 Number of Times Calibrated : 542
 Description: NEW 7 PT. 1016/1260 CURVE FOR INST #7 06/23/08.

Global Sample Information

Default Sample Volume : 1.000 uL
 Quantitation Units : ng
 Void Time : 0.000 min
 Correct amounts during calibration : Yes
 Convert unknowns to concentration units : Yes
 Reject outliers during calibration : No

An External Standard calibration will be used
 Unknown peaks will be quantitated using a response factor of 1.000000e+06
 First peak will be relative retention reference

Component Information

TMX
 Component Type : Single Peak Component
 Retention Time : 1.999 min
 Search Window : 3.00 s, 0.00 %
 Reference Component :
 Find peak closest to expected RT in window
 Use Average Calibration Factor (Area / Amount)
 Component standard purity percentage : 100.0000%

 Number of Times Calibrated : 543
 Description: NEW 7 PT 1016/1260 CURVE FOR INST #7 06/23/08.

Global Sample Information

Default Sample Volume : 1.000 uL
 Quantitation Units : ng
 Void Time : 0.000 min
 Correct amounts during calibration : Yes
 Convert unknowns to concentration units : Yes
 Reject outliers during calibration : No

An External Standard calibration will be used
 Unknown peaks will be quantitated using a response factor of 1.000000e+06
 First peak will be relative retention reference

Component Information

TMX
 Component Type : Single Peak Component
 Retention Time : 1.642 min
 Search Window : 3.00 s, 0.00 %
 Reference Component :
 Find peak closest to expected RT in window
 Use Average Calibration Factor (Area / Amount)
 Component standard purity percentage : 100.0000%

 Reviewed by: RJB 4/11/08

Global Sample Information

Default Sample Volume : 1.000 uL
 Quantitation Units : ng
 Void Time : 0.000 min
 Correct amounts during calibration : Yes
 Convert unknowns to concentration units : Yes
 Reject outliers during calibration : No

An External Standard calibration will be used
 Unknown peaks will be quantitated using a response factor of 1.000000e+06
 First peak will be relative retention reference

Component Information

TMX
 Component Type : Single Peak Component
 Retention Time : 1.618 min
 Search Window : 3.00 s, 0.00 %
 Reference Component :
 Find peak closest to expected RT in window
 Calibrating Area versus Amount using a 1st Order Fit
 Curve will be forced through the origin
 Amounts will not be scaled prior to the regression
 Weighting factor for the regression: 1
 Component standard purity percentage : 100.0000%

Global Sample Information

Default Sample Volume : 1.000 uL
 Quantitation Units : ng
 Void Time : 0.000 min
 Correct amounts during calibration : Yes
 Convert unknowns to concentration units : Yes
 Reject outliers during calibration : No

An External Standard calibration will be used
 Unknown peaks will be quantitated using a response factor of 1.000000e+06
 First peak will be relative retention reference

Component Information

TMX
 Component Type : Single Peak Component
 Retention Time : 1.288 min
 Search Window : 3.00 s, 0.00 %
 Reference Component :
 Find peak closest to expected RT in window
 Calibrating Area versus Amount using a 1st Order Fit
 Curve will be forced through the origin
 Amounts will not be scaled prior to the regression
 Weighting factor for the regression: 1
 Component standard purity percentage : 100.0000%

TRIP BLANK	A8837405

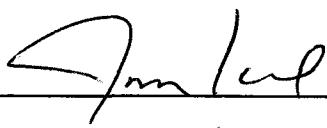

Were ICP interelement corrections applied? Yes/No YES

Were ICP background corrections applied? Yes/No YES

If yes-were raw data generated before application of background corrections? Yes/No NO

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: 

Name: Jason R. Kacalski

Comments: EPPENDORFS USED TO ADD SPIKES:

05-12-08 HGL5 2.0mL; 05-12-08 HGL4 1.0mL; 05-12-08 HGL3 0.5mL

Color: Black Gray Red Yellow
 Blue Green Violet Colorless
 Brown Orange White
 Redigestion

Clarity: Clear
 Cloudy
 Opaque

Texture: Fine (powdery)
 Medium (sand)
 Coarse (large crystals or rocks)

DATA USABILITY SUMMARY REPORT
ORGANICS
USEPA REGION II

Site: Former Vacuum Oil Refinery

SDG #: 8374

Client: Labella and Associates

Date: September 3, 2008

Laboratory: Test America Laboratories Inc

Reviewer: Linda Wright

Sample ID and Analyses Table

Client ID	Laboratory ID	Matrix	VOA/SVOA	PEST/PCB
Blind Duplicate	A8837404	Water	X	X
MW-014	A8837402	Water	X	X
MW-023	A8837403	Water	X	X
MW-023	A8837403MS/MSD	Water	X	X
MW-069	A8837401	Water	X	X
Trip Blank	A8837405	Water	X	X

The data package contained six (6) aqueous samples. The samples were analyzed via SW-846 methods 8260B, 8270C, 8081 and 8082. Matrix spikes and matrix spike duplicates were analyzed. The adherence of laboratory analytical performance to these SW-846 methods' Analytical Specifications was evaluated during the data validation process. The data package was evaluated for its usability as defined by the Guidance for the Development of Data Usability Summary Reports (NYSDEC, 10/02). USEPA Region II checklists were used as guidance documents. According to the NYSDEC Guidance for the Development of Data Usability Summary Reports, the following QC data were evaluated: blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data. All QC data were within quality control limits, except the following issues:

Cover letter, Narrative and Data Reporting Forms (Form 1s): All criteria were met. The deficiencies noted in the case narrative have been discussed in applicable sections.

Chain of Custody (COC) and Traffic Report: All were present.

Holding Time: Holding time criterion was exceeded. This resulted in the following compounds being qualified.

Client ID	Analyte	Qualifier
MW-023	Cyclohexane, isopropyl benzene, methylcyclohexane, toluene, total xylenes	J
	All other compounds	UJ

Calibration Quality Control: Percent difference was outside the QC limits which resulted in the following compounds being qualified;

DATA USABILITY SUMMARY REPORT
ORGANICS
USEPA REGION II

VOA

Client ID	Analyte	Qualifier
MW-069, MW-014, Blind Duplicate	Methyl acetate, cis-1,3- dichloropropene	UJ

SVOA

Client ID	Analyte	Qualifier
Blind Duplicate, MW-014, MW-069, MW-023	3,3'-Dichlorobenzidine	UJ

Pesticide

Client ID	Analyte	Qualifier
Blind Duplicate	beta-BHC,	J
	Methoxychlor	UJ
MW-023, MW-069	beta-BHC, methoxychlor	UJ
MW-014	Methoxychlor	UJ

Blanks Quality Control: SVOA method blank reported chrysene contamination and resulted in the following qualification; See also trip blank.

Pesticide

Client ID	Analyte	Qualifier
Blind Duplicate, , MW-014	Gamma-chlordane,	U
MW-023	Gamma-chlordane, 4,4'-DDT	U

Surrogates: The following compounds were qualified due to surrogate exceedance.

Client ID	Analyte	Qualifier
Blind Duplicate	Acetone, benzene, 2-butanone, carbon disulfide, cyclohexane, ethyl benzene, 2-hexanone, methylcyclohexane, 4-methyl-2- pentanone, toluene, 1,2,4- trichlorobenzene, total xylenes	J
MW-014	Acetone, benzene, 2-butanone, carbon disulfide, cyclohexane, ethyl benzene, 2-hexanone, methylcyclohexane, 4-methyl-2- pentanone, toluene, total xylenes	J

DATA USABILITY SUMMARY REPORT
ORGANICS
USEPA REGION II

Matrix Spike: Recoveries were acceptable.

Post Digestion Spike: Results were acceptable.

Laboratory Control Sample (LCS): Recoveries met QC criteria.

Internal Standard: Results are acceptable.

ICP Serial Dilution: Results were acceptable.

Duplicate Results: Results were acceptable.

Field Quality Control: Trip blank reported low level pesticide contamination. The method blank also reported the same contamination. See Method blanks Section for qualifications. The following SVOA compounds were qualified due to trip blank contamination.

Client ID	Analyte	Qualifier
Blind duplicate, MW-014, MW-023 MW-069	Chrysene, di-n-octyl phthalate	U
MW-069	Di-n-butyl phthalate	U

MW-014 is the original sample of "Blind Duplicate". RPDs are acceptable.

Compound Quantitation: Some compounds were reported at elevated reporting limits due to dilutions.

Data usability: Data qualified with the "UJ" qualifier are to be used cautiously as they are estimated data with some quality control issues. Data qualified with the "J" qualifier are to be used cautiously as they are estimated data with some quality control issues. Data qualified with the "R" qualifier are not usable due to severe quality control issues. Data qualified with the "U" qualifier are usable as there are no quality control issues.

SOC NARRATIVE

Job#: A08-8374

Project#: NV2A9951.6

Site Name: LaBella Associates

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A08-8374

Sample Cooler(s) were received at the following temperature(s): 462.0 °C
Volume for volatile analysis on sample Trip Blank were received empty. No test assigned.

GC/MS Volatile Data

For method 8260, sample MW-023 exhibited a pH=2 at the time of analysis. The analysis was performed after the recommended 7 days for un-preserved samples, therefore all detected concentrations should be considered minimum values and the results estimated. All other samples were preserved to a pH less than 2.

The recovery of surrogate p-Bromofluorobenzene in Method 8260 for samples MW-014 and BLIND DUPLICATE were outside above control limits. These samples were reanalyzed outside of analytical holding time with the surrogate now recovered within control limits. The reanalyzed results should be considered biased low. Both sets of results are reported.

Linear regression was used to calibrate all analytes and surrogates that were greater than 15% RSD in the initial calibration standard curves A81000528-1 and A81000533-1.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

7/1914

Due to an oversight, a second source calibration standard was not analyzed with initial calibration standard curve A81000533-1.

GC/MS Semivolatile Data

The analytes Di-n-butylphthalate and Di-n-octylphthalate were detected in the Method Blank A8B187802 at a level above the laboratory reporting limit. According to EPA validation criteria, up to 5 times the reporting limit is acceptable for phthalate contamination. No further corrective action was performed.

Linear regression was used to calibrate analytes that were greater than 15% RSD in the initial calibrations A81000529-1 and A81000530-1.

GC Extractable Data

For method 8081, sample MW-014 required dilution prior to analysis due to the heavy matrix present. The surrogate and spike recoveries are diluted out of all sample extracts with a dilution factor of 10X or greater.

For method 8082 the recovery of spike compound Aroclor 1260 fell outside established acceptance limits in the Matrix Spike and Matrix Spike Duplicate of sample MW-023. The MSB was acceptable therefore no further action was performed.

For method 8081, the recoveries for gamma-BHC, Heptachlor, 4,4'-DDT, 4,4'-DDE, and Hept. Epoxide in the Matrix Spike and the recoveries for gamma-BHC, Heptachlor, 4,4'-DDT, and 4,4'-DDE Matrix Spike duplicate are outside quality control limits, though the Matrix Spike Blank recoveries are compliant, no action necessary.

For method 8081, the response of the instrument was temporarily >15% difference in the continuing calibration verifications for methoxychlor. Subsequent continuing calibration verifications demonstrated compliance with routine quality control criteria, verifying the temporary nature of this effect.

For method 8081, beta-BHC exhibited positive bias and a % difference result greater than 15% in the ending continuing calibration verification. No corrective action was taken, all field samples are non-detect for this analyte.

For method 8081, the ending continuing calibration verification is elevated and above 15% difference for beta-BHC and gamma Chlordane, this would yield a biased high result for the associated, the data was accepted.

For methods 8081 and 8082, the method blank and samples were contaminated with low level PCBs. There is insufficient volume for re-extraction, and all positives are to be considered estimated values.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

8/1914

The analyte 4,4'-DDE was detected in the TRIP BLANK at a level above the project established reporting limit. This analyte was also detected in the associated Method Blank at a similar concentration. As a result this detect has been qualified with a "B" and should be evaluated accordingly.

Metals Data

No deviations from protocol were encountered during the analytical procedures.

"I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this Sample Data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature."

Jason R. Kacalski
