Community Air Monitoring Daily Log

Date: 3/28/2012

Site Representative: JMIF/ED

Appr. Wind Direction: → N.E

Weather Conditions: cool, 60°F, sunny

Appr. Wind Speed: 15

Time  
On-Site: 0730

On-Site: \_\_\_\_\_

On-Site: \_\_\_\_\_

Off-Site: \_\_\_\_\_

Off-Site: \_\_\_\_\_

Off-Site: \_\_\_\_\_

Description of Daily Work

Tasks: begin excav of PA./Break stockpile concrete, stage imp. soil.

Action Level Exceedance:

None

Yes: (description)

Notes:

Action Level: Downwind particulate level that exceeds the upwind particulate level by 100 ug/m3. If the action level is exceeded, the Site Representative will immediately notify the Site Safety Officer.

Action Level: Downwind VOC levels exceed upwind VOC levels. If action level exceeded, the Site Representative will immediately notify the Site Safety Officer implement minor or major emission monitoring.

Description of Daily Work

Tasks: peel concrete from Chrom Exc./Exc. Cr<sup>6</sup> soil (Northside)

Action Level Exceedance:

None

Yes: (description)

Notes:

FA00088

Action Level: Downwind particulate level that exceeds the upwind particulate level by 100 ug/m3. If the action level is exceeded, the Site Representative will immediately notify the Site Safety Officer.

Action Level: Downwind VOC levels exceed upwind VOC levels. If action level exceeded, the Site Representative will immediately notify the Site Safety Officer implement minor or major emission monitoring.

| Time | Particulates (ug/m <sup>3</sup> ) |       |          | Volatile Organic Compounds (VOCs) (ppm) |    |          |

**Orchard-Whitney Plating Area - City of Rochester  
Community Air Monitoring Daily Log**

Date: 4/4/2012

Site Representative: JMHE

Appr. Wind Direction: → N-NE

Weather Conditions: sunny, fair 50°F

Appr. Wind Speed: 5

Time  
On-Site: 0730

On-Site: \_\_\_\_\_

On-Site: \_\_\_\_\_

Off-Site: \_\_\_\_\_

Off-Site: \_\_\_\_\_

Off-Site: \_\_\_\_\_

Description of Daily Work site becomes v. windy @ ~1:30pm High Dust across site  
Tasks: Calm in work area

Action Level Exceedance: None Yes: (description) Dust exceedance due to site wide dust and berm not work area. (work area sloppier)

Notes: FA00086  
Action Level: Downwind particulate level that exceeds the upwind particulate level by 100 ug/m<sup>3</sup>. If the action level is exceeded, the Site Representative will immediately notify the Site Safety Officer.  
Action Level: Downwind VOC levels exceed upwind VOC levels. If action level exceeded, the Site Representative will immediately notify the Site Safety Officer implement minor or major emission monitoring.

| Time                                       | Particulates (ug/m <sup>3</sup> ) |       |          | Volatile Organic Compounds (VOCs) (ppm) |    |          |

ORCHARD/WHITNEY SOIL LOADING

4/16/12 overcast, 65° (730)

WILL/MIKE Optech

- 700 Optech on site
- 715 Lu on site; Ricelli 10-wheeler w/ tandem trailer on site  
for non-haz. soil
- 730 Bobcat mini-excavator w/ hoe ram attachment on site for  
breaking up concrete footer (chrom.); Optech loads out truck
- 750 Ricelli truck leaves site (337 tons non-haz.); Optech moves  
Cr<sup>6</sup> concrete stages on slab next to haz. pile; begins breaking up concrete  
footer

DONE  
(NO SOIL  
MOVEMENT)

Exchange  
Structure

8<sup>45</sup> Done breaking concrete (backhoe  $\frac{1}{2}$  hoe ram); Jane F. on site

9<sup>00</sup> Optech drains purge water drums onto haz. soil pile

(1x 30 gal  $\frac{1}{2}$ , 1x 15 gal, 1x 35 gal)

9<sup>12</sup> Bobcat picks up hoe ram (rental) excavator  $\frac{1}{2}$  leaves site

9<sup>23</sup> Ricelli truck returns to site for non-haz load out, loads out  $\frac{1}{2}$

9<sup>50</sup> leaves; tiny bit (500 lbs  $\frac{1}{2}$ ) of Non haz soil remains ... add to haz. pile

10<sup>00</sup> Haz. trucks arrive (2x trailer - 8 wheels) from Page E.T.C. Inc.

11<sup>10</sup> First truck is loaded, tarped and leaves site; load 2<sup>nd</sup> truck

~~add~~ add 2 crocks/soil from drum onto haz. pile for disposal; all

purge/development water from plating area has been added to haz. soil

11<sup>45</sup> 2<sup>nd</sup> truck of haz leaves site (tarped); Optech changes

bucket on excavator for final test pitting

12<sup>30</sup> lunch

1<sup>00</sup> Optech sends Will to shop w/ trailer of empty totes, equip

2<sup>15</sup>; 1<sup>st</sup> Haz. truck returns to site; was 6,000 lbs overweight

begin test pit 7B headed south from TP-7; excavate monitoring well

approx. 30' south, 10-12' west of MW 20; TP 7B extends to within

12-15' of tunnel wall, still impacted from 4' to 7-8' (grey)

Optech stages 2x 275 gal chimney water totes on trailer; 55 gal drum;

backfills TP 7B

Optech/hu offsite, site secure

Water samples were validated for analyses of volatile organics by the US EPA Region II data validation SOP (HW-24, Revision 2, 2008). Data were reviewed for usability according to the following criteria:

- \* - Data Completeness
- \* - GC/MS Tuning
- \* - Holding Times
  - Calibrations
  - Laboratory Blanks
  - Trip Blank
- \* - Surrogate Compound Recoveries
- \* - Internal Standard Recoveries
- \* - Matrix Spike / Matrix Spike Duplicate
- \* - Laboratory Control Samples
- \* - Compound Identification
- \* - Compound Quantitation

\* - Indicates that all criteria were met for this parameter.

## DATA VALIDATION SUMMARY

The problems calibrations and blanks should be noted. These are discussed in detail below.

### Holding Times

All samples were analyzed within 14 days of collection.

### Tunes

No problems were detected with the tunes associated with the samples of this delivery group.

### Surrogate Compound Recoveries

All surrogate compound recoveries were within the 80% - 120% quality assurance limits referenced in the data validation protocols..

### Calibrations

All of the %RSDs were less than 20% with the exceptions of acetone (119%) and methylene chloride (119%).

Undetected data were flagged with the "R" qualifier and technically rejected since the %RSDs were greater than 90%.

When one of these compounds was detected in a sample, the data were flagged with the "J" qualifier and are estimated values.

All of the percent differences in the 12/7 continuing calibration were less than 20% with the exceptions of acetone (31%) and methylene chloride (51%)

Undetected data for acetone and methylene chloride were previously rejected due to their high %RSDs.

This continuing calibration was associated with the following samples:

|            |                |
|------------|----------------|
| 12:4962-01 | PA03 12-03-12  |
| 12:4962-02 | PA04 12-03-12  |
| 12:4962-03 | PA09 12-03-12  |
| 12:4962-05 | PA15S 12-03-12 |
| 12:4962-06 | PA15D 12-03-12 |
| 12:4962-07 | MW16 12-03-12  |
| 12:4962-08 | MW17 12-03-12  |
| 12:4962-09 | MW15 12-03-12  |
| 12:4962-10 | MW23 12-03-12  |
| 12:4962-11 | Trip Blank     |

All of the percent differences in the 12/11 continuing calibration were less than 20% with the exceptions of acetone (46%) and methylene chloride (51%).

Undetected data for acetone and methylene chloride were previously rejected due to their high %RSDs.

This continuing calibration was associated with the following samples:

|            |               |
|------------|---------------|
| 12:4962-04 | PA14 12-03-12 |
| 12:4988-01 | MW19 12-04-12 |
| 12:4988-02 | MW06 12-04-12 |
| 12:4988-03 | MW07 12-04-12 |

All of the percent differences in the 12/12 continuing calibration were less than 20% with the exceptions of acetone (43%), methylene chloride (53%) and 1,4-dioxane (27%).

Undetected data for acetone, methylene chloride 1,4-dioxane were previously rejected due to their high %RSDs and / or low relative response factors..

This continuing calibration was associated with the following samples:

|            |                   |
|------------|-------------------|
| 12:4988-04 | MW18 12-04-12     |
| 12:4988-05 | MW20 12-04-12     |
| 12:4988-06 | MW05 12-04-12     |
| 12:4988-07 | MW13 12-04-12     |
| 12:4988-08 | MW21 12-04-12     |
| 12:4988-09 | MW11 12-04-12     |
| 12:4988-10 | MW14 12-04-12     |
| 12:4988-11 | MW20 12-04-12 Dup |

All of the relative response factors (rrfs) were greater than 0.05 with the exceptions of 2-butanone (0.030) and 1,4-dioxane (0.009).

The undetected data for 2-butanone and 1,4-dioxane were flagged with the "R" qualifier and technically rejected.

Detected data were flagged with the "J" qualifier and are estimated values.

### Matrix Spike

The laboratory's in-house QC limits noted on their summary forms were often wider than the 70% - 130% Region 2 limits. The data were validated on the basis of the Region 2 limits.

Sample 12:4988-02 / MW06 12-04-12 was used for the matrix spike and matrix spike duplicate.

All recoveries and RPDs were within the required limits.

Only 5 compounds were reported in the spiking solution.

### Laboratory Control Sample

The laboratory's in-house QC limits noted on their summary forms were often wider than the 70% - 130% Region 2 limits. The data were validated on the basis of the Region 2 limits.

All of the laboratory control samples were within the 70% - 130% limits.

Only 5 compounds were reported in the laboratory control samples.

### Method Blanks

Acetone was detected in two of the method blanks, 12.36 ug/l (12/7) and 11.6 ug/l (12/12).

These blanks were associated with the analyses of the following samples:

|            |                   |
|------------|-------------------|
| 12:4962-01 | PA03 12-03-12     |
| 12:4962-02 | PA04 12-03-12     |
| 12:4962-03 | PA09 12-03-12     |
| 12:4962-05 | PA15S 12-03-12    |
| 12:4962-06 | PA15D 12-03-12    |
| 12:4962-07 | MW16 12-03-12     |
| 12:4962-08 | MW17 12-03-12     |
| 12:4962-09 | MW15 12-03-12     |
| 12:4962-10 | MW23 12-03-12     |
| 12:4962-11 | Trip Blank        |
| 12:4988-04 | MW18 12-04-12     |
| 12:4988-05 | MW20 12-04-12     |
| 12:4988-06 | MW05 12-04-12     |
| 12:4988-07 | MW13 12-04-12     |
| 12:4988-08 | MW21 12-04-12     |
| 12:4988-09 | MW11 12-04-12     |
| 12:4988-10 | MW14 12-04-12     |
| 12:4988-11 | MW20 12-04-12 Dup |

Only low concentrations of acetone, less than the concentrations in the method blanks, were detected in these samples.

All of the acetone data in these samples, with the exception of the Trip Blank, were flagged with the "R" qualifier and technically rejected.

No other compounds were detected in the method blanks.

### Trip Blank

The trip blank contained 7.61 JB ug/l of acetone.

Acetone was detected in the associated method blank at a concentration of 12 ug/l.

### **Internal Standard Areas and Retention Times**

The areas and retention times of all other standards were within the required quality control limits.

### **Sample Results**

No problems were detected with any of the samples.

Water samples were validated for inorganic analyses by the US EPA Region II data validation SOP (HW-2, Revision 13). Data were reviewed for usability according to the following criteria:

- \* - Holding Times
- \* - Calibration Verification
  - CRDL Standard
- \* - Laboratory Control Sample
  - Serial Dilution
- \* - Calibration Blanks
  - Field Blank
- \* - Preparation Blanks
- \* - Matrix Spike
- \* - Duplicate Analyses
- \* - ICP Interference Check Sample
- \* - Detection Limit Results
- \* - Linear Range
- \* - Sample Results

\* - Indicates that all criteria were met for this parameter.

### **Data Validation Summary**

A serial dilution and CRDL standards were not analyzed.

No other problems were detected that would affect the use of the data.

### **Holding Times**

All samples were analyzed within the required holding times.

### **Initial and Continuing Calibrations**

No problems were found with any of the initial or continuing calibrations.

### **Preparation Blank**

No compounds were detected in the one preparation blank associated with the digestions of these samples at concentrations above the CRDL. Several analytes were found in the preparation blank at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table.

### **Calibration Blanks**

Several analytes were found in the continuing calibration blanks at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table and do not affect the end use of the data.

**Field Blank**

A field blank was not collected with this sample delivery group.

**ICP Interference Check Sample**

All of the ICP interference check standard recoveries were within the required limits.

**Matrix Spike Recovery**

Samples 12:4962-10 / MW23 12-03-12, 12:4988-02 / MW06 12-04-12 and 12:4988-10 were used as the matrix spike for the ICP analysis.

Sample 12:4988-11 / MW20 12-04-12 Dup was used as the matrix spike for the mercury analysis.

All of the recoveries were within the 75% - 125% quality control limits used for the purpose of the data validation.

**Duplicate Analysis**

Samples 12:4962-10 / MW23 12-03-12, 12:4988-02 / MW06 12-04-12 and 12:4988-10 were used as the matrix duplicate for the ICP analysis.

Sample 12:4988-11 / MW20 12-04-12 Dup was used as the matrix duplicate for the mercury analysis.

All percent differences were less than the 20% quality control limits used for the validation.

**Laboratory Control Sample**

No problems were detected with the recoveries of the LCS standards.

**Serial Dilutions**

A serial dilution was not analyzed.

**Instrument Detection Limit**

No problems were found with the instrument detection limits.

**ICP Linear Ranges**

No problems were detected with the linear ranges.

**Sample Results**

No problems were detected with any of the data.

Water samples were validated for analyses of volatile organics by the US EPA Region II data validation SOP (HW-24, Revision 2, 2008). Data were reviewed for usability according to the following criteria:

- \* - Data Completeness
- \* - GC/MS Tuning
- \* - Holding Times
  - Calibrations
  - Laboratory Blanks
  - Trip Blank
- \* - Surrogate Compound Recoveries
- \* - Internal Standard Recoveries
- \* - Matrix Spike / Matrix Spike Duplicate
- \* - Laboratory Control Samples
- \* - Compound Identification
- \* - Compound Quantitation

\* - Indicates that all criteria were met for this parameter.

**DATA VALIDATION SUMMARY**

The problems calibrations and method blanks should be noted. These are discussed in detail below.

**Holding Times**

All samples were analyzed within 14 days of collection.

## Tunes

No problems were detected with the tunes associated with the samples of this delivery group.

## Surrogate Compound Recoveries

All surrogate compound recoveries were within the 80% - 120% quality assurance limits referenced in the data validation protocols.

## Calibrations

All of the %RSDs were less than 20% with the exceptions of acetone (119%) and methylene chloride (119%).

Undetected data were flagged with the "R" qualifier and technically rejected since the %RSDs were greater than 90%.

When one of these compounds was detected in a sample, the data were flagged with the "J" qualifier and are estimated values.

All of the percent differences in the 12/13 continuing calibration were less than 20% with the exceptions of acetone (39%) and methylene chloride (50%).

Undetected data for acetone and methylene chloride were previously rejected due to their high %RSDs.

This continuing calibration was associated with the following samples:

|            |               |
|------------|---------------|
| 12:5042-01 | MW24_12-06-12 |
| 12:5042-02 | MW25 12-06-12 |
| 12:5042-03 | MW09 12-06-12 |
| 12:5042-04 | MW10 12-06-12 |
| 12:5042-05 | MW22 12-06-12 |
| 12:5042-06 | MW10 12-06-12 |

All of the percent differences in the 12/14 continuing calibration were less than 20% with the exceptions of acetone (36%), methylene chloride (55%) and 1,4-dioxane (27%).

Undetected data for acetone and methylene chloride were previously rejected due to their high %RSDs.

This continuing calibration was associated with the following samples:

|            |               |
|------------|---------------|
| 12:5042-07 | MW12 12-06-12 |
| 12:5042-08 | MW08 12-06-12 |

All of the relative response factors (rrfs) were greater than 0.05 with the exceptions of 2-butanone (0.030) and 1,4-dioxane (0.009).

The undetected data for 2-butanone and 1,4-dioxane were flagged with the "R" qualifier and technically rejected.

Detected data were flagged with the "J" qualifier and are estimated values.

### **Matrix Spike**

The laboratory's in-house QC limits noted on their summary forms were often wider than the 70% - 130% Region 2 limits. The data were validated on the basis of the Region 2 limits.

Sample 12:5042-03 / MW09 12-06-12 was used for the matrix spike and matrix spike duplicate.

All recoveries and RPDs were within the required limits.

Only 5 compounds were reported in the spiking solution.

### **Laboratory Control Sample**

The laboratory's in-house QC limits noted on their summary forms were often wider than the 70% - 130% Region 2 limits. The data were validated on the basis of the Region 2 limits.

All of the laboratory control samples were within the 70% - 130% limits.

Only 5 compounds were reported in the laboratory control samples.

### **Method Blanks**

Acetone was detected in two of the method blanks, 14.7 ug/l (12/13) and 15.6 ug/l (12/14).

These blanks were associated with the analyses of all of the samples:

Only low concentrations of acetone, less than the concentrations in the method blanks, were detected in these samples.

All of the acetone data in these samples were flagged with the "R" qualifier and technically rejected.

### **Trip Blank**

A trip blank was not analyzed with this sample delivery group.

### **Internal Standard Areas and Retention Times**

The areas and retention times of all other standards were within the required quality control limits.

### **Sample Results**

No problems were detected with any of the samples.

Soil samples were validated for inorganic analyses by the US EPA Region II data validation SOP (HW-2, Revision 13). Data were reviewed for usability according to the following criteria:

- \* - Holding Times
- \* - Calibration Verification
  - CRDL Standard
- \* - Laboratory Control Sample
  - Serial Dilution
- \* - Calibration Blanks
  - Field Blank
- \* - Preparation Blanks
- \* - Matrix Spike
  - Duplicate Analyses
- \* - ICP Interference Check Sample
- \* - Detection Limit Results
- \* - Linear Range
- \* - Sample Results

\* - Indicates that all criteria were met for this parameter.

**Data Validation Summary**

The problem with the arsenic matrix duplicate should be noted. This is described in detail below.

A serial dilution and CRDL standards were not analyzed.

No other problems were detected that would affect the use of the data.

**Holding Times**

All samples were analyzed within the required holding times.

**Initial and Continuing Calibrations**

No problems were found with any of the initial or continuing calibrations.

**Preparation Blank**

No compounds were detected in the one preparation blank associated with the digestions of these samples at concentrations above the CRDL. Several analytes were found in the preparation blank at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table.

**Calibration Blanks**

Several analytes were found in the continuing calibration blanks at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table and do not affect the end use of the data.

**Field Blank**

A field blank was not collected with this sample delivery group.

**ICP Interference Check Sample**

All of the ICP interference check standard recoveries were within the required limits.

**Matrix Spike Recovery**

Sample 10233 / OW-PA15-(11-13') was used as the matrix spike.

All recoveries were within the 75% - 125% quality control limits used for the validation.

**Duplicate Analysis**

Sample 10233 / OW-PA15-(11-13') was used as the matrix duplicate .

All percent differences were less than the 20% quality control limit used for the validation with the one exception of arsenic (41%).

The arsenic data were flagged with the "J" qualifier and are estimated values

**Laboratory Control Sample**

No problems were detected with the recoveries of the LCS standards.

### **Serial Dilutions**

A serial dilution was not analyzed.

### **Instrument Detection Limit**

No problems were found with the instrument detection limits.

### **ICP Linear Ranges**

No problems were detected with the linear ranges.

### **Sample Results**

No problems were detected with any of the data.

# Appendix M – Fish and Wildlife Impact Analysis Decision Key

## Interim Remedial Measures Construction Completion Report

Prepared For:

City of Rochester  
City Hall, Room 300B  
30 Church Street  
Rochester, NY 14614

Prepared By:

175 Sully's Trail, Suite 202  
Pittsford, New York 14534

*I, Robert Hutteman, P.E., certify that I am currently a NYS registered professional engineer and that this Final Engineering Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10).*

**November 2015**

## CERTIFICATIONS

I, Robert Hutteman, am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Supplemental Site Investigation Work Plan and the prior Remedial Investigation and Interim Remedial Measures Work Plan were implemented and that all construction activities were completed in substantial conformance with the Department-approved Supplemental Site Investigation Work Plan.

I certify that the data submitted to the Department with this Interim Remedial Measures Construction Completion Report demonstrates that the remediation requirements set forth in the Supplemental Site Investigation Work Plan and prior Remedial Investigation and Interim Remedial Measures Work Plan and in all applicable statutes and regulations have been or will be achieved in accordance with the time frames, if any, established in for the remedy.

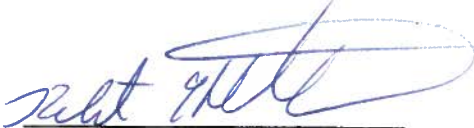

I certify that all use restrictions, Institutional Controls, Engineering Controls, and/or any operation and maintenance requirements applicable to the Site are contained in an environmental easement created and recorded pursuant ECL 71-3605 and that all affected local governments, as defined in ECL 71-3603, have been notified that such easement has been recorded.

I certify that a Site Management Plan has been submitted for the continual and proper operation, maintenance, and monitoring of all Engineering Controls employed at the Site, including the proper maintenance of all remaining monitoring wells, and that such plan has been approved by Department.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Robert Hutteman, of Lu Engineers, am certifying as Owner's Designated Site Representative for the site.

## 1.0 Introduction

Lu Engineers has prepared this combined Interim Remedial Measures (IRM) Construction Completion Report (CCR) on behalf of the City of Rochester for the Orchard-Whitney Brownfield Site (the 'Site') located at 415 Orchard Street. This combined summary report was prepared for submission to the New York State Department of Environmental Conservation (NYSDEC) to present a complete summary of recent Supplemental Site Investigation findings and subsequent Interim Remedial Measures (IRM) conducted at the Site in July, August, and October 2015. Investigative activities and remedial actions were conducted at the Site as outlined in the approved *Supplemental Site Investigation Work Plan*, dated June 2015 and subsequent *Interim Remedial Measures Update*, dated September 2015.

This combined report serves as an addendum to the previous Site Investigation and IRMs implemented and documented in the NYSDEC approved *Site Investigation/ Remedial Alternatives Report (January 2014)*. Previous additional IRMs were performed in accordance with the *Remedial Investigation and Interim Remedial Measures Work Plan (April 2011)* and included:

- Detailed evaluation of tunnels and underground utilities;
- Partial excavation of USTs to evaluate subsurface conditions;
- Excavation of twenty-three (23) test pits (TP-19 through TP-39 and TP-7A through TP-7E);
- High resolution test boring program within the former plating area;
- Installation and sampling of sixteen (16) mini-wells, including three nested pairs, within former plating area;
- Installation of three (3) monitoring wells (MW-23 through MW-25);
- Pre-demolition Phase investigation;
  - PCB assessment;
  - Hazardous materials inventory and characterization;
  - Limited lead survey;
  - Pre-demolition asbestos survey of 354 Whitney Street and 415 Orchard Street;
  - Demolition inspection;
- Post-demolition Phase Site-wide investigation (2008-2009);
  - Test pits;
  - Background soil borings;
  - Site-wide soil borings and sampling;
  - Monitoring well installation and subsequent groundwater sampling;
  - Aquifer testing;
  - Surface soil sampling;
- AOC investigation and IRMs (2011-2012);
  - UST investigation;

- Plating area investigation;
- Abandoned Hydraulic Lift
- Former Gasoline Storage and Dispenser
- Drain System Evaluation
- Underground Tunnels and Buried Utility Evaluation
- Former “Low-Rise” Sub-Slab Investigation
- Former Coal Storage; and
- Additional groundwater sampling.

The project was funded by a New York State Environmental Restoration Program awarded to the City of Rochester (the ‘City’) for remediation of petroleum and other hazardous materials at the Orchard-Whitney Site.

A Pre-Demolition Design Investigation, as requested by the NYSDEC, was completed in January 2012 in order to locate and characterize hazardous or contaminated materials that required removal prior to, or concurrently with, demolition. The pre-demolition investigation included a PCB assessment, full hazardous materials inventory, a limited lead inspection, and a pre-demolition survey of 415 Orchard Street. Asbestos abatement activities for the 415 Orchard Street property were conducted between June 30, 2014 and October 25, 2014. Demolition of the 415 Orchard Street building commenced in May 2014 and concluded in June 2015.

In July 2015, Lu Engineers began implementing a Supplemental Site Investigation (SSI) to assist the City with additional Site investigative activities at 415 Orchard Street in accordance with the SSI Work Plan approved by the NYSDEC on July 8, 2015. The purpose of the SSI was to delineate the nature and extent of contamination beneath, and in the immediate vicinity of, the footprint of the former 415 Orchard Street building.

The SSI was also intended to allow development of a Supplemental IRM Work Plan and a Limited Supplemental Site Investigation/Remedial Alternatives Analysis which was used to select a remedy for the area within the former 415 Orchard Street building footprint. Remedial Alternatives outlined in the August 27, 2015 letter to the NYSDEC included (1) abating the asbestos-containing material within the located pipe chase in accordance with appropriate Federal, State, and local variance, guidelines and protocols; (2) excavating the area of petroleum-impacted soils found to be in exceedance of Commercial Use SCOs; (3) soils were field screening during excavation so that soils exhibiting elevated PID readings were segregated for appropriate disposal measures in accordance with applicable requirements. Remedial efforts were completed as IRMs and are described in further detail in this report. IRMs were implemented during October, November, and December 2015.

The previously approved Quality Assurance Project Plan (QAPP), Health and Safety Plan (HASP), Community Air Monitoring Plan (CAMP) and Community Participation Plan (CPP), from the original July 2006 Remedial Investigation (RI) Work Plan and subsequent September 2007 Interim Remedial Measures (IRM) Work Plan, were updated and used for the project-specific purposes of the SSI and most recent IRM work.

The Scope of Work for the IRMs detailed in this report included:

- Abatement of an unknown quantity of asbestos containing materials (ACM) from the previously undocumented utility pipe trench depicted on the attached figures prior to accessing petroleum-contaminated soils.
- Excavation and off-Site disposal of an approximate total of 690 tons petroleum-impacted subsurface soils;
- Placement of existing on-Site clean cover materials across portions of the Site;
- Removal and disposal of trash, woody vegetation, and wood debris.

Section 2.0 provides a detailed description of SSI related activities and Section 4.0 provides details relating to IRM activities conducted as part of this project.

### **1.1 Site Description**

The Orchard-Whitney Site is a 3.9-acre site consisting of two parcels: 415 Orchard Street and 354 Whitney Street, in the City of Rochester (Figures 1 and 2). The Site lies within the City's LYLAKS (Lyell-Lake-State Street Corridor) Brownfield Opportunity Area (BOA) that includes mixed residential and commercial/industrial uses.

The Site is currently a fenced vacant lot covered mainly with concrete slabs and debris piles. Demolition of all structures on the 354 Whitney Street parcel was completed in 2008. Demolition of the 415 Orchard Street building was completed in 2015. Crushed masonry, brick, concrete and stone building materials generated during the demolition process are staged throughout the parcel.

Currently the Site is vacant and void of any buildings or structures with the exception of several large piles of crushed demolition debris and the remaining wall along the southern property line of 415 Orchard Street. The existing, staged, crushed demolition debris piles will be used during the Final Site Grading Plan as Site cover material as well as to create a properly sloped berm against the remaining 415 Orchard Street wall structure.

The Site is bordered by Orchard Street to the east, a former railroad right-of-way to the south, Whitney Street to the west, and commercial buildings with frontage on Lyell Avenue, to the north.

## 1.2 Site History

According to previous environmental reports for the Site, the area was originally developed with residential housing in the mid 1800's. Railroad spurs were extended through the southern adjacent properties circa 1875 and the tracks were used for coal and metal delivery and shipping as the Site and surrounding properties developed into manufacturing and industrial uses in the early 1900s. From 1915 to 1922, the North East Electric Company occupied the Site.

The Delco Appliance Division of General Motors occupied the Site from 1930 to 1967 and had several processes including the manufacture of electrical equipment, various metal finishing operations, coal storage, boiler operation, power generation, petroleum storage and industrial waste water treatment. The facility was expanded to its pre-demolition size and configuration by 1935. The plant closed in 1967 and the property continued to be used for metal finishing, synthetic foam production, printing, plastics manufacturing, electronic manufacturing, and warehousing until 1990 when the Site was abandoned.

After the cessation of commercial use of the Site in 1990, Site conditions declined steadily and in 2003, a large section of the structures on the Whitney Street parcel were heavily damaged during an arson fire. The City partially demolished the structure in 2005 to reduce the risk of collapse and to eliminate other hazardous conditions at the Site. The City had previously offered the parcels at tax delinquent auctions; however, no viable developers had shown interest. Therefore City had acquired ownership of the Orchard and Whitney parcels through tax foreclosure proceedings in 2000 and 2005 respectively.

The City has completed a number of Site Investigation (SI) and Interim Remedial Measures (IRMs) work, along with City of Rochester personnel, from 2006 through 2014, as detailed in the *Site Investigation/ Remedial Alternatives Report (January 2014)* and summarized in Section 1.3 below.

## 1.3 Previous Site Investigations

The Site has undergone a series of environmental investigations since the late 1990's in order to assess Recognized Environmental Concerns (RECs) at the Site. These investigations include:

- Draft Center City Industrial Park Facility Assessment: *The Flint, Allen, White & Radley Draft Center City Industrial Park Facility Assessment (1999)*;
- USEPA Hazardous Substance Removal Action (1999);

- *Phase I Environmental Site Assessment (ESA): 354 Whitney Street and 367, 370, 406, and 415 Orchard Streets, Day Environmental, Inc.* (December 2000);
- Pre-Demolition Asbestos Inspection of 354 Whitney Street Bldg 2/2A/ Brick Mill, *ENSR International* (August 2003);
- Demolition of the western portions of the 354 Whitney Street buildings (2003);
- 354 Whitney Street building demolition (2005);
- *Orchard-Whitney Targeted Site Assessment Report*, NYSDEC Region 8, (December 2006);
- The NYSDEC Targeted Site Assessment, Fall of 2005 to evaluate the Site for potential registry as an Inactive Hazardous Waste Disposal Site (IHWDS). *NYSDEC Investigation* (2005);
- Post-demolition Site-wide investigation completed by Lu Engineers, 2008-2009 as outlined in the *Remedial Investigation Work Plan* (August 2006);
- *Pre-demolition Investigation for 354 Whitney Street* (February 2007);
- Area of Concern (AOC) investigation and IRMs by Lu Engineers, 2011-2012 as described in the *Remedial Investigation and Interim Remedial Measures Work Plan* (April 2011); and
- *Pre-Demolition Investigation for 415 Orchard Street* (January 2012).

#### **1.4 Contemplated Use**

The Site is currently undeveloped and zoned for commercial and light industrial use. The City is at present requesting proposals for future use planning and development designs for the Site, consistent with current commercial or industrial zoning.

Due to potential exposure hazards to human health and the environment, subsurface soil and groundwater contamination, as well as existing asbestos pipe wrap in the underground tunnels, will need to be addressed as part of the planning process associated with eventual re-use of the Site. If future Site redevelopment involves excavation or disturbance of impacted soils, contact with groundwater, and/or asbestos containing material disturbances, potential for human exposures and contaminant migration exists. Potential future exposures shall be addressed by the final Site remedy. Residual petroleum-based contaminant concentrations identified in groundwater are

expected to decrease over time due to the natural attenuation processes in the subsurface.

Groundwater flow is generally to the northeast, toward the Genesee River. There is no evidence to suggest that contaminated soil or groundwater has migrated off-site. The additional investigative and remedial components associated with the most recent phase of this project were conducted in July, August, and October 2015 and are described in detail within the following sections of this report.

## 2.0 Summary of Supplemental Site Investigation Findings

In July 2015, Lu Engineers implemented the scope of work outlined in the NYSDEC approved Supplemental Site Investigation Work Plan (SSIWP) dated May 2015 prepared for the City. The purpose of the SSIWP was to assist the City with additional Site investigative activities, specifically to delineate the nature and extent of contamination beneath, and in the vicinity of, the footprint of the former 415 Orchard Street building.

The scope of work included:

- Completion of sixteen (16) test pit excavations
- Installation of four (4) soil borings
- Subsurface soil sampling for EPA 8260 VOCs, EPA 6010 RCRA Metals, EPA 8082 PCBs, and NYSDOH 310.13 Total Petroleum Hydrocarbons (TPH)
- Installation of four (4) new 2-inch groundwater monitoring wells
- Groundwater sampling for EPA 8260 VOCs, EPA 6010 RCRA Metals , and EPA 8082 PCBs

Figure 2 illustrates the test pit excavations, soil borings, and existing and newly installed monitoring well locations as well as associated analytical result exceedances detected during the SSI. Figure 3 illustrates the photo ionization detector (PID) readings and associated depths for each reading.

### 2.1 SSI Test Pit Excavations

As part of the Supplemental Site Investigation conducted in July 2015 a total of sixteen (16) test pit excavations were advanced within and in the immediate vicinity of the footprint of the former 415 Orchard Street building in accordance with the approved SSIWP (TP-1 through TP-16, see Figure 2).

The objective of the test pits was to more completely delineate the nature and extent of contamination remaining at the Site and use the information to develop appropriate IRMs and if necessary, select suitable remediation technologies.

Test pit excavation activities commenced on July 13, 2015 and were completed on July 16, 2015. Subsurface samples were collected from each test pit location from the area of the pit exhibiting the highest concentration of contamination, if applicable. If no visible, olfactory, or PID indications of contamination were encountered, samples were collected from depths determined by the on-Site Lu Engineer's field professional in conjunction with the City. Analytical results for the test pit activities are tabulated on Tables 1 and 2. Figure 2 illustrates land-surveyed and GPS confirmed locations of each test pit and includes exceedances detected in the analytical data. Test pit logs included as Appendix B detail the test pit dimensions, total depth, soil description, PID reading

results, as well as any other pertinent findings recorded during the test pit excavation activities. PID readings and the depth at which they were recorded during test pit excavation activities are illustrated on Figure 3.

Groundwater infiltration was observed in three (3) of the test pits (TP-5, TP-6, and TP-9); the remaining test pits did not produce water during excavation activities. Groundwater within the three (3) test pits was noted to be free of observed sheen, odors, or discoloration.

During the initial excavation surrounding TP-10 a previously undocumented underground pipe chase was uncovered. The pipe chase was observed to contain several different diameter pipes oriented in a north to south direction. Groundwater was not observed within the pipe chase.

Lu Engineers asbestos professionals conducted an asbestos abatement survey of the pipe wrap material discovered in the pipe chase. Subsequent analytical results confirmed the presence of asbestos within the pipe chase and as a result an asbestos abatement specification was generated under the direction of the City. Lu Engineers was retained by the City to perform Project/Air Monitoring for the abatement portion of the project, as required by New York State Department of Labor (NYSDOL). Genesee Environmental, LLC commenced the asbestos abatement activities on September 21, 2015 and completed work on September 30, 2015. Lu Engineers completed subsequent clearance air sampling verifying that work areas were adequately cleaned and decontaminated prior to commencement of IRM activities. All related documentation has been provided under separate cover (December 2015).

Location of the utility pipe chase is illustrated on Figures 2 and 3.

## 2.2 Test Pit Analytical Sampling

The table below depicts the peak PID headspace readings detected during test pit excavation activities, as well as the PID readings and associated depths from which samples were collected from at each test pit location.

| Test Pit | PID Screen Interval (feet bgs) | Peak PID Headspace Reading (ppm) | Analytical Sample ID | Analytical Sample Depth and PID Reading (feet bgs: ppm) |
|----------|--------------------------------|----------------------------------|----------------------|---------------------------------------------------------|
| TP-1     | 0.0-6.0                        | 0.0                              | OW-TP-01-2015        | 4.0-6.0: 0.0                                            |
| TP-2     | 4.0-6.0                        | 0.7                              | OW-TP-02-2015        | 6.0-9.0: 0.0                                            |
| TP-3     | 0.0-1.0                        | 0.8                              | OW-TP-03-2015        | 8.0-10.0: 0.0                                           |
| TP-4     | 0.0-8.5                        | 0.0                              | OW-TP-04-2015        | 8.5: 0.0                                                |
| TP-5     | 0.0-10.0                       | 0.0                              | OW-TP-05-2015        | 10.0: 0.0                                               |

| Test Pit | PID Screen Interval (feet bgs) | Peak PID Headspace Reading (ppm) | Analytical Sample ID | Analytical Sample Depth and PID Reading (feet bgs: ppm) |
|----------|--------------------------------|----------------------------------|----------------------|---------------------------------------------------------|
| TP-6     | 2.0-4.0                        | 0.2                              | OW-TP-06-2015        | 12.0: 0.0                                               |
| TP-7     | 0.0-9.0                        | 0.0                              | OW-TP-07-2015        | 9.0: 0.0                                                |
| TP-8     | 2.0-4.0                        | 0.2                              | OW-TP-08-2015        | 9.0: 0.0                                                |
| TP-9     | 4.0                            | 5.3                              | OW-TP-09-2015        | 12.0: 0.0                                               |
| TP-10    | 6.0-8.0                        | 54.1                             | OW-TP-10-2015        | 7.5: 54.1                                               |
| TP-11    | 6.0-8.0                        | 22.1                             | OW-TP-11-2015        | 12.0: 0.0                                               |
| TP-12    | 8.5                            | 90.0                             | OW-TP-12-2015        | 8.5: 90.0                                               |
| TP-13    | 2.0                            | 215.0                            | OW-TP-13-2015        | 8-10: 12.5                                              |
| TP-14    | 2.0-4.0                        | 0.7                              | OW-TP-14-2015        | 12.0: 0.0                                               |
| TP-15    | 4.0-6.0                        | 37.9                             | OW-TP-15-2015        | 6.0-8.0: 24.4                                           |
| TP-16    | 6.0-8.0                        | 18.7                             | OW-TP-16-2015        | 6.0: 18.7                                               |

### 2.3 SSI Soil Boring, Monitoring Well Installation, Development, and Sampling

Soil boring and monitoring well installation activities commenced on July 20, 2015 and were completed on July 22, 2015 with a total of four (4) soil borings advanced and a total of four (4) new wells installed in the location of the soil borings. Soil boring logs and monitoring well construction diagrams are included as Appendix G and Appendix H, respectively.

Soil boring and subsequent monitoring well installations were completed by Nothnagle Drilling, Inc., a qualified and licensed drilling subcontractor. A Lu Engineers geologist supervised all well installation activities. Well borings were advanced in overburden using 4.25 ID hollow-stem augers and split spoon samples were field screened at each boring location. Newly installed wells were identified as MW-26 through MW-29.

Subsequent to installation, each monitoring well was developed in accordance with the approved SSIWP. Well development occurred on July 22 and July 23, 2015 for newly installed wells and selected existing wells located on Site. Well development logs are included as Appendix I.

All split-spoon samples were logged by a geologist and recorded for reference. Field screening measurements of VOCs from split-spoon soil samples were recorded using a MiniRAE 3000 PID meter. Since no elevated PID readings or indications of contamination were observed in any of the borings, representative soil samples were collected at varying depths as outlined in the table below.

**Depth of Soil Boring Sample Collected**

| <b>Well ID</b> | <b>Sample Collected Depth (feet bgs)</b> | <b>Total Installed Depth (feet bgs)</b> |
|----------------|------------------------------------------|-----------------------------------------|
| MW-26          | 9.5                                      | 12.1                                    |
| MW-27A         | 29                                       | 36.7                                    |
| MW-27B         | 31                                       | -                                       |
| MW-28          | 11                                       | 18.0                                    |
| MW-29          | 11                                       | 16.0                                    |

Borings were advanced to depths between 12.1 feet (MW-26) and 32.5 feet (MW-27) into bedrock using air rotary/air hammer techniques. Coring of bedrock was conducted with a NX Core barrel. All monitoring wells were constructed according to the following specifications.

- 10 feet of 2-inch Schedule 40 polyvinyl chloride (PVC) machine-slotted screen (0.010-inch slot) installed at the bottom of the boring, with 5' of screen advanced into bedrock (except MW-27, which was terminated at the bedrock surface).
- Two-inch ID Schedule 40 PVC solid riser casing was used to complete each well to grade.
- A sand filter pack composed of chemically inert, coarse-grained sand pack was placed from the bottom of the boring to 1 to 2 feet above the top of the screen interval.
- A 2-foot thick bentonite seal was placed above the sand pack, followed by Portland cement/5% bentonite grout mixture to the surface.
- Each well was completed with flush-mount protective steel casings set in concrete drainage pads. Flush-mounted completions were installed at all monitoring well locations and J-plugs were placed on each well upon completion.

Based on the results of previous investigations and observations made during the advancement of each boring, drill cuttings and water generated during drilling were temporarily containerized, however, did not require off-Site disposal and were subsequently returned to the subsurface during IRM activities. Investigation-derived wastes were not generated as part of the well installations.

Split-spoons were appropriately decontaminated prior to each use. Decontamination involved these three steps:

1. Removal of gross debris;
2. Washing with an Alconox solution; and
3. Rinse with clean water.

### **2.3.1 SSI Well Development**

After construction of new wells, new and selected existing wells (MW-16, MW-22, and MW-23) were developed using dedicated PVC bailers. Well development consisted of gentle surging followed by purging in order to draw fine sediments out of the sand pack and into the well for removal. Development continued until each well purged dry multiple times. Turbidity readings of the development water did not achieve 50 nephelometric turbidity units (NTU) in several wells, however, was achieved in MW-23, MW-26, and MW-29. Turbidity readings and development observations were recorded on Well Development Logs, included in Appendix I. Well development was conducted on July 23, 2015.

Development water from all four (4) newly installed wells was containerized and sampled for characterization. Analytical results revealed no evidence of contamination; therefore water was then discharged to the ground surface post IRM work, allowing for surface infiltration.

### **2.3.2 SSI Groundwater Sampling**

Newly installed and existing monitoring wells were sampled via bailer in two different sampling events. On July 24, 2015 groundwater was collected from new and existing monitoring wells and analyzed for EPA Method 8260 VOCs. Analytical results are tabulated and included as Table 6. On July 26, 2014 groundwater was collected from newly installed and existing monitoring wells and analyzed for EPA Method 6010 RCRA Metals and EPA Method 8082 PCBs. Analytical results are tabulated and included as Table 5. Figure 2 illustrates the exact location of each newly installed monitoring well and detected exceedances in soil and groundwater for new monitoring wells sampled and only groundwater exceedances for existing monitoring wells sampled. Analytical results for soil boring samples are shown on Tables 3 and 4 of this report. Complete analytical reports are included in Appendix C.

Prior to sampling, the water level at each well was measured using an electronic water level indicator, with reference to the casing elevation and recorded on Groundwater Sampling Field Records included as Appendix J.

PVC bailer purging and sampling methods were utilized to obtain representative groundwater samples. Prior to sample collection, the following parameters were measured in the field during sample collection using field testing equipment:

- Dissolved oxygen
- Oxidation/reduction potential
- pH
- Conductivity
- Temperature

- Turbidity

No sheen or unusual odors were observed during purging or sampling. Purge water generated during sampling activities was not containerized since there were no indications of contamination observed in overburden soils, bedrock or purge water.

Well casing elevations were surveyed and established using survey-grade GPS to NAD 83 coordinates on August 14, 2015. Figure 5 illustrates the estimated groundwater flow direction across the Site based on groundwater elevation data collected during sampling. It appears groundwater primarily flowed to the north east across the Site. Subsequent data obtained in November, 2015 suggests a south eastward migration vector, primarily due to the unusually low groundwater elevation observed in MW-25.

## **3.0 Supplemental Site Investigation Analytical Results**

### **3.1 SSI Sample Results**

SSI samples collected were relinquished for analysis to Paradigm Environmental Services, Inc. (Paradigm), in Rochester, New York. Paradigm is an appropriately accredited analytical laboratory, including NYSDOH Environmental Laboratory Approval Program (ELAP) certification. All sample reporting, with the exception of waste characterization samples, was completed with ASP Category B deliverables.

#### **3.1.1 Test Pit Results**

Elevated levels of petroleum contaminated soils exceeding NYSDEC Part 375 Commercial Standards were identified in two test pit excavations. Analytical results for OW-TP-10-2015 indicated an exceedance above Unrestricted Use SCOs for heavy weight petroleum hydrocarbon (PHC) as lube oil and exceedances above Commercial Use SCOs for medium weight PHC as diesel and mineral oil. Analytical results for OW-TP-12-2015 indicated exceedances above Commercial Use SCOs for medium weight PHC as diesel and mineral oil. Please refer to the enclosed Table 2 for further detail and complete tabulated analytical results. In addition, nuisance level odors were observed during SSI activities at varying depths of the area delineated in Figures 2 and 3.

#### **3.1.2 Groundwater Results**

As discussed in Section 2.3.2, groundwater was analyzed for VOCs by EPA Method 8260, RCRA Metals by EPA Method 6010, and PCBs by EPA Method 8082. Groundwater analytical results did not indicate exceedances above NYS Groundwater Class GA Standard for VOCs, however, several well locations did exhibit exceedances for RCRA metals. Metals were encountered in all of the monitoring wells with the exception of MW-23. Comprehensive analytical results are tabulated on Tables 5 and 6 and complete analytical reports are included in Appendix C.

#### **3.1.3 Soil Boring Results**

Soil boring sample analytical results collected during the SSI are presented in Tables 3 and 4. All boring samples collected indicated exceedances above Unrestricted Use SCOs for chromium, however, these detections were beneath Commercial Use SCOs. Acetone was detected in three (3) of the five (5) soil boring samples at levels exceeding Unrestricted Use, but below Commercial Use SCOs. Copies of all laboratory analytical data are included in Appendix C of this report. Soil boring sample locations are illustrated on Figures 2 and 3.

## **4.0 Interim Remedial Measures**

The remedial tasks consisted of asbestos abatement from the utility trench, removal of petroleum-contaminated soil for off-Site disposal at an appropriately permitted disposal facility, and placement of clean Site cover. All confirmatory analytical testing was completed by Paradigm laboratory.

### **4.1 Governing Documents**

Previously approved Quality Assurance Project Plan (QAPP), Health and Safety Plan (HASP), Community Air Monitoring Plan (CAMP) and Community Participation Plan (CPP), from the original July 2006 Remedial Investigation (RI) Work Plan and subsequent September 2007 Interim Remedial Measures (IRM) Work Plan, were updated for the project-specific purposes of the 2015 SSI and IRM work and are included in the appendices.

#### **4.1.1 Site Specific Health and Safety Plan (HASP)**

A Site-Specific Health and Safety Plan (HASP) was prepared and approved for the July 2006 Remedial Investigation and subsequent September 2007 IRM Work Plan, and was modified accordingly for the additional IRM work in accordance with applicable general industry and construction standards of the Federal Occupational Safety and Health Administration (OSHA), U.S. Department of Labor, as well as any other Federal, State or local applicable statutes or regulations. A copy of the modified HASP is included as Appendix L.

All remedial work performed under the SSI and IRM Work Plan was in full compliance with governmental requirements, including Site and worker safety requirements mandated by Federal OSHA.

The Site Specific Health and Safety Plan (HASP) were complied with for all remedial and invasive work performed at the Site.

Monitoring of the work area and screening of soil and groundwater was conducted with a MiniRAE 3000 PID throughout the duration of field activities to assure the safety of on-Site workers.

#### **4.1.2 Quality Assurance Project Plan (QAPP)**

All monitoring and sampling activities were completed in accordance with the NYSDEC approved Quality Assurance Project Plan (QAPP). All quality assurance/quality control procedures were adhered to during this project. The QAPP was included as Appendix A of the SSIWP approved by the NYSDEC. The

QAPP describes the specific policies, objectives, organization, functional activities and quality assurance/quality control activities designed to achieve the project data quality objectives. A copy of the modified QAPP is included as Appendix M.

Samples were obtained, handled and characterized in accordance with the most recent NYSDEC Analytical Services Protocol (ASP) methods. Once obtained, samples were immediately labeled and stored on ice in a cooler. Analytical work was performed by an appropriately qualified ELAP accredited laboratory. All chain of custody requirements were strictly adhered to for designated analyses.

#### **4.1.3 Community Air Monitoring Plan (CAMP)**

A written Community Air Monitoring Plan (CAMP) was prepared in accordance with the requirements of the Environmental Bond Act. This Plan was followed during all Site activities. The CAMP for the SSI Site work is included as Appendix C of the SSIWP and as Appendix N of this report.

Professional personnel entering the Site maintain current OSHA “HAZWOPER” Certifications.

#### **4.2 Site Preparation and Control**

All IRM soil removal work was performed by TREC Environmental, Inc. The remedial activities were observed by appropriately qualified Lu Engineers staff. TREC Environmental was responsible for coordinating a utility stakeout for identification and clearance of Site utilities prior to commencement of work. Op-Tech Environmental Services, Inc. completed the Site re-grading and related IRM effort under Lu Engineers and City oversight.

##### Permits

Permits were not required prior to start of work. No road closures were necessary during the project.

##### Site Security

The Site has been secured with chain-link fencing along the east and west ends of the property for the duration of the work activities. Access to the Site was limited to appropriately trained staff, workers, and pertinent agencies involved with the project only. The public was not permitted to enter the Site or work areas.

##### Traffic Control and Truck Routes

During the petroleum-impacted soil removal, trucks entered and exited the Site from the gated entrance off of Orchard Street, on the east boundary of the Site. Queuing of

trucks was performed on-Site in order to minimize off-Site disturbances. Egress points on Orchard Street for truck and equipment transport from the Site were kept clean of dirt and other materials during Site remediation.

#### On-Site Cover

Clean crushed rubble, derived from the demolition of the former 415 Orchard Street building, was used as on-Site backfill cover material within the IRM removal excavation area. Figure 4 illustrates the actual IRM removal excavation area. Crushed rubble material will also be used for Site cover as part of the Final Site Grading Plan discussed in Section 7.

### **4.3 Asbestos Abatement**

As part of the excavation IRM, asbestos containing materials (ACM) located in the underground utility trench required abatement prior to accessing the underlying petroleum-contaminated soils. Lu Engineers worked with the New York State Department of Labor (NYS DOL) to secure a variance request for relief from certain provisions of Industrial Code Rule 56. As indicated, the variance was required due to the uncertain nature and extent of the utility trench and facilitates safe and fully compliant abatement with certain procedural adjustments. Abatement began on September 21, 2015 and concluded, including inspection and air sampling activities, by October 2, 2015. A Project Monitoring for Environmental Abatement Report was submitted to the City under separate cover in November 2015.

### **4.4 IRM Soil Removal and Disposal**

Concrete hammering and excavation activities were performed by TREC Environmental. Hauling and disposal was performed by M.J.Dreher Trucking Inc., a certified Women Business Enterprise (WBE). All trucks hauling contaminated media were appropriately permitted with valid NYSDEC Part 364 waste hauler permits. All soil disposed from the Site was non-hazardous. Soil removed from the petroleum-impacted area of the Site was live-loaded into dump trucks and transported off-Site for disposal at High Acres Landfill.

Following soil removal at each location, Lu Engineers measured the location of the limits of each removal area and logged the location of each confirmatory sample location. The extent of the excavation was mapped using survey-grade GPS.

#### **4.4.1 Concrete Slab and Subsurface Structure Removal**

Prior to subsurface soil removal, TREC Environmental, Inc. mobilized an excavator equipped with an impact hammer to break through the existing concrete slab as well as any break up any concrete walls, support pillars, or

subsurface concrete structures that were encountered during the SSI work. Concrete flooring and foundations were removed to the extent necessary to allow access to petroleum contaminated soils beneath the building footprint and immediate vicinity.

Portions of the uncontaminated concrete located in the IRM areas were hammered and broken up, removed, and staged to be re-used as clean back fill once petroleum-impacted soils were removed.

During excavation activities the total quantity of subsurface concrete encountered became much greater than originally anticipated. Sheet piling, with diameter exceeding four feet and densely integrated rebar, was encountered in two (2) areas. Large volumes of concrete walls, subsurface concrete floors and support pillars laden with rebar were also encountered during excavation and soil removal activities.

#### **4.4.2 Petroleum-Impacted Soil Removal and Disposal**

SSI analytical results indicated elevated petroleum-related contamination in the soils exceeding Commercial Use SCOs in two test pit excavations. Test pit TP-10, located in the northwest portion of the former 415 Orchard Street building footprint, indicated exceedances for heavy weight PHC as lube oil and medium weight PHC as diesel and mineral oil. This test pit location is immediately to the east of the utility pipe chase, which lies directly east of the former tank farm location and remaining flowable fill from previous tank removal activities.

Soil was removed up to the eastern most perimeter and, to the extent possible, beneath the layer of flowable fill which had been placed in the adjacent former tank pit during the 2013 IRMs. Petroleum impacted materials adhering to subsurface concrete structures were scoured to the extent possible by excavator bucket. This methodology removed the majority of residual contamination on or beneath the subsurface concrete. PID readings generally ranged from 34.1 to 189 ppm throughout the contaminated zone prior to contaminated soil removal.

Based on observations during the IRM excavation, contaminant migration was strongly influenced by the presence of large impermeable concrete foundation components. The distribution of heavily contaminated soils was commonly associated with the soils in contact with subsurface concrete within the vadose zone.

During SSI activities, analytical results for test pit TP-12 revealed exceedances above Commercial Standards for medium weight PHC as diesel and mineral oil.

Additionally, nuisance level odors were observed during investigative activities at varying depths as indicated in the PID readings table in Section 2.2.

The selected remedial measure to address areas of remaining petroleum contamination was to excavate the area of soils found to be in exceedance of Commercial Use SCOs. The proposed area of removal was illustrated in Figure 2. Figure 4 illustrates the actual excavation limits and confirmatory sample locations and results.

Groundwater entered the excavation in the area beneath the former utility pipe chase in the north western portion of the excavation, however, no sheen, odor or free product was observed on the water surface. Prior to soil removal, sampling and backfilling, an 18,000-gallon frac tank was mobilized to the Site. The excavation was subsequently dewatered by means of submersible pump placed in the excavation which pumped water into the staged frac tank. A total of approximately 5,000-gallons of water was removed and staged on-Site for characterization prior to release to the Site to allow surface infiltration in the area of the IRM backfill, in accordance with NYSDEC's requirements per the November 3, 2015 meeting. Frac tank analytical results are discussed in Section 5.0. A complete analytical report is included in Appendix C.

Soils in the delineated removal area were continuously field screened by PID so that the soils which exceeded 25 ppm were live-loaded into Part 360 permitted trucks for off-Site disposal at High Acres Landfill. Total estimated removal quantity post completion of the Supplemental Site Investigation was calculated to be approximately 1,500 cubic yards (1,823 tons). Due to the large amount of non-impacted concrete encountered the actual combined total volume of petroleum-impacted soil removed for off-Site disposal was approximately 690 tons (568 cubic yards). Waste disposal documentation is included in Appendix E.

All trucks were tarped and decontaminated as necessary prior to transporting soil off-Site. No off-Site tracking of contaminated soil occurred as loaded trucks left the Site.

IRM confirmatory analytical results are discussed in Section 5.0.

#### **4.5 Backfilling and Placement of Cover Material**

Once impacted soils had been excavated and confirmatory sampling was completed, the excavations were backfilled with removed and crushed concrete, existing on-Site crushed concrete rubble, and soil removed from the excavation field screened to be clean. No imported backfill material was required during the backfilling activities.

A minimum of one (1) foot of clean cover material consisting of on-Site crushed clean fill was placed throughout the Site, compacted with the excavator in two (2) foot lifts. Any subsurface metal not readily accessible for removal was trimmed and left in the excavation. The purpose of the cover material was to fill in existing void spaces throughout the Site due to the existing underground tunnels and vaults. One area of exposed tunnel void space has been covered with a steel plate bolted to the concrete pad. This cover will allow classification of the Site as meeting commercial re-use requirements set forth in 6 NYCRR Part 375. Additional Site grading was addressed during the Final Site Grading activities.

#### **4.6 Dust and Vapor Monitoring and Mitigation Procedures**

Fugitive dust migration was continuously visually assessed during all work activities. Air monitoring for particulate matter was performed continuously at locations upwind and downwind of the work zone when ground intrusive work was being conducted in known areas of contamination, as specified in the RI and SSIWP Community Air Monitoring Plan (CAMP).

Work zone air monitoring was conducted during petroleum-contaminated soil removal and handling activities using a MiniRAE 3000 PID to ensure that workers were not exposed to elevated concentrations of VOCs. Air monitoring was conducted in accordance with the RI and SSIWP HASP. No exceedances of HASP action levels were observed during the course of the project. CAMP air monitoring data is provided in Appendix F.

#### **4.7 Decontamination Procedures**

Decontamination was performed in accordance with NYSDEC-approved procedures. Sampling methods and equipment were selected to minimize decontamination requirements and prevent the possibility of cross-contamination and ensure compliance with the RI and SSIWP QAPP.

Prior to exiting the Site, transport vehicles were brushed cleaned if deemed necessary. Construction of a decontamination pad was not deemed necessary since efforts were made to unload, use and load transport equipment in a manner that prevents contact of the vehicles with impacted materials. Adherence to these procedures helped to ensure that decontamination was not necessary.

To further eliminate the tracking of contaminated soils, drivers followed a designated truck route through the center of the Site on a temporary gravel road to contain traffic within a limited area.

#### **4.8 Site Survey**

A survey of the Site was performed by Lu Engineers and Land Surveying Services, a NYS Licensed Surveyor in October 2015 to identify excavation limit boundaries and encountered subsurface Site features, such as concrete walls, sheet piling, and concrete subfloor slabs. A base map of the Site was produced using the NAD 83 UTM Zone 18 (NYTM) coordinate system, and is included as Appendix A of this report. An updated metes and bounds description for the Site is also included in Appendix A.

## 5.0 IRM Confirmatory Sample Results

### 5.1 IRM Confirmatory Sample Results

IRM confirmatory samples collected were relinquished for analysis to Paradigm Laboratory. All sample reporting, with the exception of waste characterization samples, was completed with ASP Category B deliverables. IRM confirmatory sample locations are illustrated on Figure 4.

#### 5.1.1 IRM Soil Results

Confirmatory soil sampling in the source removal area was conducted per the protocols outlined in NYSDEC DER-10 for standard excavation sampling. Based on the dimensions of the excavation, a total of four (4) sidewall and four (4) floor samples were collected as illustrated on Figure 4. It is noted that several areas of the excavation were not accessible to sidewall sampling due to existing concrete walls, specifically in the area near the former tank farm and flowable fill as well as the south east wall. Several of the encountered subsurface concrete walls, pillars, and sheet piling were scraped clean with the excavator bucket then left in place during backfilling activities. Prior to backfilling accessible, remaining concrete structures were surveyed by Lu Engineers.

Confirmatory soil samples were analyzed for VOC by EPA Method 8260 and RCRA Metals by EPA Method 6010, and included the following IDs:

| Sample ID        | Sample Type                 | Sample Location                                                             |
|------------------|-----------------------------|-----------------------------------------------------------------------------|
| OW-BOT-01-101215 | Excavation floor sample.    | North west area of excavation near north east corner of utility pipe chase. |
| OW-SW-01-101315  | Excavation sidewall sample. | North east edge of excavation. Center of TP-16.                             |
| OW-BOT-02-101315 | Excavation floor sample.    | Center north east area of excavation. West end of TP-15.                    |
| OW-SW-02-101315  | Excavation sidewall sample. | Eastern edge of excavation. South east corner of TP-12.                     |
| OW-SW-03-101315  | Excavation sidewall sample. | South east edge of excavation.                                              |
| OW-BOT-03-101415 | Excavation floor sample.    | Center of western portion of excavation.                                    |
| OW-SW-04-101415  | Excavation sidewall sample. | South end of excavation. South of TP-11.                                    |
| OW-BOT-04-101415 | Excavation floor sample.    | South end of excavation.                                                    |

PID readings observed on the samples during confirmatory sample collection ranged from 0 ppm to 5 ppm.

Confirmatory analytical results indicated no exceedances for VOCs at any of the confirmatory sample locations and exceedances above Unrestricted Use SCOs for chromium in all sample locations. These chromium exceedances, however, are below Commercial and Industrial Use SCOs. Two (2) sample locations (OW-BOT-03-101415 and OW-BOT-04-101515) did indicate exceedances above Unrestricted standards for Cadmium; however, these results were beneath Commercial and Industrial Standards. Complete confirmatory results are tabulated on Tables 8 and 9. Complete analytical reports are included in Appendix C.

### **5.1.2 Frac Tank Water Results**

Confirmatory samples were collected for the frac tank water and analyzed for volatile organics and methyl tertiary butyl ether (MTBE) by EPA 602, semi-volatile organics (PAHs) by EPA 625, RCRA metals by EPA 610 and were compared to NYSDEC Groundwater Quality Standards for Surface Water and Groundwater, NYSDEC Groundwater Effluent Limitations for Discharges to Class GA Waters, and the Sewer Use Law of Monroe County, Daily Maximum Limit.

Analytical results for the frac tank water indicated no exceedances above any of the three (3) compared standards, therefore, with NYSDEC approval the water was discharged to the ground surface in the source removal area.

## 6.0 Contamination Remaining at the Site

Access to the most heavily contaminated soils identified during the SSI and IRM process was not substantially restricted by the presence of massive concrete foundation components. The foundations appeared to rest directly on bedrock indicating that the overburden/bedrock interface migration pathway does not exist in these locations. Small areas of low-level contaminated soils not accessible due to excavation collapse or other factors during IRM implementation are considered likely to biodegrade over time. The source area(s) for petroleum contamination at this Site have been removed to the extent possible. Based on confirmatory soil sample data, however, the excavation of the source area has been successful in removing accessible petroleum-impacted soils.

Previous investigations have shown that elemental lead exists in the concrete slab on-Site. Lead was commonly used to seal cracks and penetrations in floor slabs in industrial plants in the past. Small nodes of lead have been observed in the remaining slabs at the Site in a number of locations. Prior attempts to quantify the amount of lead remaining in the slabs have been complicated by the presence of varying amounts of dust and debris at the surface. Since large portions of the slab will remain, elemental lead will remain on-Site and as a result will be addressed in the SMP, as necessary.

Remaining asbestos pipe wrap in the existing underground tunnel system presents an existing condition and potential for exposure during future subsurface disturbances or activities. The presence of asbestos in the subsurface will be addressed in the SMP, as necessary.

The Site is currently being considered and the City is accepting proposals for commercial or light industrial development Site planning. As a result of the existing conditions, recommendations for future Site work include an updated Environmental Easement and a Site Management Plan (SMP) as part of the Site remedy. The SMP will provide a clear means of identifying areas of the Site with residual contamination that may require special handling and/or disposal. The SMP will also specify procedures to be followed if contaminated media is encountered during future Site use or redevelopment.

Overall groundwater flow appears to follow a general east, northeast flow direction. It is noted that MW-27 was omitted from the data used for groundwater contour map development due to its anomalously low elevation representative of deeper flow conditions than observed within the SI/IRM areas. This estimation is based, in part, on the deeper screen interval used in construction of this well and previous observations of subsurface conditions in the immediate vicinity of MW-27. Bedrock depth at MW-27 is substantially deeper at the south end of the former petroleum storage/plating area(s). No environmental impacts have been identified in deeper soil or groundwater in this area of the Site in previous or the current 2015 investigation effort.

## **7.0 Engineering Controls**

The Final IRMs completed for the Site included (1) removal of asbestos containing materials within a utility trench; (2) removal of residual petroleum-impacted subsurface soils, specifically in the area adjacent to the former tank farm; and (3) Site grading and restoration with existing crushed building debris.

The final remedy will be chosen by the NYSDEC in a Proposed Remedial Action Plan (PRAP). It is anticipated that part of the PRAP requirements will be a long-term groundwater monitoring program, and certification and annual inspection of the Site cover (Cap). Additional requirements to protect human health and the environment from the potential exposure to remaining asbestos in existing underground tunnel system beneath the property will be addressed in the final Site remedy and SMP.

Demolition debris (crushed brick and stone) has been re-used as on-Site backfill cover material throughout the Site as an engineering control. Areas of exposed soils have been covered with a minimum of one (1) foot of crushed demolition rubble material. One area of exposed tunnel void space has been covered with a steel plate bolted to the concrete pad in order to prevent exposure to human health and environment. The Site cover system will be inspected annually as a requirement to the SMP.

## **8.0 Institutional Controls**

The Site remedy requires that an environmental easement (through deed restrictions) be placed on the property to (1) implement, maintain and monitor any Engineering Controls; (2) prevent future exposure to remaining contamination by controlling disturbances of the subsurface contamination; and, (3) limit the use and development of the Site to Commercial and Industrial uses only. Adherence to these Institutional Controls (ICs) on the Site will be required by the Declaration of Covenants and Restrictions (DCR) and will implement under the Site Management Plan (SMP).

An environmental easement describing these controls will be submitted to NYSDEC for approval by the City. The final easement and survey map will be filed at the Monroe County Clerk's Office.

**City of Rochester

1 - All values presented in micrograms per kilogram (µg/Kg).  
 2 - 6 NYCRR Part 375-6.8 - Table 375-6.8(a): Unrestricted Use Soil Cleanup Objectives  
 3 - 6 NYCRR Part 375-6.8 - Table 375-6.8(b): Restricted Use Soil Cleanup Objectives  
 ND- Not detected above reporting limit  
 J- value is estimated  
 D- all compounds identified in an analysis at secondary dilution factor  
 M- matrix spike recoveries outside QC limits; matrix bias indicated

1 - All values presented in micrograms per kilogram (µg/L).

2 - NYS Ambient Groundwater Standard (6 NYCRR Part 703.5)

3- All values for metals are presented in milligrams per kilogram (mg/L)

  Value Exceeds NYS Ambient Groundwater Standards

ND - not detected above method detection limit

\* - NYSDEC Guidance Value (TOGS 1.1.1)

J - compound detected below the laboratory quantitation limit

B - compound detected in associated method blank

- 1 - All values presented in micrograms per kilogram (µg/L).  
2 - NYS Ambient Groundwater Standard (6 NYCRR Part 703.5)  
3- All values for metals are presented in milligrams per kilogram (mg/L)  
Value Exceeds NYS Ambient Groundwater Standards  
ND - not detected above method detection limit  
\* - NYSDEC Guidance Value (TOGS 1.1.1)  
J - compound detected below the laboratory quantitation limit  
B - compound detected in associated method blank

- 1- All values for metals are presented in milligrams per kilograms (mg/kg)
- 2 - 6 NYCRR Part 375-6.8 - Table 375-6.8(a): Unrestricted Use Soil Cleanup Objectives
- 3 - 6 NYCRR Part 375-6.8 - Table 375-6.8(b): Restricted Use Soil Cleanup Objectives
- ND- Not detected above reporting limit
- J- value is estimated
- D- all compounds identified in an analysis at secondary dilution factor
- M- matrix spike recoveries outside QC limits; matrix bias indicated
- E- value is estimated or not reported due to interference (for metals)
- N- spike sample recovery is not within QC limits (for metals)
- NU- Not detected (for metals)
- \*- spike or duplicate analysis is not within QC limits (for metals)

## Appendix A – Site Survey/Metes and Bounds Description

**ENVIRONMENTAL EASEMENT GRANTED PURSUANT TO ARTICLE 71, TITLE 36  
OF THE NEW YORK STATE ENVIRONMENTAL CONSERVATION LAW**

**THIS INDENTURE** made this 26<sup>th</sup> day of September, 2016, between Owner(s) City of Rochester, having an office at 30 Church Street, Rochester, New York 14614-1290, County of Monroe, State of New York (the "Grantor"), and The People of the State of New York (the "Grantee."), acting through their Commissioner of the Department of Environmental Conservation (the "Commissioner", or "NYSDEC" or "Department" as the context requires) with its headquarters located at 625 Broadway, Albany, New York 12233,

**WHEREAS**, the Legislature of the State of New York has declared that it is in the public interest to encourage the remediation of abandoned and likely contaminated properties ("sites") that threaten the health and vitality of the communities they burden while at the same time ensuring the protection of public health and the environment; and

**WHEREAS**, the Legislature of the State of New York has declared that it is in the public interest to establish within the Department a statutory environmental remediation program that includes the use of Environmental Easements as an enforceable means of ensuring the performance of operation, maintenance, and/or monitoring requirements and the restriction of future uses of the land, when an environmental remediation project leaves residual contamination at levels that have been determined to be safe for a specific use, but not all uses, or which includes engineered structures that must be maintained or protected against damage to perform properly and be effective, or which requires groundwater use or soil management restrictions; and

**WHEREAS**, the Legislature of the State of New York has declared that Environmental Easement shall mean an interest in real property, created under and subject to the provisions of Article 71, Title 36 of the New York State Environmental Conservation Law ("ECL") which contains a use restriction and/or a prohibition on the use of land in a manner inconsistent with engineering controls which are intended to ensure the long term effectiveness of a site remedial program or eliminate potential exposure pathways to hazardous waste or petroleum; and

**WHEREAS**, Grantor, is the owner of real property located at the address of 354 Whitney Street in the City of Rochester, County of Monroe and State of New York, known and designated on the tax map of the County Clerk of Monroe as tax map parcel numbers: Section 105.66 Block 3 Lot 24, being the same as that property conveyed to Grantor by deed dated August 15, 2006 and recorded in the Monroe County Clerk's Office in Liber and Page 10342/568. The property subject to this Environmental Easement (the "Controlled Property") comprises approximately 2.771 +/- acres, and is hereinafter more fully described in the Land Title Survey dated December 22, 2015 and last revised August 2, 2016 prepared by Daniel J. MacDonald, P.L.S., which will be attached to the Site Management Plan. The Controlled Property description is set forth in and attached hereto as Schedule A, and is identified as Parcel A;

**WHEREAS**, Grantor, is the owner of real property located at the address of 415 Orchard Street in the City of Rochester, County of Monroe and State of New York, known and designated on the tax map of the County Clerk of Monroe as tax map parcel numbers: Section 105.66 Block

3 Lot 23, being the same as that property conveyed to Grantor by deed dated December 29, 2008 and recorded in the Monroe County Clerk's Office in Liber and Page 10705/335. The property subject to this Environmental Easement (the "Controlled Property") comprises approximately 1.302 +/- acres, and is hereinafter more fully described in the Land Title Survey dated December 22, 2015 and last revised August 2, 2016 prepared by Daniel J. MacDonald, P.L.S., which will be attached to the Site Management Plan. The Controlled Property description is set forth in and attached hereto as Schedule A, and is identified as Parcel B; and

**WHEREAS**, the Department accepts this Environmental Easement in order to ensure the protection of public health and the environment and to achieve the requirements for remediation established for the Controlled Property until such time as this Environmental Easement is extinguished pursuant to ECL Article 71, Title 36; and

**NOW THEREFORE**, in consideration of the mutual covenants contained herein and the terms and conditions of State Assistance Contract Number: C303000, Grantor conveys to Grantee a permanent Environmental Easement pursuant to ECL Article 71, Title 36 in, on, over, under, and upon the Controlled Property as more fully described herein ("Environmental Easement").

1. Purposes. Grantor and Grantee acknowledge that the Purposes of this Environmental Easement are: to convey to Grantee real property rights and interests that will run with the land in perpetuity in order to provide an effective and enforceable means of encouraging the reuse and redevelopment of this Controlled Property at a level that has been determined to be safe for a specific use while ensuring the performance of operation, maintenance, and/or monitoring requirements; and to ensure the restriction of future uses of the land that are inconsistent with the above-stated purpose.

2. Institutional and Engineering Controls. The controls and requirements listed in the Department approved Site Management Plan ("SMP") including any and all Department approved amendments to the SMP are incorporated into and made part of this Environmental Easement. These controls and requirements apply to the use of the Controlled Property, run with the land, are binding on the Grantor and the Grantor's successors and assigns, and are enforceable in law or equity against any owner of the Controlled Property, any lessees and any person using the Controlled Property.

A. (1) The Controlled Property may be used for:

**Commercial as described in 6 NYCRR Part 375-1.8(g)(2)(iii) and Industrial as described in 6 NYCRR Part 375-1.8(g)(2)(iv)**

(2) All Engineering Controls must be operated and maintained as specified in the Site Management Plan (SMP);

(3) All Engineering Controls must be inspected at a frequency and in a manner defined in the SMP;

(4) The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the NYSDOH or the Monroe County Department of Health to render it safe for use as drinking water or for industrial purposes, and

the user must first notify and obtain written approval to do so from the Department;

(5) Groundwater and other environmental or public health monitoring must be performed as defined in the SMP;

(6) Data and information pertinent to Site Management of the Controlled Property must be reported at the frequency and in a manner defined in the SMP;

(7) All future activities on the property that will disturb remaining contaminated material must be conducted in accordance with the SMP;

(8) Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP;

(9) Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical components of the remedy shall be performed as defined in the SMP;

(10) Access to the site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by this Environmental Easement.

B. The Controlled Property shall not be used for Residential or Restricted Residential purposes as defined in 6NYCRR 375-1.8(g)(2)(i) and (ii), and the above-stated engineering controls may not be discontinued without an amendment or extinguishment of this Environmental Easement.

C. The SMP describes obligations that the Grantor assumes on behalf of Grantor, its successors and assigns. The Grantor's assumption of the obligations contained in the SMP which may include sampling, monitoring, and/or operating a treatment system, and providing certified reports to the NYSDEC, is and remains a fundamental element of the Department's determination that the Controlled Property is safe for a specific use, but not all uses. The SMP may be modified in accordance with the Department's statutory and regulatory authority. The Grantor and all successors and assigns, assume the burden of complying with the SMP and obtaining an up-to-date version of the SMP from:

Site Control Section  
Division of Environmental Remediation  
NYSDEC  
625 Broadway  
Albany, New York 12233  
Phone: (518) 402-9553

D. Grantor must provide all persons who acquire any interest in the Controlled Property a true and complete copy of the SMP that the Department approves for the Controlled Property and all Department-approved amendments to that SMP.

E. Grantor covenants and agrees that until such time as the Environmental Easement is extinguished in accordance with the requirements of ECL Article 71, Title 36 of the ECL, the

property deed and all subsequent instruments of conveyance relating to the Controlled Property shall state in at least fifteen-point bold-faced type:

**This property is subject to an Environmental Easement held by the New York State Department of Environmental Conservation pursuant to Title 36 of Article 71 of the Environmental Conservation Law.**

F. Grantor covenants and agrees that this Environmental Easement shall be incorporated in full or by reference in any leases, licenses, or other instruments granting a right to use the Controlled Property.

G. Grantor covenants and agrees that it shall, at such time as NYSDEC may require, submit to NYSDEC a written statement by an expert the NYSDEC may find acceptable certifying under penalty of perjury, in such form and manner as the Department may require, that:

(1) the inspection of the site to confirm the effectiveness of the institutional and engineering controls required by the remedial program was performed under the direction of the individual set forth at 6 NYCRR Part 375-1.8(h)(3).

(2) the institutional controls and/or engineering controls employed at such site:

(i) are in-place;

(ii) are unchanged from the previous certification, or that any identified changes to the controls employed were approved by the NYSDEC and that all controls are in the Department-approved format; and

(iii) that nothing has occurred that would impair the ability of such control to protect the public health and environment;

(3) the owner will continue to allow access to such real property to evaluate the continued maintenance of such controls;

(4) nothing has occurred that would constitute a violation or failure to comply with any site management plan for such controls;

(5) the report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;

(6) to the best of his/her knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and

(7) the information presented is accurate and complete.

3. Right to Enter and Inspect. Grantee, its agents, employees, or other representatives of the State may enter and inspect the Controlled Property in a reasonable manner and at reasonable times to assure compliance with the above-stated restrictions.

4. Reserved Grantor's Rights. Grantor reserves for itself, its assigns, representatives, and successors in interest with respect to the Property, all rights as fee owner of the Property, including:

A. Use of the Controlled Property for all purposes not inconsistent with, or limited by the terms of this Environmental Easement;

B. The right to give, sell, assign, or otherwise transfer part or all of the underlying fee interest to the Controlled Property, subject and subordinate to this Environmental Easement;

5. Enforcement

A. This Environmental Easement is enforceable in law or equity in perpetuity by Grantor, Grantee, or any affected local government, as defined in ECL Section 71-3603, against the owner of the Property, any lessees, and any person using the land. Enforcement shall not be defeated because of any subsequent adverse possession, laches, estoppel, or waiver. It is not a defense in any action to enforce this Environmental Easement that: it is not appurtenant to an interest in real property; it is not of a character that has been recognized traditionally at common law; it imposes a negative burden; it imposes affirmative obligations upon the owner of any interest in the burdened property; the benefit does not touch or concern real property; there is no privity of estate or of contract; or it imposes an unreasonable restraint on alienation.

B. If any person violates this Environmental Easement, the Grantee may revoke the Certificate of Completion with respect to the Controlled Property.

C. Grantee shall notify Grantor of a breach or suspected breach of any of the terms of this Environmental Easement. Such notice shall set forth how Grantor can cure such breach or suspected breach and give Grantor a reasonable amount of time from the date of receipt of notice in which to cure. At the expiration of such period of time to cure, or any extensions granted by Grantee, the Grantee shall notify Grantor of any failure to adequately cure the breach or suspected breach, and Grantee may take any other appropriate action reasonably necessary to remedy any breach of this Environmental Easement, including the commencement of any proceedings in accordance with applicable law.

D. The failure of Grantee to enforce any of the terms contained herein shall not be deemed a waiver of any such term nor bar any enforcement rights.

6. Notice. Whenever notice to the Grantee (other than the annual certification) or approval from the Grantee is required, the Party providing such notice or seeking such approval shall identify the Controlled Property by referencing the following information:

County, NYSDEC Site Number, NYSDEC Brownfield Cleanup Agreement, State Assistance Contract or Order Number, and the County tax map number or the Liber and Page or computerized system identification number.

Parties shall address correspondence to:      Site Number: E828123  
Office of General Counsel  
NYSDEC  
625 Broadway  
Albany New York 12233-5500

With a copy to:                                              Site Control Section

Division of Environmental Remediation  
NYSDEC  
625 Broadway  
Albany, NY 12233

All notices and correspondence shall be delivered by hand, by registered mail or by Certified mail and return receipt requested. The Parties may provide for other means of receiving and communicating notices and responses to requests for approval.

7. Recordation. Grantor shall record this instrument, within thirty (30) days of execution of this instrument by the Commissioner or her/his authorized representative in the office of the recording officer for the county or counties where the Property is situated in the manner prescribed by Article 9 of the Real Property Law.

8. Amendment. Any amendment to this Environmental Easement may only be executed by the Commissioner of the New York State Department of Environmental Conservation or the Commissioner's Designee, and filed with the office of the recording officer for the county or counties where the Property is situated in the manner prescribed by Article 9 of the Real Property Law.

9. Extinguishment. This Environmental Easement may be extinguished only by a release by the Commissioner of the New York State Department of Environmental Conservation, or the Commissioner's Designee, and filed with the office of the recording officer for the county or counties where the Property is situated in the manner prescribed by Article 9 of the Real Property Law.

10. Joint Obligation. If there are two or more parties identified as Grantor herein, the obligations imposed by this instrument upon them shall be joint and several.

**Remainder of Page Intentionally Left Blank**

IN WITNESS WHEREOF, Grantor has caused this instrument to be signed in its name.

# Test Pit Log

Test Pit No. TP 15

Equipment Used: KOMATSU HAMMER  
 DIESEL EXC.

Project: Orchard-Whitney SSI

Lu Project No.: 4216-06

Weather: SUN, CLEAR Temp.: 75°

Date: 7/16/15

Field Engineer/Geologist: ARI CHEREMISOFF

Test Pit Dimensions: 15' x 8' x 12' (Approx.)  
 Length Width Depth

| Depth | PID Reading | Description                                                                                            |
|-------|-------------|--------------------------------------------------------------------------------------------------------|
| 0-2'  | 0.0         | Brown, sandy soil BENEATH LAYER OF CONCRETE                                                            |
| 2-4'  | 0.0         | Brown, sandy soil w/ some crushed brick, fill mat'l.                                                   |
| 4-6'  | 37.9        | Brown, sandy soil with darker brown soil, petrol odor. - concentrated to western portion of excavation |
| 6-8'  | 28.1        | " "                                                                                                    |
| 8-10' | 12.7        | " "                                                                                                    |

**Comments**

- No rock encountered; or
- Rock encountered at 12 feet
- Perch/Seepage water encountered at \_\_\_\_\_ feet
- No groundwater encountered; or
- Ground water encountered at \_\_\_\_\_ feet

EPA 5035

**Data File:** x24587.D

*This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.*

## Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

*"<" = Analyzed for but not detected at or above the quantitation limit.*

*"E" = Result has been estimated, calibration limit exceeded.*

*"Z" = See case narrative.*

*"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.*

*"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.*

*"B" = Method blank contained trace levels of analyte. Refer to included method blank report.*

*"J" = Result estimated between the quantitation limit and half the quantitation limit.*

*"L" = Laboratory Control Sample recovery outside accepted QC limits.*

*"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.*  
*"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.*

*"\*" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

*"(1)" = Indicates data from primary column used for QC calculation.*

# GENERAL TERMS AND CONDITIONS

## LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term, or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

### **Warranty.**

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

### **Scope and Compensation.**

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

### **Prices.**

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

### **Limitations of Liability.**

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

### **Hazard Disclosure.**

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

### **Sample Handling.**

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises. Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

### **Legal Responsibility.**

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

### **Assignment.**

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

### **Force Majeure.**

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

### **Law.**

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

*Internal standard outliers indicate probable matrix interference*

**Method Reference(s):** EPA 8260C  
EPA 5035

**Data File:** x24596.D

*This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.*

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

## Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

*"<" = Analyzed for but not detected at or above the quantitation limit.*

*"E" = Result has been estimated, calibration limit exceeded.*

*"Z" = See case narrative.*

*"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.*

*"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.*

*"B" = Method blank contained trace levels of analyte. Refer to included method blank report.*

*"J" = Result estimated between the quantitation limit and half the quantitation limit.*

*"L" = Laboratory Control Sample recovery outside accepted QC limits.*

*"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.*  
*"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.*

*"\*" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

*"(1)" = Indicates data from primary column used for QC calculation.*

# GENERAL TERMS AND CONDITIONS

## LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term, or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

### **Warranty.**

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

### **Scope and Compensation.**

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

### **Prices.**

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

### **Limitations of Liability.**

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

### **Hazard Disclosure.**

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

### **Sample Handling.**

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises. Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

### **Legal Responsibility.**

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

### **Assignment.**

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

### **Force Majeure.**

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

### **Law.**

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

# CHAIN OF CUSTODY

|                                                                                                                                           |  |                                                                                                                                                                                                                                                               |  |                                                                         |  |

| Toluene-D8            | <b>97.1</b>             | 90.8 - 109    |                 | 7/16/2015            | 18:04 |

**Method Reference(s):** EPA 8260C  
EPA 5035

**Data File:** x24645.D

*This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.*

## Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

*"<" = Analyzed for but not detected at or above the quantitation limit.*

*"E" = Result has been estimated, calibration limit exceeded.*

*"Z" = See case narrative.*

*"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.*

*"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.*

*"B" = Method blank contained trace levels of analyte. Refer to included method blank report.*

*"J" = Result estimated between the quantitation limit and half the quantitation limit.*

*"L" = Laboratory Control Sample recovery outside accepted QC limits.*

*"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.*  
*"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.*

*"\*" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

*"(1)" = Indicates data from primary column used for QC calculation.*

# GENERAL TERMS AND CONDITIONS

## LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term, or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

### **Warranty.**

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

### **Scope and Compensation.**

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

### **Prices.**

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

### **Limitations of Liability.**

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

### **Hazard Disclosure.**

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

### **Sample Handling.**

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises. Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

### **Legal Responsibility.**

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

### **Assignment.**

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

### **Force Majeure.**

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

### **Law.**

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

**Method Reference(s):** EPA 8260C  
EPA 5035

**Data File:** x24767.D

*This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.*

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

## Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

*"<" = Analyzed for but not detected at or above the quantitation limit.*

*"E" = Result has been estimated, calibration limit exceeded.*

*"Z" = See case narrative.*

*"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.*

*"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.*

*"B" = Method blank contained trace levels of analyte. Refer to included method blank report.*

*"J" = Result estimated between the quantitation limit and half the quantitation limit.*

*"L" = Laboratory Control Sample recovery outside accepted QC limits.*

*"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.*  
*"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.*

*"\*" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

*"(1)" = Indicates data from primary column used for QC calculation.*

# GENERAL TERMS AND CONDITIONS

## LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term, or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

### **Warranty.**

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

### **Scope and Compensation.**

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

### **Prices.**

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

### **Limitations of Liability.**

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

### **Hazard Disclosure.**

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

### **Sample Handling.**

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises. Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

### **Legal Responsibility.**

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

### **Assignment.**

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

### **Force Majeure.**

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

### **Law.**

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.
