I. Introduction

A. Executive Summary

- The Site was previously used for various commercial and industrial purposes since the early 1920s, including plumbing supply, electrical supply, bakery, printer, commercial bus depot and bus repair garage, gasoline station, chemical sales/distribution, dry cleaning equipment distributor, fuel oil contractor, and warehousing.
- Types of contamination at the Site that required remediation included:
 - A source area and groundwater plume of Tetrachloroethene (Perchloroethene or PCE)-impacted soil, urban fill material and/or groundwater above New York State Department of Environmental Conservation (NYSDEC) criteria.
 - A trunk sewer in the former Evans Street right-of-way near the PCE source area that had the potential to act as a preferential pathway and allow PCE to migrate off-site.
 - An area containing two closed-in-place 5,000-gallon capacity petroleum underground storage tanks (USTs) and petroleum-impacted soil above NYSDEC criteria.
 - An area of polychlorinated biphenyl (PCB)-impacted soil above NYSDEC criteria.
 - A trench drain area containing soil impacted with metals and semi-volatile organic compounds (SVOCs) above NYSDEC criteria.
 - A portion of sewer piping on the 320 Andrews Street parcel that contained PCE-impacted sediment.
 - Historic urban fill material across most of the Site that is sporadically impacted with metals and/or SVOCs above NYSDEC criteria.
- Remedial actions were performed at the Site as Interim Remedial Measures (IRMs) and Supplemental IRMs. Remedial actions taken included:
 - Removal and off-site disposal of soil generally above the groundwater table that was contaminated with volatile organic compounds (VOCs), metals, PCBs and SVOCs to concentrations below applicable NYSDEC criteria.
 - Removal and off-site disposal of the two previously closed in-place USTs.
 - Removal and off-site disposal of the buried piping on the 320 Evans Street parcel that contained low levels of PCE-impacted sediments.
 - Removal and off-site disposal of a portion of sewer piping in the former Evans Street right-of-way (ROW) that was potentially acting as a preferential pathway for VOCs to migrate off-site.
 - In-Situ Chemical Oxidation (ISCO) of VOC contamination in saturated soils and groundwater.
 - Installation of a cover system over the Site as an engineering control.
 - Execution and recording of an Environmental Easement as an institutional control.
 - Development and implementation of a Site Management Plan (SMP).

- B. Effectiveness of the Remedial Program
1. Progress made during the reporting period toward meeting the remedial objectives for the Site included: continued ISCO groundwater polishing on a portion of the Site; and continued monitoring and/or inspection of the cover system and/or groundwater conditions.
 2. The work completed to date shows that the remedial program has the ability to achieve the remedial objectives for the Site.
- C. Compliance
1. There are no areas of non-compliance with the SMP as modified with NYSDEC approval.
 2. Given compliance with the Site's SMP, no steps were needed to correct areas of non-compliance.
- D. Recommendations
1. It is recommended that appropriate sections of the SMP be revised to reflect decommissioning of select monitoring wells, additional ISCO polishing activities and modifications to the groundwater monitoring program that have been, or will be, approved by the NYSDEC.
 2. No change to the frequency of Periodic Review Report (PRR) submittals is recommended at this time.
 3. Since residual contamination remains on the Site, it is recommended that site management requirements continue to be implemented.

II. Site Overview

- A. The 1.524 acre Site consists of four contiguous parcels that are addressed as 300, 304-308, and 320 Andrews Street and 25 Evans Street, and are located in the City of Rochester (City), County of Monroe, New York (refer to Figure 1 and Figure 2). The Site is owned by the City.

The Site is bounded by the Inner Loop highway ROW to the north, Andrews Street ROW with commercial property beyond to the south, Franklin Square ROW with a City-owned park beyond to the east, and Bristol Street ROW with commercial property beyond to the west.

Prior to remediation, multiple types of contamination at the Site were identified in various media. Refer to Figure 3 for the locations of IRM areas and significant former features of the Site that may have influenced the migration and distribution of Site contaminants:

Soil

Area 1 (IRM-01) - PCE Source Area

The VOC Tetrachloroethene is the predominant contaminant detected in soil and groundwater at the Site.

Area 2 (IRM-02) - Preferential PCE Migration Pathway

The contaminants from the PCE source area described above appeared to have impacted the sewer (contents, pipe and bedding material) that was located in the adjoining former Evans Street ROW.

Area 3 (IRM-03) - UST Area

The two closed in-place 5,000-gallon capacity USTs, presumed to have stored gasoline and diesel oil, were identified as a potential source area for petroleum contamination

Area 4 (IRM-04) - PCB-Impacted Area

Soil impacted with PCBs above SCOs was identified in an approximate 15 foot by 15 foot area, extending from near the ground surface to a depth of approximately 3 ft. bgs.

Area 5 (IRM-05) - Trench Drain Area

An approximately 130-foot long by 1-foot wide trench drain was located inside a building that was demolished on the 25 Evans Street parcel.

Area 6 (IRM-06) - Piping Area

An area of buried piping, estimated to be approximately 210 linear feet (L.F.) in length, was located on the 320 Andrews Street Parcel.

Area 7 - Historical Fill Material

Heterogeneous historic urban fill material is present across most of the Site.

Miscellaneous Areas with VOCs

Low levels of PCE (in relation to that detected in the PCE source area described above) and other VOCs (acetone, benzene, trimethylbenzenes, trichloroethene, etc.) were detected in soil/fill samples on portions of the Site.

Groundwater

Area 1 (IRM-01) - PCE Source Area; and Area 2 (IRM-02) - Evans Street Sewer

A source of VOCs primarily consisting of PCE was located on the 304-308 Andrews Street parcel. PCE and other VOCs were also identified on the 320 Andrews Street parcel and the 25 Evans Street parcel that are shown on Figure 2.

Miscellaneous Areas of Contaminants

Groundwater samples from each overburden and bedrock monitoring well contained one or more metals exceeding groundwater standards and guidance values.

Evidence of light non-aqueous phase liquid (LNAPL) or dense non-aqueous phase liquid (DNAPL) was not detected at test locations.

B. Chronology

The Site was remediated in accordance with a NYSDEC-approved Interim Remedial Measures Work Plan (IRMWP) dated October 4, 2012, a Supplemental Interim Remedial Measure Work Plan (SIRMWP) dated June 14, 2014, an Addendum #1 to the SIRMWP dated December 10, 2014, and an Addendum #2 to the SIRMWP dated May 11, 2015.

A chronology of the Remedial Actions performed at the Site under the IRMWP is summarized below, and the specific IRM areas are shown on Figure 3:

- **IRM-01:** In November, 2012, a total of 1,673.06 tons of non-hazardous PCE-impacted soil, and 138.83 tons of characteristic hazardous PCE-impacted soil, were removed from an approximate 3,500 SF source area at Area 1 (PCE source area) and disposed off-site at regulated landfills.
- **IRM-02:** In November and December 2012, approximately 115 L.F. of combined sanitary/storm sewer trunk line and associated laterals in the Evans Street ROW near IRM-01 were decommissioned. Approximately 101 tons of PCE-impacted soil was removed from Area 2 (Preferential PCE Migration Pathway) and disposed off-site at a regulated landfill as non-hazardous waste.
- **IRM-03:** In October 2012 and November 2012, two 5,000-gallon previously closed in-place petroleum USTs, their K-Crete contents and 48.82 tons of petroleum-contaminated soil at Area 3 (UST Area) was removed. The steel USTs were recycled, and the K-Crete and contaminated soil were disposed off-site at a regulated landfill as non-hazardous wastes.
- **IRM-04:** In November 2012, a total of 15.64 tons of PCB-impacted soil was removed at Area 4 (PCB-Impacted Area) down to a depth of approximately 3 ft. bgs, and disposed off-site at a regulated landfill as a non-hazardous waste.
- **IRM-05:** In October 2012, a total of 223.21 tons of non-hazardous petroleum and VOC-impacted soil was removed at Area 5 (Trench Drain Area) down to depths of approximately 5.5 ft. bgs from a former trench floor drain area, and disposed off-site at a regulated landfill as a non-hazardous waste.
- **IRM-06:** In October 2012, approximately 210 L.F. of piping, and a limited amount of soil, were removed at Area 6 (Piping Area) down to depths of approximately 3 ft. bgs from the east side of the Site. The piping, sediments, and limited surrounding soil were disposed off-site at a regulated landfill as a non-hazardous waste.

A chronology of the Remedial Actions performed at the Site under the SIRMWP, as amended by Addendum #1 and Addendum #2, is summarized below:

- **Supplemental IRM Soil Removal:** In June 2014 and July 2014, a total of 76.05 tons of PCE-impacted soil were removed from a shallow depth immediately south of Area 1, and disposed off-site at a regulated landfill as a non-hazardous waste (refer to Figure 3).

- **Supplemental IRM In-Situ Chemical Oxidation (ISCO):** Between June 2014 and June 2015, approximately 36,933 pounds of potassium permanganate were injected or otherwise placed in the ground by various methods to treat PCE in saturated soils and groundwater at Area 1 (PCE source area) and surrounding PCE plume area (refer to Figure 4). During this work, approximately 134.32 tons of non-hazardous soil were generated and disposed off-site at a regulated landfill.
- **Cover System:** In November 2014, a site-wide cover system was installed at the Site to allow for restricted residential use (refer to Figure 3). The stone cover is at least two feet thick at locations not covered by the limited areas of existing asphalt and concrete pavements. The cover system is an engineering control that assists in management of residual contamination at the Site.
- **Environmental Easement:** In May 2015, an Environmental Easement was recorded that in part includes land use restrictions, groundwater use restrictions and a requirement to evaluate and mitigate (as warranted) soil vapor intrusion for new buildings. The Environmental Easement is an institutional control that assists in management of residual contamination at the Site.
- **Site Management Plan:** In August 2015, a Site Management Plan (SMP) was finalized that includes an Excavation Work Plan, and was prepared for future environmental management, maintenance and monitoring activities that are required at the Site during future development and use. The SMP is an institutional control that assists in management of residual contamination at the Site.

Cleanup goals for groundwater are NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Groundwater Standards and Guidance Values.

Cleanup or on-site re-use goals for soil are NYSDEC Part 375 Restricted Residential SCOs and Protection of Groundwater SCOs.

Remaining remediation components include: continued implementation of site-wide inspections (e.g., monitoring wells and cover system), and groundwater monitoring in accordance with the SMP. In addition, ISCO polishing-phase treatment continues to be conducted within Area 1 (PCE source area) and the associated plume area. During 2018, ISCO polishing treatment work included: installation of ten new injection wells (designated as IW-13 through IW-22 on Figure 4) in proximity to monitoring wells MW-03A and MW-17; and injection of a total of 220 pounds of potassium permanganate (KMnO₄) mixed with water at injection wells IW-1, IW-4A, IW-4B, IW-5, IW-6, IW-8, IW-9, and IW-13 through IW-22, which are in proximity to monitoring wells MW-01, MW-03A and MW-17. Boring logs and construction diagrams for the ten new injection wells are included in Attachment A. The analytical laboratory report for a waste characterization sample of the soil cuttings from IW-13 through IW-22 [designated as Sample 928-IDW(Soil)], and the associated waste disposal documentation, are included in Attachment B.

III. Evaluation of Remedy Performance, Effectiveness and Protectiveness

A. Effectiveness of Remedies

As documented in a Remedial Investigation/Alternatives Analysis Report (RI/AAR) dated November 2015, soil removals and ISCO were implemented and subsequently evaluated with the collection and analysis of confirmatory soil samples and groundwater samples.

- As shown in the RI/AAR, the results of confirmatory soil samples collected in soil removal areas were successful at remediating the targeted contamination in those areas to levels that meet applicable SCOs.
- The results of previous groundwater monitoring (conducted between November 2014 and June 2017) and monitoring conducted during the reporting period (conducted between December 2017 and August 2018) showed that chlorinated VOCs (CVOCs) in groundwater in some areas were above TOGS 1.1.1 groundwater standards and guidance values for individual VOCs. However, the concentrations of CVOCs in groundwater had been significantly reduced in relation to pre-ISCO baseline concentrations in the source area and plume core. Documentation concerning four groundwater monitoring events performed during this reporting period is included in Attachment C. This documentation includes Figures 5 and 6, Data Tables 1 through 6, Graphs A through I showing CVOC concentrations in groundwater samples over time for select monitoring wells, ASP Category B laboratory reports, and a data validation summary report (DUSR) for the December 2017 lab package. Table 1 is a log of the samples that were analyzed by a laboratory during the reporting period. Table 2 includes the static water levels and calculated groundwater elevations for the 2nd bi-annual and 3rd bi-annual groundwater monitoring events. Table 3 summarizes the VOC results for overburden groundwater samples collected from monitoring wells during the reporting period. As shown on Table 3, post-IRM CVOC concentrations during the PRR reporting period continue to be highest generally in the overburden groundwater at the former source area (MW-03A and MW-17) and/or immediately downgradient in the plume core (MW-01). Table 4 summarizes the VOC results for quality assurance/quality control (QA/QC) samples collected during the reporting period. Table 5 summarizes the VOC results for performance groundwater samples collected from select injection wells during the reporting period. Table 6 summarizes the cumulative VOC results for groundwater samples collected from overburden groundwater monitoring wells between January 2012 and August 2018. As shown on the Graphs, CVOC concentrations in overburden groundwater have generally decreased over time. However, there are occasional increases that may be associated with fluctuations of the groundwater table, etc. It is anticipated that the CVOC concentrations in groundwater at the Site will continue to decrease since residual potassium permanganate from the Supplemental IRM work, and on-going polishing remedial efforts using potassium permanganate, will continue to oxidize the residual CVOCs.

A cover system engineering control was installed at the Site. In accordance with the SMP, an inspection was completed on July 26, 2018. The results of this inspection are presented on the Site-Wide Inspection Form included in Attachment D. As shown, the cover system continues to successfully inhibit contact with underlying Site media.

Based on the monitoring conducted to date, the remedy is shown to be effective at achieving the remedial goals for this Site.

IV. IC/EC Compliance Report

A. IC/EC Requirements/Compliance

1. A description of each control, its objective, and how performance of the control is evaluated is provided below:

- Site Management Plan: The objective of the SMP is to manage remaining contamination above regulatory criteria in a manner that is protective of human health and the environment. The SMP is a living document and is anticipated to be revised and updated during the next reporting period (i.e., September 1, 2018 through August 31, 2019) to reflect the current Site conditions and applicable restrictions. The SMP includes an Institutional and Engineering Control (IC/EC) Plan and a Site Monitoring Plan. An Operation and Maintenance Plan is not included in the SMP since the Site currently does not rely on any mechanical systems to protect public health and the environment. The performance of the controls is evaluated through monitoring and periodic certification. Controls on the Site include:
 - Management of soil and historic fill material during future activities that would penetrate, encounter, or disturb remaining contamination must be conducted in accordance with provisions of the SMP, including the Excavation Work Plan (EWP);
 - A requirement for evaluation of potential soil vapor intrusion into any new enclosed structures on the Site, and designing and implementing engineering controls to address soil vapor intrusion for those structures, if deemed warranted.
 - Requirements for monitoring and repair of the cover system engineering control;
 - Requirements for inspections and notifications for various reasons associated with Site conditions, change in use, change in ownership, etc.
 - Requirements for monitored natural attenuation groundwater sampling and analysis.
- Environmental Easement: Restricts use of the property; restricts use of groundwater; requires implementation of the SMP; requires evaluation of soil vapor intrusion on any new buildings, and mitigation, if needed; requires operating, maintaining and inspecting any engineering controls; requires groundwater and other environmental and public health monitoring; requires monitoring, maintaining and replacing groundwater wells as necessary as set forth in the SMP; requires reporting of SMP data

and information; requires implementation of the SMP for activities that would disturb remaining contaminated media; and requires monitoring to assess the performance and effectiveness of the remedy. The performance of each control is evaluated through periodic certification.

2. Status

Each control is fully in place, is being adhered to, and is effective.

3. Corrective Measures

None Required.

4. Conclusions and Recommendations for Changes

The controls are being implemented and no changes are being recommended.

B. Certification

Certification included as Attachment E.

V. Monitoring Plan Compliance Report

A. Components

- Groundwater Monitoring Plan: As identified in the SMP, monitored attenuation groundwater monitoring is to be completed over a three year period. The monitored attenuation groundwater monitoring is to include quarterly monitoring the first year, and bi-annual (i.e., semi-annual) monitoring for two years thereafter. Any modifications in the monitoring frequency, sampling techniques, the number of wells to be sampled, and the test parameters will be determined by the NYSDEC. This plan also covers monitoring well repairs, replacement, and decommissioning.
- Excavation Work Plan: An EWP is included as part of the SMP for management of soil and historic fill material that may contain residual contamination at the Site.
- Site-Wide Inspection: Site-wide inspections that include cover system monitoring and monitoring well inspection are required at least yearly and also after severe weather conditions that may affect engineering controls or monitoring devices.

B. Summary of Monitoring Completed

- Groundwater Monitoring Plan: December 2017 2nd bi-annual groundwater monitoring, May 2018 performance groundwater monitoring, June 2018 performance groundwater monitoring, and August 2018 3rd bi-annual groundwater monitoring were completed during the reporting period.
 - Monitoring wells MW-01, MW-02, MW-03A, MW-04, MW-05, MW-06, MW-07, MW-11, MW-15, MW-16, MW-17, MW-18, MW-19, and MW-20 were sampled during the December 2017 2nd bi-annual groundwater monitoring event.
 - Monitoring wells MW-01, MW-03A, and MW-17 were sampled during the May 2018 performance groundwater monitoring event.

- Injection wells IW-6, IW-13, IW-14, IW-15, IW-16, IW-21 and IW-22 were sampled during the June 2018 performance groundwater monitoring event.
- Monitoring wells MW-01, MW-02, MW-03A, MW-04, MW-05, MW-06, MW-07, MW-11, MW-15, MW-16, MW-17, MW-18, MW-19, and MW-20, and injection wells IW-13, IW-14, IW-15, IW-16, IW-21 and IW-22 were sampled during the August 2018 3rd bi-annual groundwater monitoring event.

Documentation concerning the above-referenced groundwater monitoring events are included in Attachment C, which includes Figures 5 and 6, Data Tables 1 through 6, Graphs A through I showing CVOC concentrations in groundwater samples over time for select monitoring wells, ASP Category B laboratory reports, and a data validation summary report (DUSR) for the December 2017 lab package.

- Excavation Work Plan: No activities were performed during the reporting period that required the implementation of the EWP requirements.
- Site-Wide Inspection: An annual site-wide inspection was completed on July 26, 2018. A copy of the Site-Wide Inspection Form is included in Attachment D. The inspection revealed the following:
 - Monitoring wells present at the Site at the time of the inspection were in good condition.
 - The Site cover system at the time of the inspection was observed in good condition.

C. Comparison with Remedial Objectives

- Groundwater Monitoring Plan: The results of the groundwater monitoring completed during the reporting period showed some CVOC concentrations exceeded TOGS 1.1.1 groundwater standards and guidance values in select well located generally within or downgradient of the PCE source area. There are some fluctuations in concentrations of CVOCs (i.e., increases and decreases) in relation to previous results, which in part may be attributable to seasonal changes in groundwater levels at the Site. Future ISCO polishing will continue to focus on treatment of the areas on the Site where highest CVOC concentrations are detected (i.e., areas of monitoring wells MW-01, MW-03A and MW-17).
- Excavation Work Plan: N/A
- Site-Wide Inspection: The site cover engineering control continues to meet the remedial objective of protecting human health and the environment from coming into contact with residual contamination at the Site.

D. Monitoring Deficiencies

There are no monitoring deficiencies.

E. Conclusions and Recommendations for Changes

- Groundwater Monitoring Plan: Changes to the groundwater monitoring plan are recommended following the 4th bi-annual groundwater monitoring event. The 4th bi-annual groundwater monitoring event is planned for December 2018 and will involve sampling monitoring wells MW-01, MW-02, MW-03A, MW-04, MW-05, MW-06, MW-07, MW-11, MW-15, MW-16, MW-17, MW-18, MW-19, and MW-20 using passive diffusion bag samplers. The resulting samples will be analyzed for TCL VOCs and tentatively identified compounds (TICs). A groundwater contour map will also be prepared for the 4th bi-annual groundwater monitoring event. Subsequent to completing the 4th bi-annual groundwater monitoring event, it is recommended that groundwater monitoring be reduced to once per year and will involve sampling groundwater from monitoring wells MW-01, MW-02, MW-03A, MW-11, MW-17, MW-18 and MW-19. Since the previously-generated groundwater contour and flow direction data are well-established and consistent for this Site, groundwater contour maps will not be prepared for these subsequent annual groundwater monitoring events. It is also recommended that the remaining monitoring wells (i.e., MW-04, MW-05, MW-06, MW-07, MW-15, MW-16 and MW-20 shown on Figure 7 in Attachment C) be decommissioned in accordance with NYSDEC's CP-43 Groundwater Monitoring Well Decommissioning Procedure dated November 3, 2009 since cumulative groundwater chemical data for these well locations have been consistently low in relation to the wells that are recommended for continued monitoring. Intermittent performance monitoring may also be completed at the City's discretion using one or more of the remaining wells. Subsequent to well decommissioning, the Site's SMP will be updated and revised to reflect the current monitoring well field and groundwater monitoring plan.
- Excavation Work Plan: No changes to the EWP are recommended.
- Site-Wide Inspection: No changes to the site-wide inspection are recommended.

VI. Operation & Maintenance (O&M) Plan Compliance Report

N/A

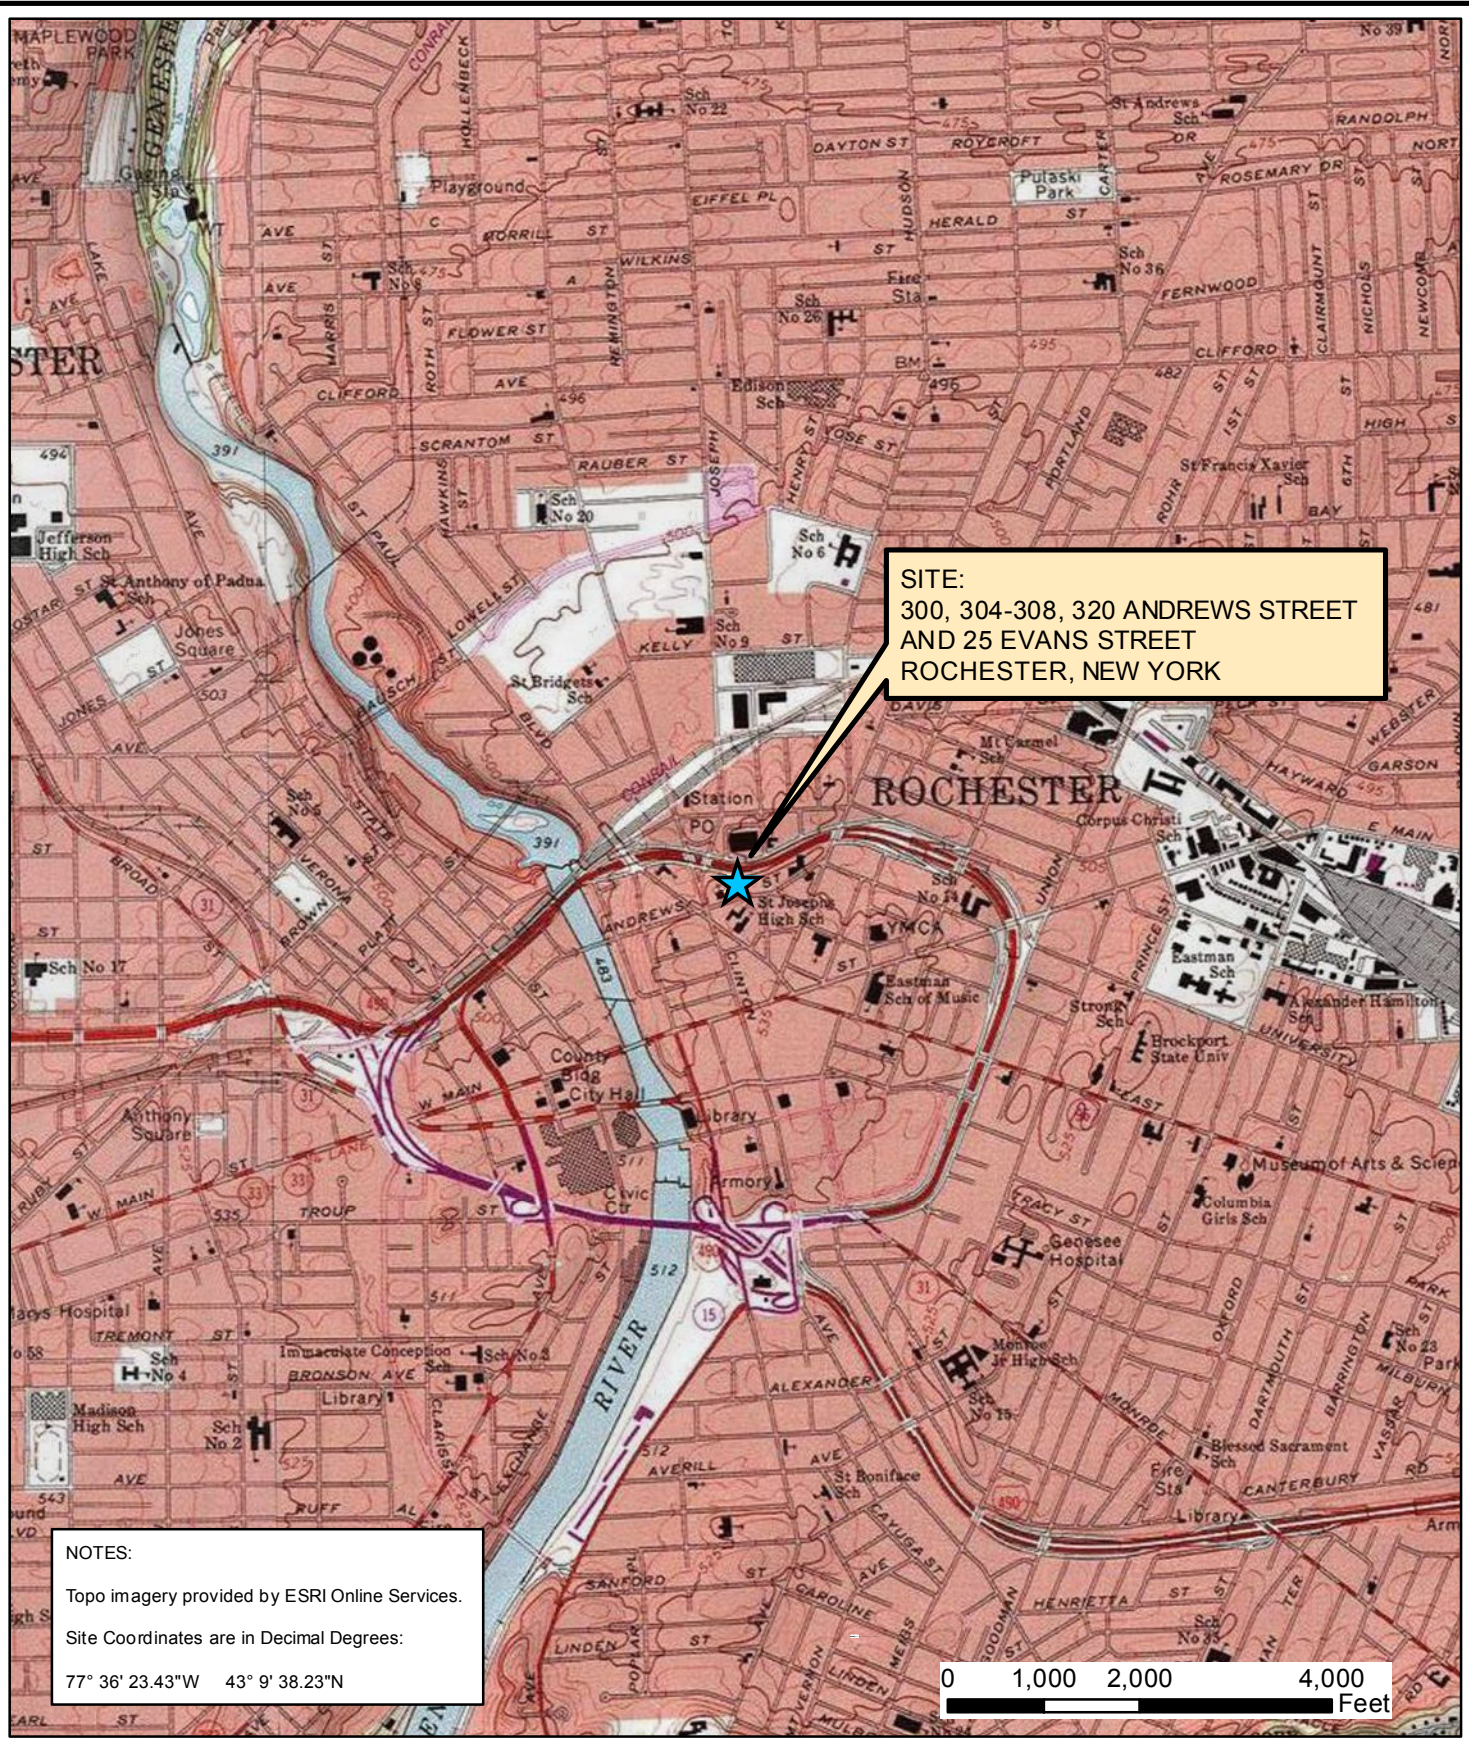

VII. Overall PRR Conclusions and Recommendations

A. Compliance with SMP

1. The requirements of the following plans were met during the reporting period:
 - IC/EC requirements.
 - Monitoring Plan requirements.
2. Identify any requirements not met: N/A
3. Identify any proposed plans and a schedule for coming into full compliance: N/A

- B. Performance and Effectiveness of Remedy: An evaluation of the components of the SMP during this reporting period indicated that: the IC/EC controls were protective of human health and the environment; the monitoring plan continues to sufficiently monitor the performance of the remedy; and the remedial program is achieving the remedial objectives for the Site.
- C. Future PRR submittals:
1. It is recommended that the frequency of PRR submittals remain unchanged.
 2. Since residual contaminants remain beneath the cover system at the Site, it is recommended that related aspects of the SMP continue to be implemented at this Site. In addition, it is recommended that appropriate sections of the SMP be revised to reflect previous decommissioning of select monitoring wells, additional ISCO polishing activities, and modifications to the groundwater monitoring program that have been, or will be, approved by the NYSDEC.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.

"E" = Result has been estimated, calibration limit exceeded.

"Z" = See case narrative.

"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.

"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.

"B" = Method blank contained trace levels of analyte. Refer to included method blank report.

"J" = Result estimated between the quantitation limit and half the quantitation limit.

"L" = Laboratory Control Sample recovery outside accepted QC limits.

"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.

"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.

"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

"(1)" = Indicates data from primary column used for QC calculation.

"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.

"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

GENERAL TERMS AND CONDITIONS

LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty.

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation.

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices.

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability.

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure.

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling.

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility.

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment.

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure.

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law.

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Site Plan with Overburden Groundwater Potentiometric Map for July 26, 2018 and
PCE Concentrations Detected in August 2018 Overburden Groundwater Samples

Project No.
5334S-17

FIGURE 6

Document Path: \\DAY\GIS\GIS_Data\GIS_Mapping\Rocky\Andrews_Street\PRR2\5334S-04-PRR2_Overburden_GW_07-2018.mxd

Legend

- MW-12 Overburden monitoring well
- Andrews Street ERP Site
- Former Evans Street right-of-way
- Proposed for Decommissioning

NOTES:
 Base mapping data provided by City of Rochester and Monroe County.
 Aerial imagery provided by Monroe County and EagleView, dated 2018.

Notes

(1) Approximate depth of sample as referenced to the sidewalk adjacent to Andrews Street with assumed datum of 0.00 feet prior to installation of cover system.

Depth for water samples was the depth in which the passive diffusion bag was set.

NA = Not Applicable

bgs = below ground surface

Ft = Feet

MS/MSD = Matrix Spike/Matrix Spike Duplicate

TCL VOCs - Target Compound List Volatile Organic Compounds, including Tentatively Identified Compounds (TICs) via Method 8260

December 2017, May 2018, and August 2018 groundwater samples collected using passive diffusion samplers (PDBs). June 2018 groundwater samples collected using purge and sample bailer method.

* = Trip blank inadvertently not included in shipment to laboratory; thus, was not tested.

Notes

2nd Bi-Annual Monitoring Event***

3rd Bi-Annual Monitoring Event***

Monitoring Wells listed are overburden groundwater monitoring wells.

Ft TOC = Feet below top of casing

Well MW-03A was damaged during Supplemental MIP work and was repaired and re-set with a flush-mount curb box in July 2013.

MW-03A TOC re-surveyed August 8 or 9, 2013, and is 2.46 lower than original. MW-03A groundwater elevations collected after August 9, 2013 are adjusted accordingly.

⁽¹⁾ Represents ground elevation prior to installation of #2 Crusher Run (CR2) cover system material as a Supplemental Interim Remedial Measure.

***Monitoring event had a 1.53' riser (repaired) added to the top of casing of MW-02.

U = Not Detected

NA = Not Available

LF - Low Flow

J = Estimated value

µg/L = micrograms per Liter or parts per billion (ppb).

PDB - Passive Diffusion Bag

TIC = Tentatively Identified Compound E = Value Exceeds Calibration Range.

VOC = Volatile Organic Compound

UJ = Not Detected at an estimated detection limit as qualified by the data validator.

X = Exceeds Groundwater Standard or Guidance Value.

Groundwater Standards or Guidance Values referenced in NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 dated June 1998 as amended by the NYSDEC's supplemental table dated April 2000.

D = The reported value is from a secondary analysis with a dilution factor. The original analysis exceeded the calibration range.

(1) Refer to the analytical laboratory report for individual TICs detected and associated flags.

134	Sample ID
MW-01	Sample Location
1/9/2012	Sample Date
LF 20.5 ft	Sample Method with Sample Collection Depth in Feet Below the Ground Surface Prior to Installation of #2 Crusher Run (CR2) Cover System Material as a Supplemental Interim Remedial Measure.

Results of DUSR incorporated on analytical laboratory data

U = Not Detected = Round 1 RI Groundwater Sample
 NA = Not Available = Round 2 RI Groundwater Sample
 LF - Low Flow = Round 3 Supplemental RI Groundwater Sample
 J = Estimated value = Round 4 Supplemental RI Groundwater Sample (Pre-ISCO Baseline Sample)
 = Performance Monitoring Sample After ISCO

PDB - Passive Diffusion Bag µg/L = micrograms per Liter or parts per billion (ppb).

TIC = Tentatively Identified Compound E = Value Exceeds Calibration Range.

VOC = Volatile Organic Compound

UJ = Not Detected at an estimated detection limit as qualified by the data validator.

X = Exceeds Groundwater Standard or Guidance Value.

Groundwater Standards or Guidance Values referenced in NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 dated June 1998 as amended by the NYSDEC's supplemental table dated April 2000.

D = The reported value is from a secondary analysis with a dilution factor. The original analysis exceeded the calibration range.

(1) Refer to the analytical laboratory report for individual TICs detected and associated flags.

U = Not Detected  = Round 1 RI Groundwater Sample
 NA = Not Available  = Round 2 RI Groundwater Sample
 LF - Low Flow  = Round 3 Supplemental RI Groundwater Sample
 J = Estimated value  = Round 4 Supplemental RI Groundwater Sample (Pre-ISCO Baseline Sample)
  = Performance Monitoring Sample After ISCO

PDB - Passive Diffusion Bag µg/L = micrograms per Liter or parts per billion (ppb).

TIC = Tentatively Identified Compound E = Value Exceeds Calibration Range.

VOC = Volatile Organic Compound

UJ = Not Detected at an estimated detection limit as qualified by the data validator.

X = Exceeds Groundwater Standard or Guidance Value.

Groundwater Standards or Guidance Values referenced in NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 dated June 1998 as amended by the NYSDEC's supplemental table dated April 2000.

D = The reported value is from a secondary analysis with a dilution factor. The original analysis exceeded the calibration range.

(1) Refer to the analytical laboratory report for individual TICs detected and associated flags.

CASE NARRATIVE**Day Environmental, Inc.****Project Name: Andrew St. RI****Project # N/A****Chemtech Project # I7090****Test Name: VOC-TCLVOA-10****A. Number of Samples and Date of Receipt:**

18 Water samples were received on 12/28/2017.

B. Parameters

According to the Chain of Custody document, the following analyses were requested: VOC-TCLVOA-10. This data package contains results for VOC-TCLVOA-10.

C. Analytical Techniques:

The analysis performed on instrument MSVOA_U were done using GC column DB-624UI 20m 0.18mm 1.0 um. Cat#121-1324UI The analysis of VOC-TCLVOA-10 was based on method 8260-Low.

D. QA/ QC Samples:

The Holding Times were met for all analysis.

The Surrogate recoveries met the acceptable criteria.

The Internal Standards Areas met the acceptable requirements.

The Retention Times were acceptable for all samples.

The MS recoveries met the requirements for all compounds .

The MSD recoveries met the acceptable requirements .

The RPD recoveries met criteria .

The Blank Spike met requirements for all samples .

The Blank analysis did not indicate the presence of lab contamination.

The %RSD is greater than 15% in the Initial Calibration (Method 82U010318W.M) for Cyclohexane , this compound is passing on Linear regression .

The Continuous Calibration met the requirements .

The Tuning criteria met requirements.

E. Additional Comments:

Samples 914-MW-03A(17), 922-MW-17(15.5) was diluted due to bad matrix.

Samples 912-MW-01(23), 924-MW-19(28) were diluted due to high concentrations.

Please use %D calculated based on Avg RF and CCRF for all compounds using Average Response Factor when the %RSD value for a compound is <15% for the Initial Calibration curve and use %D calculated based on Amount added and Calculated amount for all compounds using Linear Regression when the %RSD value for a compound is > 15% for the Initial Calibration curve for SW-846 analysis.

F. Manual Integration Comments:

Please refer to the Manual integration Report included with the Run Logs for information on the manual integrations performed.

I certify that the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. The laboratory manager or his designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

DATA REPORTING QUALIFIERS- ORGANIC

For reporting results, the following “ Results Qualifiers” are used:

Value	If the result is a value greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. “10 U”. This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
ND	Indicates the analyte was analyzed for, but not detected
J	Indicates an estimated value. This flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3 ug/L was calculated report as 3 J. This is flag is used when similar situation arise on any organic parameter i.e. Pest, PCB and others.
B	Indicates the analyte was found in the blank as well as the sample report as “12 B”.
E	Indicates the analyte ‘s concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide/PCB target analyte when there is >25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on Form 1 and flagged with a “P”.
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
A	This flag indicates that a Tentatively Identified Compound is a suspected aldol-condensation product.
Q	Indicates the LCS did not meet the control limits requirements

GC/MS VOA CONFORMANCE/NON-CONFORMANCE SUMMARY

CHEMTECH PROJECT NUMBER: I7090

MATRIX: Water

METHOD: 8260-Low

	NA	NO	YES
1. Chromatograms Labeled/Compounds Identified. (Field samples and Method Blanks)			✓
2. GC/MS Tuning Specifications BFB Meet Criteria (NOTE THAT THERE ARE DIFFERENT CRITERIA FOR NY ASP CLP, CLP AND NJ)			✓
3. GC/MS Tuning Frequency - Performed every 24 hours for 600 series and 12 hours for 8000 Series.			✓
4. GC/MS Calibration - Initial Calibration performed before sample analysis and continuing calibration performed within 24 hours of sample analysis for 600 series and 12 hours for 8000 series.			✓
5. GC/MS Calibration Requirements. The %RSD is greater than 15% in the Initial Calibration (Method 82U010318W.M) for Cyclohexane , this compound is passing on Linear regression . The Continuous Calibration met the requirements .			✓
6. Blank Contamination - If yes, list compounds and concentrations in each blank:		✓	
7. Surrogate Recoveries Meet Criteria If not met, list those compounds and their recoveries which fall outside the acceptable ranges.			✓
8. Matrix Spike/Matrix Spike Duplicate Recoveries Meet Criteria If not met, list those compounds and their recoveries which fall outside the acceptable range.			✓
9. Internal Standard Area/Retention Time Shift Meet Criteria Comments:			✓
10. Analysis Holding Time Met If not met, list number of days exceeded for each sample:			✓

ADDITIONAL COMMENTS:

Samples 914-MW-03A(17), 922-MW-17(15.5) was diluted due to bad matrix.

Samples 912-MW-01(23), 924-MW-19(28) were diluted due to high concentrations.

GC/MS VOA CONFORMANCE/NON-CONFORMANCE SUMMARY (CONTINUED)

NA NO YES

Please use %D calculated based on Avg RF and CCRF for all compounds using Average Response Factor when the %RSD value for a compound is <15% for the Initial Calibration curve and use %D calculated based on Amount added and Calculated amount for all compounds using Linear Regression when the %RSD value for a compound is > 15% for the Initial Calibration curve for SW-846 analysis.

APPENDIX A**QA REVIEW GENERAL DOCUMENTATION**

Project #: I7090

Completed

For thorough review, the report must have the following:

GENERAL:

Are all original paperwork present (chain of custody, record of communication,airbill, sample management lab chronicle, login page) ✓

Check chain-of-custody for proper relinquish/return of samples ✓

Is the chain of custody signed and complete ✓

Check internal chain-of-custody for proper relinquish/return of samples /sample extracts ✓

Collect information for each project id from server. Were all requirements followed ✓

COVER PAGE:

Do numbers of samples correspond to the number of samples in the Chain of Custody on login page ✓

Do lab numbers and client Ids on cover page agree with the Chain of Custody ✓

CHAIN OF CUSTODY:

Do requested analyses on Chain of Custody agree with form I results ✓

Do requested analyses on Chain of Custody agree with the log-in page ✓

Were the correct method log-in for analysis according to the Analytical Request and Chain of Custody ✓

Were the samples received within hold time ✓

Were any problems found with the samples at arrival recorded in the Sample Management Laboratory Chronicle ✓

ANALYTICAL:

Was method requirement followed? ✓

Was client requirement followed? ✓

Does the case narrative summarize all QC failure? ✓

All runlogs and manual integration are reviewed for requirements ✓

All manual calculations and /or hand notations verified ✓

1,1,2,2-Tetrachloroethane	0.977	0.970	0.3	-0.72	20
1,3-Dichlorobenzene	1.575	1.567		-0.51	20
1,4-Dichlorobenzene	1.614	1.570		-2.73	20
1,2-Dichlorobenzene	1.567	1.533		-2.17	20
1,2-Dibromo-3-Chloropropane	0.211	0.217		2.84	20
1,2,4-Trichlorobenzene	1.119	1.186		5.99	20
1,2,3-Trichlorobenzene	1.087	1.125		3.5	20
1,2-Dichloroethane-d4	0.427	0.446		4.45	20
Dibromofluoromethane	0.277	0.284		2.53	20
Toluene-d8	0.882	0.981		11.22	20
4-Bromofluorobenzene	0.411	0.416		1.22	20

All other compounds must meet a minimum RRF of 0.010.
 RRF of 1,4-Dioxane = Value should be divide by 1000.

Report of Analysis

Client:	Day Environmental, Inc.	Date Collected:	
Project:	Andrew St. RI	Date Received:	
Client Sample ID:	VU0104WBS01	SDG No.:	17090
Lab Sample ID:	VU0104WBS01	Matrix:	Water
Analytical Method:	SW8260	% Moisture:	100
Sample Wt/Vol:	5 Units: mL	Final Vol:	5000 uL
Soil Aliquot Vol:	uL	Test:	VOC-TCLVOA-10
GC Column:	DB-624UI ID : 0.18	Level :	LOW

File ID/Qc Batch:	Dilution:	Prep Date	Date Analyzed	Prep Batch ID
VU021466.D	1		01/04/18 12:03	VU010418

CAS Number	Parameter	Conc.	Qualifier	MDL	LOD	LOQ / CRQL	Units
------------	-----------	-------	-----------	-----	-----	------------	-------

U = Not Detected
 LOQ = Limit of Quantitation
 MDL = Method Detection Limit
 LOD = Limit of Detection
 E = Value Exceeds Calibration Range
 Q = indicates LCS control criteria did not meet requirements
 M = MS/MSD acceptance criteria did not meet requirements

J = Estimated Value
 B = Analyte Found in Associated Method Blank
 N = Presumptive Evidence of a Compound
 * = Values outside of QC limits
 D = Dilution
 () = Laboratory InHouse Limit

Catalog No. : 555408-FL **Lot No.:** A0129506

Description : Custom Vinyl Acetate Standard
Custom Vinyl Acetate Standard 8,000µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : January 31, 2018 **Storage:** 0°C or colder

Handling: This product is photosensitive.

CERTIFIED VALUES

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.I. K=2)		
1	Vinyl acetate CAS # 108-05-4 Purity 99%	8,018.0 µg/mL (Lot STBD7333V)	+/- 47.0541	µg/mL	Gravimetric
			+/- 483.8038	µg/mL	Unstressed
			+/- 484.9522	µg/mL	Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

CERTIFIED WEIGHT REPORT

Part Number: 95318
Lot Number: 021616
Description: 2-Chloroethyl vinyl ether
Solvent(s): Methanol
Lot#: DM417

Expiration Date: 021619

* The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
 * Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
 * Standards are certified (+/-) 0.5% of the stated value, unless otherwise stated.
 * All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.
 * Uncertainty Reference: Taylor, B.N. and Kuyat, C.E., "Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Result," NIST Technical Note 1297, U.S. Government Printing Office, Washington, DC, (1994).

1. Acrolein	5	07813BN	5000	97	0.2	0.10902	0.10951	5023.9	21.3	107-02-8	0.1 ppm	ori-rat 46mg/kg
-------------	---	---------	------	----	-----	---------	---------	--------	------	----------	---------	-----------------

Method: GC6MSD-1. Detector: Mass Selective Detector (Scan mode). Column: Wool (60m X 0.25mm ID X 1.5µm film thickness). Oven Profile: Temp. 1 = 35°C (Time 1 = 10min.), Temp. 2 = 200°C (Time 2 = 8.75 min.), Rate = 4°C/min., Injector Temp. = 200°C, Detector Temp. = 220°C. Analyst: Pedro Rentas. NOTE: Due to the instability of acrolein in solution, all solutions of acrolein, and any dilutions thereof, should be used immediately. Long term storage is not recommended. Please contact our technical department if further information is required.

- The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
- Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
- Standards are certified (+/-) 0.5% of the stated value, unless otherwise stated.
- All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.
- Uncertainty Reference: Taylor, B.N. and Kuyat, C.E., "Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Result," NIST Technical Note 1297, U.S. Government Printing Office, Washington, DC, (1994).

NJDEP CERTIFICATION NO - 20012

CASE NARRATIVE**Day Environmental, Inc.****Project Name: Andrew St. RI****Project # N/A****Chemtech Project # J3131****Test Name: VOC-TCLVOA-10****A. Number of Samples and Date of Receipt:**

13 Water samples were received on 05/24/2018.

B. Parameters

According to the Chain of Custody document, the following analyses were requested: VOC-TCLVOA-10. This data package contains results for VOC-TCLVOA-10.

C. Analytical Techniques:

The analysis performed on instrument MSVOA_N were done using GC column RXI-624SIL MS 30m 0.25mm 1.4 um. Cat#13868. The analysis of VOC-TCLVOA-10 was based on method 8260-Low.

D. QA/ QC Samples:

The Holding Times were met for all analysis.

The Surrogate recoveries met the acceptable criteria.

The Internal Standards Areas met the acceptable requirements except for 932-MW-03A(22)DL, 935-MW-17(17)DL, 936-MW-17(20.5)DL and 937-MW-17(24)DL.

As per method no corrective action required for failing dilution samples.

The Retention Times were acceptable for all samples.

The MS {J3131-09MS} with File ID: VN048755.D recoveries met the requirements for all compounds except for Tetrachloroethene [200%].

The MSD {J3131-10MSD} with File ID: VN048756.D recoveries met the acceptable requirements except for Tetrachloroethene[400%].

The RPD for {J3131-10MSD} with File ID: VN048756.D recoveries met criteria except for Tetrachloroethene[67%].

The original sample for MS/MSD has high positive hit for Tetrachloroethene due to bad matrix..

The Blank Spike met requirements for all samples.

The Blank analysis indicated presence of Tetrachloroethene[2.3 ug/L]

FileID:VN048759.D{VN0530WBL02} due to possible lab contamination .

The %RSD is greater than 15% in the Initial Calibration (Method 82N052918W.M) for Dichlorodifluoromethane ,Chloromethane, Acetone, Methyl Acetate, Cyclohexane,

Bromochloromethane, 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene these compounds are passing on Linear regression.

The Continuous Calibration File ID VN048784.D met the requirements except for Acetone, 2-Butanone and Bromochloromethane. The associate sample # 938-FB052218 has no positive hit for these compounds except Acetone, Lab received two vials which lab used it, therefore not enough weight volume left for reanalysis, this run was reported as final run

The Tuning criteria met requirements.

E. Additional Comments:

Samples 929-MW-01(18), 931-MW-03A (17) and 937-MW-17(24) were diluted due to bad matrices as per the history of the samples;

Samples 930-MW-01(23), 932-MW-03A (22), 933-MW-03A (28), 934-MW-17(14), 935-MW-17(17), 936-MW-17(20.5) and 937-MW-17(24) were diluted due to high concentrations.

The data package is revised due to reported wrong tics for sample # 934-MW-17(14).

Please use %D calculated based on Avg RF and CCRF for all compounds using Average Response Factor when the %RSD value for a compound is <15% for the Initial Calibration curve and use %D calculated based on Amount added and Calculated amount for all compounds using Linear Regression when the %RSD value for a compound is > 15% for the Initial Calibration curve for SW-846 analysis.

F. Manual Integration Comments:

Please refer to the Manual integration Report included with the Run Logs for information on the manual integrations performed.

I certify that the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. The laboratory manager or his designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

DATA REPORTING QUALIFIERS- ORGANIC

For reporting results, the following “ Results Qualifiers” are used:

Value	If the result is a value greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. “10 U”. This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
ND	Indicates the analyte was analyzed for, but not detected
J	Indicates an estimated value. This flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3 ug/L was calculated report as 3 J. This is flag is used when similar situation arise on any organic parameter i.e. Pest, PCB and others.
B	Indicates the analyte was found in the blank as well as the sample report as “12 B”.
E	Indicates the analyte ‘s concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide/PCB target analyte when there is >25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on Form 1 and flagged with a “P”.
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
A	This flag indicates that a Tentatively Identified Compound is a suspected aldol-condensation product.
Q	Indicates the LCS did not meet the control limits requirements

GC/MS VOA CONFORMANCE/NON-CONFORMANCE SUMMARY

CHEMTECH PROJECT NUMBER: J3131

MATRIX: Water

METHOD: 8260-Low

	NA	NO	YES
1. Chromatograms Labeled/Compounds Identified. (Field samples and Method Blanks)			✓
2. GC/MS Tuning Specifications BFB Meet Criteria (NOTE THAT THERE ARE DIFFERENT CRITERIA FOR NY ASP CLP, CLP AND NJ)			✓
3. GC/MS Tuning Frequency - Performed every 24 hours for 600 series and 12 hours for 8000 Series.			✓
4. GC/MS Calibration - Initial Calibration performed before sample analysis and continuing calibration performed within 24 hours of sample analysis for 600 series and 12 hours for 8000 series.			✓
5. GC/MS Calibration Requirements. The %RSD is greater than 15% in the Initial Calibration (Method 82N052918W.M) for Dichlorodifluoromethane ,Chloromethane, Acetone, Methyl Acetate, Cyclohexane, Bromochloromethane, 1,2,4-Trichlorobenzene , 1,2,3-Trichlorobenzene these compounds are passing on Linear regression. The Continuous Calibration File ID VN048784.D met the requirements except for Acetone,2-Butanone and Bromochloromethane .The associate sample # 938-FB052218 has no positive hit for these compounds except Acetone , Lab received two vials which lab used it ,therefore not enough weight volume left for reanalysis, ,this run was reported as final run		✓	
6. Blank Contamination - If yes, list compounds and concentrations in each blank: The Blank analysis indicated presence of Tetrachloroethene[2.3 ug/L] FileID:VN048759.D{VN0530WBL02} due to possible lab contamination.			✓
7. Surrogate Recoveries Meet Criteria If not met, list those compounds and their recoveries which fall outside the acceptable ranges.			✓

GC/MS VOA CONFORMANCE/NON-CONFORMANCE SUMMARY (CONTINUED)

	NA	NO	YES
8. Matrix Spike/Matrix Spike Duplicate Recoveries Meet Criteria If not met, list those compounds and their recoveries which fall outside the acceptable range. The MS {J3131-09MS} with File ID: VN048755.D recoveries met the requirements for all compounds except for Tetrachloroethene [200%]. The MSD {J3131-10MSD} with File ID: VN048756.D recoveries met the acceptable requirements except for Tetrachloroethene[400%]. The RPD for {J3131-10MSD} with File ID: VN048756.D recoveries met criteria except for Tetrachloroethene[67%]. The original sample for MS/MSD has high positive hit for Tetrachloroethene due to bad matrix. The Blank Spike met requirements for all samples.		✓	
9. Internal Standard Area/Retention Time Shift Meet Criteria Comments: The Internal Standards Areas met the acceptable requirements except for 932-MW-03A(22)DL, 935-MW-17(17)DL, 936-MW-17(20.5)DL and 937-MW-17(24)DL. As per method no corrective action required for failing dilution samples.		✓	
10. Analysis Holding Time Met If not met, list number of days exceeded for each sample:			✓

ADDITIONAL COMMENTS:

Samples 929-MW-01(18), 931-MW-03A (17) and 937-MW-17(24) were diluted due to bad matrices as per the history of the samples;

Samples 930-MW-01(23), 932-MW-03A (22), 933-MW-03A (28), 934-MW-17(14), 935-MW-17(17), 936-MW-17(20.5) and 937-MW-17(24) were diluted due to high concentrations.

Please use %D calculated based on Avg RF and CCRF for all compounds using Average Response Factor when the %RSD value for a compound is <15% for the Initial Calibration curve and use %D calculated based on Amount added and Calculated amount for all compounds using Linear Regression when the %RSD value for a compound is > 15% for the Initial Calibration curve for SW-846 analysis.

QA REVIEW

APPENDIX A

QA REVIEW GENERAL DOCUMENTATION

Project #: J3131

Completed

For thorough review, the report must have the following:

GENERAL:

Are all original paperwork present (chain of custody, record of communication,airbill, sample management lab chronicle, login page) ✓

Check chain-of-custody for proper relinquish/return of samples ✓

Is the chain of custody signed and complete ✓

Check internal chain-of-custody for proper relinquish/return of samples /sample extracts ✓

Collect information for each project id from server. Were all requirements followed ✓

COVER PAGE:

Do numbers of samples correspond to the number of samples in the Chain of Custody on login page ✓

Do lab numbers and client Ids on cover page agree with the Chain of Custody ✓

CHAIN OF CUSTODY:

Do requested analyses on Chain of Custody agree with form I results ✓

Do requested analyses on Chain of Custody agree with the log-in page ✓

Were the correct method log-in for analysis according to the Analytical Request and Chain of Custody ✓

Were the samples received within hold time ✓

Were any problems found with the samples at arrival recorded in the Sample Management Laboratory Chronicle ✓

ANALYTICAL:

Was method requirement followed? ✓

Was client requirement followed? ✓

Does the case narrative summarize all QC failure? ✓

All runlogs and manual integration are reviewed for requirements ✓

All manual calculations and /or hand notations verified ✓
