Mr. Joseph Biondolillo  
City of Rochester  
Division of Environmental Quality  
30 Church Street, Room 300-B  
Rochester, New York 14614

RE: Phase I Environmental Site Assessment  
1228-1230 East Main Street, Rochester, New York 14609  
LaBella Project No. 2181125

Attached, please find two hard copies and one pdf on CD of the Final Report for the Environmental Site Assessment at the above referenced facility. Please note the following:

1. The Final Report includes available information received to date.
2. Please review the report and contact us with any questions and comments you may have.

Feel free to contact us at your convenience at 716-768-4906.

Sincerely,

LABELLA ASSOCIATES, D.P.C.

Chris Kibler  
Senior Environmental Analyst  
Environmental Professional

LaBella Associates, D.P.C. (LaBella) has been contracted by the City of Rochester to perform an All Appropriate Inquiry (AAI) Phase I Environmental Site Assessment (ESA) report for 1228-1230 East Main Street, City of Rochester, Monroe County, New York, 14609, hereinafter referred to as the "Site".

The findings of this report are based upon a preliminary assessment of the condition of the Site within the Scope of Work and objective described below as of the date of our site observations and documentation review. This assessment was prepared according to the American Society for Testing and Materials (ASTM) Standard Practice E1527-13 to satisfy the due diligence requirements set for the City of Rochester. The information contained in this report is considered privileged and confidential and is intended solely for the use of the City of Rochester, as it applies to the Site.

## 1.0 EXECUTIVE SUMMARY

---

Based on the results of this assessment, no Historical Recognized Environmental Conditions (HRECs), Controlled Recognized Environmental Conditions (CRECs) or de minimis conditions have been identified associated with the Site at this time. However, the following Recognized Environmental Conditions (REC) has been identified associated with the Site at this time.

### **SECTION #5.2 and 5.5.8 Historic Use of Various Southern Adjacent Properties**

The south adjacent property, addressed as 1233 East Main Street, has been utilized for various industrial and commercial purposes including Harper Method Inc. (toilet preparations) from at least 1930 until at least 1967, IPS MacDonald Printing Company Inc. from at least 1972 until at least 1992, and by Tom & Paul's Tire Trax Inc. (waste tire storage dealer) from at least 2007 until present day. Based on the long term use of the property as a print shop (20 years) and the apparent flow of groundwater to the northeast and towards the Site, there is an apparent REC related to the historical use of the south adjacent property at this time.

In addition, the southeast adjacent property, addressed as 1237-1261 East Main Street, has been utilized as Fedder Industrial Park since at least 1976 (approximately 42 years). The industrial park has included various commercial and industrial tenants including machine shops, print shops, laminating shops, woodworking, and finishing, and plating operations. Such operations are typically known to incorporate various solvents and petroleum products in their operations. Although Phase II ESAs have been performed at the southeast adjacent property associated with "closed" Spill #1006197 above, no information has been obtained to date regarding sampling locations or laboratory analytical results associated with the Phase II ESAs. While no violations have been identified associated with the RCRA listings and the spills identified for the southeast adjacent property have been assigned a closed or inactive status by the NYSDEC, based on the long-term industrial use of the property including the likely utilization of various solvents and petroleum products, and the apparent flow of groundwater to the northeast and towards the Site, there is an apparent REC related to the nature of operations currently and historically conducted at the southeast adjacent property at this time.

The southwest adjacent property, addressed as 1185-1223 East Main Street, has been utilized for various industrial and commercial purposes including Rochester Fireworks manufacturer from at least 1892 until at least 1912, Unit Parts Rochester Corporation auto parts, including two USTs, from at least 1939 until at least 1954, and a bus garage from at least 1981 until present day. Based on the proximity of this facility to the Site and the apparent flow of groundwater to the northeast and towards the Site, there is an apparent REC related to the historical use of the southwest adjacent property at this time.

Based on the findings of this assessment, further investigation appears warranted at the Site at this time.

## 2.0 INTRODUCTION

---

### 2.1 Purpose

This investigation was requested to identify, to the extent feasible, Recognized Environmental Conditions in connection with the Site, including the identification of conditions indicative of releases and threatened releases of hazardous substances on, or in the vicinity of the Site. This AAI Phase I ESA report was conducted in general conformance with the Scope and Limitations of ASTM Standard Practice E1527-13.

The performance of ASTM Standard Practice E1527-13 is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs (defined below) and the potential liability for contamination to be present in connection with the Site recognizing reasonable limits of time and cost. It is also intended to add protection from Comprehensive Environmental Response Compensation and Liability Act (CERCLA) liability for innocent landowner defense, bona fide prospective purchaser, contiguous property owners and grantors who meet certain statutory requirements.

The objective of this AAI Phase I ESA was to determine the following, using our professional judgment, by means of the Scope of Work hereafter described.

1. A general description of the Site.
2. The current and historical usage of the Site and adjoining properties.
3. Whether RECs exist or have the potential to exist at the Site.
4. Whether Site conditions suggest further evaluation based on the presence or probable presence of such RECs.
5. Provide information which may assist the client in evaluating the fair market value of the Site.

The term "Recognized Environmental Condition" is defined by ASTM as the presence or likely presence of any hazardous substances (as currently defined by the CERCLA including pollutants and contaminants) or petroleum products (excluded from the definition of hazardous substance and controlled substances; or the presence of petroleum products as defined by the Resource Conservation and Recovery Act, the Oil Pollution Act of 1990, and the Clean Water Act) in, on, or at a property due to release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment.

The term "Historical Recognized Environmental Condition" is defined by ASTM as a past release of any hazardous substance or petroleum product that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

The term "Controlled Recognized Environmental Condition" is defined by ASTM as resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

The term "REC" is not intended to include "de minimis" conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not Recognized Environmental Conditions or Controlled Recognized Environmental Conditions.

The term "data gap" means lack or inability to obtain information required by the standards and practices as defined in ASTM Standard Practice E1527-13 despite good faith efforts by the Environmental Professional and Environmental Analyst.

The term "Environmental Professional" is defined by ASTM as a person who possesses sufficient specific education, training, and experience necessary to exercise professional judgement to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in or to a property, sufficient to meet the objectives and performance factors defined in the ASTM Standard Practice E1527-13 and §312.20 of 40 CFR §31.

## **2.2 Scope of Work**

The major components of an AAI Phase I ESA report in conformance with ASTM Standard Practice E1527-13 include a visual inspection of the Site and adjoining properties; interviews and review of documents from past and present owners, occupants, managers, representatives and neighbors to the extent necessary; interviews with tribal and local government agency representatives; review of tribal, local and state records relative to the Site; and a review of tribal, local, state and federal standard environmental record sources relative to the Site. The findings and conclusions presented in this report are based on information gathered and limitations set forth in this report.

The Scope of Work performed in this assessment is limited to the areas described as follows:

1. The City of Rochester, Site Representative, indicated that LaBella was provided any and all pertinent information regarding the Site. As such, an interview was not obtained as part of this assessment. Any pertinent information obtained from an interview with the owner of the Site will be included as a Letter of Addendum (refer to Section 7.1).

2. Interviews with and/or record reviews of each of the following to obtain information directly regarding environmental concerns at or in the immediate vicinity of the Site, which is available directly by file or through general knowledge of the individual being interviewed. Information sources include:
  - a. United States Environmental Protection Agency (USEPA)
  - b. New York State Department of Environmental Conservation (NYSDEC), Region 8
  - c. Monroe County Health Department (MCHD)
  - d. City of Rochester Fire Marshal, Building Inspector, Assessor, and Clerk
  
3. Review of the following federal, state, and local environmental records and databases to aid in the identification of conditions at or related to the Site and property, adjacent to or in the immediate vicinity of the Site, including:
  - a. USEPA National Priority List (NPL) – 1.0 mile
  - b. USEPA Delisted NPL – 0.5 mile
  - c. USEPA Superfund Enterprise Management System (SEMS) and SEMS Archived Sites– 0.5 mile
  - d. USEPA Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) – 0.5 mile
  - e. USEPA CERCLIS No Further Remedial Action Planned (NFRAP)-0.5 mile
  - f. USEPA Resource Conservation and Recovery Act (RCRA) Corrective Action Sites (CORRACTS) – 1.0 mile
  - g. USEPA RCRA non-CORRACTS Treatment, Storage, and Disposal Facility List (TSD) Facilities – 0.5 mile
  - h. USEPA RCRA Large Quantity Generator (LQG), Small Quantity Generators (SQG), and Conditionally Exempt Small Quantity Generator (CESQG) Listing – Site and adjoining properties
  - i. National Response Center (NRC) Emergency Response and Notification System Listing (ERNS) – Site only
  - j. Federal, state, and local Institutional Controls/Engineering Controls and Land Use Restrictions - Site only
  - k. NYSDEC Listed Facilities with Institutional Controls and/or Engineering Controls - Site only
  - l. NYSDEC Registry of Inactive Hazardous Waste Disposal Sites (IHWDS) (state equivalent of NPL Sites) – 1.0 mile
  - m. NYSDEC Registry of Brownfield Cleanup Program (BCP), Voluntary Cleanup Program (VCP), and Environmental Restoration Program (ERP) Sites – 0.5 miles
  - n. NYSDEC Hazardous Substance Waste Disposal Sites (state equivalent of SEMS Sites) – 0.5 mile
  - o. NYSDEC Solid Waste Facilities and Landfills (SWIMS) – 0.5 mile
  - p. NYSDEC Inventory of Hazardous Substance Waste Disposal Sites – 0.5 mile
  - q. NYSDEC Listing of Spills and Leaking Storage Tanks – 0.5 miles

- r. NYSDEC Listing of Registered Petroleum Bulk Storage Facilities (PBS), Chemical Bulk Storage Facilities (CBS), and Major Oil Storage Facilities (MOSF) – Site and adjoining properties
- s. United States Geological Survey (USGS) Topographic Quadrangle Map Rochester East, New York
- t. Generalized Groundwater Contour Map of Monroe County
- u. United States Department of Agriculture (USDA) Monroe County Soil Survey obtained from the Natural Resource Conservation Service (NRCS) website
- v. Sanborn Fire Insurance maps
- w. Aerial photographs of the area
- x. Historical atlases
- y. Historical topographic maps
- z. Local street directories

Due to the limited timeframe available to conduct this assessment, not all responses have been received from Freedom of Information Law (FOIL) requests that were submitted as a part of this report as of the date of this report submission. Any pertinent information obtained as part of the FOIL requests will be included in a Letter of Addendum (refer to Section 8.2.2).

- 4. Site visit on April 25, 2018 by Ms. Alex Vitulano of LaBella to photograph the Site and to visually identify areas of concern as defined in the agreement.
- 5. Completion of LaBella's AAI Phase I ESA Site Reconnaissance Report.
- 6. Completion of a User Questionnaire completed by Ms. Jane Forbes.

### **2.3 Subsurface Risks/Unanticipated Hazardous Materials**

This work for this report has been performed in accordance with generally accepted environmental engineering practices for the applicable region. The conclusion and recommendations of this report are based upon the opinion and judgment of an Environmental Professional (EP), and are dependent upon LaBella's knowledge, information supplied by the present owner and managers of the Site, and data and information solicited from governmental agencies. LaBella makes no other warranty or representation, either expressed or implied, nor is one intended to be included as part of its services, proposals, contracts, or reports.

In addition, LaBella cannot provide guarantees, certifications, or warranties that the property is or is not free of environmental impairment without a subsurface investigation involving drilling, vapor analysis, laboratory soil analysis, groundwater monitoring well installation, and laboratory groundwater analysis. Even with such a program, the data and samples from any given soil boring or monitoring well will indicate conditions that apply only at that particular location, and such conditions may not necessarily apply to the general Site as a whole.

## **2.4 Significant Assumptions**

As a result of the unavailability or lack of receipt of information the following assumption was made in order to complete the Scope of Work in the time frame desired by the City of Rochester.

- Groundwater flow direction in the vicinity of the Site was estimated based on review of area topographic maps and the Generalized Groundwater Contour Map of Monroe County. Determination of site-specific groundwater flow direction typically requires installing at least three groundwater monitoring wells, surveying the wells, and collecting groundwater elevation data (refer to Section 3.2).

As stated in the Agreement, the City of Rochester acknowledges this assumption and hereby agrees to release and hold LaBella harmless from any liability arising from or relating to any conclusions made or not made based on this assumption.

## **2.5 Limitations and Exceptions of Assessment**

ASTM Standard Practice E1527-13 expressly recognized the fact that no ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. LaBella's work is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the Site, and its Scope of Work reflects recognition of the reasonable limits of time and cost.

The actual presence of radon, lead-based paint, contaminants in drinking water [e.g., lead, volatile organic compounds (VOCs), "perfluorinated" compounds (PFCs), etc.], mold-related issues, electromagnetic frequencies, asbestos-containing building materials, polychlorinated biphenyl (PCB) caulk, wetlands, cultural and historic resources, ecological resources, and endangered species are not included in the Scope of Work of this assessment. Additionally, regulatory compliance, industrial hygiene, health and safety, indoor air quality and drinking water quality are not included in the Scope of Work of this assessment. Should Client want these services, LaBella can complete them; however, they are not included in the Scope of Work of the Phase I ESA. In addition, NYSDEC Part 360 Regulations indicate that fill material is defined as "*soil and similar material excavated for the purpose of construction or maintenance*". The user should be aware that this Phase I ESA has not assessed the Site for fill materials and any fill material generated as part of a construction project is subject to NYSDEC Part 360 Regulations which could include chemical testing.

It is further noted that due to post 9/11 terrorist related concerns, the NYSDEC has limited the availability of PBS, CBS, and MOSF details, and detailed spill information to the public. However, LaBella does have access to the addresses of current PBS, CBS, and MOSF locations accessed from the database from the NYSDEC website. In addition, this information can usually be acquired by a FOIL to the regulating agency to attempt to obtain this relevant and reasonably ascertainable environmental information for AAI Phase I ESA reports. If this information is not obtainable then it will be discussed as a data gap in Section 8.2.

The Site visit was limited to visual observations of exterior areas of the Site only. The interior of the Site Building was not observed at the time of the site visit.

## **2.6 Special Terms and Conditions**

The City of Rochester and LaBella have agreed that the Scope of Work described in Section 2.3, and the Limitations and Exceptions described in Section 2.5 above, are acceptable to you and that to the fullest extent permitted by law, LaBella shall not be liable to you for limiting its investigation to the Scope of Work described. Based on the engagement and Scope of Work agreed upon, our evaluation of the Site is as presented herein.

## **2.7 User Reliance**

The City of Rochester may rely upon the findings of this report and should be aware of the agreed upon Scope of Work and the limitations associated with this Scope of Work.

## **3.0 SITE DESCRIPTION**

---

### **3.1 Site Location and Legal Description**

The parcel that comprises the Site is outlined in the table below. Property boundaries for the purpose of this assessment were obtained from the Monroe County GIS website. A map depicting the tax parcel that comprises the Site is located in the Figures and Photographs Appendix of this report.

<b>Legal Address</b>	<b>Tax Account Number</b>	<b>Property Use Code</b>	<b>Acreage</b>
1228-1230 East Main Street	106.760-0001- 041.00000	220 – Two Family Residence	0.12

### **3.2 Site and Vicinity Characteristics**

The Site is located within an urban area. According to the 7.5-minute Rochester East, New York quadrangle USGS Map, the Site consists of generally level land. The USGS map indicates that the nearest water body is the Genesee River, located approximately 8,500 feet west of the Site. Based on interpretation of the USGS topographic map and the Generalized Groundwater Contour Map of Monroe County, overall groundwater flow at the Site appears to be to the northeast towards Irondequoit Bay. According to information obtained from ERIS, soils at the Site consist mainly of urban land. Urban land could include Historical Fill materials (e.g., ash, cinders, slag, etc.). Historic Fill materials are subject to NYSDEC Part 360 Regulation. Identification of Historic Fill Materials is beyond the scope of this assessment. A copy of the soil map is included in Appendix 6.

### **3.3 Present Ownership and Use**

Based on the information obtained from the Landmax Database website, the Site is currently owned by Mr. John M. Fleming; however, it should be noted that City of Rochester assessment records indicate that the Site is currently owned by the City of Rochester. The Site is currently developed with a residence.

### 3.4 Site Improvements

#### 3.4.1 Structures and Improvements

The Site is improved with one structure as detailed in the table below.

	<b>Structure</b>
<b>Square Footage</b>	2,505
<b>Foundation Type</b>	Full Basement
<b>Number of Stories</b>	Two
<b>Construction Date</b>	1895
<b>Current Use</b>	Residence
<b>Hereinafter referred to as</b>	Site Building

#### 3.4.2 Roads

The Site is bordered by the following public thoroughfares.

<b>Direction</b>	<b>Public Thoroughfare</b>
<b>East</b>	Laura Street
<b>South</b>	East Main Street

#### 3.4.3 Current Site Utilities

<b>Structure</b>	<b>Site Building</b>
<b>Heating/Cooling Source</b>	Natural Gas
<b>Potable Water Source</b>	Municipal
<b>Sanitary Wastewater Disposal</b>	Municipal
<b>Non-Sanitary Wastewater Disposal</b>	Municipal

#### 3.4.4 Current Use of the Adjoining Properties

The Site is bordered by the following properties.

<b>Direction</b>	<b>Occupant (Address)</b>
<b>North</b>	Residential (1-5 Laura Street)
<b>East beyond Laura Street</b>	Residential (4-6 Laura Street) Vacant (2 Laura Street and 1240 East Main Street)
<b>South beyond East Main Street</b>	Bus garage (1185-1223 East Main Street) Commercial (1233 East Main Street) Fedder Industrial Park (1237-1262 East Main Street)
<b>West</b>	Vacant lot (1222 East Main Street)

Refer to Section 5.2 for additional information regarding the south adjacent properties.

## 4.0 USER PROVIDED INFORMATION

In accordance with the ASTM E1527-13, a "User" is defined as the party seeking to complete an environmental site assessment of the property. If the user is aware of any specialized knowledge or experience that is material to RECs in connection with the Site, it is the user's responsibility to communicate any information based on such specialized knowledge or experience to the environmental professional. The User Questionnaire was completed by Ms. Jane Forbes on behalf of the City of Rochester. A copy of the User Questionnaire is included in Appendix 7.

#### 4.1 Title Records

According to the ASTM Standard Practice E1527-13, "the user should either engage a title company or title professional to undertake a review of reasonably ascertainable land title records and lien records for environmental liens or activity and use limitations currently recorded against or relating to the property or to negotiate such an engagement of a title company or title professional as an addition to the Scope of Work to be performed by the Environmental Professional."

ASTM Standard Practice E1527-13 User Questionnaire Question	Reported by User
Are land title records available for review?	Land title records and lien searches were obtained from ERIS and are discussed in Section 5.5.4.

#### 4.2 Environmental Liens or Activity and Use Limitations

ASTM Standard Practice E1527-13 User Questionnaire Question	Reported by User
Did a search of <i>recorded land title records</i> identify any environmental liens filed or recorded against the <i>property</i> under federal, tribal, state or local law?	The User did not report environmental liens currently recorded against or relating to the property. In addition, the User did not report any activity or use limitations currently recorded against or relating to the property.
Did a search of <i>recorded land title records</i> identify any AULs, such as <i>engineering controls</i> , land use restrictions or <i>institutional controls</i> that are in place at the <i>property</i> and/or have been filed or recorded against the <i>property</i> under federal, tribal, state or local law?	The User is not aware of any AULs, such as engineering controls, land use restriction, or institutional controls that are in place at the Site and/or have been filed or recorded in a registry under federal, state, or local law.

#### 4.3 Specialized Knowledge

ASTM Standard Practice E1527-13 User Questionnaire Question	Reported by User
Does the <i>User</i> of this <i>ESA</i> have any specialized knowledge or experience related to the <i>property</i> or nearby properties? For example, is the <i>User</i> involved in the same line of business as the current or former <i>occupants</i> of the <i>property</i> or an <i>adjoining property</i> so that the <i>User</i> would have specialized knowledge of the chemicals and processes used by this type of business?	The User does not have any specialized knowledge or experiences related to the property or nearby properties.

#### 4.4 Commonly Known or Reasonably Ascertainable Information

ASTM Standard Practice E1527-13 User Questionnaire Question	Reported by User
Is the <i>User</i> aware of commonly known or <i>reasonably ascertainable</i> information about the <i>property</i> that would help identify conditions indicative of releases or threatened releases?	Ms. Forbes is aware that the Site was occupied by a residence in 1900, an animal hospital in 1941, and a residence again in 1998.
Based on the <i>User's</i> knowledge and experience related to the <i>property</i> are there any <i>obvious</i> indicators that point to the presence or likely presence of releases at the <i>property</i> ?	Based on the <i>User's</i> knowledge and experiences related to the Site, the <i>User</i> of this ESA is not aware of obvious indicators that point to the presence or likely presence of contamination at the Site.

#### 4.5 Valuation Reduction for Environmental Issues

ASTM Standard Practice E1527-13 User Questionnaire Question	Reported by User
Does the purchase price being paid for the <i>property</i> reasonably reflect the fair market value of the <i>property</i> ?	The <i>User</i> did not report a below fair market value.
If the <i>User</i> concluded that there is a difference, has the <i>User</i> considered whether the lower purchase price is because contamination is known or believed to be present at the <i>property</i> ?	The <i>User</i> did not report a below fair market value.

#### 4.6 Reason for Performing Phase I ESA

According to ASTM E1527-13, either the *User* shall make known to the environmental professional the reason why the *User* wants to have the Phase I ESA preformed or, if the *User* does not identify the purpose of the Phase I ESA, the environmental professional shall assume the purpose is to qualify for the Landowner Liability Protections under the Brownfields Amendments. The *User* identified that the Phase I ESA is being conducted as part of a potential purchase.

## 5.0 STANDARD ENVIRONMENTAL RECORD SOURCES – FEDERAL AND STATE

The government records search included a review of federal, state and local government databases of known or suspected inactive hazardous waste sites; petroleum and chemical bulk storage tank sites; reported spills, including leaking USTs; and hazardous waste generation sites. Environmental Risk Information Services (ERIS), an independent research firm, was contracted to perform an ASTM compliant government records search. The ERIS report is included in Appendix 1.

#### 5.1 Site Listings

No regulatory listings were identified associated with the Site.

## 5.2 Adjacent Property Listings

### Adjacent Southeast – 1237-1261 East Main Street

Regulatory listings were identified associated with the southeast adjacent property addressed as 1237-1261 East Main Street. Copies of the listings are included in Appendix 1. The property is occupied by the Fedder Industrial Park that housed various tenants including Sumner Finishing, Laminating Arts of NY, General Woodwork and Monroe Tape Processing. The apparent flow of groundwater at the property appears to generally be to the northeast and away from the Site. The listings are summarized in the table below.

Listing	Identification # (Facility Name: Address)
Federal RCRA Non-Generator	USEPA Handler ID: NYD982274862 and NYP000954453 (Sumner Finishing: 1237 E Main Street) USEPA Handler ID: NYD073682866 (Laminating Arts of NY: 1237 E Main Street) USEPA Handler ID: NY0000575290 (Fedder Industrial Park Inc.: 1237 E Main Street)
NY Manifest	RCRA ID: NYD073682866 (Laminating Arts of NY: 1237 E Main Street) RCRA ID: NYD982274862 (Sumner Finishing: 1237 E Main Street) RCRA ID: NY0000575290 (R P Fedder: 1237 E Main Street)
PRP	EPA ID: NYD021744537 and NYD038641601 (Laminating Arts & Finishes Inc.: 1237 East Main Street)
FINDS/FRS	USEPA Handler ID: 110019181874 (General Woodwork: 1237 E Main Street) USEPA Handler ID: 110009468236 (Laminating Arts of NY: 1237 E Main Street) USEPA Handler ID: 110044943844 (Fedder Industrial Park Inc.: 1237 E Main Street) USEPA Handler ID: 110044943844 (Sumner Finishing: 1237 E Main Street)
ICIS	UIN # 110001613166/Program ID NY0000008261400756 and UIN # 110001613166/Program ID NY0000NY8261400756 (Sumner Finishing: 1237 E Main Street)
State Listed Registered PBS Facility	NYSDEC PBS Registration #8-458589 (Fedder Industrial Park: 1237 East Main Street)
State Listed Spill Site	Spill #8606713 (closed) (Monroe Tape Processing: 1237 East Main Street) Spill #8580106 (inactive) (1237 East Main Street) Spill #1006197 (closed) (Fedder Industrial Park: 1237 East Main Street) Spill #027018g (closed) (Sumner Finishing: 1237 East Main Street)

#### RCRA Non-GENERATOR

The property is a listed RCRA Non-generator associated with the following RCRA ID #'s and facilities (NYD982274862 – Sumner finishing; NYD073682866 – Laminating Arts of NY; and NY0000575290 – Fedder Industrial Park, Inc.). The property was formerly a listed RCRA Small Quantity Generator (SQG) under these three RCRA ID's. The presence of the property on this listing implies the property previously generated between 100 to 1,000 kilograms of hazardous waste per month.

In addition, the property is a listed RCRA Non-generator associated with #NYP000954453 - Sumner finishing. The property was formerly a listed RCRA Large Quantity Generator (LQG) under this RCRA ID. The presence of the property on this listing implies that the property previously generated more than 1,000 kilograms of hazardous waste per month.

These listings do not imply the release of hazardous waste has occurred to the subsurface of the property. The waste historically generated at the property appears to have included wastewater treatment sludge's from electroplating operations, non-halogenated wastes, ignitable wastes, corrosive wastes, and spent halogenated solvents. No outstanding compliance monitoring or enforcement violation records were identified for these RCRA Non-generator listings.

It should be noted that the property is also identified as the following Facility Registry Service/Facility Index (FINDS/FRS) listings (#110019181874 - General Woodwork; #110009468236 - Laminating Arts of NY; #110044943844 - Fedder Industrial Park Inc.; and #11004494384 - Sumner Finishing. The property is also identified as the following NY Manifest listings (# NYD073682866 - Laminating Arts of New York Inc.; #NYD982274862 - Sumner Finishing; and #NY0000575290 - R P Fedder. These listings appear to be associated with the above RCRA Non-generator listings.

It should be noted that the property is also identified as the following Integrated Compliance Information System (ICIS) listings (UIN #110001613166/Program ID NY0000008261400756 and UIN #110001613166/Program ID NY0000NY8261400756 - Sumner Finishing).

The property is also identified as the following Potentially Responsible Parties List (PRP) listings (#NYD021744537 and #NYD038641601 - Laminating Arts & Finishes Inc.).

NYSDEC PBS #8-458589

The following table summarizes the NYSDEC PBS Facility Information listing associated with the property.

Tank No.	Location	Capacity (gallons)	Product Stored	Tank Type	Secondary Containment	Date Installed	Status
001	Underground	8,000	#2 fuel oil	Steel/ Carbon Steel/Iron	Double-walled	12/1/1973	Closed/ removed 6/1/1993

NYSDEC Spill #8580106 (inactive)

According to the inactive NYSDEC Spill Report Form obtained from the NYSDEC, dated January 6, 1985, last updated February 16, 2011, approximately one gallon of muriatic acid leaked from its container into a passenger vehicle that had just purchased the product. A HAZMAT team reportedly responded and the fire department flushed the car with water. No catch basins were reported in the vicinity of the car. No further information was obtained from the ERIS report regarding the spill. The Spill was inactivated on February 16, 2011.

NYSDEC Spill #8606713 (closed)

According to the inactive NYSDEC Spill Report Form obtained from the NYSDEC, dated January 31, 1987, last updated April 3, 2002, approximately five gallons of #2 fuel oil reportedly spilled to the ground. No further information was obtained from the ERIS report regarding the spill. The Spill was closed on February 1, 1987.

NYSDEC Spill #0270189 (closed)

According to the closed NYSDEC Spill Report Form obtained from the NYSDEC, dated June 21, 2002, last updated September 5, 2013, abandoned drums containing plating solution were found at the property. No further information was obtained from the ERIS report regarding the spill. The Spill was closed on March 3, 2004.

NYSDEC Spill #1006197 (closed)

According to the closed NYSDEC Spill Report Form obtained from the NYSDEC, dated September 6, 2010, last updated September 5, 2013, petroleum-impacted soils were encountered during a Phase II ESA at the property. Fill material containing ash was encountered throughout the property during the Phase II ESA. Laboratory analytical sampling results identified minor concentrations of semi-volatile organic compounds (SVOC) impact. Staining was observed proximate a former drum storage area in Building #4 and a UST was identified to the south exterior of Building #4. A supplemental Phase II ESA report was submitted to the NYSDEC on May 11, 2011. The report indicated that no subsurface impact was identified beneath the floor of the former drum storage area. It was also determined that the UST south of Building #4 had been filled-in-place with concrete. No further action was required by the NYSDEC and the Spill was closed on May 20, 2011.

Refer to Section 5.5.8 for additional information.

**Adjacent South – 1233 East Main Street**

Regulatory listings were identified associated with the south adjacent property addressed as 1233 East Main Street. Copies of the listings are included in Appendix 1. The property is occupied by Tom & Paul's Tire Trax and was previously occupied by IPS MacDonald Printing Company. The apparent flow of groundwater at the property generally appears to be to the northeast and towards the Site. The listings are summarized in the table below.

Listing	Identification # (Facility Name: Address)
State Listed Part 360 Permitted Solid Waste Disposal Facility	NYSDEC Permit #: 28K05 (Tom & Paul's Tire Trax, Inc.: 1233 East Main Street)
State Listed Spill Site	Spill #9003948 (closed) (IPS MacDonald Printing Co.: 1233 East Main Street)

The property is a listed Solid Waste Facility/Landfill (SWF/LF). This listing is associated with Tom & Paul's Tire Trax, Inc. identified as a waste tire storage facility. No further information was obtained from ERIS regarding this listing.

### NYSDEC Spill #9003948 (closed)

According to the closed NYSDEC Spill Report Form obtained from the NYSDEC, dated July 10, 1990, last updated June 1, 2011, approximately 20 gallons of unknown petroleum was spilled to the ground surface (soil) at the property. No further information was obtained from the ERIS report regarding the spill; however, such was assigned a "closed" status on October 11, 1990.

Refer to Section 5.5.8 for additional information.

### **Adjacent Southwest – 1185-1223 East Main Street**

Regulatory listings were identified associated with the southwest adjacent property, addressed as 1185-1223 East Main Street. Copies of the listings are included in Appendix 1. The property was occupied by First Student Inc. The apparent flow of groundwater at the property appears to generally be to the northeast and towards the Site. The listings are summarized in the table below.

<b>Listing</b>	<b>Identification # (Facility Name: Address)</b>
Federal RCRA CESQG	USEPA Handler ID: NYR000076984 (Laidlaw Transit Inc.: 1185 East Main Street)
State Listed Registered PBS Facility	NYSDEC PBS Registration #8-439215 (First Student Inc.: 1185 East Main Street) NYSDEC PBS Registration #8-227005 (Quaker State Oil Ref Corporation: 1221 East Main Street)
State Listed Spill Site	Spill #9000661 (closed), Spill #9301614 (closed), Spill #9515421 (inactive), and Spill #9904476 (inactive) (National School Bus: 1185 East Main Street)
FINDS/FRS	USEPA Handler ID: 110061665121 (First Student Inc.: 1185 East Main Street) USEPA Handler ID: 110004556551 (Laidlaw Transit, Inc.: 1185 East Main Street)
ICIS	UIN # 110061665121/Program ID 3600039325 (First Student Inc.: 1185 East Main Street)

The property is a listed RCRA Conditionally Exempt Small Quantity Generator (CESQG). The presence of the property on this listing implies that the property generates 100 kilograms or less per month of hazardous waste, or 1 kilogram or less per month of acutely hazardous waste. This listing does not imply the release of hazardous waste has occurred to the subsurface of the property.

In addition, this property is listed as two FINDS/FRS (#110061665121 and #110004556551) and one ICIS (UIN # 110061665121/Program ID 3600039325). These listings appear to be associated with the RCRA listing detailed above. No outstanding compliance monitoring or enforcement violation records were identified for this RCRA listing. No further information was obtained from the ERIS report regarding these listings.

The following table summarizes the NYSDEC PBS Facility Information listing #8-439215 associated with the southwest adjacent property addressed as 1185 East Main Street.

Tank No.	Location	Capacity (gallons)	Product Stored	Tank Type	Secondary Containment	Date Installed	Status
001	Underground	10,000	Diesel	Fiberglass Coated Steel	Double-walled	08/01/1996	In Service
001-A	Underground	4,000	Diesel	Steel/Carbon Steel/Iron	None	07/01/1971	Closed - Removed 05/01/1990
002	Underground	8,000	Diesel	Steel/Carbon Steel/Iron	None	03/01/1986	Closed - Removed 08/01/1996
002A	Aboveground	265	Waste oil/Used oil	Steel/Carbon Steel/iron	Diking	04/01/2003	In Service
002B	Aboveground	250	Waste oil/Used oil	Steel/Carbon Steel/iron	Diking	04/01/2003	Closed - In place 01/17/2013
003	Aboveground	265	Motor oil	Steel/Carbon Steel/Iron	Diking	12/01/1989	In Service
004	Aboveground	180	Lube oil	Steel/Carbon Steel/Iron	Diking	04/01/2003	Closed - In place 01/17/2013

The following table summarizes the NYSDEC PBS Facility Information listing #8-227005 associated with the southwest adjacent property addressed as 1221 East Main Street.

Tank No.	Location	Capacity (gallons)	Product Stored	Tank Type	Secondary Containment	Date Installed	Status
001	Underground	3,000	Lube oil	Steel/Carbon Steel/Iron	None	07/01/1976	Closed-Removed 09/01/1987
002	Underground	3,000	Lube oil	Steel/Carbon Steel/Iron	None	07/01/1976	Closed-Removed 09/01/1987
003	Underground	3,000	Lube oil	Steel/Carbon Steel/Iron	None	07/01/1976	Closed-Removed 09/01/1987
004	Underground	3,000	Lube oil	Steel/Carbon Steel/Iron	None	07/01/1976	Closed-Removed 09/01/1987

Four (4) NYSDEC Spill listings were identified associated with the eastern adjacent property and are detailed below.

NYSDEC Spill #9000661 (closed)

According to the closed NYSDEC Spill Report Form #9000661, dated April 24, 1990, last updated May 31, 2011, a 4,000-gallon gasoline UST failed a tightness test. According to PBS #8-439215, this UST was closed and removed on May 1, 1990. The Spill was closed by the NYSDEC on May 16, 1990.

#### NYSDEC Spill #9301614 (closed)

According to the closed NYSDEC Spill Report Form #9301614, dated May 6, 1993, last updated May 7, 2014, approximately two (2) gallons of diesel fuel was released to the soil. Absorbents were reportedly applied to the spill over a 50-foot length of pavement. No further cleanup was required by the NYSDEC and the Spill was closed on May 4, 1993.

#### NYSDEC Spill #9904476 (inactive)

According to the inactive NYSDEC Spill Report Form #9904476, dated July 15, 1999, last updated July 16, 1999, approximately one (1) gallon of fumaric acid was released to the soil. The Spill was reportedly cleaned up and no further action was required by the Spills unit. The Spill was closed by the NSYDEC on July 16, 1999.

#### NYSDEC Spill #9515421 (inactive)

According to the inactive NYSDEC Spill Report Form #9515421, dated February 29, 1996, last updated May 27, 2009 and remediation files reviewed by LaBella associated with this Spill, the property has been used as a school bus parking, maintenance, fueling, and dispatching facility since at least the 1970s. The former/current UST locations lie on the southwestern portion of the property, which is surrounded by a chain link fence (located approximately 500 feet southwest of the Site). On February 29, 1996, a tank tightness failure was reported to the NYSDEC, and Spill #9515421 was opened.

On January 12, 1998, GREEN Environment and Industrial Services Inc. (GREEN) completed a subsurface investigation at the property. According to the associated report, petroleum hydrocarbon contamination was detected in the groundwater at two well locations (MW-1 and MW-4). As such, Green performed a supplemental subsurface investigation consisting of the installation of soil probes. Soil samples were collected from each probe location, and headspace testing was performed. Groundwater samples were collected from two (2) of the probe locations after temporary wells were installed and three of the permanent groundwater monitoring wells previously installed. The results of the soil and groundwater analysis indicated a plume of contamination extending from the UST pit area to the north-northwest.

A Limited Groundwater Investigation was conducted at the property by Strata Environmental (Strata) in January 2009, including the installation of three (3) temporary monitoring wells located near the downgradient extent of the previously-identified contaminant plume (S-P-7, S-P-9, and S-P-10). A fourth temporary monitoring well (S-P-11) was installed beyond the boundary of the known plume to ensure that the extent of the plume had been fully delineated and that the previously-identified, impacted groundwater was still restricted to the property. In addition, Strata collected groundwater samples from existing monitoring wells MW-2 and P-5 to assess the condition of the groundwater near the known source of the plume. Based on groundwater analytical results, it was concluded that the plume had stabilized, was no longer expanding, and may have actually decreased in size compared with the previously-identified extent of the contaminant plume as delineated in 1998. Strata recommended that any remaining contamination within the known extent of the groundwater contamination plume, be allowed to naturally attenuate with no further action required. On May 20, 2009, the NYSDEC received a Soil and Groundwater Management Plan associated with Spill #9515421. Upon review of this report and the previous work conducted at the property, the NYSDEC determined that no further action was required at that time. The NYSDEC inactivated the Spill on May 27, 2009.

Refer to Section 5.5.8 for additional information.

### 5.3 ASTM Standard Regulatory Database Listings

#### 5.3.1 USEPA National Priority List

##### Listing Summary

0	Site only	No listings	No listings

### 5.3.13 State Listed Inactive Hazardous Waste Disposal Facilities

#### Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name – State Identification # (Address)
5	1.0 mile	1	Davis-Howland Oil Corporation – Site #828088 (200 Anderson Avenue)
		2	Staubs Textile Services, Inc. – Site #828160 (935, 951 East Main Street)
		3	Navy and Marine Center #3 – Site #828202 (900 East Main Street)
		4	Conrail Rail Yards – Site #828111 (410 Atlantic Avenue)
		5	Former Elite Vogue Dry Cleaners – Site #828164 (527-533 East Main Street)

#### Detailed Summary

Reference Number	Approximate Distance from Site (feet) – Direction	Groundwater Flow – Towards/Away From the Site	REC (Yes/No)	Additional Information/ Rationale
1	1,550 – South/Southwest	Northeast – Towards the Site	No	The listing does not appear to represent a REC to the Site based on the distance of this facility from the Site.
2	1,800 – West	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.
3	2,050 – West	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.
4	2,400 – Southeast	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.
5	5,000 – West	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.

Copies of the listings are included in Appendix 1.

*Privileged and Confidential*

### 5.3.14 State Listed Voluntary Cleanup Program Facilities

#### Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name – State Identification # (Address)
0	0.50 mile	No listings	No listings

### 5.3.15 State Listed Brownfield Cleanup Program Facilities

#### Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name – State Identification # (Address)
2	0.50 mile	1	Rochester Drug Cooperative – Site #C828115 (320 North Goodman Street)
		2	Former Staub's Textile Service Inc. – Site #C828160 (935, 951 East Main Street)

#### Detailed Summary

Reference Number	Approximate Distance from Site (feet) – Direction	Groundwater Flow – Towards/Away From the Site	REC (Yes/No)	Additional Information/ Rationale
1	1,450 – West/Southwest	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.
2	1,800 - West	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.

Copies of the listings are included in Appendix 1.

### 5.3.16 State Listed Environmental Restoration Program Facilities

#### Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name – State Identification # (Address)
1	0.50 mile	1	1200 E. Main Street – Site #B00129 (1200 East Main Street)

Detailed Summary

Reference Number	Approximate Distance from Site (feet) – Direction	Groundwater Flow – Towards/Away From the Site	REC (Yes/No)	Additional Information/ Rationale
1	100 – West	Northwest/Southeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site.

A copy of the listing is included in Appendix 1.

*5.3.17 State Listed Hazardous Substance Waste Disposal Sites*

Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name – State Identification # (Address)
5	0.50 mile	1-5	Conrail Rail Yards – Site #HS8007 (400 North Goodman Street)

Detailed Summary

Reference Number	Approximate Distance from Site (feet) – Direction	Groundwater Flow – Towards/Away From the Site	REC (Yes/No)	Additional Information/ Rationale
1-5	1,000 – West	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.

Copies of the listings are included in Appendix 1.

*5.3.18 State Listed Part 360 Solid Waste Disposal Facilities*

Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name – State Identification # (Address)
2	0.50 mile	1	Tom & Paul's Tire Trax Inc. – Activity #28K05 (1233 East Main Street)
		2	T.M.S. – Activity #28K12 (183 Hayward Avenue)

Detailed Summary

Reference Number	Approximate Distance from Site (feet) – Direction	Groundwater Flow – Towards/Away From the Site	REC (Yes/No)	Additional Information/Rationale
1	Adjacent - South	Northeast – Towards the Site	Yes	Refer to Section 5.2 for additional information.
2	1,700 – West/Northwest	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.

Copies of the listings are included in Appendix 1.

*5.3.19 Local Inventory of Solid Waste Disposal Locations*

Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name – Monroe County Identification # (Address)
0	0.50 mile	Not available	Not available

A FOIL request was submitted to the MCHD on March 22, 2018. As of the date of this report submission, a response has not been received from the MCHD. Any pertinent information received as a result of this FOIL request will be included as a Letter of Addendum (refer to Section 8.2.2).

*5.3.20 NYSDEC Major Oil Storage Facilities*

Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name: Address – MOSF Identification #
0	Site and adjoining properties only	No listings	No listings

*5.3.21 NYSDEC Chemical Bulk Storage Facilities*

Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name: Address – CBS Identification #
0	Site and adjoining properties only	No listings	No listings

### 5.3.22 NYSDEC Petroleum Bulk Storage Facilities

#### Listing Summary

Number of Listed Sites	Search Radius	Reference Number	Facility Name: Address – PBS Identification #
3	Site and adjoining properties only	1-3	Refer to Section 5.2 for additional information.

### 5.3.23 NYSDEC Active and Closed/Inactive Spill Listings

#### Listing Summary

Number of Listed Sites	Search Radius	Listing Number	Facility Name: Address – Spill # (status)
4 active	Active listings: 0.25 mile  Closed/inactive listings: Site and adjoining properties only	1 – 9	Refer to Section 5.2 for additional information.
9 closed/inactive		10	1130 East Main Street – Spill #1701891 (active)
		11	Former Gasoline Station: 32 Webster Avenue – Spill #1504683 (active)
		12	CSX Railyard: 400 North Goodman Street – Spill #0004600 (active)
		13	RTS: 1372 East Main Street – Spill #1601903 (active)

Due to the urban nature of the area in which the Site is located, the search radius has been reduced from 0.50 mile to 0.25 mile, per ASTM E1527-13.

#### Detailed Summary

Reference Number	Approximate Distance from Site (feet) – Direction	Overburden Groundwater Flow Direction	REC (Yes/No)	Additional Information and/or Rationale
10	450 – Southeast	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.
11	500– Northwest	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.
12	1,000– West	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.

Reference Number	Approximate Distance from Site (feet) – Direction	Overburden Groundwater Flow Direction	REC (Yes/No)	Additional Information and/or Rationale
13	1,300 – East/Southeast	Northeast – Away from the Site	No	The listing does not appear to represent a REC to the Site based on the apparent flow of groundwater to the northeast and away from the Site and the distance of this facility from the Site.

Review of the NYSDEC Spills/Leaking Storage Tank (LST) database identified 83 closed/inactive NYSDEC Spills within a 0.25-mile radius of the Site that did not occur on the Site or adjoining/adjacent properties. As spills assigned a closed or inactive status by the NYSDEC typically suggests that the spill incident has been remedied to the satisfaction of the NYSDEC, these spill incidents do not appear to represent an environmental concern related to the Site.

#### Unplottable Listings

Seven unmapped regulatory listings are potentially located within a 0.5-mile radius of the Site. In addition, 38 unmapped closed/inactive Spills are potentially located within a 0.25-mile radius of the Site. These spills and regulatory listings are considered “unmapped” as the listings have an incomplete or inaccurate address and therefore, the specific location of the listings could not be determined. Based on the limited address information available for the listings, they do not appear to be located on the Site or adjacent properties. In addition, as spills assigned a closed or inactive status by the NYSDEC typically suggests that the spill incident has been remedied to the satisfaction of the NYSDEC, these spill incidents do not appear to represent an environmental concern related to the Site.

#### *5.3.24 Assessment of the Potential for Soil Vapor Intrusion*

Vapor intrusion is the entry of VOCs to indoor air from underlying contamination in soil and groundwater. Based on the results of this assessment, no information was obtained suggesting the presence of a soil vapor intrusion concern at the Site at this time. However, should the site and area be redeveloped in the future and such development impacts preferential pathways, soil vapor intrusion should also be evaluated.

### **5.4 Additional Environmental Record Sources**

#### *5.4.1 Review of Previous Environmental Reports*

No previous Phase I ESA, Transaction Screen report, or other previous environmental reports were obtained or were reasonably ascertainable for review.

### **5.5 Historical Use Information on the Property and Adjoining Properties**

LaBella attempted to review reasonably ascertainable and readily available standard sources of historical information as defined by the ASTM Standard Practice E1527-13 in order to identify all obvious usages of the Site back to the first developed use or 1940, whichever is earlier (i.e., the historical research objective according to ASTM). Uses of the properties adjoining the Site are identified in this report only to the extent that this information is revealed in the course of researching the Site itself and were determined at the discretion of the Environmental Analyst. As such, LaBella reviewed only as many of

these sources as necessary to achieve the historical research objective. It should be noted that the lack of availability of reasonably ascertainable and readily available standard ASTM required sources have the potential to affect the findings of this assessment and can impact the ability of the Environmental Professional or Analyst to identify recognized environmental conditions and may result in a data failure (defined in Section 8.2.1 of this report). A data failure may represent a significant data gap. Data failures and data gaps are identified, defined, and evaluated for their significance in Section 8.2 of this report.

Standard historical sources LaBella attempted to review are outlined in the table below.

Section	Historical Source	Date(s)	Source/Comments
5.5.1	Sanborn Fire Insurance Maps	1912, 1938, 1950 and 1971	ERIS
5.5.2	Aerial Photographs	1930, 1951, 1961, 1970, 1980, 1988, 1994, 2005, and 2014	Monroe County GIS and Google Earth Pro
5.5.3	Municipal Records	Not applicable	City of Rochester
5.5.4	Recorded Land Title Records	Not applicable	ERIS

### 5.5.1 Sanborn Fire Insurance Maps

The apparent usages of the Site and adjacent properties, as depicted by the Sanborn maps, are summarized in the table below.

Apparent Address	Date	Apparent Usage(s)/Occupant(s)
1222 East Main Street	1912	Developed with a residential dwelling. The adjacent properties appear developed with residences.
	1938 and 1950	Developed with a veterinary office. Adjacent properties include residences to the north, east, and west. The south adjacent properties are developed with Unit Parts Rochester Corporation – Service Station for New & Old Auto Parts and includes two gasoline USTs to the north of the building in the roadway and Harper Method Inc. – manufacturer of cosmetics.
	1971	Developed with a veterinary office. Adjacent properties include residences to the north, east, and west. The south adjacent properties are developed industrially, including warehouses and Beechnut Packing Company tenants.

Copies of the Sanborn maps are included in Appendix 2.

### 5.5.2 Aerial Photography

The table below outlines observations of the Site and adjacent properties obtained from the review of aerial photographs.

Date	Observations
1930 and 1951	The Site appears developed with a residential type structure. The northern, western and eastern adjacent properties appear developed residentially. The southern adjacent property appears developed with a large industrial type structure.
1961, 1970, 1980, 1988 and 1994	The Site appears developed with a residential type structure. The northern, eastern, and western adjacent properties appear developed residentially. The southern adjacent property appears developed with a bus garage.
2002	The Site appears developed with a residential type structure. The northern, eastern, and western adjacent properties appear developed residentially. The southern adjacent property appears developed with large industrial type structure.
2005 and 2015	The Site appears developed with a residential type structure. The southern adjacent property appears developed with a bus garage. The western adjacent property appears undeveloped.

Copies of the aerial photographs are included in Appendix 3.

### 5.5.3 Municipal Records

A FOIL request was submitted to the City of Rochester's Records Access Officer, Mr. Joseph Fratta, on March 22, 2018 requesting copies of building department, assessment and fire marshal records on file for the Site with the City. Based on the information obtained from the Landmax Database website, the Site is currently owned by Mr. John M. Fleming. Additionally, records indicate that the Site has been previously owned by various private individuals. Refer to Sections 3.3 and 3.4 for current records associated with the Site. Copies of records obtained from the City of Rochester are included in Appendix 6.

### 5.5.4 Recorded Land Title Records

Review of the historical chain of title report and environmental lien search report obtained from ERIS did not identify and liens on the Site. Copies of the reports are included in Appendix 4.

### 5.5.5 Historical Atlases

The table below outlines observations of the Site and adjacent properties obtained from the review of available historical atlases.

Date	Observations
1875 and 1888	The Site and adjacent properties appear undeveloped.
1900, 1910, 1918 and 1926	The Site and the north, west and east adjacent properties appear developed residentially. The south adjacent property appears developed with the Rochester Fire Works Company.
1935	The site and north, west and east adjacent properties appear developed residentially. The south adjacent property appears developed with the Unit Parts Rochester Corporation.

Copies of the historical atlases are included in Appendix 2.

### 5.5.6 Historical Topographic Maps

The table below outlines observations of the Site and adjacent properties obtained from the review of available historical topographic maps.

Date	Observations
1895, 1898, 1912 and 1920	Site and select surrounding properties appear developed.
1931	Site and surrounding properties appear developed.
1935	Structures are not depicted for the Site and surrounding properties on this map.
1952, 1969, 1971 and 1978	Site and surrounding areas are developed in an urban setting; no actual structures are depicted on the maps.
2013	Structures are not depicted for the Site and surrounding properties on this map.

Copies of the historical atlases are included in Appendix 2.

### 5.5.7 Local Street Directories

Listings identified associated with the Site and adjacent properties in the ERIS street directories are detailed below.

The Site appears to have been occupied by a veterinary clinic from at least 1939 until at least 1976, by various commercial businesses from at least 1981 until at least 1992, and by various private individuals from at least 1997 until at least 2002. The Site address does not appear listed from at least 2007 until at least 2017.

Adjacent properties appear to have been developed residentially and commercially. The following adjacent property uses of potential environmental concern have been identified.

- A south adjacent property was occupied by Unit Parts Rochester Corporation auto parts from at least 1939 until at least 1954, by various commercial businesses from at least 1958 until at least 1976, and by a bus garage, charters and rentals from at least 1981 until at least 2017.
- A south adjacent property was occupied by Harper Method Inc. (toilet preparations) from at least 1939 until at least 1967, by IPS MacDonald Printing Company Inc. from at least 1972 until at least 1992, and by Tom & Paul's Tire Trax Inc. from at least 2007 until at least 2017.

Copies of the street directories are included in Appendix 2.

### 5.5.8 Summary of Historical Information

Based on the historical records reviewed, the Site consisted of undeveloped land from between at least 1875 until at least 1888 and appears developed with a residential type structure from at least 1895-1935. The Site was occupied by a veterinary clinic from at least 1938 until at least 1976, various commercial businesses from at least 1981 until at least 1992, and by various private individuals from at least 1997 until at least 2002. The Site is presently occupied residentially.

Adjacent properties have been developed both commercially and residentially. The following historical adjacent property uses of potential environmental concern have been identified.

- The southwest adjacent property, addressed as 1185-1223 East Main Street, has been utilized for various industrial and commercial purposes including Rochester Fireworks manufacturer from at least 1892 until at least 1912, Unit Parts Rochester Corporation auto parts including two gasoline USTs in the roadway, from at least 1939 until at least 1954, and a bus garage including maintenance from at least 1981 until present day. A REC has been identified based on the nature of long-term historical/current uses of the southwest adjacent property. Refer to Section 5.2 for additional information.
- The south adjacent property, addressed as 1233 East Main Street, has been utilized for various industrial and commercial purposes including Harper Method Inc. (toilet preparations) from at least 1930 until at least 1967, IPS MacDonald Printing Company Inc. from at least 1972 until at least 1992, and by Tom & Paul's Tire Trax Inc. from at least 2007 until present day. Based on the long-term use of the property and the apparent flow of groundwater to the northeast and towards the Site, there is an apparent REC related to the nature of operations currently and historically conducted at the south adjacent property at this time.
- The southeast adjacent property, addressed as 1237-1261 East Main Street, has been utilized as Fedder Industrial Park since at least 1976 (approximately 42 years). The industrial park has included various commercial and industrial tenants including machine shops, print shops, laminating shops, woodworking, and finishing, and plating operations. Based on the long-term use of the property, there is an apparent REC related to the nature of operation currently and historically conducted at the southeast adjacent property at this time.

## 6.0 SITE RECONNAISSANCE

---

Conducted by: Ms. Alexandra Vitulano, Environmental Analyst

Date of site visit: April 25, 2018

Representative photographs from the site visit are included in the Figures and Photographs section of this report. In addition, observations discussed in this Section are outlined on Figure 3 in the Figures and Photographs section of this report. Site visit limitations are outlined in Section 2.5 above. Copies of the field notes taken during the site visit are included in Appendix 4.

### 6.1 Interior Observations

The Site visit was limited to visual observations of exterior areas of the Site only. The interior of the Site Building was not observed at the time of the site visit. As such, no interior observations were made.

### 6.2 Exterior Observations

#### 6.2.1 Historical Usage

Observed	Additional Information
No	No apparent indicators (i.e., signs, equipment, etc.) were observed on the exterior of the Site at the time of the site visit which would indicate historical usages of the Site.

### 6.2.2 Hazardous Substances and Petroleum Products in Connection with Identified Usages

Observed	Additional Information
No	No apparent hazardous substances or petroleum products were observed on the exterior of the Site at the time of the site visit.

### 6.2.3 Storage Tanks

Noted	Additional Information
No	No apparent indications of aboveground or underground storage tanks (e.g., fill ports, vent pipes, access ways) were observed on the exterior of the Site at the time of the Site visit.

### 6.2.4 Odors

Noted	Additional Information
No	No apparent strong, pungent, or noxious odors were noted on the exterior of the Site at the time of the site visit.

### 6.2.5 Pools of Liquid(s)

Observed	Additional Information
No	No apparent pools, sumps, or standing water containing liquids likely to be hazardous substances or petroleum products were noted on the exterior of the Site at the time of the site visit.

### 6.2.6 Unidentified Substance Containers

Noted	Additional Information
No	No apparent unidentified substance containers were observed on the exterior of the Site at the time of the site visit.

### 6.2.7 Pits, Ponds, or Lagoons

Observed on the Site	Additional Information
No	No apparent pits, ponds, or lagoons were observed at the Site at the time of the site visit.

### 6.2.8 Stained Soil or Pavement

Observed on the Site	Additional Information
No	No apparent stained soils or pavement were observed at the Site at the time of the site visit.

### 6.2.9 Stressed Vegetation

Observed on the Site	Additional Information
No	No apparent stressed vegetation was observed at the time of the site visit.

### 6.2.10 Solid Waste

Observed on the Site	Additional Information
No	No apparent solid waste disposal areas were observed on the exterior of the Site at the time of the site visit.

### 6.2.11 Wastewater

Observed on the Site	Additional Information
No	Wastewater does not appear to be discharged on the exterior of the Site.

### 6.2.12 Wells

Observed on the Site	Additional Information
No	No apparent wells were observed on the exterior of the Site at the time of the site visit or reported to be located on the Site.

### 6.2.13 Septic Systems

Observed on the Site	Additional Information
No	No apparent indications of on-Site septic systems or cesspools were observed on the Site at the time of the site visit.

### 6.2.14 PCBs-Containing Equipment

Observed	Additional Information
No	No apparent electrical or hydraulic equipment reportedly containing PCBs were observed on the exterior of the Site at the time of the site visit.

## 7.0 INTERVIEWS

### 7.1 Site Representative

The City of Rochester, Site Representative, indicated that LaBella was provided any and all pertinent information regarding the Site. As such, an interview was not obtained as part of this assessment. A copy of a blank owner/operator questionnaire is included in Appendix 5.

### 7.2 Local Government Officials

A FOIL request was submitted to the City of Rochester's Records Access Officer, Mr. Joseph Fratta, on March 22, 2018 requesting copies of building department, assessment and fire marshal records on file for the Site with the City. Based on the information obtained from the Landmax Database website, the Site is currently owned by Mr. John M. Fleming. Refer to Sections 3.3 and 3.4 for current records associated with the Site. Copies of records obtained from the City of Rochester are included in Appendix 6.

### **7.3 Tribal Records**

There do not appear to be any Native American Sovereign Territories on or within one mile of the Site. In accordance with ASTM Standard Practice E1527-13, tribal records will only be reviewed if the subject Site falls on or within one mile of Native American Sovereign Territory. Therefore, tribal government representatives were not contacted as part of this AAI Phase I ESA report.

### **7.4 New York State Department of Environmental Conservation**

A FOIL request was submitted to the NYSDEC on March 22, 2018. A response was received from the NYSDEC on April 12, 2018; however no documents associated with the Site were included. Copies of the FOIL request and response are included in Appendix 6.

### **7.5 Monroe County Health Department**

A FOIL request was submitted to the MCHD on March 22, 2018. As of the date of this report submission, a response has not been received from the MCHD. Any pertinent information received as a result of this FOIL request will be included as a Letter of Addendum. A copy of the FOIL request is included in Appendix 6.

## **8.0 FINDINGS, OPINIONS AND CONCLUSIONS**

---

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 for 1228-1230 East Main Street, City of Rochester, Monroe County, New York, 14609; the Site.

### **8.1 Findings**

Any exceptions to, or deletions from, this practice are described in Section 2.5 of this report. Based on the results of this assessment, the following REC has been identified associated with the Site at this time.

#### **SECTION #5.2 and 5.5.8 Historic Use of Various Southern Adjacent Properties**

The south adjacent property, addressed as 1233 East Main Street, has been utilized for various industrial and commercial purposes including Harper Method Inc. (toilet preparations) from at least 1930 until at least 1967, IPS MacDonald Printing Company Inc. from at least 1972 until at least 1992, and by Tom & Paul's Tire Trax Inc. (waste tire storage dealer) from at least 2007 until present day. Based on the long term use of the property as a print shop (20 years) and the apparent flow of groundwater to the northeast and towards the Site, there is an apparent REC related to the historical use of the south adjacent property at this time.

In addition, the southeast adjacent property, addressed as 1237-1261 East Main Street, has been utilized as Fedder Industrial Park since at least 1976 (approximately 42 years). The industrial park has included various commercial and industrial tenants including machine shops, print shops, laminating shops, woodworking, and finishing, and plating operations. Such operations are typically known to incorporate various solvents and petroleum products in their operations. Although Phase II ESAs have been performed at the southeast adjacent property associated with "closed" Spill #1006197 above, no information has been

obtained to date regarding sampling locations or laboratory analytical results associated with the Phase II ESAs. While no violations have been identified associated with the RCRA listings and the spills identified for the southeast adjacent property have been assigned a closed or inactive status by the NYSDEC, based on the long-term industrial use of the property including the likely utilization of various solvents and petroleum products, and the apparent flow of groundwater to the northeast and towards the Site, there is an apparent REC related to the nature of operations currently and historically conducted at the southeast adjacent property at this time.

The southwest adjacent property, addressed as 1185-1223 East Main Street, has been utilized for various industrial and commercial purposes including Rochester Fireworks manufacturer from at least 1892 until at least 1912, Unit Parts Rochester Corporation auto parts, including two USTs, from at least 1939 until at least 1954, and a bus garage from at least 1981 until present day. Based on the proximity of this facility to the Site and the apparent flow of groundwater to the northeast and towards the Site, there is an apparent REC related to the historical use of the southwest adjacent property at this time.

### 8.1.1 *Additional Findings*

Based on the results of this assessment, no apparent HRECs, CRECs, or de minimis conditions have been identified associated with the Site at this time.

## **8.2 Data Failures and Data Gaps**

### 8.2.1 *Data Failures*

ASTM E1527-13 defines a data failure as a failure to achieve the historical research objectives of AAI even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Specifically, the historical research objectives include identifying all obvious uses of the Site from the present, back to the Site's first developed use, or back to 1940, whichever is earlier.

A data failure was not encountered within Scope of Work of this assessment.

### 8.2.2 *Data Gaps*

ASTM E1527-13 defines a data gap as a lack of or an inability to obtain information required by this practice despite *good faith* efforts by the *environmental professional* to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance, interviews, data failure, or lack of a User Questionnaire.

Data gaps were encountered within the Scope of Work of this assessment. The first data gap includes the lack of FOIL response from the MCHD. The receipt of relevant environmental information as a result of FOIL requests has the ability to change the Findings and Conclusions of this report. However, it should be noted that the review of standard State and Federal regulatory database listings during the course of this Phase I ESA did not identify environmental concerns relative to the Site. The second data gap includes the lack of interior inspection of the Site Building at the time of the site visit. This data gap does not appear significant based on the use of the Site Building as a dwelling and the reported natural gas heating source.

### **8.3 Opinion of Findings**

Based on the findings of this assessment, further investigation appears warranted at the Site at this time.

### **9.0 DEVIATIONS**

---

No deviations were made to the report, other than the Limitations and Exceptions as stated in Section 2.5.

### **10.0 ADDITIONAL SERVICES**

---

No additional services were provided or agreed upon as part of this assessment.

### **11.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS**

---

We declare that, to our knowledge and belief, we meet the definition of Environmental Professional as defined in ASTM Standard Practice E1527-13 and §312.20 of 40 CFR §312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting at the subject property.

We have developed and performed the Scope of Work for this assessment in conformance with the standards, practices, and limitations set forth in ASTM Standard Practice E1527-13.

**Chris Kibler**  
*Senior Environmental Analyst*  
*Environmental Professional*

The following representative of LaBella assisted in the completion of this report.

**Alex Vitulano**  
*Environmental Analyst*

## 12.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

---

### **Chris Kibler | Senior Environmental Analyst (Environmental Professional)**

Chris is a Senior Environmental Analyst responsible for the coordination and successful completion of Phase I and II ESAs. Working with financial institutions, attorneys, private developers and municipalities, he conducts ESAs in support of real estate transactions and brownfield redevelopment initiatives. Mr. Kibler's experience includes historical and regulatory records review; field sampling and data collection using a variety of techniques and equipment; the review and evaluation of field and laboratory analytical data; and the preparation of technical reports defining potential environmental liabilities and, if warranted, remedial options.

### **Alex Vitulano | Environmental Analyst**

Alex is an Environmental Analyst and is responsible for the preparation of Phase I Environmental Site Assessments. The site assessments include evaluation of environmental liability associated with properties, and Alex provides efficient analysis and completion of environmental reports for financial institutions, attorneys and private developers.

July 21, 1993

NYSDEC Water Division  
6274 East Avon-Lima Road  
Avon, New York 14414

Attn: Carol Herington:

Dear Carol:

With reference to our telephone conversation today, I am enclosing a statement concerning the absence of any contamination encountered while removing PBS Tank No. 8-458589 located at Fedder Industrial Park, 1237 East Main Street, Rochester, NY 14609.

Statement:

"While in the process of removing subject 8000 gallon tank from the above address, monitoring during excavation was done with a Photo-Ionization Detector (PID). After the tank was removed, a composite sample of earth was taken from the sides and bottom of the excavation and given the "jar test". All PID tests and the jar test indicated no contamination. Some ground water was present in the excavation, and that contained no sheen from petroleum products. The tests were made by Sandra Allen, of Griffin Industrial Services, and witnessed by myself (John R. Hoff, P.E.)"

A copy of the contractor's invoice and bill of lading for the liquid residue is enclosed.

If you have any further questions on this project, please contact me. In the absence of any further communication, we shall consider this project completed to the satisfaction of the NYSDEC.

Very truly yours,

  
John R. Hoff, P.E.

TONAWANDA ENVIRONMENTAL CORP.

July 8, 2002

Mr. Michael Khalil, P.E.  
New York State Department of Environmental Conservation  
Division of Solid & Hazardous Materials  
6274 East Avon-Lima Road  
Avon, NY 14414

RE: Sumner Finishing/1237 East Main Street, Rochester, New York

Dear Mr. Khalil:

Enclosed please find copies of our quotations to Mr. Sumner for the transportation and disposal of materials at subject site.

The packed lab chemical quotation is lump sum based upon the inventory of materials our staff completed on July 3, 2002 (copy of inventory attached).

The transportation and disposal quotation is expressed on a per unit basis and assumes Mr. Sumner completes the tasks which he committed to at our walk through.

Rates quoted do not include New York State sales tax. Sales tax will be added to our invoice and will require Mr. Sumner to pay for services on a C.O.D. basis.

Please contact us with any questions.

Sincerely,

A handwritten signature in black ink, appearing to read 'Carl J. Andrews', written over a light gray background.

Carl J. Andrews  
Vice President

TONAWANDA ENVIRONMENTAL CORP.

July 8, 2002

Mr. Chip Sumner  
Sumner Finishing  
140 East Street  
Honeoye Falls, NY 14472

Dear Mr. Sumner:

On behalf of Tonawanda Environmental Corp., I am pleased to provide you with this quotation for transportation and disposal of the chemical inventory at your facility at 1237 E. Main Street, Rochester, New York.

Prices quoted are firm for **thirty (30)** days and subject to change upon verbal notification from Tonawanda Environmental Corp. and do not include New York State sales tax.

All services performed will be in accordance with Terms and Conditions (dated 09/01/95) and are incorporated into this quotation. Payment terms are cash on delivery.

**Fuel Surcharge:** A diesel fuel surcharge has been instituted on January 15, 2000. The surcharge is based upon the East Coast average diesel fuel price per gallon listed by the United States Department of Energy each Monday (202) 586-6966 and assessed using the Diesel Fuel Surcharge Table attached to this quotation.

We will provide completed shipping paperwork and drum labels. Final disposal will be at a fully permitted hazardous waste disposal facility. Copies of permits and insurance will be provided.

Very respectfully,

Michael Vallone  
Technical Sales Representative

TRANSPORTATION				
Van Trailer Service to Detroit (assume 2 loads; 1 for acids, 1 for cyanides)	2	loads	\$1,250	\$2,500
Labor to Label and Load Drums (2 techs)	16	hours	\$30	480
PPE, Tools, Etc.	1	each	\$100	100
Estimated Transportation Cost:				\$3,080
Total Project Estimate:				\$11,624

\$10,000

Planning assumption:

1. You will pump out all of the material currently in tanks and put it into D.O.T. approved drums.
2. You will consolidate the small quantity containers of acids, caustics, and solvents into D.O.T. approved drums as we discussed.
3. You will treat the drums you indicated that you would treat during our July 1, 2002, walk through. (They were not included on our inventory.)
4. The Lab Pack quantity waste will be addressed on a separate proposal.
5. We will have access to all of the material to obtain samples and generate approval paperwork to appropriate TSDFs.
6. You will be available to assist in the preparation of waste profiles and will be available to sign waste profiles and manifests.
7. The inventory above represents the entire quantity of waste to be removed and additions to the inventory will be addressed as a separate quote.
8. The freight elevator will be available to facilitate removing the drums.

The surcharge will be adjusted weekly based upon the Department of Energy East Coast average per gallon as updated each Monday afternoon at 4:00 PM.

Department of Energy East Coast fuel prices may be verified by calling the DOE at (202) 586-6966.

TONAWANDA ENVIRONMENTAL CORP.  
TERMS AND CONDITIONS

Following are the general terms and conditions by which Tonawanda Environmental Corp. (TEC) offers its waste management services. These conditions are offered in conjunction with a firm letter of quote, which references specific waste materials and/or transportation offered.

**ACCEPTANCE** - TEC certifies that it has obtained disposal approval for your wastes as listed, and that the disposal facility listed has the required permits and existing capacity to handle your waste materials as quoted.

**PACKAGING** - All drum containers used to ship wastes must be via container approved by DOT/EPA for waste transport and must be properly sealed and free of any exterior residues. Drums must be labeled by law. (Quotes reference 55 gallon drums where drums are listed.)

**ENVIRONMENTAL FEES/TAXES** - All legislated fees, surcharges, taxes and related charges levied for the transport and/or disposal of the listed waste material(s) will be so invoiced to the generator including retroactive adjustments for same.

**NON-CONFORMING/OFF-SPECIFICATION WASTE** - All pricing and services herein stated are based upon the waste materials being as represented, identified and/or specified to Tonawanda Environmental Corp. by the generator. Any deviation from the waste material representation, identification or specification will deem the material non-conforming/off-specification. Title for such non-conforming/off-specification shall at all times remain with the generator. All charges associated with handling, processing and/or returning any non-conforming/off-specification waste material shall be the responsibility of the generator. These charges may include TSDF rejection fees, out of route mileage charges, standard drum transportation and stop charges. Waste will be returned at transporter's convenience.

**RIGHTS RESERVED** - TEC reserves the right to decline to accept for collection, transportation, treatment or disposal any waste which, in its judgment, it cannot transport, treat or dispose of in a lawful manner or without risk of harm to public health or the environment or which cannot be handled economically due to a change in disposal, treatment, charges or sites, governmental regulations or other factors beyond the control of TEC.

**WEIGHT LIMITATIONS** - Since legal allowable load weight limits change depending on equipment variances and by state, TEC reserves the right to refuse for transport any load which is determined to be overweight at the time of pickup, until correction is made to adjust the weight to comply with requirements. It is TEC's responsibility to determine maximum allowable load limitations per shipment and advise the generator of any required adjustments needed to bring the load into weight compliance prior to shipment. Generator is responsible for removal of excess product and applicable demurrage charges.

**PAYMENT TERMS - NET 15 DAYS (US FUNDS)** - Customer agrees to make payment to the office of TEC in the amount as specified on the invoice rendered within 15 days after the date of invoice. All disputes involving items for charges on the invoice must be submitted to TEC in writing within fifteen (15) days from the date of invoice. In the event TEC has not received payment within 15 days after the date of invoice or written notification of disputed items or charges within fifteen (15) days from the date of invoice, customer agrees to pay interest on the unpaid balance at the rate of 1.5 percent per month, commencing upon the expiration of a 30 day period from the date of the invoice.

**DRUM SHIPMENTS** - For less than truckload (LTL) quantities, there is a \$60.00 stop-off charge for pickup. For deliveries to more than one facility, there is an additional \$60.00 stop-off charge per each additional facility. We allow for one hour free loading time and one hour free unloading time for LTL shipments; and two hours free loading time and two hours free unloading time for truckload shipments. Detention will be charged at a rate of \$12.50 per quarter hour thereafter.

**BULK SHIPMENTS** - Waste materials shipped in bulk tank trucks sometimes require a tank washout, and/or physical removal of high solids residue that does not come out of the truck at unloading. The Generator will be advised of this as it occurs and the Generator will be responsible for all bulk tank cleanout charges for labor, materials and sludge disposal.

TONAWANDA ENVIRONMENTAL CORP.

July 8, 2002

Mr. Chip Sumner  
Sumner Finishing  
140 East Street  
Honeoye Falls, NY 14472

Dear Mr. Sumner

Tonawanda Environmental Corporation is pleased to present this proposal for the packaging, transportation and disposal of obsolete (lab pack) chemicals at your facility at 1237 East Main Street, Rochester, New York. Our personnel will complete the following tasks:

1. We will segregate, package, label and otherwise prepare for shipment all of the materials identified on your waste inventory. These activities will be in compliance with all state and federal regulations.
2. We will complete all required paperwork including packing slips for each container and shipping manifests.
3. We will transport the wastes to the disposal facility via our fully permitted and insured transportation group.
4. We will dispose of the wastes in a manner prescribed by state and federal regulations. Disposal will be accomplished at CWM Chemical Services in Model City, New York, Philip Services and Michigan Disposal in Detroit, Michigan.

Based on your inventory, which is enclosed and incorporated into this proposal, our firm price for the project is \$12,950.00, excluding applicable taxes, i.e. disposal taxes, and New York State sales tax. *\$ 11,500.*

As per federal regulations, Tonawanda Environmental Corporation does not accept and cannot handle radioactive or biologically active materials.

Mr. Chip Sumner  
Sumner Finishing  
July 8, 2002  
Page 2

The prices quoted herein are firm for 30 days from the date of this proposal. This quotation incorporates our Terms and Conditions which are attached, and we respectfully request that you signify your acceptance with both a formal purchase order as well as your signature on this quotation. Terms for this project will be cash on delivery.

We sincerely appreciate the opportunity to present this proposal and look forward to participating in your waste management program.

Sincerely,

Carl J. Andrews  
Vice President

TONAWANDA ENVIRONMENTAL CORP.  
TERMS AND CONDITIONS

Following are the general terms and conditions by which Tonawanda Environmental Corp. (TEC) offers its waste management services. These conditions are offered in conjunction with a firm letter of quote, which references specific waste materials and/or transportation offered.

**ACCEPTANCE** - TEC certifies that it has obtained disposal approval for your wastes as listed, and that the disposal facility listed has the required permits and existing capacity to handle your waste materials as quoted.

**PACKAGING** - All drum containers used to ship wastes must be via container approved by DOT/EPA for waste transport and must be properly sealed and free of any exterior residues. Drums must be labeled by law. (Quotes reference 55 gallon drums where drums are listed.)

**ENVIRONMENTAL FEES/TAXES** - All legislated fees, surcharges, taxes and related charges levied for the transport and/or disposal of the listed waste material(s) will be so invoiced to the generator including retroactive adjustments for same.

**NON-CONFORMING/OFF-SPECIFICATION WASTE** - All pricing and services herein stated are based upon the waste materials being as represented, identified and/or specified to Tonawanda Environmental Corp. by the generator. Any deviation from the waste material representation, identification or specification will deem the material non-conforming/off-specification. Title for such non-conforming/off-specification shall at all times remain with the generator. All charges associated with handling, processing and/or returning any non-conforming/off-specification waste material shall be the responsibility of the generator. These charges may include TSDF rejection fees, out of route mileage charges, standard drum transportation and stop charges. Waste will be returned at transporter's convenience.

**RIGHTS RESERVED** - TEC reserves the right to decline to accept for collection, transportation, treatment or disposal any waste which, in its judgment, it cannot transport, treat or dispose of in a lawful manner or without risk of harm to public health or the environment or which cannot be handled economically due to a change in disposal, treatment, charges or sites, governmental regulations or other factors beyond the control of TEC.

**WEIGHT LIMITATIONS** - Since legal allowable load weight limits change depending on equipment variances and by state, TEC reserves the right to refuse for transport any load which is determined to be overweight at the time of pickup, until correction is made to adjust the weight to comply with requirements. It is TEC's responsibility to determine maximum allowable load limitations per shipment and advise the generator of any required adjustments needed to bring the load into weight compliance prior to shipment. Generator is responsible for removal of excess product and applicable demurrage charges.

**PAYMENT TERMS - NET 15 DAYS (US FUNDS)** - Customer agrees to make payment to the office of TEC in the amount as specified on the invoice rendered within 15 days after the date of invoice. All disputes involving items for charges on the invoice must be submitted to TEC in writing within fifteen (15) days from the date of invoice. In the event TEC has not received payment within 15 days after the date of invoice or written notification of disputed items or charges within fifteen (15) days from the date of invoice, customer agrees to pay interest on the unpaid balance at the rate of 1.5 percent per month, commencing upon the expiration of a 30 day period from the date of the invoice.

**DRUM SHIPMENTS** - For less than truckload (LTL) quantities, there is a \$60.00 stop-off charge for pickup. For deliveries to more than one facility, there is an additional \$60.00 stop-off charge per each additional facility. We allow for one hour free loading time and one hour free unloading time for LTL shipments; and two hours free loading time and two hours free unloading time for truckload shipments. Detention will be charged at a rate of \$12.50 per quarter hour thereafter.

**BULK SHIPMENTS** - Waste materials shipped in bulk tank trucks sometimes require a tank washout, and/or physical removal of high solids residue that does not come out of the truck at unloading. The Generator will be advised of this as it occurs and the Generator will be responsible for all bulk tank cleanout charges for labor, materials and sludge disposal.

## 1.0 Introduction and Objectives

LaBella Associates, P.C. ("LaBella") was retained by Scott Fedder to conduct a Phase II Environmental Site Assessment (ESA) at the Fedder Industrial Park located at 1237 East Main Street, Rochester, Monroe County, New York (hereinafter referred to as the "Site"; located as shown on Figure 1).

The Phase II ESA was conducted as a followup to LaBella's Phase I ESA, which identified several Recognized Environmental Conditions on the property. The Phase II was intended to investigate potential contamination at specific locations based on historical Site activities.

## 2.0 Project Background and Work Scope

A Phase I ESA was completed at the Site by LaBella. The findings of the Phase I ESA were summarized in our report entitled "Phase I Environmental Site Assessment, Fedder Industrial Park, 1237 East Main Street, Rochester, New York," dated January 19, 2004. The Phase I ESA identified the following Recognized Environmental Conditions (RECs):

- *On-Site Hazardous Substance, Petroleum, Chemical Usage/Storage/Disposal*
  - Approximately fifteen 55-gallon drums were observed scattered throughout the first floor of Building #4. Some of the drums appeared to be empty and others appeared to contain a liquid product. A petroleum-like product appeared to have leaked from one of the drums inside the building.
  - The Site formerly housed coal and coal ash that were associated with the former power plant at the Site at Building #4. In addition, there is currently an uncovered coal pile present on the west side of Building #5 that reportedly is used for a small foundry operation inside Building #5. The presence of a former coal power plant and historic storage of coal or coal ash could have resulted in the leaching of petroleum hydrocarbons and metals into soil and groundwater.
  - An apparent aboveground storage tank (AST) was observed adjacent to a storage shed in the southwest corner of the Site. The AST appears to be contained in a cinder block structure and could not be thoroughly inspected. The contents of this former AST are unknown.
  
- *On-Site Petroleum Storage*
  - A 12,000-gallon underground fuel oil tank appears to exist adjacent to the outside south exterior wall of Building #4 under a concrete pad. The tank was apparently installed in approximately the 1940s and Site personnel indicated the tank was reportedly closed in place, however documentation of that closure is not available. In addition, two other underground tanks may be located adjacent to this tank based on historic Sanborn Fire Insurance and Site maps. Based on the age of these tanks, the lack of information relating to tightness testing, and the potential for the tanks to have adversely impacted the subsurface, their presence represents a REC.

- A historic map of the site dated 1919 indicated gasoline drums were stored in a former building located near the southeast corner of Building #4. Further details on this drum storage were not found.
- *Off-Site Petroleum and Chemical Bulk Storage and Major Oil Storage Facilities*
  - Former Gas Station, 1275 East Main Street: This facility was located adjacent to the east of the Site at the southeast corner of Palmer and East Main Street, and appears to have been utilized as a gas station from the 1940s to the 1980s. Although no active spills were found to be listed for this property, based on the age of the facility and the proximity of this petroleum bulk storage facility to the Site, this site is considered to represent a REC due to the potential for migration of contaminated groundwater.
  - Tire Shop, 1233 East Main Street: According to Sanborn Fire Insurance Maps and City of Rochester Directories, an underground tank(s) was located adjacent to the west of the Site, approximately 30 feet west of Building #4 at the Site as shown on the Sanborn Map. Although no active spills were found to be listed for this property, based on the age of the facility and the proximity of this petroleum bulk storage facility to the Site, this site is considered to represent a REC due to the potential for migration of contaminated groundwater.
  - Laidlaw Transit, Inc., 1185 East Main Street: This facility is located west and adjacent to the Site. According to the New York Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) Facility Information Report Form, this facility has an active capacity of 10,275 gallons and stores diesel fuel and lube oil. At the time of the 2003 Phase I ESA, according to the NYSDEC Active Spills Listing, there were three closed and one active listed spill on file with the NYSDEC. The active listed spill, #9515421, indicated that soil and groundwater contamination was encountered after a tank tightness test failed and an underground storage tank was removed. Approximately 4,200 tons of contaminated soil appears to have been removed and disposed of off-site. A check of the current status of Spill File #9515421 indicates it was closed on May 27, 2009. However, based on the proximity of this petroleum bulk storage facility to the Site and that several spills were formerly listed for this facility, the potential for adverse impacts to the Site should be evaluated.
- *Historical Use Information Regarding the Property*
  - Based on review of a site map dated December 5, 1914 and a Sanborn Fire Insurance Map dated 1911/1912, it appears that the adjacent property to the west of the site was formerly the location of The Rochester Fireworks Company. The maps indicate the area immediately to the southwest of the Site included several sheds and at least one was labeled "powder storage." Because fireworks have been known to contain mercury and other metals, this represents a REC.

Since over six years have elapsed since the Phase I ESA was performed, LaBella performed a site walkover, accompanied by Mike Wolfe on June 25, 2010 to update observations made previously. Based on that walkover, the following other potential environmental conditions were observed:

- Mr. Wolfe indicated that the area in the vicinity of the loading dock on the eastern side of the Laidlaw building (west of Fedder Building #5) was historically used for drum storage of unknown liquids from operations at Laidlaw.
- Mr. Wolfe also indicated an aboveground petroleum storage tank had been removed from the south end of the site adjacent to Building #1. The apparent concrete foundation of the tank is still visible.
- The condition of the interior of Building #4 is apparently largely the same as it was during the time of the 2004 Phase I ESA, with the following exceptions:
  - Some of the drums that were present in 2004 have been removed, however those were only empty drums removed by a scrap dealer. Several drums containing unknown materials remain. The drums are rusty, typically have an oily residue on the outside
  - The roof of the building is badly deteriorated, and much of the former powerhouse equipment, stored materials and the floor are covered in rust and debris.

Based on the RECs and other potential environmental conditions identified above, Fedder requested that LaBella Associates investigate the potential for adverse environmental conditions with regard to these areas of the site. The work scope identified in our proposal included subsurface investigations in the vicinity of these locations.

### **3.0 Field Investigation Summary**

A subsurface utility stakeout was arranged with the Underground Facilities Protection Organization (UFPO) to locate any underground public subsurface utilities servicing the Site property.

Sixteen soil test borings (designated GP-01 through GP-16) were performed on July 1-2, 2010 using a track-mounted Geoprobe® direct-push sampling system to depths ranging from 5 to 12 ft below ground surface (bgs). The locations of the test borings and monitoring wells are shown on Figure 2. Copies of the soil test boring logs prepared by LaBella are included in Appendix 1. It should be noted that Geoprobe drill rig access to Building #4 was not feasible so no borings were drilled inside the building.

The explorations were performed by TREC Environmental Services of Spencerport, New York under LaBella observation. Four groundwater monitoring wells were installed (designated MW-1 through MW-4) were installed in borings GP-01, GP-02, GP-04, and GP-06, respectively. However, only well MW-4 took on sufficient groundwater to facilitate groundwater sampling.

The Geoprobe® unit utilizes a 4 ft-long macro-core sampler with disposable polyethylene sleeves. Soil cores are retrieved in 4 ft sections and can be cut from the polyethylene sleeves for observation, field screening, and sampling. The macro-core sampler was decontaminated between samples and borings using analconox and water solution.

Field Screening for presence of volatile organic compound (VOC) presence was performed for each sample with a photoionization detector (PID). PID readings were recorded on the test boring logs (Appendix 1), and a summary of the results of the screening are presented and discussed in the next section.

A soil sample was also obtained beneath the floor slab in Building 4, in the vicinity of the stored drums. The sample was obtained by coring the slab with an electric core drill, and hand-sampling the soil to a depth of about 6 inches below the slab. The corehole and soil were screened with the PID. The floor slab was re-sealed with concrete upon completion of sampling.

## **4.0 Results**

### **4.1 Site Geology and Hydrogeology**

The test borings encountered approximately six inches of asphalt and crushed stone or sand and gravel at the surface. Underlying this was a variable deposit of fill soils or apparently disturbed natural soils that consisted of silt or sandy silt with variable amounts of gravel. The test borings encountered equipment refusal at depth ranging from 6.2 to 12.3 ft bgs. This is generally interpreted to likely be the top of bedrock; however the shallower refusals may also have been in very dense granular soils overlying bedrock.

Layers of ash and cinders were also encountered in several of the test borings at depths ranging up to 9.5 feet below ground surface (bgs). The ash was generally described as black fine-sand sized and the thickness where encountered ranged from a few inches to approximately one ft. A layer of black organic material was encountered in boring GP-01 at a depth of approximately 4 ft. and a layer of black material was also encountered from approximately 9.5 to 10.5 ft. Soil encountered beneath the Building 4 floor slab at the location where the slab was cored was generally a mixture of gravel, sand and silt. This soil appeared to be stained with oil. This is discussed in further detail in Section 4 below. An existing hole in the floor slab was observed approximately 15 ft north of the cored location. That location was also screened with a PID, and the soil was visually characterized, as described below.

Natural soils underlying the fill materials consisted primarily of lacustrine sandy Silt to silty SAND, with some interbedded fine to coarse gravel.

Moist to wet soils were encountered in the test borings at depths ranging from approximately 8 to 11 feet bgs; however only one of the monitoring wells installed accumulated appreciable groundwater. This indicates the water table is generally at or below the top of bedrock, and water in the overburden may exist only as variable "perched" zones.

### **4.2 Field Screening Results**

The following table lists the test borings and summarizes PID readings obtained from each sample:

### Summary of Soil PID Readings

Test Boring/Sample Location ID	Sample Interval (depth in ft)					
	0-2	2-4	4-6	6-8	8-10	10-12
GP-01	0	0	0	0	0	0
GP-02	0	0.2	0	0	0	0
GP-03	0	0	0	0	NA	NA
GP-04	0	0.4	0	0	0	0
GP-05	0	0	0.3	0	NA	NA
GP-06	0	0	0	0	0	0
GP-07	0	0	0	NA	NA	NA
GP-08	0	0	0	0	0	0
GP-09	0	0	0	0	0	0
GP-10	0	0	0	0	0	NA
GP-11	0.2	0	0	0	0	0
GP-12	0	0	0	0	0	0
GP-13	0	0	0	NA	NA	NA
GP-14	0	0	0	0	0	NA
GP-15	0	0	0	0	0	0
GP-16	0	0	0	0	0	NA
Oil Drum Stain Area (under slab)	110	NA	NA	NA	NA	NA

*Notes:*

1. All PID readings were collected utilizing a Minirae 2000 photoionization detector and are expressed in parts per million.
2. The PID screening is performed as a method of determining general presence or absence of VOCs in soil, and to provide a basis for selecting samples for laboratory analysis. The readings obtained provide only an indication of the relative levels of VOC presence in the soil, and are not considered to be a direct quantization of actual soil VOC concentration.
3. Readings shown represent the highest value observed in a given sample interval.
4. "NA" - denotes boring not completed to above listed depth

The screening results summarized in the table above are not indicative of significant presence of VOCs in soil at the test boring locations, with the exception of the sub-slab sample obtained in Building 4, where a reading of 110 ppm was obtained in the upper 6 inches of soil. This soil was also observed to be stained with apparent oil and a strong petroleum odor was present. Soil from an existing hole in the slab a few feet north of the core location was observed to be a gray coarse to fine Sand with fine gravel; PID screening of the soil did not indicate the presence of VOCs.

#### 4.3 Laboratory Analytical Results

LaBella collected and submitted ten soil samples to evaluate the subsurface conditions in the areas of the identified RECs. One water sample was also collected from well MW-4. The following table lists the analyses that were performed on the submitted samples:

**Summary of Laboratory Analyses  
Performed on Each Sample**

Sample ID (depth)	REC/AOC	TCL & STARS VOC <sup>(1)</sup>	STARS VOC <sup>(1)</sup>	TCL SVOCs <sup>(2)</sup>	STARS SVOC <sup>(2)</sup>	PCBs <sup>(3)</sup>	RCRA Metals <sup>(4)</sup>
GP-02 (7-8')	Petroleum UST Area		X		X		
GP-03 (5-6')	On-site coal/ash storage						X
GP-04 (3-4')	On-site coal/ash storage	X			X	X	
GP-07 (2-3')	Powder storage Area	X			X		X
GP-08 (9-10')	AST location	X			X		
GP-10 (6-7')	Onsite coal/ash storage	X		X			X
GP-11 (9.5-10.5')	Petroleum UST Area/ Onsite coal/ash storage		X		X	X	X
GP-12 (8-10')	Offsite petroleum storage/ Onsite exterior drum storage	X			X	X	X
GP-14 (8-8.5')	Former AST		X		X		
GP-15 (8-8.5')	Bldg 4 drums				X	X	
Oil Drum Stain (0-0.5')	Bldg 4 drum storage		X		X		
MW-4 (groundwater sample)	Current and Former ASTs	X			X		

Notes:

1. REC/AOC – indicates Recognized Environmental Condition/Area of Concern
2. Soil and water samples were analyzed for Target Compound List (TCL) and/or Spill Technology and Remediation Series (STARS) Volatile Organic Compounds (VOCs) using United States Environmental Protection Agency (USEPA) Method 8260B.
3. Soil and water samples were analyzed for TCL and/or STARS Semivolatile Organic Compounds (SVOCs) using USEPA Method 8270C.
4. Soil samples were analyzed for Polychlorinated Biphenyls (PCBs) using USEPA Method 8082.
5. Soil samples were analyzed for Resource Conservation and Recovery Act (RCRA) Metals except mercury by USEPA Method 6010B and for mercury by USEPA Method 7471A.

The analytical results for the soil samples and groundwater sample are tabulated in Tables 1 through 6. The results are compared to the NYSDEC Technical and Administrative Guidance Memorandum (TAGM) 4046 Recommended Soil Cleanup Objectives. The analytical results for the groundwater sample were compared to the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 – *Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations* dated June 1998.

## 5.0 Discussion of Findings and Conclusions

Soil: As discussed above, field screening of samples did not indicate the presence of significant VOC presence in the soils at the sampling locations, with the exception of the sample taken beneath the Building 4 floor slab. That sample location was noted to be oil-stained and strong petroleum odors were present.

As indicated in Tables 1 and 3, VOCs or PCBs were not detected in any of the soil samples from the test borings. The sample from beneath the floor slab in Building 4 contained one VOC (1,3,5-trimethylbenzene, a common component of gasoline and other petroleum products) and one SVOC (Naphthalene, a common oil-related compound). Although these compounds were present at detectable levels their concentrations were below the NYSDEC TAGM 4046 recommended soil cleanup objectives (SCOs).

As indicated in Table 2, sample GP-04 (3-4') had an estimated ("J"-qualified data) concentration of the SVOC benzo(a)pyrene of 140 parts per billion (ppb). The TAGM 4046 SCO for this compound is 61 ppb or the Method Detection Limit, which for this sample is 400 ppb. As such, this detection is not considered an exceedence. Other SVOC compounds were detected in several samples at estimated levels (below the method detection limit) but did not exceed SCO values. This distribution and occurrence of SVOCs is typical of urban fill materials.

As indicated in Table 4, samples GP-07 (2-3') and GP-10 (6-7') had concentrations of mercury of 0.17 and 0.52 parts per million (ppm), respectively. These levels exceed the TAGM 4046 SCO of 0.1 ppm. GP-07 (2-3') was a sample of ash and cinders that was typically encountered in several test borings. This indicates that the mercury found in this sample is likely related to the ash presence and not a result of off-site contamination from the former fireworks operation on the adjacent property described above. GP-10 (6-7') was a sample of soft, moist, black soil that had no evidence of petroleum odor and no indication of VOC presence from field screening. The source of elevated mercury in this sample is not apparent.

Groundwater: As discussed above, only well MW-4 (located in the southwest corner of the Site) produced a volume of groundwater sufficient for sampling. As shown on Tables 5 and 6 VOC or SVOCs were not present at concentrations at or above the method detection limit in this sample.

In summary, the potential RECs identified in the Phase I ESA and the additional potential environmental issues identified during the recent Site walkover have been further investigated as part of this study. The data are generally not indicative of contaminant presence in soil or groundwater at the explorations locations, with following exceptions:

- Sub slab soil beneath Building 4. Although the sample obtained did not contain petroleum-related compounds at levels in excess of the NYSDEC SCOs, petroleum presence was apparent based on observed staining and PID screening results. This petroleum presence appears to be a result of leaking drums stored in the building. The extent of this presence could not be thoroughly characterized within the scope of this investigation.

- Fill soils at locations GP-7 and GP-10. Mercury was present in fill soils at levels exceeding the NYSDEC TAGM 4046 SCOs.

Given the long history of the site and usage as an industrial facility it is possible that impairment may be present at other locations not specifically studied during this investigation.

## **6.0 Recommendations**

- The drums containing unknown materials that are located in Building #4 represent an environmental liability, and as such, should be sampled and their contents properly disposed in accordance with applicable regulations.
- Additional investigation of soils beneath the building 4 floor slab are recommended to more thoroughly characterize the presence of apparent petroleum-impacted soils beneath the building. We recommend that measures be taken to facilitate access to the interior for a small track-mounted Geoprobe drill rig that can drill multiple locations within the building to characterize the nature and extent of the apparent oil presence.
- The fuel Oil UST that reportedly still exists on the south side of Building #4 should be opened, if possible and assessed to confirm that it has been properly closed-in-place (i.e. cleaned and filled with an inert material such as sand or concrete). If the tank is found to not be properly closed, any remaining petroleum product or sludge, if present should be removed and the tank should then be removed or properly closed-in-place, in accordance with NYSDEC Petroleum Bulk Storage regulations.
- The presence of mercury in two of the soil samples at levels in excess of NYSDEC cleanup objectives does not appear to represent a critical environmental issue, since metals in unsaturated soils underlying an area covered with pavement are not generally mobile. However, if future development activities at the site involve potential excavation and disturbance of soils at these locations, measures should be taken to properly handle or dispose of the material to prevent inadvertent exposure to mercury.

WATER LEVEL DATA			DEPTH (FT)			NOTES:
DATE	TIME	ELAPSED TIME	BOTTOM OF CASING	BOTTOM OF BORING	GROUNDWATER ENCOUNTERED	
						Well MW-3 installed at this location had no water recovery. Tried re-drilling the hole but only went down another 4". Still no water recovered from this well..

**GENERAL NOTES**

- 1) STRATIFICATION LINES REPRESENT APPROXIMATE BOUNDARY BETWEEN SOIL TYPES, TRANSITIONS MAY BE GRADUAL.
- 2) WATER LEVEL READINGS HAVE BEEN MADE AT TIMES AND UNDER CONDITIONS STATED, FLUCTUATIONS OF GROUNDWATER MAY OCCURE DUE TO OTHER FACTORS THAN THOSE PRESENT AT THE TIME MEASUREMENTS WERE MADE

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received.

All applicable NELAC or USEPA CLP requirements have been met.

Mitkem Laboratories is accredited under the National Environmental Laboratory Approval Program (NELAP) and is certified by several States, as well as USEPA and US Department of Defense. The current list of our laboratory approvals and certifications is available on the Certifications page our web site at [www.mitkem.com](http://www.mitkem.com).

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

### **Project Narrative**

This data report includes the analysis results for eleven (11) samples that were received from LaBella Associates, P.C. on July 3, 2010. Analyses were performed per specification in the project's contract and the Chain of Custody form and discussion with the client. For reference, a copy of the Chain of Custody form and the Mitkem Sample Log-In form are included for cross-referencing the client sample ID and laboratory sample ID.

Volatile organic analyses were performed by method SW8260. Surrogate recoveries were within the QC limits. Spike recoveries for the laboratory control samples were within the QC limits.

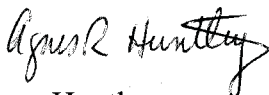

Semivolatile organic analyses were performed by method SW8270. Surrogate recoveries were within the QC limits with the exception of low recovery of 2-fluorobiphenyl in samples GP-07 2'-3', GP-14 and GP-15. Spike recoveries for the laboratory control samples were within the QC limits.

PCB were performed by method 8082. Surrogate recoveries were within the QC limits. Spike recoveries were within the QC limits in the lab control samples.

Metals analysis was performed by method SW6010 and mercury analysis was performed by method SW7471. Spike recoveries were the QC limits in the laboratory control samples. Arsenic was detected in method blank MB-52842 above the method detection limit but below the reporting limit. Arsenic was also detected in the associated samples at a concentration that is at least ten times greater than the concentration in the blank, indicating that laboratory contamination did not significantly impact these samples.

No other unusual occurrences were noted during sample analyses.

This data report has been reviewed and is authorized for release as evidenced by the signature below.

 Responding to: Jennifer Emerson

Enough sample to analyze for GP-12 10'3". Do not  
 need third bottle. GP-07 (5-6') was sent  
 by accident. do not need.

**Mitkem Action Taken:**

Dispose of GP-07 (5-6'). Use  
 two bottles for all analyses for sample GP-12

**Subject:** RE: Samples Received 7/3

Hi Jennifer,

Sorry for the mix-up. For GP-12, if there is enough sample to analyze for all requested compounds, please disregard the note that there are 3 samples. If there is not enough sample, please let me know ASAP. GP-07 (5-6') must have been sent by accident. You should also have GP-07 (2-3'). If you do have GP-07 (2-3'), please disregard GP-07 (5-6'). If you don't have GP-07 (2-3'), please let me know ASAP.

The project is #210479, 1237 East Main Street, Fedder Industrial Park. Please let me know if you need any additional information.

Thanks,  
Jen

**Subject:** Samples Received 7/3

Hi Jen,

We received samples on Saturday and there were some issues with the bottles. Sample GP-12 10'3" has three bottles listed on the chain of custody. We are missing sample bottle 2 of 3. We have bottles 1 of 3 and 3 of 3. We also received a bottle labeled GP-07 (5-6') collected 7/1/10 at 7:50 for RCRA Metals 6010 & 7470. This sample is not listed on the chain and doesn't match any information for the samples listed on the chain. Do you want us to add this sample and test for RCRA 8 Metals? Also, the chain doesn't list what project these samples are for. Are they for Standby?

Thank you,

## Analytical Report Cover Page

### *LaBella Associates*

For Lab Project # 10-3350

Issued August 23, 2010

This report contains a total of 4 pages

The reported results relate only to the samples as they have been received by the laboratory.

Any noncompliant QC parameters having impact on the data are flagged or documented on the final report.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of frequently used data flags and their meaning:

**"ND" = analyzed for but not detected.**

**"E" = Result has been estimated, calibration limit exceeded.**

**"Z" = See case narrative.**

**"D" = Duplicate results outside QC limits. May indicate a non-homogenous matrix.**

**"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.**

**"B" = Method blank contained trace levels of analyte. Refer to included method blank report.**

## 1.0 Introduction and Objectives

LaBella Associates, P.C. ("LaBella") was retained by Scott Fedder to conduct a Supplemental Phase II Environmental Site Assessment (ESA) at the Fedder Industrial Park located at 1237 East Main Street, City of Rochester, Monroe County, New York (hereinafter referred to as the "Site"; located as shown on Figure 1).

The Supplemental Phase II ESA was conducted as a followup to LaBella's Phase I ESA and Preliminary Phase II ESA, which investigated several Recognized Environmental Conditions on the property. The Supplemental Phase II ESA was intended to investigate potential contamination beneath the floor of Building #4 in the vicinity of several former drums of unknown material within the building, and to access the fuel oil Underground Storage Tank (UST) that reportedly still exists on the south side of Building #4 to confirm that it was closed-in-place and filled with an inert material.

## 2.0 Project Background and Work Scope

The Phase I ESA identified several Recognized Environmental Conditions (RECs) at the Site. In addition, LaBella performed a site walkover, accompanied by Mike Wolfe on June 25, 2010 to update observations made previously. Based on the RECs and other potential environmental conditions identified during the site walkover, Fedder requested that LaBella Associates investigate the potential for adverse environmental conditions with regard to these areas of the site. The work scope identified in our proposal included subsurface investigations in the vicinity of these locations.

The Preliminary Phase II ESA included the advancement of sixteen (16) soil test borings (designated GP-01 through GP-16) on July 1-2, 2010 using a track-mounted Geoprobe® direct-push sampling system to depths ranging from 5 to 12 ft below ground surface (bgs). Four (4) soil borings (GP-01, GP-02, GP-03, and GP-04, respectively) were converted into shallow overburden groundwater monitoring wells (MW-1 through MW-4). Only monitoring well MW-4 generated a sufficient amount of groundwater to facilitate groundwater sampling.

A soil sample was also obtained beneath the floor slab in Building 4, in the vicinity of the stored drums, that were noted in the prior assessment. The sample was obtained by coring the slab with an electric core drill, and hand-sampling the soil to a depth of about 6 inches below the slab. The corehole and soil were screened with the PID. The floor slab was re-sealed with cement upon completion of sampling.

A total of ten (10) soil samples and one (1) groundwater sample were submitted for laboratory analysis for constituents of concern to evaluate subsurface conditions in the locations identified as potential environmental concerns in the Phase I ESA and site walkover. Of the ten soil samples submitted for laboratory analysis, none were reported to contain volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), or polychlorinated biphenyls (PCBs) above the Soil Cleanup Objectives (SCOs) included in NYSDEC Part 375-6.8(a) and Tables 2 and 3 of the NYSDEC Soil Cleanup Policy CP-51 (October 2010). The sub-slab sample collected beneath the floor of Building #4 was reported to contained one VOC (1,3,5-trimethylbenzene, a common component of gasoline and other petroleum products) and one SVOC (Naphthalene, a common oil-related compound). Although these compounds were present at levels below the NYSDEC SCOs, their detections indicate that a release of petroleum to the subsurface has occurred. The groundwater sample submitted for laboratory analysis was reported to

contain no VOCs or SVOCs above the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 – *Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations dated June 1998*.

The data gathered during the Phase II ESA were generally not indicative of contaminant presence in soil or groundwater at the explorations locations, with the exception of the sub-slab soil sample collected beneath Building #4. This sample contained minor petroleum-related compounds at levels below the NYSDEC SCOs. The minor presence of petroleum compounds appears to be a result of leaking drums stored in the building. The extent of this presence could not be thoroughly characterized within the scope of the Phase II ESA. As a result, further subsurface investigation was recommended in this location.

Additionally, the fuel Oil UST that reportedly still exists on the south side of Building #4 was not accessed as part of the Preliminary Phase II ESA and confirmation that it had been properly closed-in-place (i.e. cleaned and filled with an inert material such as sand or concrete) was also recommended.

### **3.0 Supplemental Phase II Environmental Site Assessment**

A subsurface utility stakeout was arranged with the Underground Facilities Protection Organization (UFPO) to locate any underground public subsurface utilities servicing the Site property.

Three (3) soil test borings (designated TB-1 through TB-3) were performed on April 4, 2011 using a track-mounted Geoprobe® direct-push sampling system to depths ranging from 11.8 to 12.2 ft below ground surface (bgs). The borings were completed in an around a sub slab soil sample that was collected beneath the floor of Building #4 and analyzed during the preliminary assessment that identified minor petroleum impacts to soil where drums were observed to be stored. The supplemental test borings (TB-1 to TB-3) were completed in a manner to assess whether drum storage inside Building #4 impacted the subsurface soils in this area of the Site. The locations of the test borings are shown on Figure 2. Copies of the soil test boring logs prepared by LaBella are included in Appendix 1. The explorations were performed by TREC Environmental Services of Spencerport, New York under LaBella observation.

The Geoprobe® unit utilizes a 4 ft-long macro-core sampler with disposable polyethylene sleeves. Soil cores are retrieved in 4 ft sections and can be cut from the polyethylene sleeves for observation, field screening, and sampling. The macro-core sampler was decontaminated between samples and borings using analconox and water solution.

Field Screening for presence of volatile organic compound (VOC) presence was performed for each sample with a photoionization detector (PID). PID readings were recorded on the test boring logs (Appendix 1), and a summary of the results of the screening are presented and discussed in the next section.

## 4.0 Results

### 4.1 Site Geology and Hydrogeology

The test borings encountered approximately six inches of asphalt and crushed stone or sand and gravel at the surface. Underlying this was a variable deposit of fill soils or apparently disturbed natural soils that consisted of silt or sandy silt with variable amounts of gravel. The test borings encountered equipment refusal at depth ranging from 11.8 to 12.2 ft bgs. This is generally interpreted to likely be the top of bedrock.

Moist to wet soils were encountered in the test borings at depths ranging from approximately 8 to 11 feet bgs.

### 4.2 Field Screening Results

The following table lists the test borings and summarizes PID readings obtained from each sample:

**Summary of Soil PID Readings**

Soil Boring	Sample Depth						Sample Interval Analyzed	Analytical Parameters Analyzed
	0'-2'	2'-4'	4'-6'	6'-8'	8'-10'	10'-12'		
TB-1	0.0	0.0	0.0	0.0	6.4	7.9	8'-12'	STARS VOCs and STARS SVOCs
TB-2	0.0	0.0	0.0	0.0	0.0	0.0	NA	NA
TB-3	0.0	0.0	2.3	3.2	0.0	0.0	4'-8'	STARS VOCs and STARS SVOCs

*Notes:*

*All PID readings were collected utilizing a MiniRae Lite photoionization detector and represent total VOCs in ppm*

*---- denotes soil sample not collected for this interval*

*NA denotes Not Applicable*

The screening results summarized in the table above are not indicative of significant presence of VOCs in soil at the test boring locations.

### 4.3 Laboratory Analytical Results

LaBella collected and submitted two (2) soil samples to evaluate the subsurface conditions beneath the slab of Building #4. The table above lists the analyses that were performed on the submitted samples.

The analytical results for the soil samples are compared to the SCOs included in NYSDEC Part 375-6.8(a) and Tables 2 and 3 of the NYSDEC Soil Cleanup Policy CP-51 (October 2010)

## 5.0 Discussion of Findings and Conclusions

As discussed above, field screening of samples did not indicate the presence of significant VOC presence in the soils at the sampling locations. Additionally, no VOCs or SVOCs were detected in the two (2) soil samples submitted for laboratory analysis above the laboratory minimum detection limits.

At the time of the soil sampling field work, the UST reportedly located to the south of Building #4 was accessed and it was confirmed that it had been historically filled with what appeared to be concrete.

In summary, the subsurface beneath Building #4 and the fuel oil UST to the south of Building #4 have been further investigated as part of this study. The data are generally not indicative of contaminant presence in soil and the fuel oil UST appears to have been properly closed-in-place.

Based on the work performed, LaBella respectfully requests on behalf of Scott Fedder that the NYSDEC close Spill File #1006197, and issue a letter to Scott Fedder stating that No Further Action is required for the Site.

ENVIRONMENTAL SERVICES, INC.

## Analytical Report Cover Page

### **LaBella Associates**

For Lab Project # 11-1383

Issued April 14, 2011

This report contains a total of 6 pages

The reported results relate only to the samples as they have been received by the laboratory.

Any noncompliant QC parameters having impact on the data are flagged or documented on the final report.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of frequently used data flags and their meaning:

**"<" = analyzed for but not detected at or above the reporting limit.**

**"E" = Result has been estimated, calibration limit exceeded.**

**"Z" = See case narrative.**

**"D" = Duplicate results outside QC limits. May indicate a non-homogenous matrix.**

**"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.**

**"B" = Method blank contained trace levels of analyte. Refer to included method blank report.**

Commissioner

May 20, 2011

Mr. Scott Fedder  
P.O. Box 67222  
Rochester, New York 14609

Dear Mr. Fedder:

**Re: NYSDEC Spill # 1006197  
Fedder Industrial Park  
1237 East Main Street  
Rochester, Monroe County**

On May 11, 2011, this office received the Supplemental Phase II Environmental Site Assessment, prepared by LaBella Associates, for the above referenced spill location. Upon review of the aforementioned report and previously submitted information, the Department does not require additional remedial action at this time. This case has been removed from the Department's active files. However, be aware that this ruling does not preclude reactivation of this case should new information become available and/or an impact to receptors be discovered in the future.

If there are any questions or comments, feel free to contact me at either the above address or by telephone at 585-226-5438.

Sincerely,

Michael F. Zamirski, P.E.  
Environmental Engineer II  
Division of Environmental Remediation

cc: Seth Davis, LaBella Associates

### **CALLER REMARKS:**

Caller states approx. half gallon of muriatic acid leaked from a 1-gallon container (which was not labeled correctly) into a passenger vehicle owned by Mr. John Dodd, who just purchased the material from Rochester Standard Building Supply. HAZMAT team responded, found leaking container, and fire department flushed the car with water (parked on gravel/no ca basins around).

National School Bus  
East Main Street  
Rochester, N.Y.

90-00661  
April 19, 1990

May 16.

Excavation work - D. Das Construction  
Vac truck - Doemenmuth  
Contractor - Steve Saunders, El Jary Petroleum  
National Bus - Skip Georgia

Removal of 4000 gal underground storage tank - 2200, tank 0.074 gal

Top and side of tank open when I arrived - on fill port end free product noticed at base of tank. It was raining very hard and water was entering excavation from top of tank while draining in from the top. Product was very dark in color -

Soil conditions - 2-3 ft depth old Building - bricks  
Base of tank got into a sandy-clay. Believe this is clay bottom of tank. (containment layer).  
Soil from along side of tank had slight ~~tan~~ petroleum color.

During removal dig on opposite end of tank - soil slight color but no product noticed

As time went on and more rain fell, water came from beneath the tank and you noticed product & water along the entire length of tank. Clay acting as containment may have held product beneath the tank. Rain forced the product out. didn't soak in

worked from each opening in  
the top of the tank.

Tank was cleaned out using high pressure water - vac out with ~~truck~~ truck  
Tank purged using dry ice.

Tank pulled after lunch.

No dark product noticed as before. Brownish foam on the water.  
Probably caused by stirring up the water.

Using the vac truck removed and skimmed off the material

1-2 ft of water in hole - being held by clay -

Hand dig done into the base of ~~the~~ when tank sat - fill and (also  
this is where a hole was noticed in tank approx. 1/2 way up the  
side) soil was gray sandy <sup>(clay)</sup> ~~clay~~. No odor was noticed. 1-2 ft  
below bottom of tank.

Therefore <sup>no</sup> need for soil removal. Product that <sup>was</sup> ~~was~~ noticed contained  
by clay soil. (vac trucked need to remove) ~~to~~

~~It~~ Based on what was seen in excavation. No significant contamination  
problem. O.K. to backfill with no further action necessary.

---

**Petroleum Bulk Storage Applications**  
**First Student, Inc. – New York Facilities**  
**Strata Environmental Project Number 0028400**

Dear Staff Member:

On January 17, 2009, the company name of Laidlaw Transit, Inc. (Laidlaw) was changed to First Student, Inc. Enclosed are the revised Petroleum Bulk Storage Applications for the following Laidlaw facilities.

Facility Name	Street Address	City, State	PBS #
First Student #20646	8775 Alexander Road	Batavia, NY	8-600117
First Student #20058	575 Colfax Street	Rochester, NY	8-434590
First Student #20061	73 Bickford Street	Rochester, NY	8-601032
First Student #20059	75 Kane Drive	Rochester, NY	8-439223
First Student #20060	1185 East Main Street	Rochester, NY	8-439215

If you have any questions or require any additional information, please contact the undersigned at 865/539-2077. Best regards.

Sincerely,

STRATA ENVIRONMENTAL

Nan D. Cutshall, PE  
Environmental Engineer

**Petroleum Bulk Storage Application**  
**Laidlaw Transit Inc. – Rochester, New York Facilities**  
**Strata Environmental Project Number 0068400**

Dear Staff Member:

Enclosed are Petroleum Bulk Storage Applications for the renewal of the registrations for the following three facilities and a check in the amount of \$1,500 for payment of the associated fees.

Facility Name	Facility Address	PBS Number
First Student, Inc. (Former Laidlaw Transit Inc.)	575 Colfax Street Rochester, NY 14606	8-434590
First Student, Inc. (Former Laidlaw Transit Inc.)	1185 East Main Street Rochester, NY 14609	8-439215
First Student, Inc. (Former Laidlaw Education Services)	2458 Ridge Road East Rochester, NY 14622	8-439223

Please note that the parent company of First Student, Inc., FirstGroup America, has purchased Laidlaw Transit Services, aka Laidlaw Transit Inc. and Laidlaw Education Services. Therefore, the change of ownership was not due to a property transaction, and property deeds are not enclosed with the applications.

If you have any questions or require additional information, please contact the undersigned at (865) 539-2077, ext. 244. Thank you for your assistance.

Sincerely,

STRATA ENVIRONMENTAL

ENV REMEDIATION

Dear Regulator,

Enclosed are the results of recent testing performed at the following facility:

*Student Inc #2*  
FIRST-GROUP F020060  
1185 EAST MAIN STREET  
ROCHESTER, NY 14609

Testing conducted in accordance with paragraph 613.5(a)(6) of NYCRR. Technician is a certified Vacutect tank tester and/or a certified TLD-1 line tester in accordance with company protocol. Technician address on file at Tanknology corporate office: 11000 N. MoPac Expressway, Suite 500, Austin, TX 78759

Testing performed:  
IMPACT VALVE  
LEAK DETECTOR  
LINE TEST  
MONITOR CERTIFICATION

Sincerely,

*Dawn Kohlmeier*

Dawn Kohlmeier

**D. Results of Testing/Serviceing**

Software Version Installed: 11.02

Complete the following checklist:

<input checked="" type="radio"/> Yes	<input type="radio"/> No* <input type="radio"/> N/A	Is the <b>visual</b> alarm on the console operational?
<input checked="" type="radio"/> Yes	<input type="radio"/> No* <input type="radio"/> N/A	Is the <b>audible</b> alarm on the console operational?
<input type="radio"/> Yes	<input checked="" type="radio"/> No	Is the external <b>visual</b> overfill alarm (light unit) present?
<input type="radio"/> Yes	<input type="radio"/> No* <input checked="" type="radio"/> N/A	Is the external <b>visual</b> overfill alarm operating properly?
<input type="radio"/> Yes	<input checked="" type="radio"/> No	Is the external <b>audible</b> overfill alarm (light unit) present?
<input type="radio"/> Yes	<input type="radio"/> No* <input checked="" type="radio"/> N/A	Is the external <b>audible</b> overfill alarm operating properly?
%	<input checked="" type="checkbox"/> N/A	At what percent of tank(s) capacity is the external alarm programmed to trigger? <i>If different %between tanks, clarify in section E.</i>
<input checked="" type="radio"/> Yes	<input type="radio"/> No* <input type="radio"/> N/A	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="radio"/> Yes	<input type="radio"/> No* <input type="radio"/> N/A	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="radio"/> Yes	<input type="radio"/> No* <input checked="" type="radio"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? <i>(Check all that apply)</i> <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks <u>and</u> sensor failure/disconnection? <input type="radio"/> Yes; <input type="radio"/> No
<input type="radio"/> Yes*	<input checked="" type="radio"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="radio"/> Yes*	<input checked="" type="radio"/> No	Was liquid found inside any secondary containment systems designed as dry systems? <i>(Check all that apply)</i> <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

\* In Section E below, describe how and when these deficiencies were or will be corrected.

**E. Comments:**

**F. In-Tank Gauging / SIR Equipment:**

- Check this box if tank gauging is used only for inventory control.
- Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

**Complete the following checklist:**

<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Was accuracy of system product level readings tested?
<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Was accuracy of system water level readings tested?
<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Were all probes reinstalled properly?
<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

**G. Line Leak Detectors (LLD):**

- Check this box if LLDs are not installed.

**Complete the following checklist:**

<input checked="" type="radio"/> Yes	<input type="radio"/> No* <input type="radio"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input checked="" type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h.; <input type="checkbox"/> 0.2 g.p.h.
<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Was the testing apparatus properly calibrated?
<input checked="" type="radio"/> Yes	<input type="radio"/> No* <input type="radio"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="radio"/> Yes	<input type="radio"/> No* <input checked="" type="radio"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="radio"/> Yes	<input type="radio"/> No* <input checked="" type="radio"/> N/A	For electronic LLDs that are programmed for positive shut down, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="radio"/> Yes	<input type="radio"/> No* <input checked="" type="radio"/> N/A	For electronic LLDs that are programmed for positive shut down, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="radio"/> Yes	<input type="radio"/> No* <input checked="" type="radio"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input checked="" type="radio"/> Yes	<input type="radio"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

**H. Comments:**

DID OVERALL MONITOR SYSTEM TESTING PASS (Check One)? YES  NO   
INCONCLUSIVE

SPILL/ESC  
NYS DEC REGION 8

Dear Ms. Stevenson:

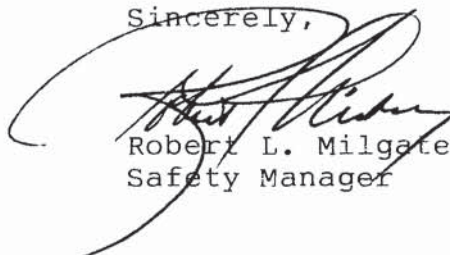

I am responding to two separate inquiries as regards to our locations as follows:

Tank 001 1185 Main Street East  
Capacity 4000 Removed 5/92  
See attached invoice from Eljay Petroleum Services, Inc.

Tank 001 575 Colfax Street  
Tank 002 Capacity 10,000 each  
See attached invoice from Eljay Petroleum Service, Inc.

I have enclosed additional information which hopefully will be of value in updating the status of our underground tanks.

Sincerely,

  
Robert L. Milgate  
Safety Manager

**TANK REMOVAL AND EXISTING TANK UPGRADE  
PROPOSAL**

Prepared For:

**NATIONAL SCHOOL BUS SERVICE INC.  
EAST MAIN STREET LOCATION  
ROCHESTER, NEW YORK**

Prepared by:

**ELJAY PETROLEUM SERVICES INC**

**Project No: EP0590NSBS059006**

**May 7, 1990**

Prepared By:

*Karen Suracusa*

Approved By:

*[Signature]*

ELJAY Petroleum Services Inc. is pleased to present the following proposal for your consideration. The bid is for the removal of the existing 4,000 gallon gasoline tank and the installation of various equipment to the existing 8,000 gallon diesel tank in order to bring the facility into compliance with all NYSDEC and USEPA regulations. Attached is a detailed breakdown of the individual items comprising this proposal.

REMOVAL OF 4,000 GALLON GAS TANK:

- ALL APPROPRIATE SAFETY PROCEDURES TO BE FOLLOWED
- DISCONNECTING AND DISPOSING OF ALL PIPING ASSOCIATED WITH THE TANK. (AS PRACTICAL)
- UNCOVERING THE TANKS
- PUMPING OUT ALL MATERIAL INSIDE THE TANKS
- RENDER THE INTERIOR ATMOSPHERE INERT
- PROPERLY CLEAN THE TANK INTERIOR
- PUMPING AND TRANSPORTATION OF THE FOLLOWING:
  - RESIDUAL MATERIAL INSIDE THE TANK
  - SLUDGE AND SCALE
  - WASH WATER AND CHEMICALS
- PROPER DISPOSAL OF ABOVE LISTED MATERIALS
- TRANSPORTATION AND PROPER DISPOSAL OF THE TANK
- BACKFILL AND COMPACT WITH SUITABLE FILL MATERIAL
- EDGE CUT AND REPAVE ALL EXCAVATED AREAS

TANK UPGRADE / 8,000 GALLON DIESEL:

- UNCOVER TANK
- REMOVE AND DISPOSE OF EXISTING STEEL PIPING
- REPIPE WITH NEW FRP PIPING
- DETERMINE PROPER CATHODIC PROTECTION SYSTEM FOR THE TYPE, COATING AND CONDITION OF THE EXISTING TANK
- INSTALL PROPERLY ENGINEERED CATHODIC PROTECTION SYSTEM
- PROVIDE ENGINEERING REPORT FROM AN OUTSIDE FIRM TO CERTIFY THE EFFECTIVENESS OF THE CATHODIC PROTECTION SYSTEM
- CONSTRUCT SMALL BUILDING TO HOUSE CATHODIC PROTECTION TRANSFORMERS AND TANK GAUGING EQUIPMENT (IF REQUIRED)
- INSTALL PETRO-VEND TANK GAUGING AND MONITORING SYSTEM
- BACKFILL AND COMPACT WITH SUITABLE FILL MATERIAL
- CONSTRUCT NEW CONCRETE PAD AND MANWAYS OVER THE TANK
- EDGE CUT AND REPAVE ALL EXCAVATED AREAS

TOTAL COST \$ 27,032

NOTES:

- 1) THIS BID DOES NOT INCLUDE THE HANDLING AND DISPOSAL OF ANY CONTAMINATED SOIL THAT MAY BE DISCOVERED.
- 2) THIS BID CONFORMS TO THE SPECIFICATIONS PROVIDED BY NATIONAL SCHOOL BUS SERVICE INC.
- 3) PROPOSAL PRICE IS EXCLUSIVE OF ANY APPLICABLE TAXES.
- 4) COST INCLUDES ALL PERMITS, FEES AND NOTIFICATIONS AS REQUIRED BY LAW.
- 5) AS DISCUSSED THE EXISTING GASOLINE PUMP WILL BE CONNECTED TO THE DIESEL TANK. ELJAY PETROLEUM WILL ATTEMPT TO SUPPLY LATE MODEL USED SUCTION PUMPS TO REPLACE BOTH OF THE EXISTING PUMPS. ELJAY WILL NOTIFY NATIONAL SCHOOL BUS AS TO THE AVAILABILITY AND COST OF THE PUMPS. INSTALLATION COST OF THE PUMPS IS INCLUDED IN THIS PROPOSAL.

We appreciate the opportunity to service your underground petroleum storage needs. If you have any questions or need further clarification please call us at your convenience.

Dear Ms. Walker:

Attached is the completed Petroleum Bulk Storage Application Form reflecting the removal of the underground storage tanks formerly located at our facility in Rochester, NY. The petroleum bulk storage ID number for the tanks removed was 226005.

The tanks were removed in September, 1987 by Valley Tank & Pump Services, Palmyra, NY. If additional information is needed I can be contacted at our Canastota, NY warehouse.

Sincerely,

A handwritten signature in cursive script that reads "Arlene Hosey".

Arlene Hosey

WEATHER:

INSPECTION NARRATIVE (Sketch, Discussions, Agreements, Observations):

I met with Fred Prince and Jany Gilbert of Nat. Sched Bus. I found a 50' trail of oil stain on pavement north from the dispenser to a low area. There was speedy dry spread on it. They said they had treated it several times already with sorbent when it happened in the morning.

They said they did not know of reporting requirements. I asked that they pick up the last absorbent before it rains.

The oil had not reached any catchbasin which was a distance away.

**DEC REGION:** 8 **SPILL NUMBER:** 9515421  
**SPILL NAME:** NATIONAL SCHOOL BUS **DEC LEAD:** MFZAMIAR

07/23/96 1030HRS; MZ ON SITE. L & O EXCAVATED UNDER OLD PUP ISLANDS . UNDER THE SOUTHERN ISLAND W/ SOME DIESEL CONTAMINATED SOIL . UNDER THE NORTH ISLAND WAS DIESEL CONTAMINATED SOIL MIXED WITH OLD GASOLINE CONTAMINATION . BOB MILGATE OF NAT'L SCHOOL BUS STATED THAT THERE USED TO BE GASOLINE TANKS IN THE AREA . CONTINUED TO EXCAVATE DOWN TO APPROX 9 FT BELOW GROUND SURFACE. WATER ENCOUNTERED AT APPROX 8 FT B.G.S. THE SOUTH PIT HAD A SLIGHT SHEEN ON THE WATER AND STAIN CLAY ON THE NORTH WALL . THE NORTH PIT HAD SOME PRODUCT ON THE WATER AND STAINED SOIL ON THE SII WALLS. MZ STATED TO MILGATE THAT EXTENT OF CONTAMINATION MUST BE DTERMINED AND THAT ONCE DETERMINED, A REMEDIAL PROPOSAL MUST BE SUBMITTED TO DEPT .

07/23/96 1530 HRS; MZ ON SITE WITH L & O MECH. PEA STONE DELIVERED SO L & O WILL INTALL A COUPLE OF 4" SLOTTED PVC WELLS IN OLD PUMP ISLAND EXCAVATION . NEW TANK TO BE DELIVERED ON 07-25-96. MILA LOUGHLIN OF OKAR TO LOOK INTO DEWATERING SOLUTION . MZ SUGGESTED THAT OKAR CHECK WITH MONROE CO PURE WATER REARDING TREATING AND DISCHARGING TO SEWER .

08/09/96 MZ ON SITE. NEW TANK IS INSTALLED AND THERE ARE 2 NEW PUMPS. THERE ARE 4 GROUNDWATER WELLS, 1 NEAR EACH PUMP AND 2 NEAR THE TANK. CONTAMINATED SOIL IS STAGED ON SITE AND IS COVERED WITH PLASTIC. MZ TO CONTACT NAT'L SCHOOL BUS REGARDING DISPOSAL OF SOIL AND ADDITIONAL INVESTIGATION OF SUBSURFACE CONT.

08/27/96 MZ SENT RESPONSIBILITY LETTER TO BOB MILGATE, NAT'L SCHOOL BUS SERVICE . LETTER REQUIRES SAMPLING OF WELLS ON SITE AS WELL AS DELINEATION OF SUBSURFACE CONTAMINATION .

09/11/96 MZ ON SITE TO CHECK ON SOIL PILE. SOIL PILE HAS BEEN REMOVED FROM SITE. MZ TO CONTACT NAT SCHOOL BUS.

09/16/96 MZ TELCON WITH BRIAN HABKIRK (NAT'L SCHOOL BUS - 647-9360). MZ DISCUSSED 8/28/96 LETTER TO MILGATE. HABKIRK STATED THAT OKAR WILL BE ARRANGING TO HAVE WELLS SAMPLED AS WELL AS ARRANGE FOR SUBSURFACE INVESTIGATION. HABKIRK TO CONTACT DEPT WHEN WORK IS SCHEDULED. HABKIRK STATE THAT SOIL PILE WAS TESTED AND DISPOSED OF . HABKIRK TO SUBMIT COPIES OF ANALYTICAL RESULTS AND DISPOSAL RECEIPTS.

09/18/96 MZ REC'D SOIL PILE ANALYTICAL RESULTS AND DISPOSAL RECEIPTS FOR 423 TONS OF LEAD CONTAMINATED SOIL . LETTER ALSO STATES THAT OKAR WILL BE SAMPLING WELLS AND THAT RESULTS WILL BE FORWARDED TO DEPT. ALSO STATED WAS THAT PROPOSALS WILL BE OBTAINED TO PERFORM SUBSURFACE INVESTIGATION.

7/14/97 NOTHING RECEIVED TO DATE. LETTER SENT TO HABKIRK.

7/31/97 DEPT REC'D SAMPLIG RESULTS FOR WELLS 1,2 AND 4. WELL #3 COULD NOT BE SAMPLED DUE TO LACK OF WATER.

11/18/97 LETTER SENT TO HABKIRK REGARDING SAMPLING OF WELL #3 AND SUBSURFACE INVESTIGATION PROPOSAL.

12/4/97 DEPT REC'D SUBSURFACE SITE INVESTIGATION PROPOSAL PREPARED BY GREEN SERVICE . MZ TELCOI WITH HABKIRK AND INFORMED HIM THAT PROPOSAL WAS ACCEPTABLE . HABKIRK OR GREEN TO NOTIFY DEPT WHEN WORK WILL START.

12/17/97 MZ REC'D MESSAGE FROM GREEN SERVICES THAT WORK WILL BEGIN ON 12/18/97.

7/20/98 MZ TELCON WITH JOHN SWANSON (SENTINEL TECH.) REGARDING FINDINGS OF SUBSURFACE INVESTIGATION. SWANSON TO CHECK WITH NATIONAL SCHOOL BUS RE : REPORT.

7/22/98 DEPT REC'D SUBSURFACE INVESTIGATION REPORT AND REMEDIAL PROPOSAL . PROPOSE TO USE IN-SI

BIO-REMEDIATION.

8/31/98 MZ SENT LETTER TO BRIAN HABKIRK (CC: JOHN SWANSON - SENTINEL TECH) REQUESTING SOME ADDITIONAL INFORMATION AND PROVIDE OTHER DEC COMMENTS .

1/17/08 MZ LEFT MESSAGE FOR BRIAN HABKIRK (585-647-9380) TO GET UPDATE ON WORK PERFORMED .

1/18/08 MZ TELCON WITH HABKIRK WHO STATED THAT HE WOULD ASK AROUND AND LOOK FOR THE FILE AND PROVIDE DEC WITH AN UPDATE .

6/2/08 MZ TELCON WITH HABKIRK WHO STATED THAT SINCE THEY BEEN BOUGHT BY FIRST STUDENT, THERE IS AN ENVIRONMENTAL COMPANY THAT WILL BE HANDLING ALL OF THEIR SITES . HABKIRK TO HAVE STRATA CONSULTING CONTACT ME TO GO OVER SITE .

6/3/08 MZ TELCON WITH GREG JERNIGAN (STRATA ) TO DISCUSS SITE. DEPT REQUIRES UPDATED GROUNDWATER INFO. STRATA TO DO WORK AND NOTIFY DEPT WHEN A DATE IS SET .

7/28/08 MZ ON SITE WITH JOSH BOLLING (STRATA0 AND JBL DRILLERS. INSTALLING SEVERAL MICROWELLS TO GET NEW GROUNDWATER DATA AS WELL AS SAMPLING EXISTING WELLS TO GET UPDATED DATA . PER BOLLING BORING S-P7 (ADJACENT TO FORMER P-7) HAD A DISTINCT PETRO ODOR AT APPROX 9 FT. (WATER AT 8-9 FT). S-P11, WHICH IS DOWNGRADIENT HAD NO ODOR NOTED. A PETRO ODOR WAS NOTED WHEN BAILING P-1 (ADJACENT TO UST). 2 ADDITIONAL WELLS TO BE INSTALLED AND 2 FORMER WELLS TO BE SAMPLED.

01/21/09 LIMITED GROUNDWATER INVESTIGATION RECEIVED FROM STRATA ENVIRONMENTAL .

SAMPLING RESULTS INDICATE LOW LEVEL RESIDUAL CONTAMINATION IN GROUNDWATER . BORINGS ALSO INDICATE ODORS IN THE SOIL IN THE SATURATED ZONE .

2/4/09 MZ TELCON WITH TIM RIDDLE AND GREG JERNIGAN (STRATA) TO DISCUSS SITE. BASED ON PAST DATA AND DATA OBTAINED DURING THE RECENT INVESTIGATION, THE DEPT WILL NOT REQUIRE ADD'L SITE WORK BUT WILL REQUIRE A SOIL AND GROUNDWATER MGMT PLAN BE PREPARED .

2/4/09 MZ EMAILED GUIDANCE TO RIDDLE AND TO FRANK LUCIANO (FIRST STUDENT).

05/26/09 SOIL AND GROUNDWATER MANAGEMENT PLAN RECEIVED FROM STRATA ENVIRONMENTAL . PLAN APPEARS ACCEPTABLE .

5/27/09 NFA LETTER SENT TO STEPHEN PUCKE (FIRST GROUP AMERICA - CINC, OHIO) WITH COPY TO KEVIN CRANE (STRATA). PAPER FILE REMOVED PER FILE RETENTION POLICY .

Mr. Zamiarski:

Per your request, enclosed is the Soil and Groundwater Management Plan prepared by Strata Environmental for the First Student, Inc. facility located at 1185 East Main Street, Rochester, New York. This Plan was prepared and will be implemented upon NYSDEC approval in order to attain site closure relative to the historic release (Spill # 9515421) from the former underground storage tank (UST) at the site.

If you have any questions or require any additional information, please contact the undersigned at 865/539-2077. Best regards.

Sincerely,

STRATA ENVIRONMENTAL

## SOIL AND GROUNDWATER MANAGEMENT PLAN

THIS SOIL AND GROUNDWATER MANAGEMENT PLAN (Plan) is prepared this 8<sup>th</sup> day of May 2009, by First Student, Inc. (First Student), 600 Vine Street, Cincinnati, Ohio 45202 (together with their successors and assignees, collectively "Owner").

WHEREAS: Owner owns certain real estate located at 1185 East Main Street, Rochester in the County of Monroe, New York. The geographic map coordinates for the facility are 43° 09' 38.28" North latitude and -77° 34' 48.91" West longitude. The location of the property is shown on a portion of the Rochester East, New York U.S.G.S. Topographic Map on Figure 1 (Attachment A).

WHEREAS: First Student is the operator of the property conducting school bus parking, maintenance, fueling and dispatching activities since purchasing the property in 2009. Petroleum bulk storage and dispensing equipment at the site currently consist of one 10,000 gallon capacity diesel underground storage tank (UST) located on the southwest portion of the property. The UST is constructed as a doubled-walled fiberglass-coated steel tank and is equipped with a Veeder Root TLS-300 automatic tank gauging system. Fuel is dispensed from two pump dispensers located approximately 40 to 60 feet northwest of the UST and are equipped with a PetroVend Automated Fueling Systems. See Figure 2 in Attachment A for a site map that shows site structures and location of petroleum dispensing and UST equipment.

WHEREAS: In 1996, a previous owner of the property, National School Bus Service, operated an 8,000 gallon capacity steel UST used to store diesel along with two dispensers and associated underground piping. On February 29, 1996, a tank tightness failure was reported to the New York State Department of Environmental Conservation (NYSDEC) and assigned Spill #9515421. The 8,000 gallon capacity UST and contaminated soil were removed in August 1996. Under oversight by the NYSDEC, the site was investigated by Green Services, Inc. (GSI) in 1996 and 1997. GSI reported in their January 12, 1998 Subsurface Investigation report that the results of laboratory analyses of soil samples were all either below the detectable limits of the analytical methods used or below Spills Technology and Remediation Series (STARS) guidance values for both volatile and semi-volatile organics. GSI showed that hydrocarbon impacted groundwater extended approximately 90 to 100 feet north of the former UST but remained on the subject property. Table 1 and 2 in Attachment B are summaries of soil and groundwater data obtained by GSI in 1996 and 1997. Figure 2 in Attachment A shows the locations of boring and monitoring wells installed by GSI.

WHEREAS: In September 2008, Strata Environmental Services, Inc. (Strata), on behalf of First Student, conducted an Environmental Site Assessment at the request of the NYSDEC to determine the level and extent of residual groundwater impact from the 1996 petroleum release. Strata installed four soil borings/temporary monitoring wells and sampled two previously installed monitoring wells (GSI, 1996). Strata submitted six groundwater samples for analytical testing of NYSDEC STARS list of petroleum constituents using the Environmental Protection Agency (EPA) Method 8021MS and 8270C and the NYSDEC Technical Administrative Guidance Manual: Determination of Soil Cleanup Objectives and Cleanup Levels (TAGM 4046). Strata concluded that contaminant concentrations in groundwater when compared to the original investigation concentrations demonstrate a significant decrease, and that natural attenuation is occurring at the site, which has resulted in the decrease of petroleum contaminants. Based on the apparent stabilization, decrease in extent of the contaminant plume and the reduction of contaminant concentrations at the leading edge of the plume, Strata recommended in

January 2009 that the site be allowed to naturally attenuate with no further actions required. Figure 2 in Attachment A is a site map that shows soil boring/sample locations, groundwater monitoring wells and known limits of impacted groundwater beneath the site. Table 3 in Attachment B is a summary of laboratory analytical results for groundwater samples obtained in 2008.

WHEREAS: The subject property is underlain by tan to brown silty clay, which transitions into a well graded medium to coarse grained sands with varying fractions of silt and silty clay. Groundwater was generally encountered at depths ranging from six to eight feet below ground surface with an approximate direction of groundwater flow to the north – northwest.

NOW THEREFORE, Owner, hereby, in consideration of analytical data obtained to date, nature and extent of residual petroleum impacted media beneath the study area, and other good and valuable consideration agrees to:

#### I. GENERAL PROVISIONS

1. Responsible Party. The Owner shall assume responsibility for the proper management of any disturbed/encountered soil or groundwater that has been impacted by petroleum products associated with the former UST incident.
2. NYSDEC Notification. The Owner shall notify the NYSDEC Spills Unit, if during any site work in the vicinity of the former UST project areas, impacted soil and/or groundwater is encountered above regulatory reporting thresholds.
3. Term. This Plan shall apply until the NYSDEC determines that the contaminants of concern are no longer present at the site or are below appropriate regulatory guidelines.
4. Modifications. This Plan shall not be amended, modified, or terminated except by written instrument executed between the NYSDEC and the Owner at the time of the proposed amendment, modification, or termination.
5. Notices. A copy of this Plan will be submitted to:
  1. New York State Department of Environment and Conservation  
6274 Avon-Lima Road  
Avon, New York 14414-9519
  2. New York State Department of Health  
Corning Tower  
Empire State Plaza  
Albany, New York 12237
  3. City of Rochester Code Enforcement  
30 Church Street  
Rochester, New York 14614

4. First Student, Inc.  
600 Vine Street, Suite 1400  
Cincinnati, Ohio 45202

Any party may change its address or the individual to whose attention a notice is to be sent by giving written notice in compliance with this paragraph.

## II. SOIL AND GROUNDWATER MANAGEMENT

1. The Owner shall:
  - a) Neither engage in nor allow excavation of soil anywhere in the potentially affected area of the former UST as depicted on Figure 2 without first developing a Work Plan and an appropriate Site Health and Safety Plan.
  - b) Neither engage in nor allow the removal of groundwater anywhere in the potentially affected area of the former UST as depicted on Figure 2 without first developing a Work Plan and an appropriate Site Health and Safety Plan.
  - c) Any removal, excavation or disturbance of soil and/or groundwater from or within the affected area of the former UST must be conducted in accordance with all applicable requirements of the Occupational Safety and Health Act (OSHA), and soil and/or groundwater that is removed, excavated or disturbed from the affected area of the former UST must be managed and disposed of in accordance with all applicable federal and state laws and regulations.
2. Soil and Groundwater Management:
  - a) If future excavation or site work in the affected area of the former UST is required, a work plan will be developed that describes activities to be performed, methods and monitoring procedures to be used, roles and responsibilities of workers, management of residual disturbed/removed petroleum impacted material, and proper health and safety considerations.
  - b) Monitoring of site work will be performed to ensure the safety of workers, and proper characterization and management of disturbed/removed petroleum impacted material. Monitoring activities will be include, but not limited to, visual and olfactory field evaluation of soil samples for indications of contamination, and field screening of selected soil samples using a volatile organic analyzer (ex., photoionization detector).
  - c) Site workers will properly stage and segregate any soil media that is removed from the subsurface in the affected area of the former UST and deemed to contain residual petroleum contamination from field screening. Site workers will properly stage any groundwater that is removed from the affected area of the former UST in appropriate containers until the removed groundwater has been properly characterized and an approved method of disposal has been developed.

- d) Removed soil and/or groundwater will be properly characterized to determine appropriate disposal requirements. Follow-up sampling of the removed media will include laboratory analysis of a representative number of samples for petroleum constituents and other constituents necessary to classify the waste and satisfy regulatory and disposal facility requirements.

May 27, 2009

Mr. Stephen Pucke  
Director of Environment and CSR  
First Group America  
600 Vine Street  
Suite 1400  
Cincinnati, Ohio 45202

Dear Mr. Pucke:

**Re: NYSDEC Spill # 9515421**  
**First Student, Inc.**  
**1185 East Main Street**  
**Rochester (C), Monroe County**

On May 26, 2009, this office received the Soil and Groundwater Management Plan, prepared by Strata Environmental, for the above referenced spill location. Upon review of the aforementioned Plan, the site work conducted and previously submitted information, the Department does not require additional remedial action at this time. The residual subsurface contamination does not appear to pose a threat to human health and safety or the environment. This case has been removed from the Department's active spill files.

However, be aware, that this ruling does not preclude reactivation of this case should new information become available, an impact to a receptor be discovered, the site usage change and/or the residual contamination be exposed in the future. Should future site work result in the uncovering of the residual contamination, the Department must be notified and the Soil and Groundwater Management Plan be implemented?

If there are any questions or comments, feel free to contact me at either the above address or by telephone at 585-226-5438.

Sincerely,

Michael F. Zamiarski, P.E.  
Environmental Engineer II  
Division of Environmental Remediation

cc: Kevin D. Craig, Principal Hydrogeologist, Strata Environmental

# FACT SHEET

## Environmental Restoration Program

1200 East Main Street Site  
Site No. B00129  
Rochester, NY

November 2009

### Cleanup Action to Begin at Municipal Brownfield Site

A cleanup is about to begin that will address contamination related to the 1200 East Main Street Site (“site”) located in the City of Rochester, Monroe County under New York’s Environmental Restoration Program (ERP, see program description at end of this fact sheet). See map on Page 4 for site location.

The cleanup action for the site includes the removal and off-site disposal of petroleum from groundwater, excavation and off-site disposal of petroleum contaminated soils, and treatment of dissolved petroleum in groundwater. The cleanup activities will be performed by City of Rochester (“municipality”). The New York State Department of Environmental Conservation (NYSDEC), in consultation with the New York State Department of Health and the Monroe County Health Department, has approved the Remedial Work Plan for this project and will provide oversight of the cleanup activities.

#### Highlights of the Upcoming Cleanup Activities

The goal of the cleanup action for the site is to achieve cleanup levels that protect public health and the environment. The elements of the selected cleanup include:

- Removal and off-site disposal of petroleum found in existing groundwater monitoring wells at the site;
- Excavation and off-site disposal of petroleum contaminated soils from select areas at the site.
- Treatment of dissolved petroleum contaminants in groundwater via an atmospheric air or oxygen injection system. This decision will be made upon re-evaluation of groundwater quality at the site following removal of readily recoverable petroleum and contaminated soils. The system will involve the injection of atmospheric air or oxygen into the groundwater to flush out volatile petroleum contaminants and stimulate the growth and activity of naturally occurring bacteria that breakdown petroleum compounds;
- Installation of a soil vapor extraction system to recover contaminants that are volatilized into soil gas by the air or oxygen injection system;
- Implementation of a community air-monitoring program during all ground-intrusive activities. This program is designed to provide protection for the downwind community (i.e., off-site receptors including residences and businesses and on-site workers not directly involved with the work) from potential airborne contaminant releases as a direct result of the remedial work;
- Continued operation and maintenance of the existing sub-slab ventilation system in the basement of the adjacent 1214/1216 East Main Street building to prevent site-related contaminants from entering the structure; and
- Use of institutional controls (restrictions on the property’s future use) via an environmental easement to limit the site to commercial or industrial future use, address residual soil contamination, prohibit groundwater usage, prevent vapor intrusion into any future buildings at the site, and ensure compliance with an operation, maintenance, and monitoring program.

## **Next Steps**

The municipality is expected to begin cleanup activities at the site on or about December 14, 2009. The initial extraction of petroleum from groundwater and the excavation of petroleum contaminated soils should be complete within two months. Groundwater quality will then be reevaluated and a system will be selected and installed to treat dissolved petroleum in groundwater, which may take an additional one to two years to complete.

After the municipality completes the cleanup activities, it will prepare a Final Engineering Report and submit it to NYSDEC. The Final Engineering Report will describe the cleanup activities completed and certify that cleanup requirements have been achieved or will be achieved.

The municipality also must implement a site management plan because the cleanup action is based on restrictions on the use of the site. The plan would ensure protection of public health and the environment by describing the required engineering and/or institutional controls and how they would be effectively maintained. The municipality also will be required to file an environmental easement that identifies the restrictions on use of the site and the institutional/engineering controls. The easement would give NYSDEC the ability to assure compliance with these restrictions and controls.

When the municipality has completed the project to NYSDEC's satisfaction, NYSDEC will issue a document to the municipality called a "Certificate of Completion". This document releases the municipality from liability related to the site and allows the site to be re-used. NYSDEC and the municipality will keep the public informed during the cleanup of the site.

## **Background**

NYSDEC previously accepted an application from the municipality to participate in the ERP. The application proposed that the site would be used for commercial use.

The 1200 East Main Street site is a half-acre parcel of land that was operated as a gasoline filling station and automobile repair facility from 1928 until 1993 (most recently as a "Pic n' Pay" station). The City of Rochester obtained ownership of the property through tax foreclosure in 1998 in order to address possible contamination issues and return the site to productive use through the New York State Environmental Restoration Program.

A 1,600-square foot one-story building on the site was demolished in January 2003 by the City of Rochester due to its state of disrepair. Historic use of this facility as an automobile service facility and filling station resulted in petroleum contamination at the site. There are no records or reports of spills during the site's operation. However, past leakage from underground petroleum storage tanks and piping systems/filling areas is evident (all tanks, pumps, and piping systems were removed during this project). Other potential sources of contamination identified at the site include a floor drainage system and subsurface vehicle lift unit in the former building. Waste oil dumping is also suspected to have occurred to the unpaved ground surface in the northern portion of the property.

## **FOR MORE INFORMATION**

**Where to Find Information** Project documents are available at the following locations to help the public to stay informed. These documents include the decision document describing the selected remedy for the site, called the "Record of Decision" and the Remedial Work Plan.

**If you know someone who would like to be added to the site contact list, have them contact the NYSDEC project manager above. We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.**

#### **Environmental Restoration Program:**

New York's Environmental Restoration Program (ERP) reimburses municipalities for their costs to investigate and clean up municipally owned contaminated properties. Once cleaned up, the properties may be redeveloped for commercial, industrial, residential or public use.

A **brownfield** is any real property that is difficult to reuse or redevelop because of the presence or potential presence of contamination.

For more information about the ERP, visit: [www.dec.ny.gov/chemical/8444.html](http://www.dec.ny.gov/chemical/8444.html)

### Site Record

#### Administrative Information

**Site Name:** 1200 E. Main Street

**Site Code:** B00129

**Program:** Environmental Restoration Program

**Classification:** A

**EPA ID Number:**

#### Location

**DEC Region:** 8

**Address:** 1200 E. Main Street

**City:**Rochester Zip: 14609-

**County:**Monroe

**Latitude:** 43.16186424

**Longitude:** -77.57984144

**Site Type:**

**Estimated Size:** 0.6 Acres

#### Site Owner(s) and Operator(s)

**Current Owner Name:** City of Rochester

**Current Owner(s) Address:** City Hall, Room 307A  
Rochester, NY, 14614

#### Site Document Repository

**Name:** Rochester Public Library - Sully Branch

**Address:** 939 Bay Street  
Rochester, NY 14609

#### Site Description

**Location:** The 1200 East Main Street site is located in the City of Rochester. The 0.622 acre site is located in an urban area. The site is approximately 0.18 miles east of the East Main Street and Goodman Street North intersection. **Site Features:** The site is a flat vacant site. The site's surface consists of a combination of grass vegetation, crusher run, and asphalt. The site is bounded by residential properties to the north, East Main Street to the south, a residential property to the east, and a commercial property to the west. **Current Zoning and Land Use:** The site is currently vacant and is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial and residential. The nearest residential area is located directly adjacent to the site to the north and east. **Past Use of the Site:** The site was used as a retail gasoline station from 1928 until 1993, at which time it was abandoned and foreclosed on by the City. Most recently known as a Pic 'N' Pay retail gasoline station. The site had several storage tanks used for the storage of gasoline, diesel fuel, and kerosene. Site had at one time 7 underground storage tanks which ranged in sizes ranged from 275 to 6,000 gallons totaling approximately 25,275 gallons of storage capacity. The site also had 2 aboveground storage tanks totaling 1050 gallons of storage capacity. The site also had a fuel island that consisted of 3 fuel pumps. The northern end of the site was also the location of illegal dumping activities for oil, antifreeze, and C&D waste material. The use of the site as a retail gasoline station and the illegal dumping activities appear to have led to the petroleum contamination at the site. **Site Geology and Hydrogeology:** Site soils consist of heterogeneous fill material and native glacial till to depths of 11.5 to 15.5 feet below grade, overlying Lockport Dolomite bedrock. The fill material generally consists of reworked soil (i.e., silt, sand, gravel, clay) with lesser amounts of brick, glass, concrete, wood, and metal. The glacial till primarily consists of sandy silt and clay with lesser amounts of gravel. The depth to groundwater at the site ranges from 13 to 15 feet below the ground surface. Groundwater flow direction is typically a bimodal directional pattern. Groundwater flow direction in the northern portion of the site is to the northwest and in the southern portion of the site to the southeast.

## Contaminants of Concern (Including Materials Disposed)

### Contaminant Name/Type

toluene  
benzene  
benzo(a)pyrene  
methyl-tert-butyl ether (MTBE)  
fluoranthene  
xylene (mixed)  
ethylbenzene  
lead

## Site Environmental Assessment

Nature and Extent: The primary contaminants of concern petroleum related compounds (TCL VOCs and TCL SVOCs) and metals. The remedial investigation activities included test pits, soil borings, groundwater monitoring well installation, soil gas investigation as well as the removal of underground storage tanks. Surface and subsurface soil, groundwater, and soil gas samples were collected for laboratory analysis. The soil and groundwater samples were analyzed for TCL VOCs plus TICs, TCL SVOCs plus TICs, TAL Metals, and PCBs. The soil vapor samples were analyzed using Method TO-15 for VOCs. Surface Soil: Fifteen (15) surface soil samples were collected and were analyzed for TCL VOCs SVOCs plus TICs, TAL Metals, and PCBs. The constituents of concern detected were petroleum related compounds. Benzo(a)anthracene concentrations ranged from non-detect (ND) to 22 parts per million (ppm). Benzo(a)pyrene concentrations ranged from ND to 19 ppm. Benzo(b)fluoranthene concentrations ranged from ND to 17 ppm. Benzo(k)fluoranthene concentrations ranged from ND to 16 ppm. Dibenzo(a,h)anthracene concentrations ranged from ND to 0.82 ppm. Indeno(1,2,3-cd)pyrene concentrations ranged from ND to 11 ppm. Chrysene concentrations ranged from ND to 20 ppm. Fluoranthene concentrations ranged from ND to 61 ppm. PCBs concentrations ranged from ND to 3.012 ppm. Lead concentrations ranged from 89 to 1,050 ppm. Mercury concentrations ranged from ND to 0.44 ppm. Subsurface soils: Forty-seven (47) subsurface soil samples were collected from soil borings, excavations (USTS, pump island, building foundation), and test pits. The soil samples were analyzed for TCL VOCs, TCL SVOCs, PCBs, TAL metals, and ethylene glycol. The constituents of concern detected were petroleum related compounds. M & p xylene concentrations ranged from ND to 52 ppm. O-xylene concentrations ranged from ND to 14 ppm. Benzene concentrations ranged from ND to 1.6 ppm. Ethyl benzene concentrations ranged from ND to 37 ppm. 1,2,4-trimethylbenzene concentrations ranged from ND to 140 ppm. Benzo(a)pyrene concentrations ranged from ND to 2.4 ppm. Naphthalene concentrations ranged from ND to 33 ppm. Benzo(a)anthracene concentrations ranged from ND to 2.7 ppm. Arsenic concentrations ranged from ND to 12 ppm. Lead concentrations ranged from ND to 1,320 ppm. Mercury concentrations ranged from ND to 0.864 ppm. Silver concentrations ranged from ND to 45 ppm. Groundwater: Groundwater samples were collected from groundwater monitoring wells located on-site and off-site. Thirty-seven (37) groundwater samples were collected for laboratory analysis. The groundwater samples were analyzed for TCL VOCs, TCL SVOCs, PCBs, TAL metals, and ethylene glycol. The constituents of concern detected were petroleum related compounds. Benzene concentrations ranged from ND to 2,400 parts per billion (ppb). Ethyl benzene concentrations ranged from ND to 3,300 ppb. Toluene concentrations ranged from ND to 8,600 ppb. M,p-xylene concentrations ranged from ND to 14,000 ppb. Naphthalene concentrations ranged from ND to 6,000 ppb. 1,2,4-trimethylbenzene concentrations ranged from ND to 25,000 ppb. 1,3,5-trimethylbenzene concentrations ranged from ND to 7,300 ppb. Chrysene concentrations ranged from ND to 83 ppb. Fluoranthene concentrations ranged from ND to 180 ppb. Lead concentrations ranged from ND to 120 ppb. Soil Vapor: A total of 10 sub-slab soil vapor/air samples were collected and analyzed for VOCs. The analytical results indicated moderately elevated detections of petroleum-related and chlorinated VOCs. Sub-slab and ventilation system exhaust analytical results indicated the petroleum related and chlorinated VOCs. Ethyl benzene concentrations ranged from ND to 8.78 micrograms per cubic meter (ug/m3). Toluene concentrations ranged from 6.8 to 46 ug/m3. Tetrachloroethene concentrations ranged from ND to 38.5 ug/m3. M,p-xylene concentrations ranged from 5.9 to 30.48 ug/m3. 1,2,4-trimethylbenzene concentrations ranged from ND to 12.4 ug/m3. 1,3,5-trimethylbenzene concentrations ranged from ND to 5.6 ug/m3. Trichloroethene concentrations ranged from ND to 12 ug/m3. Indoor air analytical results indicated petroleum related VOCs. Benzene concentrations ranged from 2 to 7.4 ug/m3. Ethyl benzene concentrations ranged from 1.6 to 3.2 ug/m3. Toluene concentrations ranged from 8.3 to 42 ug/m3. 1,2,4-trimethylbenzene concentrations ranged from ND to 7.2 ug/m3. 1,3,5-trimethylbenzene concentrations ranged from ND to 7.7 ug/m3. M,p-xylene concentrations ranged from 5.2 to 10.8 ug/m3.

## Site Health Assessment

The site is located in a commercial area in Rochester with a residential area nearby. All nearby residents are served by public water so exposures via drinking water are not expected. Results of indoor air sampling conducted at the neighboring dwelling indicate some impact from the site. A subslab depressurization system installed to address this impact has been successful in reducing the concentration of site-related chemicals at this dwelling.

<b>Site Name:</b>		1200 E. Main Street				
<b>Site Name (GIS):</b>		1200 E. Main Street				
<b>Site Class Desc (GIS):</b>		Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.				
<b>Site Class Desc:</b>		ERP				
<b>Program:</b>		Environmental Restoration Program				
<b>Program Desc:</b>		The site is located in a commercial area in Rochester with a residential area nearby. All nearby residents are served by public water so exposures via drinking water are not expected. Results of indoor air sampling conducted at the neighboring dwelling indicate some impact from the site. A subslab depressurization system installed to address this impact has been successful in reducing the concentration of site-related chemicals at this dwelling.				
<b>Assess DOH:</b>						

**Source of Data:**  
**Description:**

Location: The 1200 East Main Street site is located in the City of Rochester. The 0.622 acre site is located in an urban area. The site is approximately 0.18 miles east of the East Main Street and Goodman Street North intersection. Site Features: The site is a flat vacant site. The site's surface consists of a combination of grass vegetation, crusher run, and asphalt. The site is bounded by residential properties to the north, East Main Street to the south, a residential property to the east, and a commercial property to the west. Current Zoning and Land Use: The site is currently vacant and is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial and residential. The nearest residential area is located directly adjacent to the site to the north and east. Past Use of the Site: The site was used as a retail gasoline station from 1928 until 1993, at which time it was abandoned and foreclosed on by the City. Most recently known as a Pic 'N' Pay retail gasoline station. The site had several storage tanks used for the storage of gasoline, diesel fuel, and kerosene. Site had at one time 7 underground storage tanks which ranged in sizes ranged from 275 to 6,000 gallons totaling approximately 25,275 gallons of storage capacity. The site also had 2 aboveground storage tanks totaling 1050 gallons of storage capacity. The site also had a fuel island that consisted of 3 fuel pumps. The northern end of the site was also the location of illegal dumping activities for oil, antifreeze, and C&D waste material. The use of the site as a retail gasoline station and the illegal dumping activities appear to have led to the petroleum contamination at the site. Site Geology and Hydrogeology: Site soils consist of heterogeneous fill material and native glacial till to depths of 11.5 to 15.5 feet below grade, overlying Lockport Dolomite bedrock. The fill material generally consists of reworked soil (i. e., silt, sand, gravel, clay) with lesser amounts of brick, glass, concrete, wood, and metal. The glacial till primarily consists of sandy silt and clay with lesser amounts of gravel. The depth to groundwater at the site ranges from 13 to 15 feet below the ground surface. Groundwater flow direction is typically a bimodal directional pattern. Groundwater flow direction in the northern portion of the site is to the northwest and in the southern portion of the site to the southeast.

**Assessment:**

Nature and Extent: The primary contaminants of concern petroleum related compounds (TCL VOCs and TCL SVOCs) and metals. The remedial investigation activities included test pits, soil borings, groundwater monitoring well installation, soil gas investigation as well as the removal of underground storage tanks. Surface and subsurface soil, groundwater, and soil gas samples were collected for laboratory analysis. The soil and groundwater samples were analyzed for TCL VOCs plus TICs, TCL SVOCs plus TICs, TAL Metals, and PCBs. The soil vapor samples were analyzed using Method TO-15 for VOCs. Surface Soil: Fifteen (15) surface soil samples were collected and were analyzed for TCL VOCs SVOCs plus TICs, TAL Metals, and PCBs. The constituents of concern detected were petroleum related compounds. Benzo(a)anthracene concentrations ranged from non-detect (ND) to 22 parts per million (ppm). Benzo(a)pyrene concentrations ranged from ND to 19 ppm. Benzo(b)fluoranthene concentrations ranged from ND to 17 ppm. Benzo(k)fluoranthene concentrations ranged from ND to 16 ppm. Dibenzo(a,h)anthracene concentrations ranged from ND to 0.82 ppm. Indeno(1,2,3-cd)pyrene concentrations ranged from ND to 11 ppm. Chrysene concentrations ranged from ND to 20 ppm. Fluoranthene concentrations ranged from ND to 61 ppm. PCBs concentrations ranged from ND to 3.012 ppm. Lead concentrations ranged from 89 to 1,050 ppm. Mercury concentrations ranged from ND to 0.44 ppm. Subsurface soils: Forty-seven (47) subsurface soil samples were collected from soil borings, excavations (USTS, pump island, building foundation), and test pits. The soil samples were analyzed for TCL VOCs, TCL SVOCs, PCBs, TAL metals, and ethylene glycol. The constituents of concern detected were petroleum related compounds. M & p xylene concentrations ranged from ND to 52 ppm. O-xylene concentrations ranged from ND to 14 ppm. Benzene concentrations ranged from ND to 1.6 ppm. Ethyl benzene concentrations ranged from ND to 37 ppm. 1,2,4-trimethylbenzene concentrations ranged from ND to 140 ppm. Benzo(a)pyrene concentrations ranged from ND to 2.4 ppm. Naphthalene concentrations ranged from ND to 33 ppm. Benzo(a)anthracene concentrations ranged from ND to 2.7 ppm. Arsenic concentrations ranged from ND to 12 ppm. Lead concentrations ranged from ND to 1,320 ppm. Mercury concentrations ranged from ND to 0.864 ppm. Silver concentrations ranged from ND to 45 ppm. Groundwater: Groundwater samples were collected from groundwater monitoring wells located on-site and off-site. Thirty-seven (37) groundwater samples were collected for laboratory analysis. The groundwater samples were analyzed for TCL VOCs, TCL SVOCs, PCBs, TAL metals, and ethylene glycol. The constituents of concern detected were petroleum related compounds. Benzene concentrations ranged from ND to 2,400 parts per billion (ppb). Ethyl benzene concentrations ranged from ND to 3,300 ppb. Toluene concentrations ranged from ND to 8,600 ppb. M,p-xylene concentrations ranged from ND to 14,000 ppb. Naphthalene concentrations ranged from ND to 6,000 ppb. 1,2,4-trimethylbenzene concentrations ranged from ND to 25,000 ppb. 1,3,5-trimethylbenzene concentrations ranged from ND to 7,300 ppb. Chrysene concentrations ranged from ND to 83 ppb. Fluoranthene concentrations ranged from ND to 180 ppb. Lead concentrations ranged from ND to 120 ppb. Soil Vapor: A total of 10 sub-slab soil vapor/air samples were collected and analyzed for VOCs. The analytical results indicated moderately elevated detections of petroleum-related and chlorinated VOCs. Sub-slab and ventilation system exhaust analytical results indicated the petroleum related and chlorinated VOCs. Ethyl benzene concentrations ranged from ND to 8.78 micrograms per cubic meter (ug/m3). Toluene concentrations ranged from 6.8 to 46 ug/m3. Tetrachloroethene concentrations ranged from ND to 38.5 ug/m3. M,p-xylene concentrations ranged from 5.9 to 30.48 ug/m3. 1,2,4-trimethylbenzene concentrations ranged from ND to 12.4 ug/m3. 1,3,5-trimethylbenzene concentrations ranged from ND to 5.6 ug/m3. Trichloroethene concentrations ranged from ND to 12 ug/m3. Indoor air analytical results indicated petroleum related VOCs. Benzene concentrations ranged from 2 to 7.4 ug/m3. Ethyl benzene concentrations ranged from 1.6 to 3.2 ug/m3. Toluene concentrations ranged from 8.3 to 42 ug/m3. 1,2,4-trimethylbenzene concentrations ranged from ND to 7.2 ug/m3. 1,3,5-trimethylbenzene concentrations ranged from ND to 7.7 ug/m3. M,p-xylene concentrations ranged from 5.2 to 10.8 ug/m3.

<b>Caller Remark:</b>			

"Caller states approx. half gallon of muriatic acid leaked from a 1-gallon container (which was not labeled correctly) into a passenger vehicle owned by Mr. John Dodd, who just purchased the material from Rochester Standard Building Supply. HAZMAT team responded, found leaking container, and fire department flushed the car with water (parked on gravel/no catch basins around)."

**Tank Information**

**Tank ID:** 151988  
**Tank No:** 001  
**Tank Model:**  
**Pipe Model:**  
**Tank Location:** 5  
**Tank Location Desc:** Underground  
**Tank Status:** 6  
**Tank Status Desc:** Closed Prior to 03/1991  
**Install Date:** 1961-12-01 00:00:00  
**Capacity (gal):** 3000  
**Tank Type:** 01  
**Tank Type Desc:** Steel/Carbon Steel/Iron  
**Test Method:** NN  
**Date Tested:**  
**Next Test:**  
**Close Date:**  
**Registered:** True  
**Modified By:** TRANSLAT

<b>Caller Remark:</b>			

"Per the caller there was an old fuel tank in the basement that was no longer being used. Appears to have corroded and spilled whatever remaining fuel might have been in it onto the concrete floor. The local fire department came and put cat litter down and advised the homeowner to have it removed. Homeowner is an elderly female in a wheelchair and has no idea how to have this taken care of. The homeowner would like a callback. UPDATE: 2330 Yvonne Gilchrist would like DEC rep to contact her as she has additional information she wants to talk to them about."

**DEC Remark:**

"01/13/2005: HALL INSPECTS SITE AND OBSERVES OIL SATURATED SPEEDY DRY UNDER THE TANK. THERE IS MODERATE FUEL ODOR IN THE BASEMENT AND IN THE LIVING AREAS OF THE(SINGLE FAMILY) RESIDENCE. SATURATED SPEEDY DRY IS REMOVED AND BAGGED UP FOR DISPOSAL. TANK CONTINUES TO DRIP (TO FOIL PAN LINED WITH PADS). JACKSON WILL HAVE THE TANK PUMPED OUT AND WILL COMPLETE CLEANUP. FAXED TO MCHD ON 01/13/05 AT 0734 HRS."

<b>DEC Remark:</b>			

"11/09/2011: DAVID DAY CONTACTED TO GET UPDATE/INQUIRE WHETHER THERE WERE LIQUIDS IN THE TANKS. 11/10/2011: DD TELECON WITH DAVID DAY - THEY INSPECTED AN AREA ON THE PROPERTY ON 11/8 USING A BACKHOE WHERE HISTORICAL MAPS SHOWED USTs, AND A RECENT GEOPHYSICAL SURVEY SHOWED A MAGNETIC ANOMALY. OWNER UNCOVERED TWO OLD TANKS, SIDE BY SIDE, AS WELL AS SOME PIPES (TRACKED BACK AND ALL CUT OFF). INSPECTED INTERIOR OF TANKS AND FOUND LIQUIDS. THE 300-GAL TANK HAS 10-INCHES OF LIQUID (LIKELY WATER WITH A GASOLINE ODOR). THE 500-GALLON TANK HAS 18-INCHES OF SIMILAR LIQUIDS. LIQUIDS WERE SAMPLED FOR QUICK TURNAROUND. PETROLEUM IMPACTS OBSERVED AT ONE CORNER OF 500-GALLON TANK (SOIL ALSO SAMPLED). SAMPLES SUBMITTED FOR DISPOSAL PURPOSES. NO CHLORINATED SOLVENTS FOUND. NYETECH WILL GET PERMIT, PULL TANKS ETC. WILL EXCAVATE SOME SOIL DURING TANK REMOVAL AND EVALUATE NEED FOR ADDITIONAL REMEDIAL WORK. WORK TENTATIVELY SCHEDULED FOR 11/15/11. NO GROUNDWATER ENCOUNTERED. TANKS ARE LOCATED IN MIDDLE OF PARKING LOT, NOT TOO CLOSE TO BUILDINGS. TANKS ALSO WILL NEED TO BE REGISTERED WITH PBS. 11/14/2011: DD TELECON WITH DAVID DAY; UST PULL MOVED TO 11/16/11 (NYETECH). WAITING FOR DISPOSAL APPROVAL. 11/16/2011: DDAKE ONSITE - DAY ENVIRONMENTAL (NATE SIMON/RICH MCPHEE) SUPERVISING NYETECH, REMOVING TWO OLDER USTs DISCOVERED LAST WEEK IN THE MIDDLE OF THE PAVED PARKING LOT, NORTH OF THE MAIN LARGE BRICK BUILDING AND SOUTH OF #1111 BUILDING. THE TANKS HAVE BEEN PUMPED OUT (10-INCHES AND 18-INCHES; PRESUMED GASOLINE AND WATER) AND THEY ARE WAITING FOR THE FIRE DEPARTMENT TO SHOW UP BEFORE THE TANKS CAN BE EXCAVATED. TANKS (APPROX. 300 AND 500-GALLONS IN SIZE) ARE REMOVED, REVEALING SOME STAINING AND GASOLINE ODORS IN THE SURROUNDING SOILS. THERE IS SOME MINOR WATER BENEATH THE LARGER TANK WITH A PETROLEUM SHEEN. BOTH TANKS HAVE A FEW 1/4-INCH DIA. HOLES. THE PLAN BETWEEN DAY AND THE PROPERTY OWNER IS TO REMOVE ONLY ONE SMALL TRUCKLOAD OF CONTAMINATED SOIL AT THIS TIME AND COLLECT 'CONFIRMATORY' SOIL SAMPLES. REMOVAL OF CONTAMINATED SOIL IS GOING VERY SLOWLY DUE TO SMALL SIZE OF MINI-EXCAVATOR. A FORMER BUILDING FOUNDATION/CONCRETE SLAB IS LOCATED TO THE IMMEDIATE SOUTH, HINDERING EXCAVATION IN THAT DIRECTION. DD LEAVES SITE, AND LATER RECEIVES A PHONE CALL FROM JEFF DANZINGER OF DAY ENV, WHO STATES THEY WOULD LIKE TO LIMIT REMOVAL OF IMPACTED SOIL TODAY TO ONE TRUCKLOAD, COLLECT A FEW SOIL SAMPLES FOR LAB ANALYSIS, AND BACKFILL THE HOLE, RETURNING AT A LATER DATE TO DELINEATE THE IMPACTS WITH A DIRECT PUSH RIG. 11/17/2011: EMAIL RECEIVED FROM JEFF DANZINGER OF DAY ENVIRONMENTAL (SAVED TO eDOCS). EMAIL SUMMARIZES WORK PERFORMED - PLAN IS TO DELINEATE SOIL IMPACTS NEXT WEEK. TWO SOIL SAMPLES SENT TO LAB FOR VOC ANALYSIS. PID READINGS OF SIDEWALLS AND BOTTOM ALL RANGED ABOVE 1,000 PPM. 11/21/11: DDAKE ONSITE, DAY ENVIRONMENTAL (JEFF DANZINGER) PERFORMING DIRECT PUSH INVESTIGATION SURROUNDING THE FORMER UST AREA TO DELINEATE SOIL IMPACTS. APPROX. 10 BORINGS ADVANCED SO FAR TO BEDROCK REFUSAL AT APPROX. 14 TO 16-FEET BGS. SOME GROUNDWATER ENCOUNTERED ON TOP OF ROCK. SOILS AT MOST BORINGS NOT IMPACTED, SO IMPACTED AREA IS SUSPECTED TO BE ONLY A FEW TRUCKLOADS. A BORING DIRECTLY ON THE EAST SIDE OF THE FORMER TANK AREA HAD PID READINGS FROM 400 TO 1600 PPM. DAY LIKELY TO RECOMMEND A DIGOUT BE COMPLETED FAIRLY SOON. A FEW SOIL SAMPLES TO BE SUBMITTED TO THE LAB FOR VOC ANALYSIS. 11/29/11: DDAKE TELECON WITH JEFF DANZINGER OF DAY ENV - OK'D NOT SENDING A # OF SOIL SAMPLES COLLECTED DURING RECENT DIRECT PUSH SUBSURFACE INVESTIGATION TO LAB FOR ANALYSIS. THE PROPERTY OWNER HAS AGREED TO DO A 'DIGOUT' AND CONFIRMATORY SIDEWALL AND BOTTOM SOIL SAMPLES WILL BE COLLECTED AT THAT TIME. WORK LIKELY TO BE PERFORMED WITHIN 1 WEEK OR SO. ONE SOIL SAMPLE FROM THE HOTTEST BORING/DIRECTLY ADJACENT TO FORMER UST AREA WILL BE SUBMITTED FOR LAB ANALYSIS. 12/20/11: DD TELECON WITH JEFF DANZINGER OF DAY ENV - THE PROPERTY OWNER WOULD LIKE TO WAIT UNTIL THE SPRING 2012 TO COMPLETE THE 'DIGOUT,' SINCE THE ASPHALT BATCH PLANTS ARE CLOSED AND INCLEMENT WEATHER IS HERE. DANZINGER STATED CONTAMINATION IS OLD/HISTORICAL ETC. DD STATED CONCERNS WITH PARKING LOT RUNOFF AND SNOW-MELT ENTERING GRAVEL EXCAVATION AREA AND POSSIBLY CAUSING CONTAMINANT MIGRATION. DANZINGER TO EXPRESS CONCERNS WITH OWNER (MAYBE COVER AREA W POLY) AND SEND DEC EMAIL SUMMARIZING DIGOUT PLANS. 3/27/12: JEFF DANZINGER CONTACTED TO SEE IF THERE IS A SCHEDULE YET FOR DIGOUT THIS SPRING. 3/30/12: PER DANZINGER OF DAY ENV: The property owner is interested in making this happen in April as soon as asphalt batch plants are open for good (they are checking this with their preferred paving contractor, and also lining up their excavation contractor). DAY is assisting them with the paperwork to line up the landfill and trucking services. We'll provide you additional details on the scope and schedule hopefully in very near future. 4/27/12: DANZINGER CONTACTED TO SEE WHEN DIGOUT WILL BE SCHEDULED. 5/10/12: DAY ENV. SENDS EMAIL (SAVED TO EDOCS) SUMMARIZING PROPOSED DIGOUT, SAMPLING, ETC. APPROX. 450 TONS OF CLEAN SOIL WILL BE REMOVED TO ACCESS APPROX. 350 TONS OF CONTAMINATED SOILS. 5/15/12: DDAKE ONSITE, WITH TOM ROSZAK OF DAY ENV; THEY ARE USING A LARGE EXCAVATOR TO DIG AROUND THE PERIMETER OF THE PROPOSED 'DIGOUT' AREA TO DETERMINE LIMITS, MOVING CONTAMINATED SOILS TO THE CENTER OF THE AREA. CLEAN SOILS HAVE ALREADY BEEN SET ASIDE AND WILL BE USED AS BACKFILL. 5/16/12: DDAKE ONSITE, WITH JEFF DANZINGER OF DAY ENV. SILVAROLE IS HAULING CONTAMINATED SOILS

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

OFFSITE TO MILL SEAT LANDFILL. THE EXPECTED QUANTITY OF CONTAMINATED SOIL IS HIGHER THAN EXPECTED. ENCOUNTERED COURSE SAND AND GRAVEL LAYER AT DEPTH, ON TOP OF ROCK WHICH IS MOIST TO WET, AND STRONGLY IMPACTED (PID READINGS EXCEEDING 1,000 PPM, WITH STRONG WEATHERED PETROLEUM ODOR). 5/21/12: DD BRIEF SITE INSPECTION; EXCAVATION HAS BEEN BACKFILLED TO GRADE. 6/19/12: DDAKE TELECON WITH JEFF DANZINGER OF DAY ENV (585-454-0239 X 114) - THEY ARE WORKING ON DIGOUT SUMMARY REPORT AND SHOULD GET TO DEC SOON/NEED PROMPT REVIEW. IT APPEARS CONFIRMATORY SOIL SAMPLES LOOK GENERALLY ACCEPTABLE. DISCUSSED ABANDONMENT OF THE 4-INCH WELLS THAT THEY BACKFILLED AROUND. 6/20/12: JEFF DANZINGER OF DAY ENVIRONMENTAL SUBMITS CLOSURE REPORT (SAVED TO eDOCS). REPORT SUMMARIZES SITE ACTIVITIES, EXCAVATION AND OFFSITE DISPOSAL OF APPROX. 780-TONS OF CONTAMINATED SOIL AT LOCAL LANDFILL. EXCAVATION EXTENDED DOWN TO TOP OF BEDROCK (APPROX. 14 TO 17-FEET BGS). GROUNDWATER WAS ENCOUNTERED AT THE BOTTOM OF THE EXCAVATION (NO DEWATERING PERFORMED) AND WATER HAD NO SHEEN OR FREE PRODUCT PRESENT). IMPACTED SOIL WAS REMOVED ABOVE APPROX. 100 PPM. SIX POST-EXCAVATION 'CONFIRMATORY' SOIL SAMPLES WERE COLLECTED AND ANALYZED FOR VOCs. VOCs WERE REPORTED IN FOUR OF THE SIX SOIL SAMPLES, BUT ALL COMPOUNDS AT CONCENTRATIONS LESS THAN CP-51 GUIDELINES. GROUNDWATER IN BEDROCK WAS NOT EVALUATED DURING THIS INVESTIGATION/REMEDIAL WORK, BUT BASED ON THE LOCATION OF THE PROPERTY/IMPACTED OVERBURDEN SOILS, AGE OF THE TANKS, ETC NO EVALUATION REQUESTED. BASED ON INFORMATION PROVIDED, REMEDIAL WORK PERFORMED, CONFIRMATORY LAB ANALYTICAL RESULTS, NO FURTHER ACTIONS REQUIRED BY SPILLS UNIT/SPILL FILE CLOSED. NOTE THAT THE SPILL MAY BE REACTIVATED IN THE FUTURE SHOULD ADDITIONAL IMPACTS IN THE AREA BE ENCOUNTERED. REQUESTED 'NO FURTHER ACTION' LETTER SENT TO MAGUIRE PROPERTIES on 6/21/12."

**Caller Remark:**

"WHILE REMOVING A 2 UNKOWN SIZED TANKS FROM SANBORN MAPS THAT HEL GASOLINE, CONTAMINATED SOILS WERE ENCOUNTERED. TANK SIZE ARE 500 GALLON AND 300 GALLON. TO BACKFILL AND REMOVE AT LATER DATE. COPY TO MCHD."

<b>Caller Remark:</b>						

"UNKNOWN AMOUNT LEAKED AND UNKNOWN IF THE LEAK HAS STOPPED \*\*\*UPDATE\*\*\*0140HRS. CSX STATES THAT THERE ARE NO LIFE HAZARDS AND THEY ARE CONFIDENT THE TRAIN IS OK FOR TRANSPORT. IN ONE HOUR, THE TRAIN WILL MOVE ON TO IT'S NEXT DESTINATION, WHICH IS ALBANY."

**DEC Remark:**

"05/30/14: CH TELECON WITH BATALLION CHIEF. THEY ARE AWAITING CALL BACK FROM CSX. A PEDESTRIAN GOING OVER THE BRIDGE ON MAIN STREET NOTICED THE LEAKING CAR. CH WILL CALL BACK IN A 1/4 TO 1/2 HR. ON CALLING BACK THE CHIEF HAS BEEN IN CONTACT WITH CSX. APPARENTLY THERE WAS NO RELEASE OBSERVED, JUST A FROZEN VALVE ON THE TOP OF THE CAR, WHICH WOULD INDICATE SOME SORT OF A LEAK AT THE VALVE. CSX HAS DETERMINED THE CAR SAFE TO MOVE TO IT'S FINAL DESTINATION IN ALBANY. THE FD CONDUCTED AIR MONITORING AND HAD NO READINGS OUT OF NORM. THE CSX ROCHESTER YARD MASTER HAS LABELED THE CAR SO IT CAN BE EASILY IDENTIFIED WHEN IT ARRIVES IN ALBANY. NO FURTHER ACTION IS NECESSARY."

"auto shut-off failure due to human error, spill onto balice rock. contractor being contacted to perform clean-up. REPORT FAXED TO MCHD 5/3/06."

**DEC Remark:**

"05/03/2006: NYTECH ON SITE PERFORMING CLEANUP. SPILL AMOUNT WAS LIKELY @ 100 GALLONS. 01/04/06: A CLOSURE REPORT SUBMITTED TO THE DEPT ON DEC 18,2006. ORIGINAL SPILL QUANTITY REPORTED AS 40 GALLONS, BUT CLEANUP CONTRACTOR NYTECH ESTIMATES 300-500 GALLONS WAS ACTUALLY LOST. NYTECH PERFORMED CLEANUP UNDER THE SUPERVISION OF ARCADIS. THE SPILL WAS IN THE AREA OF HE SERVICE TRACKS ADJACENT TO THE FUEL DISPENSING AREA. NYTECH RESPONDED TO THE SPILL AND EXCAVATED TWO TRENCHES, ONE BETWEEN AND ONE NEXT TO THE OUTER TRACK. THE INNER TRENCH WAS 28'X4'X3' DEEP. THE TRENCH ON THE OUTSIDE OF THE TRACK WAS 60'X 10'X 2-4' DEEP. ABSORBENT PADS AND BOOMS WERE PLACED IN THE TRENCHES AND MAINTAINED BY NYTECH FROM THE TIME OF THE SPILL UNTIL JUNE 6,2006 AT WHICH TIME THE TRENCHES WERE BACKFILLED. NYTECH DISPOSED OF 15 DRUMS OF SPENT ABSORBENTS FROM THE TRENCHES. THE EXCAVATED IMPACTED SOILS WERE DISPOSED OF AT HIGH ACRES LANDFILL. APPROXIMATELY 71 TONS OF SOILS WAS DISPOSED OF AT THE LANDFILL. NYTECH ALSO RECOVERED 1000 GALLONS OF WATER/DIESEL FROM MW-2, MW-3 AND MW-4 FOR THE PERIOD. ARCADIS IS REQUESTING CLOSURE OF THE MAY 2006 SPILL WITH FUTURE SITE CORRECTIVE ACTION BEING HANDLED UNDER SPILL 0004600. REFER TO SPILL 0004600 FOR ALL FUTURE ACTION. THE MAY 2006 SPILL WILL BE CLOSED. 11/08/07 PAPER FILE REMOVED PER FILE RETENTION POLICY."

"ESTIMATE OF 50 GALLONS LOST TO PAVEMENT AND SOIL ONLY. CLEANUP PENDING BY NYETECH."

**DEC Remark:**

"10/06/2014: CALLER STATES THAT ON 10/04 NOCO DELIVERED DIESEL TO ENGINE #CX6230, NOCO IS NOT THEIR NORMAL VENDOR. WORKERS NOTED SPEEDI DRI AND SAND AROUND SPILL. NYETECH HIRED TO CLEANUP SPILL. NO NEARBY WATER RECEPTORS, HOWEVER THERE ARE MONITORING WELLS IN THE AREA. 10/06/2014: TH ON SITE AT 11:15 WITH MIKE STABLEWSKI (CSX) AND CREW

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

FROM NYETECH. REPORTEDLY, THE NOCO DRIVER WAS UNFAMILIAR WITH FUELING LOCOMOTIVES AND DID NOT USE A POP OFF NOZZLE FOR DELIVERY. THE DRIVER ALSO NEGLECTED TO USE A SPILL PAN WHICH RESULTED IN THE PRODUCT IMPACTING THE GRAVEL UNDER THE VENT. APPROXIMATELY 50 GALLONS WAS RELEASED FROM THE VENT. NYETECH IS COMPLETING HAND SHOVELING OF IMPACTED GRAVEL AND SAND. POST EXCAVATION SOIL SAMPLES WILL BE SENT TO LAB FOR ANALYSIS. THE NEAREST MONITORING WELL IS APPROXIMATELY 50 FEET AWAY. 12/08/2014: CLOSURE REPORT INCLUDING POST EXCAVATION SAMPLE RESULTS AND MANIFEST FOR 3 DRUMS RECEIVED IN SPILLS UNIT. NO FURTHER ACTION IS ANTICIPATED AT THIS TIME-CLOSED."

"50'X20' OF SPRAY FROM STACK ONTO RAILROAD BED. CLEANUP IS ENROUTE, NYTECH."

**DEC Remark:**

"2/27/15: DDAKE OF SPILLS TELECON WITH JASON FRO CSX ENVIRONMENTAL GROUP AT 0745 HOURS - A FAULTY LOCOMOTIVE ENGINE SPRAYED LUBE OIL OUT OF IT'S STACK IN THE RAIL YARD. MUCH OF OIL WENT ON TO THE LOCOMOTIVE ITSELF, BUT A MIST SPRAYED ONTO AN AREA APPROX. 20x50- FEET (SNOW COVERED). NYETECH HAS BEEN RETAINED AND IS MOBILIZING TO DO CLEANUP. THE LOCOMOTIVE HAS BEEN SHIT DOWN FOR REPAIRS. NYETECH TO SCRAPE UP SNOW AND BALLAST AS NEEDED. THE ENTIRE SPILL WAS ON THEIR RAIL YARD PROPERTY AND IS CONTAINED/NOTHING REACHED ANY SEWERS OR WATERWAYS. NO OIL IS POOLED. PAUL BUIRCH OF NYETECH CONTACTS DEC AT 1850 HOURS AND CONFIRMED SPILL SITUATION. THEY ARE WIPING DOWN THE LOCOMOTIVE AND VAC'ING OUT SUMPS ON THE UNIT. THERE IS A VERY THIN LAYER OF SNOW THAT IS COVERED BY A THIN LAYER OF 'OIL MIST' THAT WILL BE SCRAPED OUT USING A LOADER OR BOBCAT AND PLACED ON POLY. BUIRCH TO CONTACT DEC IF THEY FIND ANY ADDITIONAL IMPACTS. 3/2/15: DDAKE ONSITE IN AM - HARD TO IDENTIFY WHERE SPILL WAS LOCATED; I CONTACT THE CSX 'YARDMASTER' WHO KNOWS NOTHING ABOUT THE SPILL ON 2/27 BUT POINTS ME TO THE GENERAL AREA AS DESCRIBED BY NYETECH. A WORKER THEN SHOWS ME THE SPILL AREA - THE LOCOMOTIVE HAS BEEN MOVED. THERE IS APPROX. 2-INCHES OF FRESH SNOW ON THE GROUND AND STRONG WINDS. I OBSERVE NO IMPACTS TO THE SNOW/BALLAST IN THE SPILL AREA, WHICH IS APPROX. 125-YARDS EAST OF THE YARDMASTER'S TOWER. AREA WAS DESCRIBED AS 'WEST END RECEIVING TRACK 3.' I ALSO LOCATE A SMALL STOCKPILE OF IMPACTED SNOW STAGED AND COVERED WITH POLY, AS WELL AS SOME 55-GALLON DRUMS GENERATED FROM A DIFFERENT SPILL IN JANUARY 2015. THERE MAY BE MINOR RESIDUAL IMPACTS TO THE BALLAST NO NO ADDITIONAL CLEANUP IS POSSIBLE. DD CONTACTS PAUL BUIRCH OF NYETECH WHO STATES HE WILL SEND PICS AND A SUMMARY SPILL LOG TO DEC AS WELL AS WASTE DISPOSAL DOCUMENTATION. TODAY THEY WILL VAC UP THE STOCKPILE OF IMPACTED SNOW/ICE AND DISPOSE WITH OTHER WASTE GENERATED. THE SUSPECTED VOLUME OF OIL RELEASED WAS APPROX. 100-GALLONS +/- . 4/16/15: DD TELECON WITH PAUL BUIRCH OF NYETECH - WASTE STILL BEING PROFILED/CHARACTERIZED FOR DISPOSAL, AND DRUMS ARE STILL ONSITE. WASTE DISPOSAL RECEIPTS AND SUMMARY REPORT TO BE FORWARDED TO THE DEPT WHEN COMPLETED. 7/28/15: DD SENDS BUIRCH AT NYETECH EMAIL, INQUIRING ON DISPOSAL/REPORT. PER BUIRCH: The drums were picked up and sent for disposal we are working on the report for csx now. 9/16/15: DD LEAVES MESSAGE FOR BUIRCH AT NYETECH - STILL NEED SUMMARY REPORT. 10/2/15: DD CONTACTS MIKE BETHGE AT CSX TO GET NYETECH'S SUMMARY REPORT/WASTE DISPOSAL RECEIPTS. 11/16/15: EMAIL SENT AGAIN TO BETHGE AT CSX. 12/30/15: DD TELECON WITH MIKE BETHGE - NEED REPORT (716-861-0268) - HE WILL FIND AND SEND NEXT WEEK. 2/1/16: PAUL BUIRCH AT NYETECH EMAILED - STILL NEED SUMMARY REPORT. 2/2/16: NYETECH SUBMITS 'INCIDENT RESPONSE REPORT' - SAVED TO eDOCS. REPORT INCLUDES A SUMMARY OF SPILL/CLEANUP. APPROX. 30-GALLONS OF OIL WAS DISCHARGED OUT THE STACK OF A LOCOMOTIVE, AFFECTING A 100x30-FOOT AREA OF BALLAST (NO SOIL OR DRAINS). SITE SKETCH AND COLOR PIC OF SPILL AREA BEFORE CLEANUP IS INCLUDED. EMAIL STATES: Attached is the incident response report that NYETECH submitted to CSX in relation to this spill. Please note that no soil or groundwater were affected. The locomotive blew oil out the stack impacting a widespread area of fresh snow cover. Cleanup consisted of vacuum and mechanical removal and drum disposal of the impacted snow. NO FURTHER ACTIONS REQUIRED BY SPILLS UNIT/SPILL FILE CLOSED. "

"4000 gal usst"

**DEC Remark:**

"05/25/16: CH TELECON WITH JOHN FROM PRIME TIME. THEY WERE CALLED TO THE SITE TO TEST TANK # 05B, A 4000 GALLON MOTOR OIL TANK THAT HAD BEEN TAKING ON WATER FOR THE LAST SEVERAL WEEKS. IT WAS TAKING ON 3 OR 4 INCHES A WEEK FOR A FEW WEEKS AND THEN LAST WEEK HAD 7 INCHES OF WATER. PRIME TIME CONDUCTED THE TIGHTNESS TEST AND THE TANK FAILED. TANK WAS REPEATED 3X AND FAILED ALL TEST. THE TANK IS A SINGLE WALL FIBERGLASS TANK INSTALLED IN 1976. RTS HAS TAKEN THE TANK OUT OF SERVICE AND CONTACTED NOCO TO BRING A DAY TANK TO THE SITE AND TRANSFER PRODUCT IN FAILED TANK TO THE DAY TANK. THERE IS CURRENTLY LESS THAN 1000 GALLONS IN THE TANK OR APPROX 28-29 INCHES OF PRODUCT. DEPTH TO GROUNDWATER IS APPROX 77-78 INCHES AS MEASURED FROM AN ON-SITE MONITORING WELL. DEPTH TO THE BOTTOM OF TANK MEASURED FROM THE TOP OF RISER TO TANK BOTTOM IS 92 INCHES. 7/11/16 MZ ON SITE WITH RICH KIRTLAND (RTS) AND DON GAGE (LECHASE) TO WALK SITE AND GET UPDATE ON UNDERGROUND TANK REMOVAL PROJECT. APPROXIMATELY 11 USTS WILL BE REMOVED OVER THE COURSE OF THE PROJECT. THE FIRST PHASE INVOLVES THE HEATING OIL USTS LOCATED AT THE SOUTHWEST CORNER OF THE MAIN BLDG. TREC IS CURRENTLY EMPTYING THESE TANKS THEN WILL CLEAN THEM. THESE TANKS WILL POSSIBLY BE READY FOR REMOVAL THE WEEK OF JULY 18. NEXT PHASE ARE THE FORMER DIESEL USTS BACK BY THE WASHING FACILITY. THESE TANKS HAVE BEEN EMPTIED AND BEEN REPAOLCED WITH 2 ASTS. THERE IS ALSO A GAS TANK IN THIS AREA THAT IS SCHEDULE TO BE REPLACED WITH A GAS AST. LAST PHASE INVOLVES THE MOTOR OIL UST (FAILED TIGHTNESS TEST), TRNASMISION OIL UST AND DIESEL UST FOR BACK UP GENERATOR. KIRTLAND TO KEEP MZ UPDATED ON SCHEDULE FOR ALL WORK. 8/10/16 MZ ON SITE WITH TREC. 4 TANKS NEAR THE FUELING STATION HAVE BEEN REMOVED. NO OBVIOUS IMPACTS OBSERVED. PER TREC, RAVI COLLECTED CONFIRMATORY SOIL SAMPLES FROM BOTTOM (1 FROM UNDER EACH TANK) AND SIDE WALLS. 10/17/17 MZ AND MG (DEC) ON SITE WITH ERIN MCCORMICK (RTS), TREC AND RAVI ENGR. TO OBSERVE REMOVAL OF TANKS 5B AND 5C. TANKS UNCOVERED, PUMPED OUT AND RINSED. FIRE MARSHALL ARRIVES ON SITE TO INSPECT. EXCAVATING ALONG THE SIDE OF TANK 5B AND ODORS AND ELEVATED PID READINGS NOTED STARTING AT APPROX 2-3 FEET BELOW GRADE. AT APPROX 8-10 FT BGS, THERE WAS A BUCKET OF DARK STAINED SOIL AND STONE WHICH EXHIBITED A STRONG HEAVY WEIGHT PETRO ODOR. GROUNDWATER IN BOTTOM OF EXCAVATION HAS A SHEEN/FILM STARTING TO FORM. IMPACTED SOIL TO BE STAGED ON POLY AND COVERED IN OTHER PART OF PROPERTY. MZ DISCUSSED PUTTING A MONITORING/RECOVERY WELL IN WHEN BACKFILLING. RTS AGREES WITH WELL INSTALL IDEA. 10/18/17 MZ ON SITE WITH TREC. TANKS ARE OUT OF THE GROUND AND BROKE IN HALF PENDING DISPOSAL. EXCAVATION PARTIALLY BACKFILED. THERE IS A DEEPER AREA IN FRONT OF WALL COLUMN BETWEEN PERSON DOOR AND BAY DOOR. THE WELL WILL BE INSTALLED IN THIE LOCATION."

**Site Name:** Rochester Drug Cooperative Building  
**Site Name (GIS):** Rochester Drug Cooperative Building  
**Site Class Desc (GIS):** Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

**Site Class Desc:**  
**Program:** BCP  
**Program Desc:** Brownfield Cleanup Program  
**Assess DOH:** Homes and businesses in the vicinity of the site are served by public water so exposures via drinking water are not expected. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion into structures on or near the site.

**Source of Data:**  
**Description:**

The Former Rochester Drug Cooperative site is a 2.7 acre property located at 320 North Goodman Street in the City of Rochester. The site is immediately adjacent to a railyard and a commercial property and it is served by public water and sewers. Other nearby properties are a mix of residential and commercial uses. A 62,000 square-foot one and two-story building with a partial basement occupies the western portion of the property.

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

Past uses of the site include a lumberyard, furniture manufacturing, offices, and warehousing. Currently the building is subdivided and occupied by multiple tenants. Previous investigations at the site identified significant petroleum contamination in soil and groundwater. The source of this contamination was four underground storage tanks that were formerly located on the eastern portion of the property. Two tanks were reportedly removed in the early 1970's and one tank was removed in 1998. There is no closure documentation for the fourth tank. An IRM soil removal was completed in April 2005, and no tanks were encountered during excavations. Contaminated soils were treated in an on-site bio-pile. Petroleum contaminants in groundwater have been significantly reduced and only low levels remain on a portion of the site. A sub-slab depressurization system (SSDS) is operating in the building to mitigate the potential for indoor contamination. The site is capped by an asphalt parking lot and the on-site building. A site management plan has been developed to address periodic groundwater monitoring, continued operation of the SSDS, and management of residual contamination in soils. A final engineering report documents completion of remedial actions and no further actions are required. A Certificate of Completion was issued on December 31, 2009.

**Assessment:**

Petroleum contaminated soils and groundwater at levels as high 2,100 ppm total petroleum-related VOCs in soil and 100 ppm total petroleum-related VOCs in groundwater were documented by previous investigation reports. Approximately 2,100 cubic yards of petroleum contaminated soils were excavated in 2005 and were treated in an ex-situ biopile adjacent to the site. The excavations extended to bedrock which is approximately 15 feet below ground surface. Approximately 40,000 gallons of contaminated groundwater were collected and disposed of off-site during these soil excavations. After completion of the soil removal, a groundwater investigation and monitoring program was implemented and a sub-slab depressurization system was installed in the on-site building. Petroleum contamination in groundwater has been significantly reduced to levels ranging from non-detect to 90 ppb total VOCs. Residual levels of petroleum-related VOC compounds remain in soil. A site management plan has been developed to address continued groundwater monitoring, operation of the sub-slab depressurization system, and management of residual contamination in soils. An environmental easement was executed to ensure the SMP is implemented on-site. The final engineering report indicates no further actions will be required at this time other than maintaining institutional controls governing use of the site. As of January 2015, VOCs in groundwater have been non-detectable below the groundwater standard for several sampling events. No further groundwater monitoring will be required. Continued operation of the sub-slab depressurization system is required.

 Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

**Source of Data:**  
**Assess DOH:** Homes and businesses in the vicinity of the site are served by public water so exposures via drinking water are not expected. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion into structures on or near the site.

**Description:**  
 The Former Rochester Drug Cooperative site is a 2.7 acre property located at 320 North Goodman Street in the City of Rochester. The site is immediately adjacent to a railyard and a commercial property and it is served by public water and sewers. Other nearby properties are a mix of residential and commercial uses. A 62,000 square-foot one and two-story building with a partial basement occupies the western portion of the property. Past uses of the site include a lumberyard, furniture manufacturing, offices, and warehousing. Currently the building is subdivided and occupied by multiple tenants. Previous investigations at the site identified significant petroleum contamination in soil and groundwater. The source of this contamination was four underground storage tanks that were formerly located on the eastern portion of the property. Two tanks were reportedly removed in the early 1970's and one tank was removed in 1998. There is no closure documentation for the fourth tank. An IRM soil removal was completed in April 2005, and no tanks were encountered during excavations. Contaminated soils were treated in an on-site bio-pile. Petroleum contaminants in groundwater have been significantly reduced and only low levels remain on a portion of the site. A sub-slab depressurization system (SSDS) is operating in the building to mitigate the potential for indoor contamination. The site is capped by an asphalt parking lot and the on-site building. A site management plan has been developed to address periodic groundwater monitoring, continued operation of the SSDS, and management of residual contamination in soils. A final engineering report documents completion of remedial actions and no further actions are required. A Certificate of Completion was issued on December 31, 2009.

**Assessment:**  
 Petroleum contaminated soils and groundwater at levels as high 2,100 ppm total petroleum-related VOCs in soil and 100 ppm total petroleum-related VOCs in groundwater were documented by previous investigation reports. Approximately 2,100 cubic yards of petroleum contaminated soils were excavated in 2005 and were treated in an ex-situ biopile adjacent to the site. The excavations extended to bedrock which is approximately 15 feet below ground surface. Approximately 40,000 gallons of contaminated groundwater were collected and disposed of off-site during these soil excavations. After completion of the soil removal, a groundwater investigation and monitoring program was implemented and a sub-slab depressurization system was installed in the on-site building. Petroleum contamination in groundwater has been significantly reduced to levels ranging from non-detect to 90 ppb total VOCs. Residual levels of petroleum-related VOC compounds remain in soil. A site management plan has been developed to address continued groundwater monitoring, operation of the sub-slab depressurization system, and management of residual contamination in soils. An environmental easement was executed to ensure the SMP is implemented on-site. The final engineering report indicates no further actions will be required at this time other than maintaining institutional controls governing use of the site. As of January 2015, VOCs in groundwater have been non-detectable below the groundwater standard for several sampling events. No further groundwater monitoring will be required. Continued operation of the sub-slab depressurization system is required.

A site management plan has been developed to address periodic groundwater monitoring, continued operation of the SSDS, and management of residual contamination in soils. A final engineering report documents completion of remedial actions and no further actions are required. A Certificate of Completion was issued on December 31, 2009.

**Assessment:**

Petroleum contaminated soils and groundwater at levels as high 2,100 ppm total petroleum-related VOCs in soil and 100 ppm total petroleum-related VOCs in groundwater were documented by previous investigation reports. Approximately 2,100 cubic yards of petroleum contaminated soils were excavated in 2005 and were treated in an ex-situ biopile adjacent to the site. The excavations extended to bedrock which is approximately 15 feet below ground surface. Approximately 40,000 gallons of contaminated groundwater were collected and disposed of off-site during these soil excavations. After completion of the soil removal, a groundwater investigation and monitoring program was implemented and a sub-slab depressurization system was installed in the on-site building. Petroleum contamination in groundwater has been significantly reduced to levels ranging from non-detect to 90 ppb total VOCs. Residual levels of petroleum-related VOC compounds remain in soil. A site management plan has been developed to address continued groundwater monitoring, operation of the sub-slab depressurization system, and management of residual contamination in soils. An environmental easement was executed to ensure the SMP is implemented on-site. The final engineering report indicates no further actions will be required at this time other than maintaining institutional controls governing use of the site. As of January 2015, VOCs in groundwater have been non-detectable below the groundwater standard for several sampling events. No further groundwater monitoring will be required. Continued operation of the sub-slab depressurization system is required.

**Site Class Desc:** This classification is assigned to a site that has been properly closed but that requires continued site management consisting of operation, maintenance and/or monitoring. Class 4 is appropriate for a site where remedial construction actions have been completed for all operable units, but the site has not necessarily been brought into compliance with standards, criteria, or guidance (e.g., a groundwater extraction and treatment system has been installed and is operating properly but groundwater standards have not been achieved yet). The Record of Decision should define the remedial action objectives that need to be achieved during site management. If a Certificate of Completion (CoC) is to be issued for a site, the CoC is issued concurrently with the reclassification.

**Site Class Desc (GIS):** This classification is assigned to a site that has been properly closed but that requires continued site management consisting of operation, maintenance and/or monitoring. Class 4 is appropriate for a site where remedial construction actions have been completed for all operable units, but the site has not necessarily been brought into compliance with standards, criteria, or guidance (e.g., a groundwater extraction and treatment system has been installed and is operating properly but groundwater standards have not been achieved yet). The Record of Decision should define the remedial action objectives that need to be achieved during site management. If a Certificate of Completion (CoC) is to be issued for a site, the CoC is issued concurrently with the reclassification.

**Source of Data:**  
**Assess DOH:** People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Contact with on-site contaminated soil is unlikely unless persons dig below the ground surface. Volatile organic compounds in the groundwater may move into the soil vapor (air between soil particles), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building and actions have been taken to reduce exposure. Environmental sampling indicates that soil vapor intrusion is not a concern off-site.

**Assessment:**  
Nature and Extent of Contamination: chemicals of concern (COCs) include volatile organics (VOCs), semi-volatiles (sVOCs,) pesticides/polychlorinated biphenyls (PCBs), and metals. Shallow soil has shown the greatest impact from the chemicals of concern Shallow and deep groundwater has been impacted mostly by chlorinated VOCs (cVOCs). The highest level of soil contamination was found in the area behind the Davis-Howland building. Shallow soils were contaminated with sVOCs and metals, and subsurface soils with VOCs and, to a lesser extent, sVOCs and metals. Groundwater contamination was highest in shallow groundwater with the area directly behind 200 Anderson Avenue showing the highest concentrations. Site-Related Groundwater: Shallow overburden groundwater contamination consisted mainly of chlorinated compounds, petroleum BTEX compounds and lead. The highest contaminant levels seen were trichloroethene (98 ppm), 1,2-dichloroethene (98 ppm), and 1,1,1-trichloroethane (34 ppm). Shallow groundwater

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

flow direction is locally variable but often has a southern component of flow. Data from the Phase I and Phase II investigations indicated that contamination levels in shallow groundwater reached non-detect levels just south of Anderson Avenue in front of the Davis-Howland building. Highest contamination levels in shallow groundwater were found in the area immediately behind the Davis-Howland buildings. Bedrock groundwater contamination shows lower concentrations of chemicals than the shallow groundwater. Highest contaminant levels were for trichloroethene (0.74 ppm), 1,2-dichloroethene (8.6 ppm), and vinyl chloride (0.84 ppm). Bedrock groundwater flow is predominantly to the south. Bedrock groundwater contamination was found to be greatest south of Anderson Avenue at MW-1R and northwest of the Davis-Howland building at MW-5R. Post-Remediation: Soil: A surface soil excavation and removal was performed in 1992 which removed drums and the top foot of soil behind the 190-220 Anderson Ave buildings. The OU-1 remedial action removed 2 small areas of surface soil that were contaminated with metals. That was followed during the remedial action by the removal of three small areas of surface soil that were contaminated by metals. Dry soil contaminated from surface leaks and spills has all been removed. Subsurface soil was remediated via soil vapor extraction. A post-remedial sampling effort completed in 2015 confirmed that COCs for soils have been cleaned up to restricted-residential cleanup standards although the current zoning only allows commercial/industrial use. Groundwater: The groundwater beneath this site, both shallow and deep, continues to remain contaminated with cVOCs but at appreciably lower levels than before remediation. Overall, cVOC concentrations in the overburden wells have decreased significantly since 1997 and cVOC concentrations in the bedrock wells have decreased by about 40% since 1997. Water in the saturated upper soil zone continues to be cleaned by the sparge/SVE system. Soil Vapor Intrusion concerns in the DHOC buildings are currently being mitigated by the operation of the remedial SVE system.

**Description:**

Location: The site is located in the Southeast Quadrant of the City of Rochester in the Atlantic-University neighborhood adjacent to CSXT's Goodman Street Rail Yard. Site Features: The site consists all of or portions of eight parcels of land where documented waste disposal and remedial cleanup have occurred. The Registry site address, 200 Anderson Avenue, is the central building in a row of adjoining Davis-Howland buildings with a single open yard in back. The site also includes a small remediated disposal area on two adjoining properties on the south side of Anderson Ave. The total site area is two acres. Davis-Howland Oil Company (DHOC) site includes 192-200 Anderson Ave, parcel 106.84-1-6; 220 Anderson Ave, parcel 106.84-1-5; 190 Anderson Ave, parcel 106.84-1-7; 188 Anderson Ave, parcel 106.84-1-4.002; a portion of 360 N Goodman St, parcel 106.84-1-11; a portion of 406 Atlantic Ave, parcel 107.77-1-28.002; a portion of 183-185 Anderson Ave, parcel 121.28-2-4 and a portion of 15-17 Norwood St, parcel 121.28-2-5. The rear open yard behind the former DHOC buildings is paved with blacktop installed during remediation. Extensive remedial trenches, wells, and sparge and vacuum lines have been installed beneath this asphalt cover. A groundwater extraction water line extends beneath portions of 183-185 Anderson Ave. and 15-17 Norwood St. Current Zoning/Use(s): The site neighborhood includes residential, commercial, and industrial facilities. Zoning north of Anderson Avenue is commercial/industrial. Current uses of the buildings are storage and other commercial uses. Historical Use(s): The site buildings along Anderson Avenue were built between 1910 and 1940. A hundred years ago the DHOC bordered the Robeson Rochester Company and the Rochester Stamping Company. Robeson Rochester was a cutlery manufacturer. These neighboring companies performed metal fabrication and acid treating. The DHOC site remediation has removed contaminated soil from multiple on-site locations which may have come from these neighbors. Between 1942 and 1972 the site produced industrial chemicals, oils, greases, and other lubricants. DHOC operated the business from 1972 until 1994. An oil spill complaint in 1991 resulted in Davis-Howland removing all drums of liquid wastes and completing surficial soil clean-up in July 1992. In September of 1994, this site was referred to the State Superfund (SSF) program. A state Superfund Remedial Investigation (RI) was completed in early 1997. Two Records of Decision (RODs) were signed in 1997 and 1998. The RODs called for air sparging, soil vapor extraction and soil removal. Groundwater contamination at deep levels was encountered during pre-design sampling activities, consequently deep groundwater contamination is also addressed in the remedy. The Remedial Design was completed in September of 2000. Remedial construction began in 2001 and was completed in 2002. The site was reclassified to Class 4 on February 11, 2015. The remedial components include air sparge combined with soil-vapor extraction (sparge/SVE) supplemented by groundwater pump-and-treat technology. From various pumped wells, collected groundwater moves through an air stripper which separates volatile contaminants from the water. From 2002 until 2009, a catalytic oxidizer (CATOX) was used to burn off the contaminants liberated from the water. When concentrations declined, an engineered air discharge stack of suitable height was installed and the CATOX was removed. Presently, treated water is sampled, monitored and discharged through a dedicated water line to the sanitary sewer at Anderson Avenue under permit with discharge limits established by Monroe County. The treatment technology runs continuously. During the 2004 and 2005 heating seasons, the NYSDEC and NYSDOH completed a soil vapor intrusion (SVI) study within the Davis-Howland building, adjacent buildings and in the downgradient residential area. The active Soil Vapor Extraction (SVE) system running in the Davis-Howland building and in the connected adjacent buildings is mitigating indoor air intrusion of any contaminants. Follow-up indoor air sampling in the fall of 2010 in the off-site building on the western edge of the site did not find cVOCs in indoor air which require mitigation. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination Operable Unit 1 (OU1) encompasses the shallow groundwater, surficial soil, and subsurface soil on the site. The ROD required air sparging to treat overburden groundwater, vapor extraction to collect released VOCs and enhance soil cleanup, off-gas treatment, site fencing to protect the treatment plant, and groundwater monitoring. Operable Unit 2 (OU2) encompasses the bedrock groundwater. NYSDEC selected No Further Action as the site remedy for OU2 but included a contingent remedy. In the event that the OU-1 remedy did not effectively clean up the deeper groundwater, the remedy for OU2 could include groundwater extraction wells and groundwater monitoring. As a result, subsequent to the OU@ ROD, the decision was made to install two groundwater extraction wells and a network of monitoring wells in the bedrock aquifer. A groundwater pump-and-treat system with groundwater monitoring has operated continuously at DHOC since 2002. Site Geology and Hydrogeology: The unconsolidated surface geology consists of fine to coarse sand with some gravel and silt. No significant surface water is located in the immediate area of the site. The bedrock is the mid-upper Silurian, late Niagaran stage, Guelph dolostone of the Lockport group.

**Description:**

Location: The site is located in the Southeast Quadrant of the City of Rochester in the Atlantic-University neighborhood adjacent to CSXT's Goodman Street Rail Yard. Site Features: The site consists all of or portions of eight parcels of land where documented waste disposal and remedial cleanup have occurred. The Registry site address, 200 Anderson Avenue, is the central building in a row of adjoining Davis-Howland buildings with a single open yard in back. The site also includes a small remediated disposal area on two adjoining properties on the south side of Anderson Ave. The total site area is two acres. Davis-Howland Oil Company (DHOC) site includes 192-200 Anderson Ave, parcel 106.84-1-6; 220 Anderson Ave, parcel 106.84-1-5; 190 Anderson Ave, parcel 106.84-1-7; 188 Anderson Ave, parcel 106.84-1-4.002; a portion of 360 N Goodman St, parcel 106.84-1-11; a portion of 406 Atlantic Ave, parcel 107.77-1-28.002; a portion of 183-185 Anderson Ave, parcel 121.28-2-4 and a portion of 15-17 Norwood St, parcel 121.28-2-5. The rear open yard behind the former DHOC buildings is paved with blacktop installed during remediation. Extensive remedial trenches, wells, and sparge and vacuum lines have been installed beneath this asphalt cover. A groundwater extraction water line extends beneath portions of 183-185 Anderson Ave. and 15-17 Norwood St. Current Zoning/Use(s): The site neighborhood includes residential, commercial, and industrial facilities. Zoning north of Anderson Avenue is commercial/industrial. Current uses of the buildings are storage and other commercial uses. Historical Use(s): The site buildings along Anderson Avenue were built between 1910 and 1940. A hundred years ago the DHOC bordered the Robeson Rochester Company and the Rochester Stamping Company. Robeson Rochester was a cutlery manufacturer. These neighboring companies performed metal fabrication and acid treating. The DHOC site remediation has removed contaminated soil from multiple on-site locations which may have come from these neighbors. Between 1942 and 1972 the site produced industrial chemicals, oils, greases, and other lubricants. DHOC operated the business from 1972 until 1994. An oil spill complaint in 1991 resulted in Davis-Howland removing all drums of liquid wastes and completing surficial soil clean-up in July 1992. In September of 1994, this site was referred to the State Superfund (SSF) program. A state Superfund Remedial Investigation (RI) was completed in early 1997. Two Records of Decision (RODs) were signed in 1997 and 1998. The RODs called for air sparging, soil vapor extraction and soil removal. Groundwater contamination at deep levels was encountered during pre-design sampling activities, consequently deep groundwater contamination is also addressed in the remedy. The Remedial Design was completed in September of 2000. Remedial construction began in 2001 and was completed in 2002. The site was reclassified to Class 4 on February 11, 2015. The remedial components include air sparge combined with soil-vapor extraction (sparge/SVE) supplemented by groundwater pump-and-treat technology. From various pumped wells, collected groundwater moves through an air stripper which separates volatile contaminants from the water. From 2002 until 2009, a catalytic oxidizer (CATOX) was used to burn off the contaminants liberated from the water. When concentrations declined, an engineered air discharge stack of suitable height was installed and the CATOX was removed. Presently, treated water is sampled, monitored and discharged through a dedicated water line to the sanitary sewer at Anderson Avenue under permit with discharge limits established by Monroe County. The treatment technology runs continuously. During the 2004 and 2005 heating seasons, the NYSDEC and NYSDOH completed a soil vapor intrusion (SVI) study within the Davis-Howland building, adjacent buildings and in the downgradient residential area. The active Soil Vapor Extraction (SVE) system running in the Davis-Howland building and in the connected adjacent buildings is mitigating indoor air intrusion of any contaminants. Follow-up indoor air sampling in the fall of 2010 in the off-site building on the western edge of the site did not find cVOCs in indoor air which require mitigation. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination Operable Unit 1 (OU1) encompasses the shallow groundwater, surficial soil, and subsurface soil on the site. The ROD required air sparging to treat overburden groundwater, vapor extraction to collect released VOCs and enhance soil cleanup, off-gas treatment, site fencing to protect the treatment plant, and groundwater monitoring. Operable Unit 2 (OU2) encompasses the bedrock groundwater. NYSDEC selected No Further Action as the site remedy for OU2 but included a contingent remedy. In the event that the OU-1 remedy did not effectively clean up the deeper groundwater, the remedy for OU2 could include groundwater extraction wells and groundwater monitoring. As a result, subsequent to the OU@ ROD, the decision was made to install two groundwater extraction wells and a network of monitoring wells in the bedrock aquifer. A groundwater pump-and-treat system with groundwater monitoring has operated continuously at DHOC since 2002. Site Geology and Hydrogeology: The unconsolidated surface geology consists of fine to coarse sand with with some gravel and silt. No significant surface water is located in the immediate area of the site. The bedrock is the mid-upper Silurian, late Niagaran stage, Guelph dolostone of the Lockport group.

**Assessment:**

Nature and Extent of Contamination: chemicals of concern (COCs) include volatile organics (VOCs), semi-volatiles (sVOCs,) pesticides/polychlorinated biphenyls (PCBs), and metals. Shallow soil has shown the greatest impact from the chemicals of concern Shallow and deep groundwater has been impacted mostly by chlorinated VOCs (cVOCs). The highest level of soil contamination was found in the area behind the Davis-Howland building. Shallow soils were contaminated with sVOCs and metals, and subsurface soils with VOCs and, to a lesser extent, sVOCs and metals. Groundwater contamination was highest in shallow groundwater with the area directly behind 200 Anderson Avenue showing the highest concentrations. Site-Related Groundwater: Shallow overburden groundwater contamination consisted mainly of chlorinated compounds, petroleum BTEX compounds and lead. The highest contaminant levels seen were trichloroethene (98 ppm), 1,2-dichloroethene (98 ppm), and 1,1,1-trichloroethane (34 ppm). Shallow groundwater

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

flow direction is locally variable but often has a southern component of flow. Data from the Phase I and Phase II investigations indicated that contamination levels in shallow groundwater reached non-detect levels just south of Anderson Avenue in front of the Davis-Howland building. Highest contamination levels in shallow groundwater were found in the area immediately behind the Davis-Howland buildings. Bedrock groundwater contamination shows lower concentrations of chemicals than the shallow groundwater. Highest contaminant levels were for trichloroethene (0.74 ppm), 1,2-dichloroethene (8.6 ppm), and vinyl chloride (0.84 ppm). Bedrock groundwater flow is predominantly to the south. Bedrock groundwater contamination was found to be greatest south of Anderson Avenue at MWV-1R and northwest of the Davis-Howland building at MW-5R. Post-Remediation: Soil: A surface soil excavation and removal was performed in 1992 which removed drums and the top foot of soil behind the 190-220 Anderson Ave buildings. The OU-1 remedial action removed 2 small areas of surface soil that were contaminated with metals. That was followed during the remedial action by the removal of three small areas of surface soil that were contaminated by metals. Dry soil contaminated from surface leaks and spills has all been removed. Subsurface soil was remediated via soil vapor extraction. A post-remedial sampling effort completed in 2015 confirmed that COCs for soils have been cleaned up to restricted-residential cleanup standards although the current zoning only allows commercial/industrial use. Groundwater: The groundwater beneath this site, both shallow and deep, continues to remain contaminated with cVOCs but at appreciably lower levels than before remediation. Overall, cVOC concentrations in the overburden wells have decreased significantly since 1997 and cVOC concentrations in the bedrock wells have decreased by about 40% since 1997. Water in the saturated upper soil zone continues to be cleaned by the sparge/SVE system. Soil Vapor Intrusion concerns in the DHOC buildings are currently being mitigated by the operation of the remedial SVE system.

<b>Site Class Desc (GIS):</b>	This classification is assigned to a site that has been properly closed but that requires continued site management consisting of operation, maintenance and/or monitoring. Class 4 is appropriate for a site where remedial construction actions have been completed for all operable units, but the site has not necessarily been brought into compliance with standards, criteria, or guidance (e.g., a groundwater extraction and treatment system has been installed and is operating properly but groundwater standards have not been achieved yet). The Record of Decision should define the remedial action objectives that need to be achieved during site management. If a Certificate of Completion (CoC) is to be issued for a site, the CoC is issued concurrently with the reclassification.					
<b>Site Class Desc:</b>	This classification is assigned to a site that has been properly closed but that requires continued site management consisting of operation, maintenance and/or monitoring. <b>Program:</b>	HW					
<b>Program Desc:</b>	State Superfund Program					
<b>Assess DOH:</b>	People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Contact with on-site contaminated soil is unlikely unless persons dig below the ground surface. Volatile organic compounds in the groundwater may move into the soil vapor (air between soil particles), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building and actions have been taken to reduce exposure. Environmental sampling indicates that soil vapor intrusion is not a concern off-site.					
<b>Source of Data:</b>						
<b>Assessment:</b>	<p>Nature and Extent of Contamination: chemicals of concern (COCs) include volatile organics (VOCs), semi-volatiles (sVOCs,) pesticides/polychlorinated biphenyls (PCBs), and metals. Shallow soil has shown the greatest impact from the chemicals of concern. Shallow and deep groundwater has been impacted mostly by chlorinated VOCs (cVOCs). The highest level of soil contamination was found in the area behind the Davis-Howland building. Shallow soils were contaminated with sVOCs and metals, and subsurface soils with VOCs and, to a lesser extent, sVOCs and metals. Groundwater contamination was highest in shallow groundwater with the area directly behind 200 Anderson Avenue showing the highest concentrations. Site-Related Groundwater: Shallow overburden groundwater contamination consisted mainly of chlorinated compounds, petroleum BTEX compounds and lead. The highest contaminant levels seen were trichloroethene (98 ppm), 1,2-dichloroethene (98 ppm), and 1,1,1-trichloroethane (34 ppm). Shallow groundwater flow direction is locally variable but often has a southern component of flow. Data from the Phase I and Phase II investigations indicated that contamination levels in shallow groundwater reached non-detect levels just south of Anderson Avenue in front of the Davis-Howland building. Highest contamination levels in shallow groundwater were found in the area immediately behind the Davis-Howland buildings. Bedrock groundwater contamination shows lower concentrations of chemicals than the shallow groundwater. Highest contaminant levels were for trichloroethene (0.74 ppm), 1,2-dichloroethene (8.6 ppm), and vinyl chloride (0.84 ppm). Bedrock groundwater flow is predominantly to the south. Bedrock groundwater contamination was found to be greatest south of Anderson Avenue at MW-1R and northwest of the Davis-Howland building at MW-5R. Post-Remediation: Soil: A surface soil excavation and removal was performed in 1992 which removed drums and the top foot of soil behind the 190-220 Anderson Ave buildings. The OU-1 remedial action removed 2 small areas of surface soil that were contaminated with metals. That was followed during the remedial action by the removal of three small areas of surface soil that were contaminated by metals. Dry soil contaminated from surface leaks and spills has all been removed. Subsurface soil was remediated via soil vapor extraction. A post-remedial sampling effort completed in 2015 confirmed that COCs for soils have been cleaned up to restricted-residential cleanup standards although the current zoning only allows commercial/industrial use. Groundwater: The groundwater beneath this site, both shallow and deep, continues to remain contaminated with cVOCs but at appreciably lower levels than before remediation. Overall, cVOC concentrations in the overburden wells have decreased significantly since 1997 and cVOC concentrations in the bedrock wells have decreased by about 40% since 1997. Water in the saturated upper soil zone continues to be cleaned by the sparge/SVE system. Soil Vapor Intrusion concerns in the DHOC buildings are currently being mitigated by the operation of the remedial SVE system.</p>					
<b>Description:</b>	<p>Location: The site is located in the Southeast Quadrant of the City of Rochester in the Atlantic-University neighborhood adjacent to CSXT's Goodman Street Rail Yard. Site Features: The site consists all of or portions of eight parcels of land where documented waste disposal and remedial cleanup have occurred. The Registry site address, 200 Anderson Avenue, is the central building in a row of adjoining Davis-Howland buildings with a single open yard in back. The site also includes a small remediated disposal area on two adjoining properties on the south side of Anderson Ave. The total site area is two acres. Davis-Howland Oil Company (DHOC) site includes 192-200 Anderson Ave, parcel 106.84-1-6; 220 Anderson Ave, parcel 106.84-1-5; 190 Anderson Ave, parcel 106.84-1-7; 188 Anderson Ave, parcel 106.84-1-4.002; a portion of 360 N Goodman St, parcel 106.84-1-11; a portion of 406 Atlantic Ave, parcel 107.77-1-28.002; a portion of 183-185 Anderson Ave, parcel 121.28-2-4 and a portion of 15-17 Norwood St, parcel 121.28-2-5. The rear open yard behind the former DHOC buildings is paved with blacktop installed during remediation. Extensive remedial trenches, wells, and sparge</p>					

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

and vacuum lines have been installed beneath this asphalt cover. A groundwater extraction water line extends beneath portions of 183-185 Anderson Ave. and 15-17 Norwood St. Current Zoning/Use(s): The site neighborhood includes residential, commercial, and industrial facilities. Zoning north of Anderson Avenue is commercial/industrial. Current uses of the buildings are storage and other commercial uses. Historical Use(s): The site buildings along Anderson Avenue were built between 1910 and 1940. A hundred years ago the DHOC bordered the Robeson Rochester Company and the Rochester Stamping Company. Robeson Rochester was a cutlery manufacturer. These neighboring companies performed metal fabrication and acid treating. The DHOC site remediation has removed contaminated soil from multiple on-site locations which may have come from these neighbors. Between 1942 and 1972 the site produced industrial chemicals, oils, greases, and other lubricants. DHOC operated the business from 1972 until 1994. An oil spill complaint in 1991 resulted in Davis-Howland removing all drums of liquid wastes and completing surficial soil clean-up in July 1992. In September of 1994, this site was referred to the State Superfund (SSF) program. A state Superfund Remedial Investigation (RI) was completed in early 1997. Two Records of Decision (RODs) were signed in 1997 and 1998. The RODs called for air sparging, soil vapor extraction and soil removal. Groundwater contamination at deep levels was encountered during pre-design sampling activities, consequently deep groundwater contamination is also addressed in the remedy. The Remedial Design was completed in September of 2000. Remedial construction began in 2001 and was completed in 2002. The site was reclassified to Class 4 on February 11, 2015. The remedial components include air sparge combined with soil-vapor extraction (sparge/SVE) supplemented by groundwater pump-and-treat technology. From various pumped wells, collected groundwater moves through an air stripper which separates volatile contaminants from the water. From 2002 until 2009, a catalytic oxidizer (CATOX) was used to burn off the contaminants liberated from the water. When concentrations declined, an engineered air discharge stack of suitable height was installed and the CATOX was removed. Presently, treated water is sampled, monitored and discharged through a dedicated water line to the sanitary sewer at Anderson Avenue under permit with discharge limits established by Monroe County. The treatment technology runs continuously. During the 2004 and 2005 heating seasons, the NYSDEC and NYSDOH completed a soil vapor intrusion (SVI) study within the Davis-Howland building, adjacent buildings and in the downgradient residential area. The active Soil Vapor Extraction (SVE) system running in the Davis-Howland building and in the connected adjacent buildings is mitigating indoor air intrusion of any contaminants. Follow-up indoor air sampling in the fall of 2010 in the off-site building on the western edge of the site did not find cVOCs in indoor air which require mitigation. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination Operable Unit 1 (OU1) encompasses the shallow groundwater, surficial soil, and subsurface soil on the site. The ROD required air sparging to treat overburden groundwater, vapor extraction to collect released VOCs and enhance soil cleanup, off-gas treatment, site fencing to protect the treatment plant, and groundwater monitoring. Operable Unit 2 (OU2) encompasses the bedrock groundwater. NYSDEC selected No Further Action as the site remedy for OU2 but included a contingent remedy. In the event that the OU-1 remedy did not effectively clean up the deeper groundwater, the remedy for OU2 could include groundwater extraction wells and groundwater monitoring. As a result, subsequent to the OU@ ROD, the decision was made to install two groundwater extraction wells and a network of monitoring wells in the bedrock aquifer. A groundwater pump-and-treat system with groundwater monitoring has operated continuously at DHOC since 2002. Site Geology and Hydrogeology: The unconsolidated surface geology consists of fine to coarse sand with with some gravel and silt. No significant surface water is located in the immediate area of the site. The bedrock is the mid-upper Silurian, late Niagaran stage, Guelph dolostone of the Lockport group.

<b>Site Name:</b>	Former Staub's Textile Service, Inc.		
<b>Site Name (GIS):</b>	Former Staub's Textile Service, Inc.		
<b>Site Class Desc (GIS):</b>	No Further Action at this Time: Sites are given a classification of "N" when:		

- a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;
- b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;
- c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or
- d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

<b>Site Class Desc:</b>	
<b>Program:</b>	BCP
<b>Program Desc:</b>	Brownfield Cleanup Program
<b>Assess DOH:</b>	
<b>Source of Data:</b>	
<b>Description:</b>	

This is a new BCP Application that pertains to the property located at 935/951 East Main Street in the city of Rochester, Monroe County). This site is approximately 1.2 acres in size. The Former Saub's Textile Service Site is located in an urban area of the City of Rochester. The site is approximately 1.0 mile east of downtown Rochester on the south side of East Main Street. The main site features comprised of an unoccupied building (80%) surrounded by paved parking areas and roadways (20%). The entire site is covered by building or pavement. The site is currently inactive, and is zoned for commercial use. The future intended use is commercial. The surrounding parcels are currently used for a combination of commercial, light industrial, and residential. The nearest residential area adjoins the site to the south. Until 2005 the site was used for a commercial laundry and dry cleaners. The site is known to have operated as a dry cleaners since the 1920's. The site remedial program will be performed by The Pike Company as a volunteer in the DEC's Brownfield Cleanup Program. The site will be divided into {two} operable units. Operable unit 1 (OU1) is the on-site source area. OU2 consists of the off-site groundwater and soil vapor plumes. Phase I & II Environmental Site Assessments were performed for the site by Passero Associates in 2009. Known or suspected contaminants at this site are chlorinated solvents (Perc) and some petroleum. These contaminants are impacting the soil and groundwater. Soil gas is suspected to also be a concern. This BCP Application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility. Reclassified to "N"; based on withdrawal email on 5/19/10

**Assessment:**

Based upon investigations conducted to date and submitted with the BCP application, the primary contaminants of concern at the site include tetrachloroethene (PCE) and some petroleum related compounds. Significant PCE impacts have been recorded in unsaturated shallow and deep soils as well as shallow groundwater. Less significant impacts of other contaminants can not be determined due to the high reporting limits in the submitted data. The highest concentrations of PCE in soil and groundwater, ranging from 4700 - 9400 ppm in soil and 49 - 118 ppm in groundwater, have been recorded within 40 ft of the presumed down gradient property lines. Concentrations of PCE found on-site significantly exceed the soil cleanup objectives for the protection of groundwater (1.3 ppm). PCE and cis-DCE found in groundwater, also significantly exceed groundwater standards (typically 0.005 ppm). No off-site data has been collected however, the onsite data indicates that contaminant concentrations are increasing in the direction and vicinity of the presumed downgradient property lines. The bedrock underlying the subject site is the Upper Silurian Penfield Dolostone (Geologic Map of New York, Finger Lakes Sheet, 1970). The surficial soils are lacustrine silt and clay (Surficial Geologic Map of New York, Finger Lakes Sheet, 1986). The

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

depth to bedrock has not been reported however is presumed to be 16-20' bgs and the depth to groundwater has not been reported. Based on surficial topography, the groundwater flow direction beneath the Site is presumed to be to the southeast. Once established, more information regarding the site can be found in the documents placed in the Site Document Repository.

<b>Site Name:</b>	Staubs Textile Services, Inc.		
<b>Site Name (GIS):</b>	Staubs Textile Services, Inc.		
<b>Site Class Desc (GIS):</b>	This classification is assigned to a site at which:		

a. the disposal of hazardous waste has been confirmed and the presence of such hazardous waste or its components or breakdown products represents a significant threat to public health or the environment: or  
b. hazardous waste disposal has not been confirmed, but the site has been listed on the Federal National Priorities List (NPL).

**Site Class Desc:** This classification is assigned to a site at which:

a. the disposal of hazardous waste has been confirmed and the presence of such hazardous waste or its components or breakdown products represents a significant threat to public health or the environment: or  
b. hazardous waste disposal has not been confirmed, but the site has been listed on the Federal National Priorities List (NPL).

**Program:** HW  
**Program Desc:** State Superfund Program  
**Assess DOH:** Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile

organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of the buildings, is referred to as soil vapor intrusion. Because the on-site building is vacant, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Soil vapor intrusion sampling indicates actions, including continued monitoring, are recommended to prevent potential exposure at one off-site residence. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site.

**Source of Data:**  
**Description:**

Location: This Site is located at 951, 935 East Main Street in the City of Rochester, Monroe County. The 1.2 acre site is located in a mixed commercial/residential area on the northeast side of the city. Site Features: The majority of the site is occupied by the vacant on-site building with a paved parking area and loading dock on the west side and a small paved driveway on the east side of the property. The site is bound by East Main Street to the north, commercial properties to the west and east and a residential neighborhood to the south. Current Zoning/Use(s): The site is currently inactive and is zoned for commercial use. Historic Use(s): This site has a 70-year history of use as an industrial laundry and dry cleaning service. Operations at the facility ceased in 2005 and it has been vacant since that time. Site Geology and Hydrogeology: The site is underlain by approximately 20 to 25 feet of overburden materials overlying bedrock. The overburden consists of gray and brown silty sand to sandy silt with little clay and gravel. Groundwater in the overburden beneath the site is 12-15 feet below ground surface with flow to the north. Operable Unit(s): The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU 01) is the on-site source area. OU 02 consists of the bedrock groundwater, off-site groundwater and soil vapor contamination.

**Assessment:**

For OU 1: On-Site Area Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern for OU 1 include tetrachloroethene (PCE) and its associated degradation products. Soil - Tetrachloroethene is found in shallow and deeper soil, predominantly at the south end of the site. Concentrations of tetrachloroethene found on site at levels, up to 70,000 ppm, significantly exceed the soil cleanup objectives for the protection of groundwater (1.3 ppm). Data does not indicate any off-site impacts in soil related to this site. Groundwater - PCE and its associated degradation products are also found in groundwater at the southern end of the site, substantially exceeding groundwater standard of 5 ppb, with a concentration of PCE up to 252,800 ppb. Groundwater contamination is expected to extend offsite. Additional investigations will be conducted under OU2. Soil Vapor and Indoor Air - PCE was detected in on-site soil vapor as high as 1,800,000 ug/m3. Presently the site building is vacant; therefore there is no current potential for exposure associated with soil vapor intrusion (SVI). SVI samples, consisting of sub-slab vapor and ambient indoor and outdoor air, were collected at three off-site residence from 2011-2013. Based on the results of those samples, continued monitoring is recommended at one off-site residence and no further action is needed at the remaining two off-site residences. Additional soil vapor intrusion sampling, and any associated actions to address exposure, will be collected under Operable Unit Number 02. The samples will be collected to delineate the nature and extent of soil vapor contamination.

<i>Description History:</i>					The Site was purchased by William Staub in 1922 and utilized as a laundry and a dry cleaning operation. A dry cleaning compliance inspection in 2002 documented the presence of two dry cleaning machines utilizing PCE as the dry cleaning solvent. The NYSDEC October 2005 Hazardous Waste Compliance Inspection" stated that the facility was closed and no longer regulated at that time.

Site Name:	Navy and Marine Center #3					
Site Name (GIS):	Navy and Marine Center #3					
Site Class Desc (GIS):	Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). Further information and/or investigation, in the form of a site characterization, is needed to determine if a Class P site qualifies for listing of the site on the Registry. Generally, to qualify for placement on the Registry, there must be evidence that hazardous waste was disposed on the site and that any resulting contamination presents a significant threat (or reasonably foreseeable threat) to public health or the environment. Class P sites are not listed on the Registry and many are eventually found to not qualify for Registry listing. Sites that do not qualify for listing are typically then reclassified to a "Class

---------	-------------------	-----------	------------------	----------------	------	----

N" site.

**Site Class Desc:**  
**Program:** HW  
**Program Desc:** State Superfund Program  
**Assess DOH:** As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

**Source of Data:**  
**Description:**

This Formerly Used Defense Site (FUDS) is located in downtown Rochester and is known locally as the Main Street Armory. It was commissioned by the State of New York and constructed by the Army Corps of Engineers in 1905 as the headquarters of the 3rd Battalion of the New York Army National Guard. The Armory was used by various divisions of the National Guard and Reserve forces until it was closed in 1990. In July 1956 the facility was leased by the US Navy for use by the Naval Reserve and later the US Coast Guard. This use lasted until 1973 at which time the facility was returned to the State. The building has been renovated and is now used as a venue for concerts and other events. During its use as an armory and military training facility the structure contained two small arms firing ranges on the lower level. In 1998, XRF screening of the ranges by Army Corps of Engineers detected lead in the dust at 59 of 106 locations. Lead was also found at levels of concern in all ten wipe samples analyzed in a laboratory. Further investigation is planned under the FUDS program in 2018.

<b>Site Name:</b>	Conrail Rail Yards		
<b>Site Name (GIS):</b>	Conrail Rail Yards		
<b>Site Class Desc (GIS):</b>	No Further Action at this Time: Sites are given a classification of "N" when:		

- a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;
- b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;
- c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or
- d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

<b>Source of Data:</b>	
<b>Description:</b>	

Location: The site is located at 400 North Goodman Street, in the City of Rochester, Monroe County. The rail yard, known as Goodman Rail Yard, is situated south of Main Street, east of North Goodman Street, north of Atlantic Avenue, and to the west of Culver Road. The site is a former Hazardous

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

Substance Study site (#HS8007) and remains a rail yard in a predominantly industrial setting, however, there is a high school and some residences within 0.5 mile. Most of the site is unpaved. Site Features: The main site feature is the complex of parallel tracks running east to west from Culver Road to North Goodman Street. The facility contains railroad track and ballast (80%), vegetation (10%), and covered/paved areas (10%). Currently, CSX Goodman Yard primarily operates as a switching yard. The two main areas of activity at the rail yard, besides the network of tracks, are the Fuel Dispenser Area at the northwestern portion of the rail yard and the Maintenance Shop at the southeastern portion just south of Atlantic Avenue. Historical Use(s): Goodman Yard has been in existence since the 1880's. Originally part of the New York Central Railroad system, the yard eventually became absorbed by Conrail upon its inception in 1976. In 1998, the yard became part of CSX Transportation when Conrail was split up. Historic activities at the facility have included train control, mobile fueling, general maintenance, equipment fueling, car repair, and fuel storage. Over the years many spills of diesel fuel, hydraulic oil, and other petroleum hydrocarbons typically encountered at large operating rail yards have been reported to the DEC ?Spill Hotline.? Conrail/CSX contractors typically responded to these spills by employing a combination of containment and product recovery. Several spills of non-petroleum materials have also been documented. While the majority of these non-petroleum spills have been minor releases (e.g. 5 gal paint thinner), a train derailment in October 1976 at the northwest end of the yard near the Fuel Dispenser Area, resulted in the release of up to 20,000 gal of acetone to the environment. According to newspaper accounts at the time, Rochester firefighters applied foam suppressant to the overturned cars and pools of acetone to reduce the fire hazard. Although the deputy fire chief indicated that the State Conservation Department would attempt to recover the liquid, much of the acetone probably seeped into the ground. No documentation regarding the State?s response to the 1976 incident or related environmental investigations has been discovered. In 1994, the Monroe County Health Department nominated the Goodman Yard site for inclusion in the Hazardous Substance Waste Disposal Site Study (HSWDSS). The site (#HS8007) was included in the final report (published by DEC in 1995) based in large part on the presumed threat to the environment posed by the acetone spill twenty years prior. Site Geology and Hydrogeology: Unconsolidated materials encountered during previous site investigations consisted of surficial ballast and fill material associated with the track structure, underlain by fine sands and silts with small gravel lenses at varying depths, silty-clay, clay, and till at depth. Ballast and fill material comprise the surficial deposits at the rail yard, with native fine sands and silts, and/or clay from approximately 3 ft bgs to the depth of till, which is encountered at approximately 12 to 14 ft bgs. Bedrock is presumed to be deeper than 15 feet below grade since it was not encountered during any of the previous site investigations. In general, saturated soils (groundwater) are encountered at approximately 8 to 11 ft bgs. Groundwater elevation measurements have been collected periodically from monitoring wells installed in conjunction with previous investigations. Based on the data collected, groundwater is located at approximately 8 to 11 ft bgs. In addition, the groundwater elevation data+E44 indicate that the gradient is very flat and th+E42at the general flow direction is towards the north.

**Assessment:**

Nature and Extent of Contamination: Over the years many spills of diesel fuel, hydraulic oil, and other petroleum hydrocarbons typically encountered at large operating rail yards have been reported to the DEC ?Spill Hotline?. Many of the spills appear to have occurred as a result of locomotive fueling operations near the Fuel Dispenser Area and were confined to the ballast material between and beneath the tracks. Conrail/CSX contractors typically responded to these spills by employing a combination of containment and product recovery and the majority of the spills were closed by DEC within a few months. Occasionally further investigation and corrective action have been warranted resulting in long term soil and groundwater remediation. Several spills of non-petroleum materials have also been documented. While the majority of these non-petroleum spills have been minor releases (e.g. 5 gal paint thinner), a train derailment in October 1976 at the northwest end of the yard near the Fuel Dispenser Area resulted in the release of as much as 20,000 gal of acetone to the environment. There are currently two active spills under investigation and/or remediation: a diesel spill behind the Fuel Dispenser Area (Spill No. 0004600) and one near the Maintenance Shop (Spill No. 1102634). This work is being completed under the direction of Region 8 Spills staff. Groundwater sampling conducted by CSX in 2012 at the northwest end of the yard demonstrated that Acetone concentrations are well below levels of concern.

**Site Name:** Former Elite Vogue Dry Cleaners  
**Site Name (GIS):** Former Elite Vogue Dry Cleaners  
**Site Class Desc (GIS):** This classification is assigned to a site at which:

- a. the disposal of hazardous waste has been confirmed and the presence of such hazardous waste or its components or breakdown products represents a significant threat to public health or the environment: or
- b. hazardous waste disposal has not been confirmed, but the site has been listed on the Federal National Priorities List (NPL).

**Site Class Desc:** This classification is assigned to a site at which:

- a. the disposal of hazardous waste has been confirmed and the presence of such hazardous waste or its components or breakdown products represents a significant threat to public health or the environment: or
- b. hazardous waste disposal has not been confirmed, but the site has been listed on the Federal National Priorities List (NPL).

**Program:** HW  
**Program Desc:** State Superfund Program  
**Assess DOH:** People who dig below the ground surface may come into contact with contaminants in subsurface soil.

Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. On and off-site buildings must be sampled to determine whether people could be coming in contact with site related contaminants due to soil vapor intrusion.

**Source of Data:**  
**Description:**

Location: The Former Elite Vogue Dry Cleaners site is located at 527-533 East Main Street on a 0.126-acre parcel. The site is located in the downtown area of the City of Rochester, Monroe County. Site Features: The entire site is occupied by a one story, multi-use commercial structure. It is bordered to the north by East Main Street, to the east by a paved parking lot, to the south by Haags Alley and to the west by a commercial building. Current Zoning/Use(s): The site is currently a multi-occupant small structure and is zoned Center City District. Historical Use(s): The site was occupied by a dry cleaner from 1936 through 2003. Site Geology and Hydrogeology: Results of previous investigations of adjacent properties by others indicate that groundwater flow is generally to the east. Groundwater was encountered at an average depth of approximately 10 feet below ground surface. Soils at adjacent properties consist of the fill material, silty sand, with lesser amounts of gravel and clay. Bedrock was encountered at 12 feet below ground surface.

**Assessment:**

Based upon investigations conducted to date, the primary contaminants of concern include tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride (VC) and xylene. Soil - Cis-1,2-DCE and xylene are found in shallow soil within the building near the former underground storage tanks (USTs). Concentrations of xylene found on-site (68 ppm) exceed the soil cleanup objective (SCO) for unrestricted use (0.26 ppm). Concentrations of cis-1,2-DCE found on-site (16 ppm) exceed the soil cleanup objectives for unrestricted use (0.25 ppm). Concentrations of PCE found at the bottom of tank pit in Area 1 (1,400 ppm) exceed the soil cleanup objective (SCO) for unrestricted use (1.3 ppm). Groundwater - Cis-1,2-DCE and xylene are also found in groundwater at the site. Concentrations of cis-1,2-DCE found on-site exceed groundwater standards (5 ppb), with a maximum concentration of 9,300 ppb. Concentrations of xylene found on-site exceed groundwater standards (5 ppb), with a maximum concentration of 2,300 ppb. Soil Vapor - Soil vapor samples taken off-site indicate that PCE (71.1 micrograms per cubic meter), TCE (42.7 micrograms per cubic meter), cis-1,2 DCE (23,600 micrograms per cubic meter) and vinyl chloride (6,640 micrograms per cubic meter) are present in the soil vapor.

**Describe the Site:**

The site is located on the east bank of the Genesee River in a former freshwater wet-land. There is presently an active marina on-site and a residential area adjacent to the site. Excavation work in the area uncovered two drums. They contained low levels of PCB's and high levels of lead. Settling has occurred near residential homes(Timrod Drive).

**Describe the Threat:**

This site is in a wetland and may result in contamination of local surface waters. Buried metallic objects near the residences on Timrod Drive.

<b>Site Class Desc (GIS):</b>	No Further Action at this Time: Sites are given a classification of "N" when:		

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement

on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

**Description:**

Lat 43 10' 55" N Long. 77 34' 19" W Flat topography - urban area - commercial nearest water body: Irondequot Bay 2 miles East Hobbie Creek - adjacent SE side Genesee River 2.5 miles West This is an inactive site, formerly a gravel pit, used for disposal of fly ash from RG & E from 1942-1950. There are suspected heavy metals in the fly ash. At the last inspection in July 1983, observations included construction debris, cinders and trash. Site investigated through the NYS Superfund. The Phase I investigation did not find a consequential amount of hazardous waste.

**Assessment:**

No environmental problems associated with hazardous waste disposal have been noted at this site.

# Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

## Standard Environmental Record Sources

### Federal

#### National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

**Government Publication Date: Feb 6, 2018**

#### National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

**Government Publication Date: Feb 6, 2018**

#### Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

**Government Publication Date: Feb 6, 2018**

#### SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

**Government Publication Date: Dec 11, 2017**

#### SEMS List 8R Archive Sites:

SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

**Government Publication Date: Dec 11, 2017**

#### Comprehensive Environmental Response, Compensation and Liability Information System -

CERCLIS

#### CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

**Government Publication Date: Oct 25, 2013**

**CERCLIS - No Further Remedial Action Planned:**

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

**Government Publication Date: Oct 25, 2013**

**CERCLIS Liens:**

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Jan 30, 2014**

**RCRA CORRACTS-Corrective Action:**

[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

**Government Publication Date: Jan 24, 2018**

**RCRA non-CORRACTS TSD Facilities:**

[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

**Government Publication Date: Jan 24, 2018**

**RCRA Generator List:**

[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

**Government Publication Date: Jan 24, 2018**

**RCRA Small Quantity Generators List:**

[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

**Government Publication Date: Jan 24, 2018**

**RCRA Conditionally Exempt Small Quantity Generators List:**

[RCRA CESQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste or one kilogram or less per month of acutely hazardous waste.

**Government Publication Date: Jan 24, 2018**

**RCRA Non-Generators:**

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

**Government Publication Date: Jan 24, 2018**

**Federal Engineering Controls-ECs:**

FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Jan 20, 2016**

**Federal Institutional Controls- ICs:**

FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency ) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

**Government Publication Date: Jan 20, 2016**

**Emergency Response Notification System:**

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiologial discharges into the environment anywhere in the United States and its territories.

**Government Publication Date: 1982-1986**

**Emergency Response Notification System:**

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiologial discharges into the environment anywhere in the United States and its territories.

**Government Publication Date: 1987-1989**

**Emergency Response Notification System:**

ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiologial discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Feb 8, 2017**

**The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:**

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Feb 20, 2018**

**FEMA Underground Storage Tank Listing:**

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

**Government Publication Date: Dec 31, 2017**

**LIEN on Property:**

SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

**Government Publication Date: Jan 9, 2018**

**State**

**Registry of Inactive Hazardous Waste Disposal Sites in New York State:**

SHWS

State-and tribal- equivalent CERCLIS. State Superfund Program (Inactive Hazardous Waste Disposal Site Remedial Program) (IHWDS) - Oversees the identification, investigation and cleanup of sites where consequential amounts of hazardous waste exist. These sites go through a process of investigation, evaluation, cleanup and monitoring that has several distinct stages. This list is made available by New York State Department of Environmental Conservation's State Superfund Program.

**Government Publication Date: Jan 29, 2018**

**Delisted Registry of Inactive Hazardous Waste Disposal Sites in New York:**

DSHW

This database contains a Registry of Inactive Hazardous Waste Disposal sites which have been removed from New York Department of Environmental Conservation's Environmental Site Remediation database.

**Government Publication Date: Jan 29, 2018**

**Vapor Intrusion Legacy Site List:**

VAPOR

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion. This list is made available by Department of Environmental Conservation's Vapor Intrusion Legacy Site List. This database is state equivalent CERCLIS.

**Government Publication Date: Dec 29, 2017**

**Solid Waste Facilities and Landfills:**

SWF/LF

Solid Waste Information Management System (SWIMS) is an inventory containing active and inactive facilities throughout the state. This list is made available by Department of Environmental Conservation's Solid Waste Information Management System (SWIMS).

**Government Publication Date: Dec 08, 2017**

**Leaking Storage Tanks:**

LST

This database contains records of chemical and petroleum spill incidents. They include leaking aboveground storage tanks or leaking underground storage tanks, with incidents of tank test failures, tank failures and tank overflow. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

**Government Publication Date: Jan 10, 2018**

**Delisted Leaking Storage Tanks:**

DELISTED LST

List of Leaking Storage Tank sites which has been removed from New York Department of Environmental Conservation's Spill Response Program

**Government Publication Date: Jan 10, 2018**

**Underground Storage Tanks- UST-Petroleum Bulk Storage (PBS):**

UST

Facilities within the Petroleum Bulk Storage (PBS) that have underground storage tanks. Underground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by New York Department of Environmental Conservation's Environmental Site Database Search.

**Government Publication Date: Jan 10, 2018**

**The Bulk Storage Program Database - AST:**

AST

Facilities within the Petroleum Bulk Storage (PBS) that have aboveground storage tanks. Aboveground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by New York State Department of Environmental Conservation's Petroleum Bulk Storage (PBS) program.

**Government Publication Date: Jan 10, 2018**

**Delisted Storage Tanks:**

DELISTED TANKS

List of Storage Tank sites which has been removed from New York Department of Environmental Conservation's Environmental Site Database.

**Government Publication Date: Jan 10, 2018**

**Petroleum Bulk Storage:**

TANKS

The Bulk Storage Program Database maintains the registrations of active and inactive bulk storage sites statewide. This database includes Petroleum Bulk Storage (PBS) tanks where no information is available on whether they are ASTs or USTs. This list is made available by Department of Environmental Conservation's Petroleum Bulk Storage (PBS) program.

**Government Publication Date: Jan 10, 2018**

**Chemical Bulk Storage (CBS):**

CBS

Facilities that store regulated hazardous substances in underground tanks. "Hazardous substance" means any substance listed as hazardous or acutely hazardous in 6 NYCRR Part 597 or a mixture thereof. This list is made available by Department of Environmental Conservation's Chemical Bulk Storage (CBS) Program.

**Government Publication Date: Jan 10, 2018**

**Major Oil Storage Facilities (MOSF):**

MOSF

In 1977, the New York State Legislature passed the "Oil Spill Prevention, Control and Compensation Act" (Article 12 of the Navigation Law). This law regulates all oil terminals and transport vessels operating in the waters of the State which have a storage capacity of 400,000 gallons or more. (Terminals and vessels with a capacity of 400,000 gallons or more are commonly referred to as major oil storage facilities or MOSFs). This list is made available by Department of Environmental Conservation's Major Oil Storage Facility (MOSF) Program.

**Government Publication Date: Jan 10, 2018**

**Registry of Engineering Controls in New York State:**

NY ENG

Registry of Engineering Controls in New York State taken from the Environmental Site Remediation Database.

**Government Publication Date: Jan 29, 2018**

**Registry of Institutional Controls in New York State:**

NY INST

Registry of Institutional Controls in New York State taken from the Environmental Site Remediation Database.

**Government Publication Date: Jan 29, 2018**

**Voluntary Cleanup Agreements:**

VCP

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites. This list is made available by Department of Environmental Conservation's Voluntary Cleanup Program.

**Government Publication Date: Jan 29, 2018**

**Environmental Restoration Program Listing:**

ERP

Environmental Restoration Program - Provides municipalities with financial assistance for site investigation and remediation at eligible brownfield sites. In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (Bond Act). Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. This list is made available by Department of Environmental Conservation's Environmental Restoration Program.

**Government Publication Date: Jan 29, 2018**

**Brownfields Site List (Subset of Site Remediation):**

BROWNFIELDS

Brownfield Cleanup Program was developed to enhance private-sector cleanups of brownfields and to reduce development pressure on "Greenfields". A Brownfield site is real property, the redevelopment or reuse of which may be complicated by the presence or potential presence of a contaminant. Contaminants include hazardous waste and/or petroleum. This list is made available by Department of Environmental Conservation's Brownfield Cleanup Program.

**Government Publication Date: Jan 29, 2018**

**Tribal**

**Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands:**

INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 2, which includes New York and New Jersey. There are no LUST records in New York at this time.

**Government Publication Date: Jan 28, 2016**

**Underground Storage Tanks (USTs) on Indian Lands:**

INDIAN UST

USTs on Tribal/Indian Lands in Region 2, which includes New York and New Jersey.

**Government Publication Date: Apr 04, 2016**

**Delisted Tribal Leaking Storage Tanks:**

DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

**Government Publication Date: Oct 12, 2017**

**Delisted Tribal Underground Storage Tanks:**

DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

**Government Publication Date: Oct 12, 2017**

## County

### Cortland County Storage Tanks:

[CORTLAND TANKS](#)

Listing of aboveground and underground storage tanks in Cortland County. \*NYSDEC does not maintain the PBS registration records for this county.

*Government Publication Date: Jan 2, 2018*

### Nassau County Storage Tanks:

[NASSAU TANKS](#)

Listing of aboveground and underground storage tanks in Nassau County. This database does not include tanks of gasoline, diesel and kerosene.

\*NYSDEC does not maintain the PBS registration records for this county.

*Government Publication Date: Apr 30, 2017*

### Rockland Storage Tanks:

[ROCKLAND TANKS](#)

Listing of aboveground and underground storage tanks in Rockland County. \*NYSDEC does not maintain the PBS registration records for this county.

*Government Publication Date: Feb 2, 2017*

### Suffolk Storage Tanks:

[SUFFOLK TANKS](#)

Listing of aboveground and underground storage tanks in Suffolk County. \*NYSDEC does not maintain the PBS registration records for this county.

*Government Publication Date: Mar 3, 2015*

### Westchester Storage Tanks:

[WSTCHST TANKS](#)

Listing of aboveground and underground storage tanks in Westchester County.

\*NYSDEC does not maintain the PBS registration records for this county.

*Government Publication Date: Jan 5, 2018*

### Delisted County Records:

[DELISTED COUNTY](#)

Records removed from county databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

*Government Publication Date: Jan 5, 2018*

## **Additional Environmental Record Sources**

### Federal

#### Facility Registry Service/Facility Index:

[FINDS/FRS](#)

The US Environmental Protection Agency (EPA)'s Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel.

*Government Publication Date: Dec 12, 2017*

#### Toxics Release Inventory (TRI) Program:

[TRIS](#)

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

*Government Publication Date: Dec 31, 2016*

#### Hazardous Materials Information Reporting System:

[HMIRS](#)

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

*Government Publication Date: Sep 11, 2017*

#### National Clandestine Drug Labs:

[NCDL](#)

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

**Inventory of Open Dumps, June 1985:**

ODI

The Resource Conservation and Recovery Act (RCRA of the Act) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

**EPA Report on the Status of Open Dumps on Indian Lands:**

IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

**Toxic Substances Control Act:**

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Jun 30, 2017

**Hist TSCA:**

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

**FTTS Administrative Case Listing:**

FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

**FTTS Inspection Case Listing:**

FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

**Potentially Responsible Parties List:**

PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Oct 10, 2017

**State Coalition for Remediation of Drycleaners Listing:**

SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

**Integrated Compliance Information System (ICIS):**

ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

**Government Publication Date: Nov 18, 2016**

**Drycleaner Facilities:**

FED DRYCLEANERS

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

**Government Publication Date: Sep 14, 2016**

**Delisted Drycleaner Facilities:**

DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

**Government Publication Date: Sep 14, 2016**

**Formerly Used Defense Sites:**

FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

**Government Publication Date: Nov 22, 2016**

**Material Licensing Tracking System (MLTS):**

MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

**Government Publication Date: Sep 13, 2016**

**Historic Material Licensing Tracking System (MLTS) sites:**

HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

**Government Publication Date: Jan 31, 2010**

**Mines Master Index File:**

MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

**Government Publication Date: Jul 31, 2017**

**Alternative Fueling Stations:**

ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

**Government Publication Date: Feb 6, 2018**

**Superfund Decision Documents:**

SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

**Government Publication Date: Jan 9, 2018**

**Registered Pesticide Establishments:**

SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

**Polychlorinated Biphenyl (PCB) Notifiers:**

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 30, 2017

**State**

**Hazardous Substance Waste Disposal Sites:**

HSWDS

A list of sites included in Hazardous Substance Waste Disposal Site Study reports made available by the New York Department of Environmental Conservation Division of Hazardous Waste Remediation. Provides information regarding the evolving status of hazardous substance waste disposal sites in New York.

Government Publication Date: Oct 24, 2003

**Spill Incidents Database:**

NY SPILLS

Spill Incidents Database has records dating back to 1978. This database contains records of chemical and petroleum spill incidents. The DEC Spill Response program receives and compiles reports of hazardous material spills occurring anywhere in New York State. These reports are submitted through the Spill Hotline and other mechanisms, and entered by DEC spill response staff into the state's official data base of Spill Incidents Reports. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

Government Publication Date: Jan 10, 2018

**Registered Dry Cleaner Facilities:**

DRYCLEANERS

The Division of Air Resources of the Department of Environmental Conservation (DEC) tracks all registered dry cleaner facilities.

Government Publication Date: Dec 06, 2017

**Hazardous Waste Manifest:**

NY MANIFEST

This data has been compiled from hazardous waste manifest shipments to, from or within New York State. The Bureau of Program Management in the Division of Environmental Remediation is responsible for maintaining hazardous waste manifest records.

Government Publication Date: Apr 30, 2017

**Tribal**

**No Tribal additional environmental record sources available for this State.**

**County**

**New York City E-Designated Sites:**

E DESIGNATION

List of sites with an E-Designation - a NYC zoning map designation that indicates the presence of an environmental requirement pertaining to potential hazardous materials contamination, window/wall noise attenuation, or air quality impacts on a particular tax lot. The New York City Office of Environmental Remediation administers the E-Designation Environmental Review Program to avoid significant adverse impacts to human health or the environment through exposure to these hazards.

Government Publication Date: Sep 19, 2017

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary'-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

## APPENDIX 2

RE: CITY DIRECTORY RESEARCH  
Rochester E Main St and Laura St Parcels  
East Main Street Rochester, NY

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

**Search Criteria:**

1100-1300 of Main St E  
1-20 of Laura Street  
350-500 of Hayward Avenue  
10-50 of Baldwin Street

# **THE ERIS ENVIRONMENTAL LIEN SEARCH REPORT**

**2181125  
1228-1230 EAST MAIN ST  
ROCHESTER NY 14609**

**ERIS Project No. 20180326225**

**04/03/2018**

# ENVIRONMENTAL LIEN REPORT

The ERIS Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- Search for parcel information and / or legal description
- Search for ownership information
- Research official land title documents recorded at jurisdictional agencies such as recorder's office, registries of deeds, county clerks' offices, etc.
- Access a copy of the deed
- Search for environmental encumbrance(s) associate with the deed
- Provide a copy of any environmental encumbrance(s) based upon a review of keywords in the instrument(s) (title, parties involved and description)
- Provide a copy of the deed or cite documents reviewed

**Thank You For Your Business**  
Please contact ERIS at **416-510-5204**  
with any questions or comments

## LIMITATION

This report is neither a guarantee of title, a commitment to insure, or a policy of title insurance. ERIS – Environmental Risk Information Services does not guarantee nor include any warranty of any kind whether expressed or implied, about the validity of all information included in this report since this information is retrieved as it is recorded from various agencies that make it available. The total liability is limited to the fee paid for this report.

# ENVIRONMENTAL LIEN REPORT

The ERIS Environmental Lien Search Report is intended to assist in the search for environmental liens filed in land title records.

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

### Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

RE: PUBLIC RECORDS REQUEST of 3/22/2018, Reference # W033948-032218

Dear Environmental Analyst Alexandra Vitulano,

In response to your Freedom of Information Law (FOIL) request seeking:

Environmental enforcement, environmental permits, environmental remediation, hazardous materials, solid materials, land use restrictions including and/or engineering controls, law enforcement/ investigation, legal, water, and air, spills/ PBS, BCP ,and VCP programs for the attached list of properties.

DEC staff has identified or 1200 East Main Street - Site Number B00129. Numerous hard copy and electronic copies of files. Not all hard copy are electronic.

Please contact Teri Cotter at 585 226-5353 within two weeks to either make arrangements for copies or to schedule a mutually convenient time for you to review the records in our office.

Please reference FOIL #W033948-032218 in all future communications concerning this request.

Sincerely,  
Region 8 FOIL Coordinator

## User Interview

## USER QUESTIONNAIRE

Project No. \_\_\_\_\_ Date: 5/3/2018  
 Site Name/ Address: 1228 E. Main St  
 Site Contact (to arrange site visit/conduct Site owner interview): Name: Jane Forbes  
 Phone Number: 585-428-7892 Email Address: jane.forbes@cityofrochester.gov

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the user must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must be conducted by EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the *Environmental Professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

User (Print Name): Jane Forbes  
 Title: Environmental Specialist  
 Signature: [Handwritten Signature]

Information regarding these questions was obtained from the following parties (if applicable): \_\_\_\_\_

Purpose of this Assessment:  Selling the *property*  Purchasing the *property*  Construction loan  
 Re-financing the *property*  Other (explain): \_\_\_\_\_

1.

### Title Records

Land title records (or judicial records where appropriate, see Note 1 below) are filed under federal, tribal, state or local law and should be reviewed to identify environmental liens or activity and use limitations (AULs), if any, that are currently recorded or filed against the *property*. Are land title records available for review?  No  Yes (If yes, please provide.)  Unknown

contact Jane Forbes for Deed Histories

**Note 1** - In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases, judicial records must be searched for environmental liens and AULs.

2.

### Environmental liens that are filed or recorded against the *property* (40 CFR 312.25)

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 above) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law?

No  Yes  Unknown

Based on review of readily available information: \_\_\_\_\_

3.

### Activity and land use restrictions (AULs) that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and (vi))

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 above) identify any AULs, such as *engineering controls*, *land use restrictions*, or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state, or local law?

No  Yes  Unknown

Based on review of readily available information: \_\_\_\_\_

4. **Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)**  
Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or and *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?  
 No       Yes       Unknown  
Based on review of readily available information: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

5. **Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29)**  
Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*?  
 No       Yes       Unknown       N/A- there is no transfer of ownership  
If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?  
 No       Yes       Unknown  
Based on review of readily available information: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

6. **Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30)**  
Are you aware of any commonly known or *reasonably ascertainable* information about the *property* that could help the *Environmental Professional* to identify conditions indicative of releases or threatened releases? For example:  
(a) Do you know of the past uses of the *property*? *Residential as of 1900.*  
 No       Yes       Unknown  
Based on review of readily available information: *Developed as an Animal Hospital - 1941*  
*Residential - 1998*  
\_\_\_\_\_  
\_\_\_\_\_

(b) Do you know of specific chemicals that are present or once were present at the *property*?  
 No       Yes       Unknown  
Based on review of readily available information: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

(c) Do you know of spills or other chemical releases that have taken place at the *property*?  
 No       Yes       Unknown  
Based on review of readily available information: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

(d) Do you know of any environmental cleanups that have taken place at the *property*?  
 No       Yes       Unknown  
Based on review of readily available information: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

7. The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

Based on your knowledge and experience related to the *property*, are there any *obvious* indicators that point to the presence or likely presence of releases at that *property*?

No       Yes       Unknown

Based on review of readily available information:

1200 E. Main St. - Former gasoline/  
auto service station. Site of environmental cleanup  
located  $\approx$  400 ft west of property.  
Known soil and groundwater impacts (petroleum).

Please provide attachments if necessary to explain any answers to the above questions.
