

# Environmental Management Plan

## Location:

The La Marketa Outdoor Plaza  
6-8 Hoeltzer Street, 7-11 Sullivan Street, and  
810-844 North Clinton Avenue  
Rochester, New York

## Prepared for:

City of Rochester  
City Hall  
30 Church Street  
Rochester, New York 14614

LaBella Project No. 2172378.07

March 25, 2019

## 1.0 INTRODUCTION

---

This Environmental Management Plan (EMP) was developed on behalf of the City of Rochester (“City”) to address environmental considerations associated with the proposed redevelopment of The La Marketa Outdoor Plaza located at 6-8 Hoeltzer Street, 7-11 Sullivan Street, and 810-844 North Clinton Avenue, in Rochester, New York (Figure 1). The utilization of an EMP is intended to allow the City to complete the project efficiently while maintaining compliance with applicable Rules and Regulations. With proper planning, this EMP is designed to allow both known and unknown areas of concern to be addressed during construction without significant delays to the project.

The proposed development plan includes an outdoor plaza to be available for the community to use the space for a variety of programs, commercial purposes, and as a general event space. The new plaza will be located in the 800 block of North Clinton Avenue and comprises a number of City-owned parcels.

The plaza will be designed with open areas including both lawn and hardscaping which will allow visitors to move freely throughout the plaza and vendors to stage for various events. The site design will include concrete or paver sidewalks and staging areas, a parking lot connecting Sullivan and Hoeltzer Streets, site lighting, convenience outlets, bathroom structure, utilities, fencing and site amenities such as benches, picnic tables, bike racks and trash receptacles. The site design will also include an open air covered stage. Additionally, utilities will be run to a concrete pads which will be used to provide a ready use location of metal containers to be used as store fronts.

LaBella Associates D.P.C. (“LaBella”) will implement the EMP on behalf of the City. LaBella will provide the appropriately trained and experienced staff to be present on-site during earthwork and redevelopment activities that disturb or have the potential to disturb fill materials and Impacted Media. LaBella will provide the necessary documentation and closure documents to memorialize the construction activities as detailed in Section 11.0 of this report.

### 1.1 Plan Organization

The EMP has been organized in the following sections:

- **Section 2.0** Site Description and History
- **Section 3.0** Objective
- **Section 4.0** Regulatory Limits, Regulations, and Guidance
- **Section 5.0** Environmental Management Plan
- **Section 6.0** Implementation of the EMP
- **Section 7.0** Decontamination of Equipment
- **Section 8.0** Community Air Monitoring Plan
- **Section 9.0** Health and Safety Plan
- **Section 10.0** Laboratory Testing
- **Section 11.0** Reporting

## 2.0 SITE DESCRIPTION AND BACKGROUND

### 2.1 Site Description and Surrounding Properties

The subject Site is located within the La Marketa neighborhood within the City of Rochester, Monroe County, New York, Tax Section No. 106.39, Block No. 1, and Lot Nos. 1, 2, 3.1, 75.2, 78.1, 80.1, 82.1, and 84.1 (Figure 3). The Site is generally an irregularly-shaped block of parcels with frontage along North Clinton Avenue to the west, Sullivan Street to the north, and Hoeltzer Street to the south. The Site is located in an urban area and is currently not developed with any structures. Currently, the Site is primarily grass covered with a few trees.

The Site is bordered by the following properties:

**Table 2.1 – Adjacent Properties**

Direction	Land Use
North	Sullivan Street and beyond retail and residential properties
East	Residential properties and vacant lot
South	Restaurant and Hoeltzer Street and beyond include residential properties
West	North Clinton Avenue and beyond Valero Gas Station commercial properties

### 2.2 Site Background

The Site has historically been used for residential and limited commercial purposes from at least 1892 to until approximately 2008. Limited commercial uses reportedly included a tin shop and commercial store fronts. According to historical aerial photographs, by 2008 all structures had been removed and the property appears to have been undeveloped since that time.

### 2.3 Previous Environmental Reports

Based upon readily available information for the Site, the following previous environmental studies have been conducted at the Site and are summarized below. The reports are included in Appendix 1 and include additional detail regarding the conditions at the Site.

#### 2.3.1 *Environmental Phase II Site Assessment Report, Specific City-Owned Property within the North Clinton Avenue Urban Renewal District date April 2003 by Larsen Engineers*

According to this report, a Phase I ESA was conducted by Larsen Engineers (“Larsen”) in September 2002 at the following properties:

**Table 2.3.1A – Larsen Phase I ESA Parcels**

Property Address	Tax ID #
844 North Clinton Ave	106 390 0001 001 000
840 North Clinton Ave	106 390 0001 084 001
830 North Clinton Ave	106 390 0001 082 000
826 North Clinton Ave	106 390 0001 081 000
822 North Clinton Ave	106 390 0001 080 000
818 North Clinton Ave	106 390 0001 079 000
814 North Clinton Ave	106 390 0001 078 000
810 North Clinton Ave	106 390 0001 077 000
**804 North Clinton Ave	106 390 0001 076 000

Property Address	Tax ID #
7 Sullivan Street	106 390 0001 002 000
9 Sullivan Street	106 390 0001 003 000
11 Sullivan Street	106 390 0001 004 000
**13 Sullivan Street	106 390 0001 005 000
**15 Sullivan Street	106 390 0001 006 000
6 Hoeltzer Street	106 390 0001 075 000
8 Hoeltzer Street	106 390 0001 074 001
**10 Hoeltzer Street	106 390 0001 073 000
**12 Hoeltzer Street	106 390 0001 072 000

\*\*These parcels are not part of the Site (i.e. located off-site)

Larsen recommended that a subsurface investigation be completed based on:

- The potential presence of underground storage tanks (USTs) on-site;
- The former presence of a 1,000-gallon UST at 12 Hoeltzer Street;
- The presence of an old pole-mounted transformer and debris and trash at 12 Hoeltzer Street (Note: This parcel is located off-site); and,
- The presence of an open NYSDEC listed spill at 799 North Clinton Avenue (Note: This parcel is located off-site, to the east, and across North Clinton Avenue).

The subsurface investigation was conducted in April 2003 and included a subsurface direct-push survey, soil characterization, headspace (photoionization detector) analysis, and soil sampling at the following eight (8) parcels.

**Table 2.3.1B – Larsen Phase II ESA Parcels**

Property Address	Tax ID #
840 North Clinton Ave	106 390 0001 084 001
826 North Clinton Ave	106 390 0001 081 000
814 North Clinton Ave	106 390 0001 078 000
810 North Clinton Ave	106 390 0001 077 000
**13 Sullivan Street	106 390 0001 005 000
6 Hoeltzer Street	106 390 0001 075 000
8 Hoeltzer Street	106 390 0001 074 001
**12 Hoeltzer Street	106 390 0001 072 000

\*\*These parcels are not part of the Site (i.e. located off-site)

Based on the headspace analysis, one (1) soil sample was submitted from boring GP-16 for laboratory analysis for petroleum volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) and no contaminants were reportedly detected.

A copy of the Larsen Phase II ESA Report is included as an appendix in the LiRo's Phase I ESA that is included in Appendix 1 of this EMP and discussed in Section 2.3.2 below.

*2.3.2 Phase I Environmental Site Assessment, The La Marketa Neighborhood, 6-8 Hoeltzer Street, 7-11 Sullivan Street, and 810-844 North Clinton Avenue by LiRo Engineers, Inc. dated September 19, 2016*

A Phase I Environmental Site Assessment (ESA) was performed by LiRo Engineers, Inc. (LiRo) in September 2016 LiRo identified the following Recognized Environmental Conditions (RECs):

- The southwest adjacent property addressed at 799 North Clinton Avenue has historically been utilized as a gasoline station and for automotive repair since at least 1970. Based on historical records, this adjacent property has been utilized as follows: Rocky's Atlantic Service Station, 1970-1975; Colon Arco/Colon Auto Repair, 1982-2003; and, Valero, 2012 to the present. Based on the regulatory records, one (1) in-service 15,000-gallon gasoline underground storage tank (UST) is registered for this site under F&D of Rochester, Inc. The Site is also identified through the regulatory records as an open NY Spill site under Colon Auto Repair. Specifically, Spill No. 0200094 occurred on April 3, 2002 and involved the discovery of impacted soil during a subsurface investigation. This spill remains open by the New York State Department of Environmental Conservation (NYSDEC). In addition, this property may be associated with a NYSDEC spill listed for a closed leaking tank listed under Ron's Arco located at Clinton and Scrantom Streets (which is suspected to be 799 North Clinton Avenue). This Spill No. 8201833, occurred on February 1, 1983 and reportedly involved the removal of multiple USTs. One (1) tank was found to have several small holes. This spill was subsequently closed on October 20, 1999.
- Dry cleaning facilities were historically identified adjacent to the west of the Site. These dry cleaners include:
  - Babbs Tailors and Cleaners, 837 North Clinton Avenue (1950);
  - Bobbs Tailors and Cleaners, 843 North Clinton Avenue (1940-1945);
  - Spik N' Span Dry Cleaners/Vincent J. Filippone, 791 North Clinton Avenue (1950); and,
  - Spiak N' Span Dry Cleaners/Vincent J. Filippone (1955)

Based on the adjacent location of these dry cleaning facilities and the lack of information relative to the environmental condition of those properties, LiRo identified as a REC.

The following de minimis condition was identified.

- Vapor migration is not currently anticipated to be a concern to the Site. However, if development of the Site is to occur, vapor migration might pose an environmental concern due to the nature of some of the surrounding/nearby properties.

No CRECs or HRECs were identified.

The following ASTM non-scope considerations were also identified.

- While suspect asbestos-containing materials (ACMs) and/or suspect lead-based paint covered surfaces were not present at the time of the Site reconnaissance, LiRo was informed that the Site formerly included residences which were razed. Therefore, the potential exists for the presence of buried suspect ACMs and/or lead-based paint covered surfaces.
- Although a Site investigation was previously conducted at the Site, the previous work did not reach bedrock/groundwater (the most likely pathway by which off-site contamination would migrate).

*2.3.3 Phase II Environmental Subsurface Investigation, The La Marketa Neighborhood, 6-8 Hoeltzer Street, 7-11 Sullivan Street, and 810-844 North Clinton Avenue by LiRo Engineers, Inc. dated March 30, 2017*

LiRo completed a Phase II Environmental Subsurface Investigation (ESI) to assess the Phase I ESA RECs identified in the September 2016 LiRo Phase I ESA reported dated September 19, 2016. The Phase II ESA included the completion of seventeen (17) test pits, installation of three (3) groundwater monitoring wells, the laboratory analysis of soil and groundwater samples, and the sampling and analysis of five (5) suspect asbestos containing materials (SACM).

The objectives of the Phase II ESI were to identify the environmental characteristics (i.e., type of contaminants and concentrations) and physical characteristics (i.e., thickness and composition) of the fill material at the Site and within the former on-site structures. The LiRo Phase II ESI was also designed to supplement and address data gaps identified in the previous Larsen Engineers investigation. Investigation locations are shown on Figure 3.

Based on observations during the Phase II ESI, LiRo made the following conclusions:

- Fill material appears to be present over the majority of the Site. The fill material observed consisted primarily of silty soil with varying admixtures of poorly compacted building demolition debris. The demolition debris included bricks, cinder blocks, concrete slabs, large concrete chunks, stone block foundation walls, large stone blocks, gravel and crushed concrete, asphalt, roofing materials, transite siding, floor tile, wood, glass, ash, sand, clay drainage pipes, fiberglass insulation, metal pipe, and metal scraps. Some of this debris would be considered a regulated solid waste if disturbed during Site development.
- Based on the analytical results, SVOCs were detected at concentrations above the 6NYCRR Part 375-6.8(b) Restricted Use Residential Soil Cleanup Objectives (SCOs) in several test pits across the Site. SVOCs were reported above the Restricted Use Residential SCOs in five (5) of the 17 test pits including test pits TP-05, TP-09, TP-11, TP-12, and TP-16. As shown on Figure 3, those locations are scattered throughout the Site. These compounds are commonly found in urban fill materials. Five (5) soil samples from test pits TP-05, TP-08, TP-09, TP-10, and TP-11 contained one or more metals that exceeded the Restricted Use Residential SCOs including mercury, lead and chromium. These metals are also typically found in urban fill materials.

Based on the limited asbestos sampling that was conducted, LiRo determined that ACMs are present within portions of the building demolition debris, specifically, at test pits TP-02 and TP-07. The materials that tested positive as ACMs were not prevalent or in large quantities within the test pits. However suspect ACM samples were not collected from every investigation location at the Site and ACM may be present at other areas of the Site.

- Although the Site does not fall into any regulatory programs (i.e., spills), contaminated materials are present in the shallow subsurface and any materials excavated will require handling in accordance with NYSDEC solid waste regulations. In addition, NYSDOL regulations would apply for any demolition waste containing suspect ACM that is disturbed or disposed of.
- Results of groundwater samples collected from well MW-1 to MW-3 found minor detections of VOCs, but no exceedances above the NYSDEC Part 703 groundwater standards. SVOCs were not detected in the groundwater sample collected from well MW-1 to MW-3.

Based on these conclusions, LiRo recommend the following:

- Development plans should include a management plan which will detail soil and fill material handling provisions and procedures that will be implemented to ensure compliance with NYSDEC/NYS DOL regulations and to prevent exposure of future site workers and future site users to contaminated soil and fill materials.
- To prevent exposure for future site users, those plans could include a cover or barrier system that would effectively mitigate potential exposure to the contaminated soil.
- Due to the presence of elevated concentrations of SVOCs and metals, dust control procedures are recommended during excavation or regrading activities to minimize the creation and dispersion of fugitive airborne dust. A Community Air Monitoring Plan (CAMP) should be developed following guidance in the NYSDEC Division of Environmental Remediation (DER)-10 procedures.
- Before beginning any excavation activity, the site Contractor should prepare a site-specific health and safety plan (HASP) that will meet the requirements set forth by the Occupational, Safety and Health Administration (OSHA), the NYSDOH and any other applicable regulations. The HASP should identify the possible locations and risks associated with the potential contaminants that may be encountered, and the administrative and engineering controls that will be utilized to mitigate concerns.

*2.3.4 La Marketa Neighborhood, North Clinton Avenue, Rochester, New York, Preliminary Geotechnical Consultation, E4220.0 dated February 17, 2017 by Foundation Design, P.C.*

This report summarizes a preliminary geotechnical evaluation for the La Marketa Neighborhood development site based on information obtained from the Larsen Phase II ESA report and the LiRo Phase II ESI subsurface investigation logs. Foundation Design made some the following comments in their report:

- Two (2) soil profiles are located across the site. Where old buildings were present expect mixed earth with construction rubble to depths of about six feet below grade. In most cases the foundation walls and floor slabs are left in place. Underlying this is firm to compact silt and sand over bedrock. In the former lawn and driveway areas expect shallow earth fills. Some ash and cinder may be located within this fill. Data from the 2002 Phase II ESA suggest that deeper fill material may be in some of the former green areas.
- The in-place fill material appears to have been placed in an uncontrolled manner. Foundation Design recommends that this material be removed from proposed building footprints and replaced with structural fill. Basement depths were about six feet below existing grade. We would expect that fill depth would be less in former green areas. Actual removal quantities will be dependent on the proposed building location relative to the former structures. Pavements in fill areas will likely require two to three feet of removal and replacement. Basements walls should be cut off a minimum of two feet below foundations and floor slabs/finished pavement grade. In-place basement floor slabs can be broken-up and left in-place.

A copy of Foundations Design's Report is included as an appendix in the LiRo's Phase II ESI report that is included in Appendix 1.

## 2.4 Summary of Fill Material Present at the Site

The table below outlines previous investigation locations (e.g. borings and test pits) and the general depths and type of fill material encountered. Refer to the exploration logs included in the LiRo Phase I ESA and Phase II ESI for more detailed description of the materials encountered at each of the exploration locations. Table 2.4 is intended to provide a general overview of fill conditions at a specific location and is not intended to provide a characterization of the whole Site. Exploration locations are shown on Figure 3.

**Table 2.4 – Summary of Fill Materials**

Exploration Location	Approximate Depth of Fill Materials	Approximate Total Depth of Exploration	Peak PID Reading (ppm)	Comment
GP-1	2'-4'	6.5'	NL	Stone, concrete, fill material
GP-5	--	5'	NL	Sand and silt
GP-8	1'-7.75'	7.75'	NL	Fill material, concrete, brick fragments
GP-9	4'-7.75'	7.75'	NL	Concrete fragments
GP-10	--	6.8'	NL	Sand
GP-11	2'-3'	7'	NL	Brick fragments
GP-12	--	6'	NL	Sand
GP-13	5'-6.5'	6.5'	NL	Concrete
GP-14	3'-8'	8'	NL	Gravel and concrete
GP-15	1'-10'	10'	NL	Gravel, fill material, concrete
GP-16	0'-12'	12'	56.4	Brick, gravel, sand, contaminated layer at 11'. Sample collected from this boring and was noted by Larsen that no VOC or SVOC contaminants were detected.
GP-17	0'-5'	11.5'	NL	Grave, concrete, brick fragments
GP-18	0'-8.5'	8.5'	NL	Stone fill sand, brick fragments
GP-19	1'-5'	10.5'	NL	Fill material, sand and stone fragments
GP-20	0'-10'	11.5	NL	Concrete, brick, sand gravel, asphalt
GP-21	0'-6'	8'	NL	Gravel and stone fill
GP-22	0'-8'	11.5'	NL	Asphalt, stone and gravel fill material
GP-23	0'-8.5'	9.5'	NL	Asphalt, stone, brick fragments
GP-24	0'-2'	7.8'	NL	Asphalt and stone fill material
TP-01	8"-6'	7'	4.8	Large stone blocks, concrete, bricks, rebar, fiberglass insulation
TP-02	6"-4'	4'	3.0	Fill material and equipment refusal on concrete slab, suspect ACM siding <b>tested positive for asbestos</b>
TP-03	6"-6.5'	7'	17.1	Large pieces of concrete, clay pipe, plastic, bricks, foundation blocks
TP-04	6"-6.5'	7'	0.0	Concrete, slab at 4', asphalt, cinders, foundation blocks
TP-05	6"-4.5'	4.5'	5.4	Bricks, asphalt pieces, metal, 4.5' competent concrete slab
TP-06	6"-5'	6'	3.7	Thin concrete slab, concrete pieces, brick, cinders, asphalt, and suspect ACM tile. Samples collected for ACM and testing results indicated no asbestos was detected.
TP-07	3"-5.5'	6'	34.7	Concrete, asphalt, and wood pieces. Suspect transite pipe sampled and <b>tested positive for asbestos</b>
TP-08	6"-6'	7'	5.0	Concrete, brick and stone blocks
TP-09	1"-2'	5'	7.3	Coal, brick, ash or fine sand, plastic, and asphalt
TP-10	4"-2'	2.5'	3.8	Asphalt and concrete chunks
TP-11	4"-2'	6'	11.5	Bricks, plastic, pottery fragments, metal pieces
TP-12	6"-6'	7'	6.0	Concrete, wire, bricks, plastic, stone blocks
TP-13	3"-5'	5'	6.8	Large concrete chunks, concrete slab at 5'
TP-14	3"-5'	5.5'	0.0	Large concrete chunks, bricks, glass
TP-15	4"-5'	5.5'	5.8	Large concrete chunks, brock, metal, wood, metal (possible auto parts)
TP-16	4"-2'	3'	8.7	Brick pieces, coal fragments, ash, and asphalt pieces

Exploration Location	Approximate Depth of Fill Materials	Approximate Total Depth of Exploration	Peak PID Reading (ppm)	Comment
TP-17	6"-5'	5.5'	11.8	Bricks, glass, concrete chunks, wood, suspect ACM tile, concrete slab at 5.5'. Sample collected for ACM and testing results indicated no asbestos was detected.
MW-01	6"-7.5'	12'	8.0	Glass, coal, brick, ash, and cobble fill material
MW-02	4"-4'	8.5'	13.8	Asphalt, slag, brick, ash, and brick
MW-03	6"-11'	15'	82.5	Asphalt and red brick pieces

Note:

- (1) Borings GP-2, GP-3, and GP-4 were not completed and are not listed in the table above. Borings GP-6 and GP-7 are not listed in table above as they were completed off-site.
- (2) - denotes Fill Material was not noted in the associated exploration log provided.
- (3) NL denotes a PID reading was Not Listed in the boring log provided.
- (4) The PID screening is performed as a method of determining general presence or absence of VOCs in soil. The readings obtained from the LiRo and Larsen exploration logs provide only an indication of the relative levels of VOC presence in the soil, and are not considered to be a direct quantization of actual soil VOC concentration.

### 3.0 OBJECTIVE

This EMP is intended to provide guidance regarding the characterization and management of subsurface impacted soil, groundwater, infrastructure and man-made industrial derived fill materials (urban fill) generated during redevelopment activities at the Site.

#### 3.1 Applicability of Environmental Management Plan

This EMP applies to any Developer, Contractor, Utility Contractor, and Municipal Agency that disturbs the subsurface at the Site.

#### 3.2 Roles and Responsibilities

The roles and responsibilities for environmental oversight and management that will be responsible when contamination is disturbed during redevelopment are outlined below:

**Table 3.2 – Roles and Responsibilities**

Company	Personnel/Title	Responsibilities
City of Rochester Manager of Project Development	Anne DaSilva Tella (585) 428-6124	Provide interface with LaBella and City of Rochester regarding the implementation of the EMP.
LaBella	Michael Pelychaty, P.G. Project Manager (585) 295-6253	Provide updates to City regulatory agency interface (if necessary) and guidance to field personnel throughout project. Provide monthly progress reports verifying compliance with this EMP and noting any deviations. Provide a final report documenting all excavation, reuse, and waste disposal activities.
LaBella	To Be Determined Environmental Analyst (585) 454-6110	Provide full time oversight to observe and document the implementation of the EMP. Daily discussion with Contractor and/or Construction Manager. Provide guidance on the segregation, staging, and sampling of excavated materials, and conduct community air monitoring.

Company	Personnel/Title	Responsibilities
Contractor	TBD	Excavate, segregate, and stage materials following the direction of LaBella, and alert LaBella in the event that unknown evidence of impairment is encountered.
City of Rochester	Joe Biondolillo Sr. Environmental Specialist (585) 428-6649	City of Rochester DEQ Contact regarding environmental concerns, waste disposal approvals, etc.

## 4.0 REGULATORY LIMITS, REGULATIONS, AND GUIDANCE

---

Relevant standards and guidelines are summarized below. These include Federal hazardous waste regulations, various soil reference values promulgated by New York State agencies, New York State groundwater standards, and relevant regulations, standards, and guidelines for the removal of fuel storage tanks (if encountered). These documents and standards will be utilized to effectively implement the EMP.

### 4.1 Solid Waste Regulations

In accordance with 6 NYCRR Part 360.2(a) discarded materials containing ash and cinders (or referred to as urban fill) debris is considered by the NYSDEC to be a solid waste that cannot be treated as Construction and Demolition solid waste, due to the nature of its origin as a solid waste derived from an industrial source. The NYSDEC will not approve of the disposal of this material at Construction and Demolition debris landfills.

However the NYSDEC allows for materials containing urban fill to be relocated to other areas within the same site in accordance with 6 NYCRR Part 360.13(c) assuming they are appropriately covered (or capped). Alternatively, these materials can be disposed off-site in a New York State (NYS) Part 360 permitted landfill, pending waste characterization. Refer to Section 5.11 for on-site reuse and disposal requirements.

### 4.2 Hazardous Waste Regulations

As defined by the Resource Conservation and Recovery Act (RCRA), waste (e.g., excavated soil, fill materials, or building materials removed during construction/renovation activities) can be classified as “hazardous waste” if it is one of the Federal “listed wastes” or if it possesses one of the four (4) hazardous characteristics (“D” listed wastes): (1) ignitibility, (2) reactivity, (3) corrosivity, or (4) toxicity. The EPA has developed standard tests to measure these four characteristics. The three physical characteristics (ignitibility, reactivity and corrosivity) are tested using numerical standards of measurement.

The fourth characteristic, toxicity, the one most frequently exceeded by contaminated soils and fills, is tested using the Toxicity Characteristics Leaching Procedures (TCLP), which provides an estimate of the concentrations of contaminants that would leach into groundwater if the material were disposed of in an environmentally unsecured landfill. To assess whether materials are hazardous wastes, representative composite samples of the material are collected and submitted to a laboratory for analysis.

Composite samples are representative samples of the material that are collected from multiple locations throughout the waste. The samples are analyzed by the laboratory in accordance with the United States Environmental Protection Agency (USEPA) test methods. If the results of the laboratory testing indicate that the physical or toxicity characteristics of the sample exceed the RCRA regulatory limits detailed in 40 CFR Part 261, the material is considered hazardous waste.

### **4.3 Reference Values**

Reference values to assess environmental impacts will include the following documents and regulations:

#### **4.3.1 Evaluation of Soil and Fills**

- NYSDEC Commissioner Policy 51 (CP-51) Guidance Document: NYSDEC's Division of Environmental Remediation (DER) issued CP-51, "Soil Cleanup Guidance", in October 2010. CP-51 provides the framework and procedures for the selection of soil cleanup levels appropriate for each of the remedial programs in the NYSDEC's DER. CP-51 replaces TAGM #4046, the Petroleum Site Inactivation and Closure Memorandum, and Sections III and IV of Spill Technology and Remediation Series (STARS) #1.
- NYSDEC DER-10: NYSDEC Division of Environmental Remediation: Technical Guidance for Site Investigation and Remediation dated May 2010 (DER-10) addresses guidance procedures applicable to site investigation and remediation activities. If required, this document will be utilized to as general guidance to determine the appropriate sample frequency for any excavation closure sampling and all Quality Control/Quality Assurance protocols set forth by the Department.
- 6NYCRR Part 375-6.8: Regulations set for this section are typically used for NYSDEC remedial program sites such as inactive hazardous waste disposal sites, brownfield, or environmental restoration sites. The regulatory values in this section can be used to assess unrestricted and restricted use soil cleanup objectives. The standards contained within Part 375 are the most current regulatory guidance available for use. However, the NYSDEC typically only utilizes this set of guidance for projects administered by the NYSDEC Hazardous Waste Group pursuant to Part 375.

#### **4.3.2 Groundwater Reference Values**

Reference values to assess groundwater impacts are included in NYSDEC's Technical and Operational Guidance Series (TOGS) 1.1.1 Groundwater Standards, dated June 1998. Other reference values exist for drinking water and effluent standards for waste water discharges to state water bodies; however, this EMP is not intended to manage these subjects or discharges.

#### **4.3.3 New York State Guidance on Petroleum Storage Tanks**

Removal of certain types of petroleum storage tanks is regulated by NYSDEC under 6 NYCRR Part 613, which requires that tanks out of use for 12 months or longer be closed in place or removed. Tank decommissioning procedures are included in 6NYCRR Part 613.3. Contaminated soils surrounding the tanks (if present), separate phase product on the water table, or contaminants dissolved in the groundwater must be removed.

#### 4.3.4 Guidance for Evaluating Soil Vapor Intrusion

The New York State Department of Health (NYSDOH) provides guidance in the Guidance for Evaluating Soil Vapor Intrusion in the State of New York, dated October 2006 (and associated amendments), that presents the approach to identifying and addressing current and potential human exposures to contaminated subsurface vapors associated with known or suspected volatile chemical contamination. This guidance provides an overview of vapor intrusion issues, guidance on collecting data that can be used to identify current or potential human exposures, discusses data evaluation, and provides an overview of soil vapor intrusion mitigation methods and recommendations pertaining to their selection for use, installation and design, post-mitigation testing, operation, maintenance and monitoring, termination of operation, and annual certification. The NYSDEC provides additional guidance in *DER-13, Strategy for Evaluating Soil Vapor Intrusion at Remedial Sites in New York*, and the Environmental Protection Agency (EPA) provides additional guidance in the *Indoor Air Vapor Intrusion Mitigation Approaches*.

#### 4.3.5 Excavation of Asbestos Containing Materials

The New York State Department of Labor (NYSDOL) provides the Industrial Code Rule 56 for guidance relating to hazards to the public safety and health during the removal, encapsulation, enclosure, repair, or disturbance of friable and non-friable asbestos, or any handling of asbestos material that may result in the release of asbestos fiber. The USEPA also provides guidance in Part 763-Asbestos.

## 5.0 ENVIRONMENTAL MANAGEMENT PLAN (EMP)

---

This EMP has been designed for the redevelopment and construction activities at the Site. This EMP pertains to earthwork activities that will disturb the subsurface at the Site. It is anticipated through previous investigations and observations at the Site that materials of environmental concern may be encountered during redevelopment activities. This EMP has included specific procedures and tasks to manage environmental concerns that include but are not limited to:

- identification of materials of environmental concern
- waste disposal
- health and safety plan
- relocation of soil on-site
- execution of EMP
- soil vapor intrusion (if required by City)
- documentation of source/type of imported fill material and if any environmental sampling was performed
- waste management (e.g. handling, storage, etc.)
- regulated solid waste
- community air monitoring plan
- regulatory reporting requirements
- decontamination of equipment
- waste characterization
- documentation of barrier or cover system

LaBella will work with the City and the Contractor to implement this EMP. As noted previously, LaBella will be on-site full time during Site redevelopment activities regarding soil disturbance and/or removal activities. This EMP has been designed for redevelopment and construction activities at the Site.

## **5.1 Context and Key Issues**

Contaminated materials that exist in different media such as building materials, utilities, soil, soil gas, and/or groundwater can present health risks to workers, the public, and the environment during construction and/or operation, if not properly managed. The Contractor will need to manage these materials in accordance with the applicable Rules and Regulations and clearly understand the waste characterization and disposal process so as not to compromise construction/operation schedules, budgets and long-term liability for the City. Even if no contaminated materials are discovered, appropriate due diligence must be exercised so that the proper documentation can be secured to reduce long-term liability for the project and/or the Site.

On-site media within the Site may be contaminated by historical uses and operations conducted at the Site. Potential sources of contamination primarily include urban fill materials containing elevated concentrations of metals, semi-volatile organic compounds (SVOCs) and ACM. However, petroleum and hazardous substances such as volatile organic compounds (VOCs), fuel oils, and/or solvents could be present.

## **5.2 Potential Contaminants of Concern**

The contaminants described in this section may be encountered at the Site. Certain background concentrations can be expected from both natural and anthropogenic sources. When concentrations exceed regulatory thresholds, an analysis of potential environmental health effects and the need for mitigation measures may be necessary.

### Heavy Metals

These are used in metal works, and can be present in paint, ink, petroleum products, coal ash, and mechanical waste fluids. Certain heavy metals can be toxic to humans at elevated concentrations and are often found in historic urban fill material (e.g. cinders and ash).

### Volatile Organic Compounds (VOCs)

These include aromatic compounds such as benzene, toluene, ethylbenzene, and xylenes, which are found in petroleum products, and chlorinated VOCs such as trichloroethene and tetrachloroethene, which are common ingredients in solvents and commercial cleaners. Naturally produced VOCs may also be present including methane and hydrogen sulfide, which are breakdown products of organic materials. Inhaling toxic VOC vapors can be a health hazard, and some VOCs can be flammable if the circumstances are suitable for combustion. In contrast to contaminants such as metals, PAHs, and PCBs, VOCs generate soil gas vapors that may be a source of exposure even if the source (e.g., VOC-impacted soil or groundwater) is not directly exposed. During construction, soil disturbance, or disturbance of VOC containing materials may release VOCs into the air and produce toxic or oxygen-deficient atmospheres.

### Semi-volatile organic compounds (SVOCs)

These include PAHs, which are common constituents of partially combusted coal or petroleum-derived products, such as waste oils, creosote, coal and coal ash, wood ash, and asphalt. SVOCs can pose a risk to human health.

### Polychlorinated Biphenyls (PCBs)

These are commonly present in the dielectric fluid found in electrical transformers and feeder cables and are often associated with electrical generation stations and scrap yards.

### Asbestos Containing Material

Asbestos Containing Material (ACM) are any material containing greater than one percent (1%) of asbestos, which is a naturally occurring fibrous mineral that was used in many applications for its fire resistance, noise insulation, and electrical insulation properties. Soil and solid waste contaminated with ACM can pose an inhalation health threat to humans.

#### **5.3 Field Screening Methods**

Visual, olfactory and instrument-based (i.e., PID) soil screening will be performed by LaBella during redevelopment activities that disturb the subsurface at the Site. Soil screening will be performed during all soil disturbance and/or removal work performed during redevelopment at the Site. The contractor will be responsible to alert LaBella if evidence of impairment is encountered. In the event that evidence of impairment is noted by the Contractor, a LaBella representative will aid in the classification and management of the impacted material.

Soils will be segregated based upon previous environmental data and in-field soil screening results into material that requires off-site disposal, material that requires testing, material that can be returned to the subsurface, and material that can be used as “cover” soil.

#### **5.4 Identification of Solid Waste Impacted Media**

Based on the history and observations made during the subsurface investigations described in Section 2.3, urban fill materials are present the Site. Solid waste or fill materials identified at the Site during previous environmental investigations primarily consists of silty soil with varying admixtures of poorly compacted building demolition debris. The demolition debris reportedly includes bricks, cinder blocks, concrete slabs, large concrete chunks, stone block foundation walls, large stone blocks, gravel and crushed concrete, asphalt, roofing materials, transite siding, floor tile, wood, glass, ash, sand, clay drainage pipes, fiberglass insulation, metal pipe, and metal scraps.

Some of these fill materials are considered by the NYSDEC as solid waste that cannot be treated as Construction and Demolition (C&D) solid waste, due to the nature of its origin as a solid waste derived from an industrial source. In accordance with 6 NYCRR Part 360.13(c), fill materials containing ash and cinders may be managed and placed into similar filled areas within the same site under appropriate cover. Alternatively, these materials can be disposed off-site in a New York State (NYS) Part 360 permitted landfill.

The presence of cinders and ash and other urban fill material can be visually identified during excavation. If questions arise during identification of the solid waste LaBella shall make the final determination, for the classification on how the spoils generated during the construction activities at the Site will be managed.

### **5.5 Identification of VOC Impacted Media**

Although not previously identified at significant levels at the Site, low level VOC Impacted Subsurface Media (e.g. petroleum, PID readings less than 100 ppm) may be encountered as identified in the previous environmental investigation discussed in Sections 2.3 and 2.4. VOC Impacted Subsurface Media can be identified by the media exhibiting a chemical or petroleum-like odor, gray to black staining, and/or elevated readings of total VOCs on a Photo-Ionization Detector (PID). Groundwater impacted by VOCs may exhibit a petroleum or chemical odor or sheen. If questions arise during identification of VOC Impacted Media, LaBella will make the final determination for the classification on how the spoils generated during the construction activities at the Site will be managed.

The volatilization of contaminants present in VOC Impacted Media may represent a worker health and safety concern for construction workers at the Site.

### **5.6 On-Site Management of Solid Waste Impacted Media and VOC Impacted Media**

Solid Waste Impacted Media that is excavated should not be used within two (2) feet (ft) of the overburden groundwater table. Based on the LiRo ESI, the shallow overburden groundwater table does not appear to be present above the top of bedrock. However, the groundwater table should be visually verified prior to the placement/reuse of any impacted media within the subsurface at the Site. Solid Waste Impacted Media may be relocated on-site as approved by the Engineer and in accordance with 6NYCRR Part 360.13, or legally disposed of off-site at a NYS Part 360 Landfill. The re-location of Solid Waste Impacted Media on-site will require approval by the City and LaBella prior to final placement.

The staging of Solid Waste and Impacted Media shall be performed in a manner where it is segregated from non-Solid Waste Impacted Media (i.e. clean soils). Staging locations of Solid Waste Impacted Media will be approved by LaBella.

Prior to excavating in areas where solid waste is anticipated, the Contractor shall remove the top layer of non-Solid Waste Impacted Media (i.e. topsoil, asphalt, etc.) as practicable and keep the material segregated from any Solid Waste Impacted Media. If the material is to be relocated for re-use on-site, the Solid Waste Impacted Media shall be directly placed in the fill area or placed on and covered with polyethylene sheeting pending final on-site placement.

Subsurface Solid Waste Impacted Media is not allowed to leave the Site without expressed written consent from the City and LaBella.

If encountered, Solid (non-aqueous) VOC Impacted Media will be segregated from non-VOC Impacted Media into separate stockpiles and staged on and covered with one layer of 6-mil thick polyethylene sheeting at the end of each work day. The Contractor shall implement reasonable care to secure sheeting and maintain such stockpiles' integrity. VOC Impacted Media will then be tested for USEPA Target Compound List (TCL) and NYSDEC CP-51 list VOCs and CP-51 list SVOCs. If concentrations of VOCs and SVOCs are below the CP-51 Soil Cleanup Levels (SCLs), then the VOC Impacted Media may be re-used on-site. Conversely, if concentrations of VOCs and SVOCs are above the NYSDEC CP-51 SCLs, then the VOC Impacted Media shall be disposed of at a NYSDEC Part 360 Landfill. The 6 NYCRR Part 375-6.8(b) Restricted Residential Use Soil Cleanup Objectives (RUSCO) may be used as guidance for petroleum and chemical compounds not included in CP-51 guidance document.

If necessary, liquid or aqueous VOC Impacted Media (i.e. groundwater) shall be pumped into a holding tank approved by LaBella. LaBella will assist the contractor to obtain a temporary discharge permit from the Municipality (if acceptable). This will include preparing paperwork, coordination with the Municipality, collection and analysis of samples and the following:

- The contractor shall collect, handle, filter or otherwise treat as necessary and properly dispose of VOC-impacted groundwater removed as needed for project construction. The Contractor shall conduct all tasks associated with these items in accordance with all Federal, State, County and local regulations.
- If additional analysis and testing is required as identified by the accepting Publicly Owned Treatment Works (POTW), LaBella will collect samples from final or batch product collection. LaBella shall perform all required analyses at a laboratory approved by the New York State Department of Health Environmental Laboratory Approval Program (ELAP) for the intended analyses. LaBella shall provide a copy of the analysis report to the Contractor. No disposal shall occur prior to LaBella's receipt and acceptance of any laboratory reports and approval from POTW.
- In the event that off-site transportation of wastewater is necessary, a valid 6 NYCRR Part 364 Waste Transporter Permit shall be required. The contractor will also be required to provide all disposal documentation at an approved treatment storage and disposal facility to LaBella prior to disposal.

VOC Impacted Media shall not leave the Site without expressed written consent from the City and LaBella.

#### **5.7 Management of Demolition and Solid Waste Material**

Non-impacted demolition and solid waste material including any wood, metal scrap, drainage piping, masonry (e.g. concrete, block, bricks) or other miscellaneous solid waste, which are determined to be physically unacceptable for re-use shall be separately stockpiled for off-site disposal or recycling.

Impacted demolition and solid waste material that cannot be cleaned to the satisfaction of LaBella shall be staged on and covered with a minimum of one layer of 6-mil polyethylene sheeting pending waste characterization by LaBella. The Contractor shall secure the sheeting and maintain such stockpiles' integrity to the satisfaction of LaBella. Stockpiling locations shall be approved by LaBella. Impacted demolition and solid waste material will be disposed off-site disposal at a permitted NYSDEC Part 360 Permitted landfill.

Cleaning of impacted demolition and solid waste material shall be by physical methods such as scraping, shaking, brushing, etc. Should the Contractor utilize methods which generate liquid waste streams or if liquid waste streams (e.g. oily water, pipes or sumps filled with sludge) are present that require removal, the Contractor is responsible for proper containerization and disposal of each waste stream. The contractor shall segregate each waste stream to the satisfaction of LaBella. Once impacted demolition and solid waste material is determined to be clean to the satisfaction of LaBella, the material can be managed in accordance with the EMP.

#### **5.8 Management of Buried Asbestos Containing C&D Debris**

If buried or suspect asbestos containing material (ACM) is encountered, the Contractor will be required to sample, remove and dispose of the ACM in accordance with all applicable federal, state, and local laws and regulations. The removal of any ACM shall be completed by a licensed Asbestos Contractor with certified workers.

### **5.9 Management of Excavation Derived Water**

If impacted groundwater at the project location is required to be pumped to advance redevelopment activities, the Contractor shall pump the impacted groundwater into a holding tank and stage on-site pending off-site disposal. LaBella shall perform all characterization testing. If the water is determined by characterization testing to be suitable for discharge to the sewer, the Contractor shall be responsible for obtaining all applicable permits from the municipality.

### **5.10 Management of Orphan Underground Storage Tanks and Sub-Grade Structures**

If orphan UST(s) or sub-grade structures are encountered by the Contractor, work shall stop immediately in the vicinity of the tank or structure and LaBella must be immediately notified. LaBella will assess the condition of the tank or structure, where practicable. LaBella shall determine when it is practicable to resume work in the vicinity of the tank or structure. Tanks shall be decommissioned in accordance with 6NYCRR Part 613 and City of Rochester regulations.

The Contractor shall immediately notify LaBella and the City upon any known environmental release from and/or encountered but not limited to any tank or sub-grade structure. The City shall make the determination of any spill reporting requirements with 6NYCRR Part 613-2.4 and 6NYCRR 597.4 or any other local, state, or federal agency laws and regulations.

If a tank or sub-grade structure is damaged during discovery such that the contents of the structure are released, the Contractor shall provide the appropriately trained personnel and equipment to address the release. Possible action items include; sludges, non-aqueous liquids, or contaminated water shall be removed from the subsurface structure and the sludges or liquids shall be containerized by the Contractor, characterized by LaBella, and staged on-site pending off-site disposal.

Tanks and sub-grade structures may contain sludges, non-aqueous liquids, or contaminated water. To the extent feasible the Contractor shall avoid damaging such structures upon discovery. Based on the special nature of the work associated with the decommissioning and removal of tanks or sub-grade structures that contain regulated or hazardous wastes the removal of such structures will be completed by others (e.g. Specialty Environmental Contractor) as determined by LaBella. The subsurface structures will be decontaminated in accordance with NYSDEC CP-51, and the sludges or liquids containerized, characterized, and staged on-site pending off-site disposal. Coordination between the Contractor and Specialty Environmental Contractor will be completed by LaBella. The removal of any tank or sub-grade structures will be completed as soon as possible based on each discrete situation.

Demolition of non-suspect sub-grade structures (i.e. storm distribution boxes, etc.) will be the responsibility of the Contractor. During removal/decommissioning of the sub-grade structures LaBella shall evaluate the soils adjacent to each structure. All sub-grade structures shall be inspected by LaBella to determine suitability for reuse, recycling, or disposal in accordance with applicable regulations.

LaBella shall be responsible for all testing and characterization of Impacted Media and demolition materials described in this Section.

### 5.11 Solid Waste and VOC Impacted Media Summary

The table below details requirements and re-use of Solid Waste and VOC Impacted Media at the Site. The handling and disposal requirements for ACM are found in NYS DOL Code Rule 56.

**Table 5.11 - On-Site Re-Use and Disposal Requirements**

Material Classification	Material Description	Disposal / Re-use	On-Site Cover Requirements
Class 1	<ul style="list-style-type: none"> <li>• Solid Waste Impacted Media including but not limited to ash, cinders, PID readings &lt;25 ppm, C&amp;D, etc.</li> <li>• Soil, or Solid Waste Impacted Media containing VOC impacts that are less than the NYSDEC CP-51 SCLs. The NYSDEC Part 375-6.8(b) RUSCOs for a Commercial site may be used for compounds not included in the CP-51 guidance document.</li> </ul>	<ul style="list-style-type: none"> <li>• Can be re-used at the Site</li> <li>• If cannot be re-used at the Site, must be legally disposed of at a NYS Part 360 landfill</li> </ul>	<ul style="list-style-type: none"> <li>• Must be covered with a minimum of 12-inches of Class 4 Material, imported fill material <sup>(1)</sup>, or with impervious surfaces (e.g. asphalt, concrete paving or slabs).</li> <li>• Cannot be placed within two feet of the overburden groundwater table.</li> </ul>
Class 2	<ul style="list-style-type: none"> <li>• Soil, or Solid Waste Impacted Media containing VOC impacts, petroleum staining, odors, and PID Readings ≥25 ppm, or are above the NYSDEC CP-51 SCLs. The NYSDEC Part 375-6.8(b) RUSCOs for a Commercial site may be used for compounds not included in the CP-51 guidance document.</li> </ul>	<ul style="list-style-type: none"> <li>• Shall be legally disposed of at a permitted NYS Part 360 landfill.</li> </ul>	<ul style="list-style-type: none"> <li>• Cannot be re-used on-site. Must be staged on and covered with 6-mil polyethylene sheeting pending disposal at a NYS Part 360 landfill.</li> </ul>
Class 3	<ul style="list-style-type: none"> <li>• Solid waste physically unacceptable for re-use or recycling (e.g. lumber, refuse, metal scrap, large foundations, large pieces of concrete or brick unacceptable for reuse on-site, drainage piping, municipal waste).</li> </ul>	<ul style="list-style-type: none"> <li>• Can be reused on-site if acceptable to City.</li> <li>• Off-site disposal at NYS Part 360 permitted landfill. Requires LaBella approval.</li> <li>• Visibly non contaminated solid waste such as steel, concrete and brick may be transported to a recycling facility.</li> </ul>	<ul style="list-style-type: none"> <li>• Must be covered with a minimum of 12-inches of non-impacted on-site soil or fill, imported general fill <sup>(1)</sup>, or with impervious surfaces (e.g. asphalt, concrete paving or slabs).</li> </ul>
Class 4	<ul style="list-style-type: none"> <li>• Layers of native non-impacted soil and earth that do not contain evidence of impairment.</li> </ul>	<ul style="list-style-type: none"> <li>• Can be reused anywhere on-site if sampled for RCRA Metals <sup>(2)</sup> and CP-51 SVOCs <sup>(3)</sup> and results are below the NYSDEC Part 375-6.8(b) RUSCOs for a Commercial site.</li> <li>• If the results are above the NYSDEC Part 375-6.8(b) RUSCOs for a Commercial site, then the material shall be considered and managed in accordance with Class 1 Materials.</li> <li>• May be removed off-site with sampling and testing</li> </ul>	<ul style="list-style-type: none"> <li>• Sampling and analysis per 6 NYCRR Part 360.13(e).</li> <li>• Off-site reuse, disposal or off-site requires LaBella and City approval.</li> </ul>

Material Classification	Material Description	Disposal / Re-use	On-Site Cover Requirements
Class 5	<ul style="list-style-type: none"> <li>Impacted groundwater exhibiting visual and olfactory observations and/or determined to be by sampling and laboratory testing.</li> </ul>	<ul style="list-style-type: none"> <li>Off-site disposal at permitted facility or via sanitary sewer with approval from Monroe County Pure Waters. Requires LaBella approval.</li> </ul>	<ul style="list-style-type: none"> <li>Not Applicable</li> </ul>
Asbestos Containing Material	<ul style="list-style-type: none"> <li>Any material containing at least 1% of asbestos or previously identified by LiRo during their Phase II ESI (i.e. LiRo test pits TP-02 and TP-07), see Section 2.3.3.</li> </ul>	<ul style="list-style-type: none"> <li>Shall be disposed of at a permitted NYS landfill in accordance with all applicable regulations.</li> </ul>	<ul style="list-style-type: none"> <li>Off-site disposal requires LaBella approval.</li> </ul>

- (1) Imported fill material is any soil, stone, recycled concrete, or other earthen materials that is imported to the Site from an off-site source. **The Contractor shall obtain pre-approval from the City prior to importing any fill material to the Site. Refer to Section 5.12 for additional details and procedures.**
- (2) RCRA Metals denotes the Resource Conservation and Recovery Action Metals analyzed by USEPA Methods 6010 or 7471
- (3) CP-51 SVOCs denotes Commissioner Policy 51 list semi-volatile organic compounds analyzed by USEPA Method 8270

A flow chart is attached to this EMP as Figure 4 to provide further guidance for reuse and disposal requirements in accordance with this EMP. However, LaBella and the City shall make the final determination for the classification on how the spoils generated during the construction activities at the project location will be managed.

Upon disturbance of Impacted Media, the Contractor shall follow the procedures outlined in the following sections, as well as the Contractor's Site-Specific Health and Safety Plan.

### 5.12 Imported Fill Material

All imported Fill Material proposed for use at the Site shall be accepted by the City prior to use. Fill Material imported from a permitted quarry is anticipated to be accepted for reuse at the Site without additional sampling and testing of chemicals of concern (but may be required). Fill Material imported from a non-permitted quarry is anticipated to require sampling and testing for chemicals of concern to evaluate for potential acceptance for use at the Site. The number and type of samples and analyses accepted will be at the sole discretion of the City. Fill Material proposed for importation may be prohibited at the sole discretion of the City and may be prohibited based on sampling and testing results. The contents of this Section is not intended to remove or supersede any sampling, reuse, or any other requirements subject to 6NYCRR Part 360 or any other applicable regulations. No material will be accepted for use at the Site from a NYSDEC spill site, NYSDEC remediation site as described in 6NYCRR Part 375, or any other federal, state or local remediation sites.

The Contractor is recommended to conduct the following procedures regarding the approval of Imported Fill Material:

1. At a minimum the Contractor shall provide LaBella and the City information regarding the type/name or material, source/location of material (include applicable quarry permit numbers), gradation/sieve analysis (if available), anticipated volume to be imported, where it will be placed at the Site, and any prior sample and testing results.
2. LaBella and City will review the information and determine if the material will be accepted without any sampling and testing, prohibited from use, or sampling and testing is required to determine if the material will be accepted for use at the Site.

3. If sampling and testing of the proposed fill material is required, LaBella will collect the samples and submit them for laboratory analysis. Laboratory turnaround time for analysis is anticipated to be between 7 to 14 business days.
4. Once the laboratory results are received, LaBella and the City will review the testing results and inform the Contractor whether the material will be accepted or prohibited for use at the Site.

It is recommended the Contractor complete the Imported Fill Material Request Form included in Appendix 4 for each type of material. Additional information may be requested by LaBella and the City for acceptance that is not included in the form.

### **5.13 Off-Site Disposal of Solid Waste and VOC Impacted Media**

All Treatment, Storage and Disposal (TSD) facilities and waste transporters must provide evidence of applicable NYSDEC permits prior to handling, transporting, and/or receiving solid waste and VOC impacted media. Removal of any site materials shall be approved in writing by LaBella and the City, including submission of completed Waste Profiles and Waste Manifests for signature by an authorized representative of the City.

Copies of all waste disposal manifests, and landfill receipts shall be submitted to LaBella by the Contractor within two (2) calendar days after the Solid Waste and VOC Impacted Media was removed from the Site.

Solid Waste Impacted Media and solid (non-aqueous) VOC Impacted Media that cannot be re-used on-site in accordance with the conditions in the waste summary table shall be transported off-site by a NYS Part 364 permitted vehicles to a NYS Part 360 Permitted Landfill approved by LaBella and the City. LaBella shall perform all characterization testing.

Liquid or non-aqueous VOC Impacted Media shall be legally disposed of at a location approved of by LaBella and the City. LaBella shall perform all characterization testing.

The Contractor shall not dispose of Solid Waste or VOC Impacted Media, or any on-site derived subsurface material without expressed written permission from the City and LaBella.

### **5.14 Waste Disposal Tracking**

LaBella shall track the off-site disposal of each waste stream on an appropriate spread sheet tracking log to allow for accurate material quantification. Contractors are required to submit waste disposal receipts to LaBella within two (2) calendar days upon removal from the Site.

All operators necessary for the removal and disposal of contaminated and hazardous impacted media shall comply with the applicable Federal, State, and local laws and regulations and policies. Waste disposal material shall not leave the Site without permission of LaBella and the City. The Contractor shall provide LaBella and the City with documentation that the receiving facility is permitted to receive the accepted waste and the waste transporter is permitted to haul such wastes. The Contractor shall be responsible for the safe and proper management of all wastes addressed herein in accordance with all State and Federal regulatory requirements, including, but not limited to:

- 6NYCRR 360 – Solid Waste Management Facilities
- 6NYCRR 364 – Waste Transporter Permits
- 6NYCRR 370 – Hazardous Waste Management System: General
- 6NYCRR 371 – Identification and Listing of Hazardous Wastes

- 29 CFR 1910.120 – Hazardous Operations and Emergency Response
- 40 CFR 260 – Hazardous Waste Management System: General
- 40 CFR 261 – Identification and Listing of Hazardous Wastes
- 40 CFR 100 to 179 – DOT Hazardous Materials Transport and Manifest System
- NYSDEC CP-51 – Soil Cleanup Guidance
- 6NYCRR Part 375-6 – NYSDEC Remedial Program Soil Cleanup Objectives

Waste Disposal procedures are categorized below.

#### Non-Hazardous Impacted Media (Class 1 and 2 Material)

Non-hazardous waste may be disposed of at a NYSDEC Part 360 landfill and transported by a NYSDEC Part 364 permitted waste hauler. Waste characterization sampling and analysis will be conducted by LaBella in accordance with the accepting NYSDEC Part 360 landfill. This material must be removed from the Site within 60-days of being generated.

#### Non-Impacted Demolition and Solid Waste Material (Class 3 Material)

This material may be disposed off-site at a recycling facility in accordance with 6NYCRR 360 provided waste characterization sample results, if applicable, indicate the material is free of contaminants of concern or is below the 6NYCRR Part 375-6(a) Unrestricted Use Soil Cleanup Objectives for suspect contaminants of concern. Alternatively, this material can be disposed of at a NYSDEC Part 360 Landfill.

#### Non-Impacted Soil and Fill Material (Class 4 Material)

This material may be used off-site as clean soil and fill material provided sample results are below the appropriate reuse guidelines per 6 NYCRR Part 360.13(f) Table 2. Non-impacted soil and fill material will be sampled in accordance with 6 NYCRR Part 360.13(e) Table 1. LaBella will provide the associated analytical data of the material being shipped and the relocation site to the Site owner or authorized representative at least 48 hours prior to any non-impacted material being removed from the Site.

#### Contaminated Water (Class 5 Material)

Contaminated water pumped from excavations shall not be discharged to the local sewer system unless all local and state requirements are met. All groundwater pumped from excavations shall be containerized on site and characterized by LaBella. Impacted groundwater shall be disposed off-site at a permitted TSDf consistent with NYSDEC 6NYCRR Part 360, 364, and 370. The onsite discharge of groundwater with contaminants of concern at concentrations above the NYSDEC TOGS 1.1.1 Groundwater Standards is a direct violation of the General Stormwater Permit.

#### Hazardous Waste Impacted Media

Hazardous waste shall be disposed of in accordance with applicable Federal, State, and local regulations and requirements. This material must be removed from the Site within 90-days of being generated.

#### ACM Demolition Debris

ACM demolition debris excavated during redevelopment will be managed and disposed of in accordance with NYSDOL Code Rule 56.

### **5.15 Waste Disposal Documentation**

Removal or disposal of any sub-surface site materials or items shall be approved in advance by LaBella, including submission of completed Waste Profiles and Waste Manifests for signature by the Site Owner or their designative representative. Copies of all waste disposal manifests, and receipts shall be submitted to LaBella by the Contractor within 48-hours upon removal from the project location.

### **5.16 Soil Vapor Intrusion Considerations**

Sub-slab depressurization systems (SSDS) do not appear to be required for any structures at the Site. At this time, the proposed structures at the Site include: (1) metal storage containers that will be used as store fronts that will be located on top of concrete pads, (2) an open air stage, and (3) a bathroom building. As such, the only proposed enclosed occupied structure that will be in contact with the subsurface is the bathroom building. Since the bathroom is a temporary occupied building and that VOCs detected at the Site during the previous environmental investigations discussed in Section 2.3 do not appear to represent a remedial concern, a SSDS does not appear to be required for the La Marketa Plaza project.

If any other enclosed occupied are structures are to be developed at the Site, the City will make the final determination with regard to the need of a SSDS.

### **5.17 Unknown Environmental Issues**

If unknown subsurface environmental impacts are encountered, LaBella will determine procedures and protocols to manage any additional environmental impacts. It is the responsibility of the Contractor to alert LaBella if unknown subsurface environmental impacts are encountered, including but not limited to the following:

- soils and/or groundwater with a VOC odor or sheen;
- soils containing solid wastes including demolition debris, ash, or cinders in areas not previously identified; and,
- soils containing evidence of VOC staining.

## **6.0 IMPLEMENTATION OF THE EMP**

---

The EMP applies to all earthwork associated with the Project. However, implementation of the EMP will vary based on the specific activity being conducted. The EMP implementation guidelines associated with specific phases of the project is provided below.

### **6.1 Subsurface Excavations, Material Reuse, and Off-Site Disposal**

LaBella will provide full time oversight of any subsurface disturbance, subsurface material reuse, and off-site disposal of subsurface materials.

### **6.2 EMP Roles and Responsibilities**

LaBella Associates:

The responsibilities of LaBella with regard to the EMP are as follows:

- Working with the Contractor, Construction Manager (CM) and City to pre-determine off-site disposal locations.

- Working with CM and City as necessary to characterize excavated material per Section 5.11 and to determine reuse and/or disposal of excavated material.
- Work with the Contractors to monitor excavations for evidence of environmental impairment.
- Assist the CM as to proper staging, covering, and containment of excavated materials as needed.
- Sampling, analysis, and any additional waste stream profiling as required by a receiving NYS Part 360 landfill.
- Assist the contractor to obtain a temporary discharge permit from the POTW, if needed. This will include preparing paperwork, coordination with the POTW, and collection and analysis of samples.
- Implementation of the Health and Safety Plan (HASP) for LaBella personnel at the Site. Contractors and other personnel working at the Site are responsible for their own HASP (see Section 9.0).
- Implementation of the Community Air Monitoring Plan (CAMP) for the Site during the disturbance or handling of subsurface impacted media or impacted solid waste (see Section 8.0).

Contractor:

The Contractor shall provide all labor, equipment, and materials necessary to perform the following work items as specified in this Section, including but not limited to:

- Coordination of utilities clearance.
- Segregation of impacted media from non-impacted media.
- Dewatering of excavation, containerization of all removed wastewaters and discharge/disposal of said waters.
- Implementation of dust suppression measures as determined by LaBella or the CM.
- Loading, containerizing, and transportation of impacted media from the excavation area to an on-site staging area.
- The Contractor shall not remove any material from the project site without approval from LaBella.
- Decontamination of equipment in accordance with Section 7.0, if necessary.
- The Contractor shall be responsible for providing all necessary and legally required training for its workers, and if necessary OSHA 40-hour HAZWOPER training and respirator fit testing.
- The Contractor shall attend a meeting with the CM, LaBella, and the City to discuss Impacted Media management concerns. The Contractor shall coordinate the meeting.
- The Contractor shall coordinate the planned staging of Impacted Media with LaBella. Specific areas shall be designated for the staging of each type of impacted media so as to allow for a smooth work flow and minimize exposure routes to the public and the environment.
- The Contractor shall rely on the judgment of LaBella regarding the implementation of the EMP.
- The Contractor is solely responsible for the means, methods, techniques, sequences and procedures for all activities under the direct control of Contractor.

- The Contractor shall perform all work under this contract in accordance with all local, state and federal laws, regulations, and requirements including but not limited to New York State Department of Environmental Conservation, United States Environmental Protection Agency, United States Department of Transportation, and Occupational Safety and Health Administration.

## 7.0 DECONTAMINATION OF EQUIPMENT

---

All equipment used at the Site that comes in contact with any Impacted Media Solid Waste or other hazardous materials will require decontamination using clean water to wash off soil and water residue from construction activities. The Contractor shall construct a temporary decontamination pad that will be used to decontaminate the earthwork related equipment.

The decontamination pad shall be constructed of two (2) layers of 6-mil reinforced polyethylene sheeting (or equivalent), with a sump, for the purposes of collecting wash water. Wash water shall be stored in 55-gallon drums, storage tanks or incorporated into tanks for treatment and proper disposal as determined by LaBella. Accumulated sediments shall be legally disposed of in accordance with all applicable regulations at a location approved by the City and LaBella.

The Contractor shall be responsible for all costs relating to legally disposing of the decontamination pad materials at a facility approved by the Site owner and LaBella. All permits and waste disposal manifests shall be submitted to LaBella for review and signature prior to shipment. All permits, waste disposal manifest, and receipts associated with decontamination pad materials disposal shall be submitted LaBella.

The Contractor shall provide potable water and high-pressure sprayers for decontamination activities.

Personal decontamination procedures shall follow the procedures set forth in the HASP and the Contractor shall supply a suitable container for disposal of personal protective equipment, such as a steel drum. Disposal of PPE is the responsibility of the Contractor.

## 8.0 COMMUNITY AIR MONITORING PLAN (CAMP)

---

The NYSDOH Generic Community Air Monitoring Plan (CAMP) and Fugitive Dust and Particulate Monitoring will be utilized for this EMP implementation and is included as Appendix 2. The CAMP describes required VOC vapor and/or particulate monitoring that will be conducted during activities that disturb the subsurface at the Site. The intent of this CAMP is to provide for a measure of protection of the downwind communities from potential airborne releases of constituents of concern during activities that disturb the subsurface at the Site. As such, this CAMP specifies the potential air emissions, air monitoring procedures, and monitoring schedule.

The Contractor will be required to implement dust and VOC suppression measures as directed by LaBella that may include the following methods:

- Apply water on haul roads.
- Wetting equipment and excavation faces.
- Restricting vehicle speeds to 10 mph.
- Hauling material in properly taped containers.

- Spraying water in buckets during excavation and dumping.
- Reducing excavation size and/or number of excavations.

The Contractor shall have an onsite designated water truck or other dust suppression system. The Contractor shall obtain any necessary permits for hydrant usage, etc.

## 9.0 HEALTH AND SAFETY PLAN (HASP)

---

This EMP contains a Site Specific HASP for the site developed by LaBella. This HASP is designated for LaBella personnel only. A copy of this HASP is included in Appendix 3.

The LaBella Associates, D.P.C. HASP is included as an example. The Contactor(s) will need to develop and rely on their own HASP to manage health and safety issues associated with potential exposure to site chemicals of concern and any other potential issues.

## 10.0 LABORATORY TESTING

---

All samples collected during the EMP will be submitted under standard chain of custody procedures to a NYSDOH Environmental Laboratory Approval Program (ELAP) certified laboratory for testing. All samples will be placed in laboratory supplied sample jars and placed in coolers with ice.

## 11.0 REPORTING

---

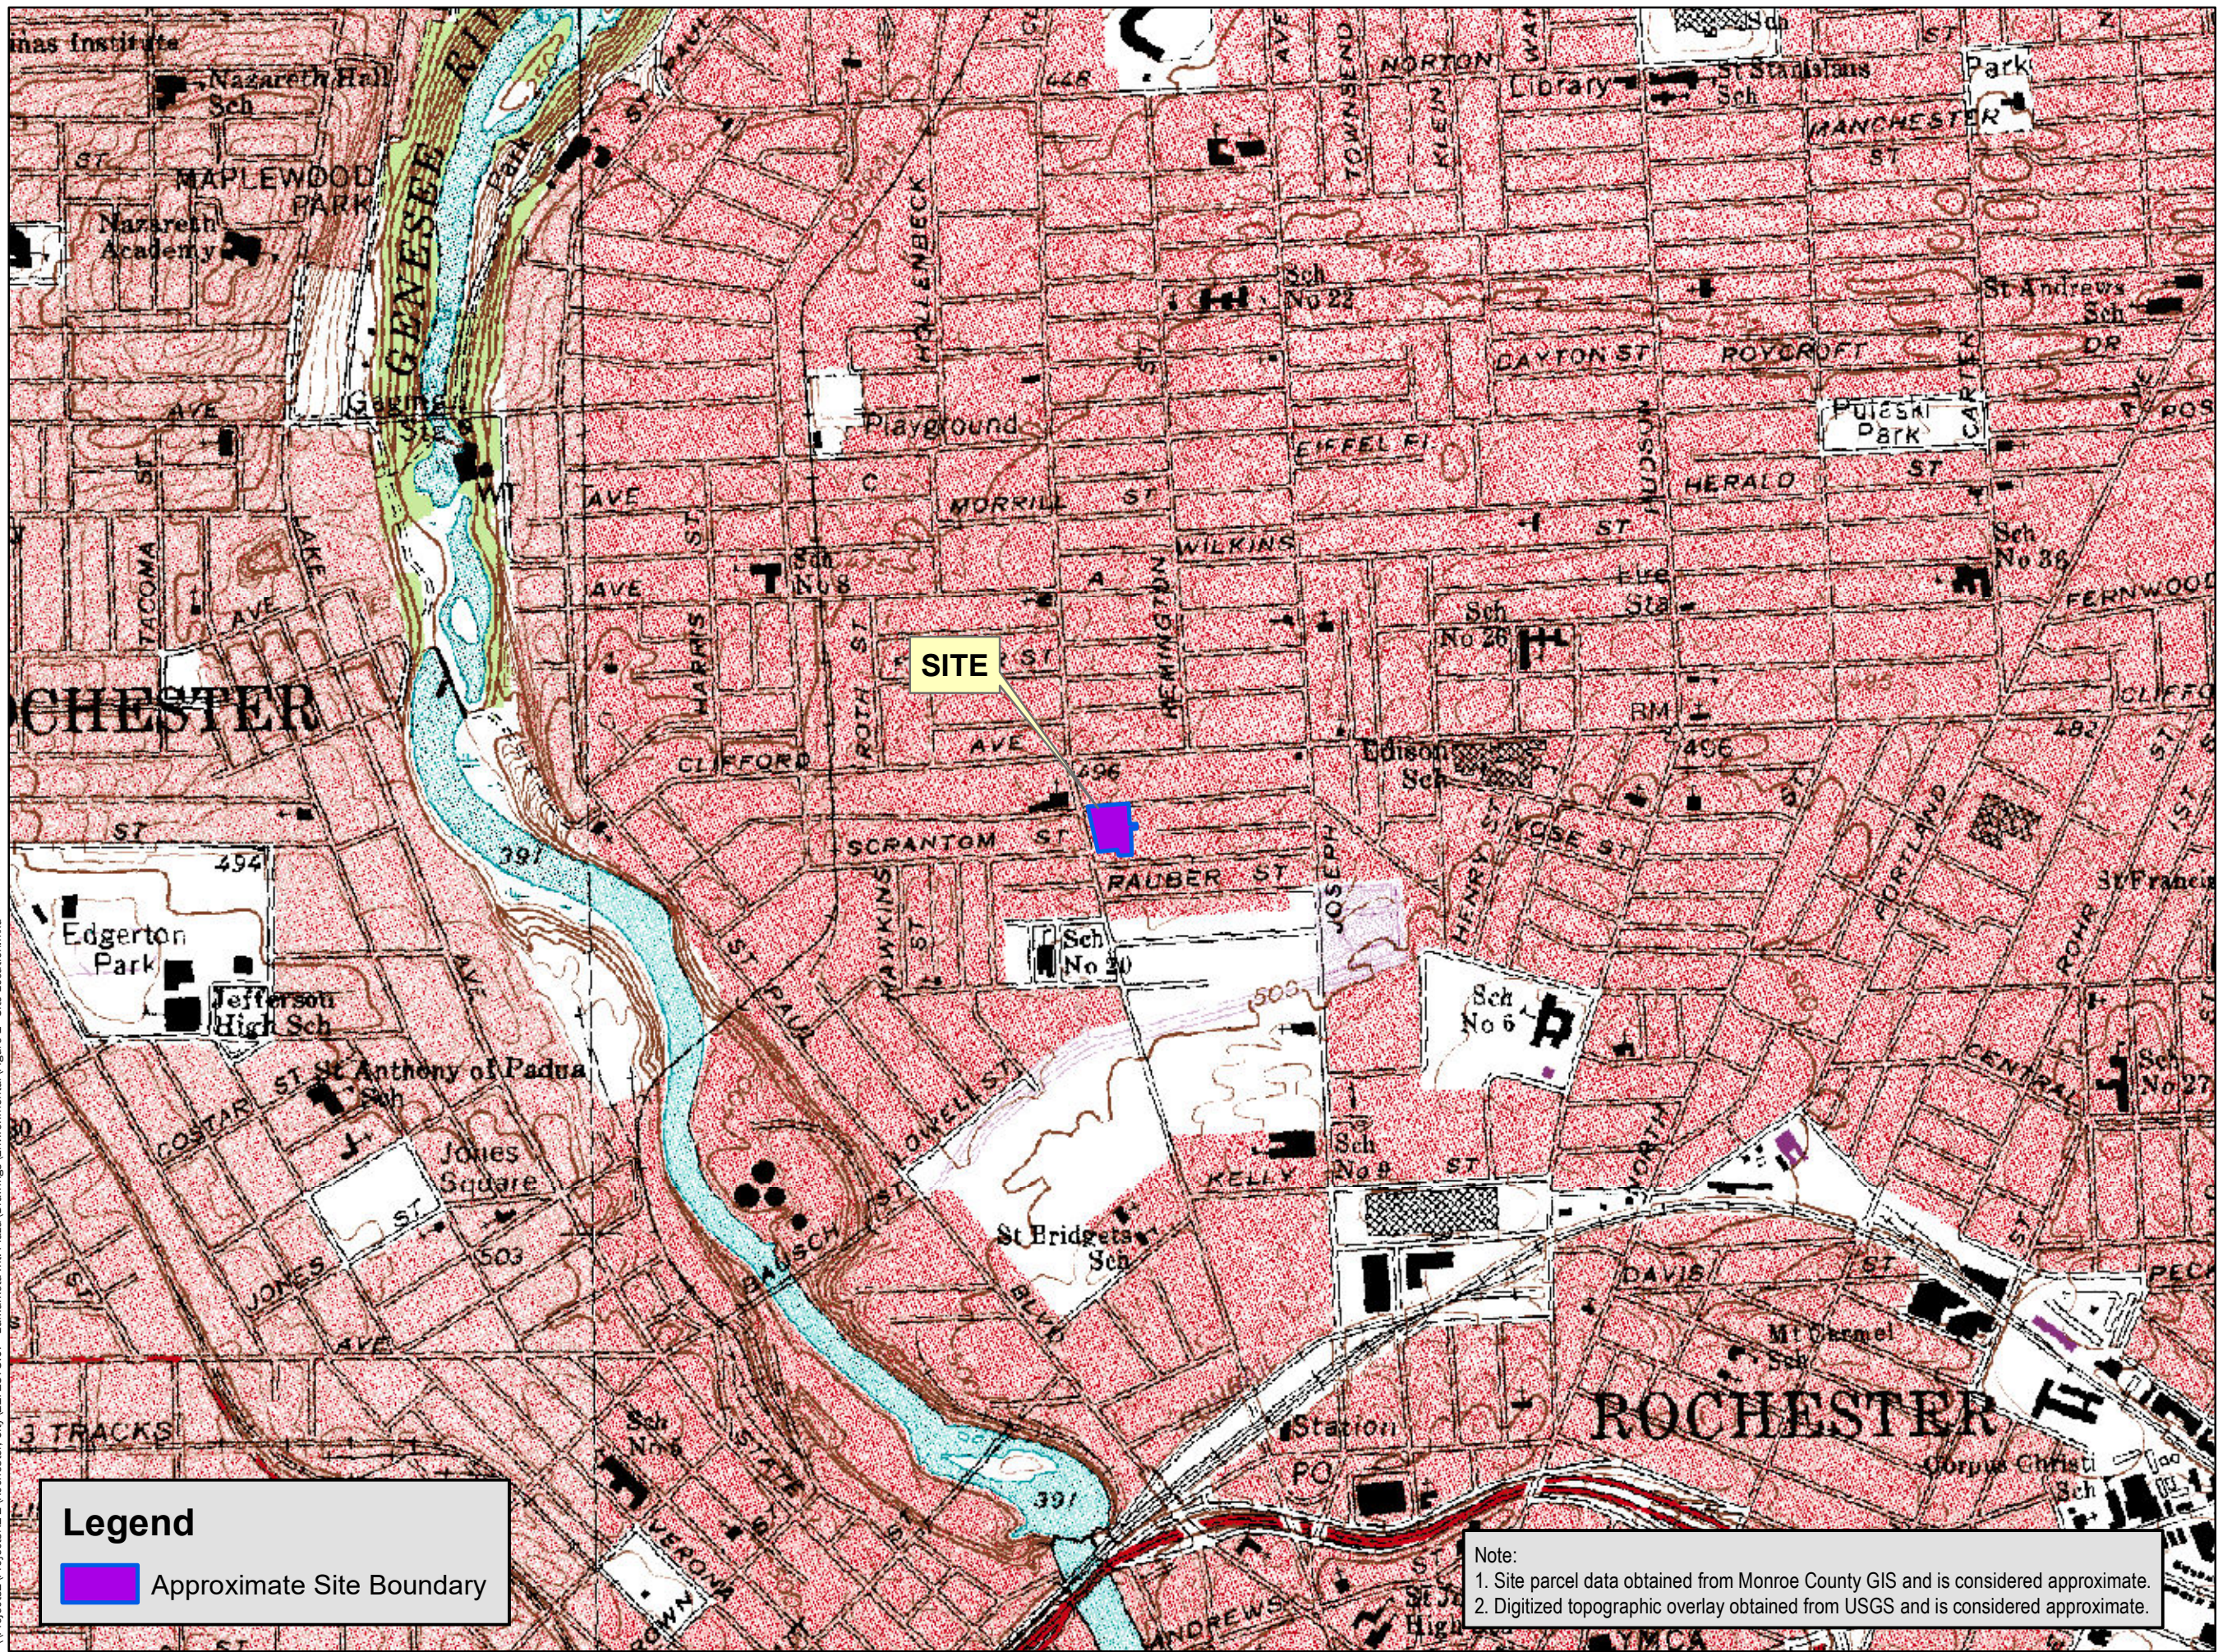

Weekly summaries will be provided to the City that will include a brief summary of the work completed, any deviations from the EMP, and if there were any CAMP exceedances (and mitigation measures if applicable).

LaBella will develop monthly monitoring reports during the earthwork phases of the project and any soil disturbance and/or removal activities in order to document excavation materials generated, regulated solid waste, petroleum impacted soil and/or groundwater, asbestos containing materials, and any other impacted materials generated. The monthly reports will include mapping depicting the areas excavated to date, the extent of any regulated materials encountered and any sampling completed. The reports will also include waste disposal documentation (weigh tickets), any laboratory data received and updated waste stream tracking information/forms.

The monthly reports will be developed to document all excavation activities and waste disposal work in accordance with the EMP. Any deviations from the scope of work in this EMP or unanticipated environmental conditions (i.e., environmental conditions not consistent with the previous environmental reports listed in Section 2.3) will be documented in the monthly reports. A final Construction Completion Report (CCR) documenting all the excavation activities and waste disposal work will be completed. The CCR will be a cumulative summary of the work and will be similar to the monthly reports (i.e., mapping, attachments, etc.); however, it will include the entire project. The final report will also include an Operation, Maintenance and Monitoring (OM&M) section, if necessary.

## **Executive Summary**

### ***ES.1 Introduction***

This Phase I Environmental Site Assessment (Phase I ESA) has been prepared by LiRo Engineers, Inc. (LiRo) for eight tax parcels (the “Site”) addressed at 6-8 Hoeltzer Street, 7-11 Sullivan Street, and 810-844 North Clinton Avenue located within the City of Rochester, New York (Tax Section No. 106.39, Block No. 1, and Lot Nos. 1, 2, 3.1, 75.2, 78.1, 80.1, 82.1, and 84.1). This Phase I ESA has been prepared in accordance with ASTM Practice E1527-13 and United States Environmental Protection Agency (USEPA) All Appropriate Inquiries (AAI) Final Rule. According to the USEPA, the AAI Final Rule is the process of evaluating a property’s environmental conditions and assessing potential liability for any contamination. All appropriate inquiries must be conducted to obtain certain protections from liability under the federal Superfund Law (also known as Comprehensive Environmental Response Compensation and Liability Act [CERCLA]). The purpose of this assessment is to identify recognized environmental conditions (RECs), historic RECs (HRECs), and/or Controlled RECs (CRECs) associated with the Site, as defined in the ASTM E1527-13 Standard. In addition, the assessment addresses ASTM non-scope considerations.

### ***ES.2 Project Description***

The Site includes eight tax parcels. The parcels are generally rectangular-shaped parcel with frontage along Hoeltzer Street, Sullivan Street, and North Clinton Avenue. The Site consists of the following.

<b><u>Section, Block, &amp; Lot</u></b>	<b><u>Address</u></b>	<b><u>Parcel Size</u></b>	<b><u>Development</u></b>
106.39-1-1	844 North Clinton Ave.	0.1 acres	Vacant Land
106.39-1-2	7 Sullivan St.	0.08 acres	Vacant Land
106.39-1-3.1	9-11 Sullivan St.	0.35 acres	Vacant Land
106.39-1-75.2	6-8 Hoeltzer St.	0.2 acres	Vacant Land
106.39-1-78.1	810-814 North Clinton Ave.	0.19 acres	Vacant Land
106.39-1-80.1	818-822 North Clinton Ave.	0.35 acres	Vacant Land
106.39-1-82.1	826-830 North Clinton Ave.	0.21 acres	Vacant Land
106.39-1-84.1	840 North Clinton Ave.	0.2 acres	Vacant Land

This Phase I ESA was performed to evaluate RECs, HRECs, CRECs, and ASTM non-scope considerations along with assessing potential liability for any contamination associated with the Site. The Phase I ESA included the following tasks:

- site reconnaissance;
- investigation of historical site conditions;
- interview with an individual having knowledge of the Site;
- review of regulatory records;
- review of an environmental database;
- observations of neighboring properties to assess potential adjacent environmental concerns; and,
- preparation of this report in accordance with ASTM and AAI guidelines.

### ***ES.3 Environmental Impacts***

Based on information gathered during this Phase I ESA, the following known or suspect RECs were identified.

- The southwest adjacent property address at 799 North Clinton Avenue has historically been utilized as a gasoline station and for automotive repair since at least 1970. Based on historical records, this site has been utilized as follows: Rocky's Atlantic Service Station, 1970-1975; Colon Arco/Colon Auto Repair, 1982-2003; and, Valero, 2012 to the present. Based on the regulatory records, one in-service 15,000-gallon gasoline underground storage tank (UST) is registered for this site under F&D of Rochester, Inc. The Site is also identified through the regulatory records as an open NY Spill site under Colon Auto Repair. Spill No. 02000094 occurred on April 3, 2002 and involved the discovery of impacted soil during a subsurface investigation. This spill remains open by the New York State Department of Environmental Conservation (NYSDEC). In addition, this property may be associated with a closed leaking tank (LTANK) spill listed for Ron's Arco located at Clinton and Scrantom Streets (which is suspected to be 799 North Clinton Avenue. This LTANK, Spill No. 8201833, occurred on February 1, 1983 and involved the removal of a few USTs. One tank was found to have several small holes. This spill was subsequently closed on October 20, 1999. Based on the history of this adjacent property and an open NYSDEC listed spill, this property is considered a REC.
- A few dry cleaning facilities were also historically identified west adjacent to the Site. These dry cleaners include: Babbs Tailors and Cleaners, 837 North Clinton Avenue (1950); Bobbs Tailors and Cleaners, 843 North Clinton Avenue (1940-1945); Spik N' Span Dry Cleaners/Vincent J. Filippone, 791 North Clinton Avenue (1950); and, Spiak N' Span Dry Cleaners/Vincent J. Filippone (1955). Based on the adjacent location of these dry cleaning facilities and the lack of information relative to the environmental condition of those sites, impact to the Site is possible. Therefore, these properties are considered RECs.

The following de minimis condition was identified.

- Based on LiRo's review of the regulatory records and observations of the Site (i.e., vacant land), vapor migration is not currently anticipated to be a concern to the Site. However, if development of the Site is to occur, vapor migration might pose an environmental concern due to the nature of some of the surrounding/nearby properties.

No CRECs or HRECs were identified.

The following ASTM non-scope considerations was also identified.

- While suspect asbestos-containing materials (ACMs) and/or suspect lead-based paint covered surfaces were not present at the time of the Site reconnaissance, LiRo was informed that the Site formerly included residences which were razed. Therefore, the potential exists for the presence of buried suspect ACMs and/or lead-based paint covered surfaces.
- Although a Site investigation was previously conducted at the Site, the previous work did not reach bedrock/groundwater (the most likely pathway by which off-site contamination would migrate).

Based on the findings of the Phase I ESA, LiRo recommends the following relative to the known or suspect RECs identified above.

- A Phase II Environmental Subsurface Investigation (ESI) is recommended to confirm on-site soil and groundwater conditions. Due to the presence of most of the RECs to the west and southwest of the Site, the subsurface investigation should be focused along the westerly portion of the Site.

LiRo recommends the following relative to the de minimis condition identified above.

- Considering that the Site is currently vacant, a soil gas/vapor evaluation is not warranted at this time. A soil gas/vapor evaluation should be completed prior to any Site redevelopment that includes buildings.

LiRo recommends the following relative to the ASTM non-scope considerations identified above.

- Due to the likely presence of razed/buried building materials, it is possible that associated contaminants (i.e., metals, semi-volatile organic compounds (SVOCs), etc. are present in shallow soils. If redevelopment plans consider re-occupancy or buildings, LiRo recommends that the Phase II ESI work should include soil characterization testing to evaluate Site cover or soil disposal constraints on future development.
- If excavation activities are conducted on-site, caution should be taken relative to the potential presence of buried materials of concern including, but not limited to, building materials with suspect ACMs, lead-based paint covered surfaces, storage tanks, etc.

## **1.0 Introduction**

LiRo Engineers, Inc. (LiRo) has prepared this Phase I Environmental Site Assessment (Phase I ESA) for the City of Rochester.

### **1.1 Purpose**

This Phase I ESA was performed on eight parcels (the “Site”) addressed at 6-8 Hoeltzer Street, 7-11 Sullivan Street, and 810-844 North Clinton Avenue located within the City of Rochester, New York (Tax Section No. 106.39, Block No. 1, and Lot Nos. 1, 2, 3.1, 75.2, 78.1, 80.1, 82.1, and 84.1). Tax Block No. 1 is bounded by Sullivan Street to the north, Hoeltzer Street to the south, Joseph Avenue to the east, and North Clinton Avenue to the west. Lot Nos. 1, 2, 3.1, 75.2, 78.1, 80.1, 82.1, and 84.1 are located within the west portion of Block No. 1. The location and boundary of the Site are presented in Figures 1 and 2, respectively.

LiRo has prepared this Phase I ESA in accordance with the ASTM Practice E1527-13 and United States Environmental Protection Agency (USEPA) All Appropriate Inquiries (AAI) Final Rule. According to the USEPA, the AAIs Final Rule is the process of evaluating a property’s environmental conditions and assessing potential liability for any contamination. All appropriate inquiries must be conducted to obtain certain protections from liability under the federal Superfund Law (also known as Comprehensive Environmental Response Compensation and Liability Act [CERCLA]). The purpose of this assessment is to identify recognized environmental conditions (RECs), historic RECs (HRECs), and/or Controlled RECs (CRECs) associated with the Site, as defined in the ASTM E1527-13 Standard.

This report is intended for the sole use of the client unless written approval is granted by the client and LiRo.

### **1.2 Scope of Work**

The scope of the Phase I ESA included, but was not limited to:

1. site visit and reconnaissance of the assessed properties and their adjoining properties;
2. review of *User* provided information;
3. review of historical Sanborn fire insurance maps;
4. review of governmental regulatory agency databases for potential environmental impact on the property or from adjacent and adjoining property listings; and,
5. interview with an individual having knowledge of the Site.

### **1.3 Significant Assumptions**

LiRo has prepared this Phase I ESA within the scope of ASTM Practice E1527-13 and USEPA AAI Final Rule on the assessed property.

### **1.4 Limitations and Exceptions**

LiRo has obtained information through various sources including, but not limited to, an environmental database provided by Environmental Data Resources, Inc. (EDR) and various agencies. It is possible that additional information exists for the property that was not provided to LiRo at the time that this Phase I ESA was performed. The findings presented in this report are based upon information reasonably

ascertainable or visible at the time of the assessment. At the time this report was prepared, LiRo had not received a complete response for records from the City of Rochester through the Freedom of Information Law (FOIL) process.

Correspondence with the above mentioned agency, along with correspondences with additional agencies, are provided in Attachment 8.

### ***1.5 Special Terms and Conditions***

This Phase I ESA does not warrant against the following.

- Conditions not visible at the time of the site reconnaissance.
- Historical information that was not included in the records obtained.
- Information from off-site contaminant sources not available in public records.
- Conditions only accessible through site investigation techniques (i.e., drilling or excavating).

### ***1.6 User Reliance***

LiRo can assure the client that this Phase I ESA has been prepared in accordance with ASTM Practice E1527-13 with any exceptions as noted in Section 1.4 along with the USEPA AAI Final Rule. This report is presumed to be valid for a reasonable period (i.e., 180-days from the report date) or until the client obtains information, which alters a significant finding or conclusion. The findings, opinions, and recommendations presented in this report are exclusive to the client and the assessed property. Written permission must be obtained from LiRo and its client for use of this report, its findings, opinions, and recommendations by other parties, persons, or firms.

## **2.0 Site Description**

### **2.1 Location and Legal Description**

The subject Site is located within the City of Rochester, New York (Tax Section No. 106.39, Block No. 1, and Lot Nos. 1, 2, 3.1, 75.2, 78.1, 80.1, 82.1, and 84.1) (Figure 2). The Site is generally rectangular-shaped with frontage along Hoeltzer Street, Sullivan Street, and North Clinton Avenue.

Block No. 1 is bounded by Sullivan Street to the north, Hoeltzer Street to the south, Joseph Avenue to the east, and North Clinton Avenue to the west, as shown on Figures 1 and 2. Lot Nos. 1, 2, 3.1, 75.2, 78.1, 80.1, 82.1, and 84.1 are located within the west portion of Block No. 1.

### **2.2 Site and Vicinity General Characteristics**

The Site is located in a mixed commercial and residential area in the City of Rochester, New York. The Site is currently vacant land. The surrounding area is an urban setting.

### **2.3 Current Use of the Property - Descriptions of Structures, Roads, Other Improvements on the Site**

Based on records provided by the City of Rochester, the Site contains eight tax parcels. The eight tax parcels are currently all vacant land. Photographs of the Site are provided in Attachment 7.

### **2.4 Current Uses of the Adjoining Properties**

The Site block primarily consists of residential structures, a few vacant lots, and small commercial storefronts along Joseph Avenue and at the northeast corner of North Clinton Avenue and Hoeltzer Street. Adjacent properties include AutoZone, residence, and vacant lots to the north, Chinese restaurant, residences, and vacant lots to the south, residences and vacant lots to the east, and commercial storefronts (including a Valero Gas Station) and residences to the west.

## **2.5 Physical Setting**

### **2.5.1 Topography**

LiRo reviewed the United States Geologic Survey (USGS), Rochester East, New York 7.5' Quadrangle (1979). The elevation at the Site is approximately 495 feet above mean sea level (amsl). The area immediately surrounding the Site has a general slope toward the north-northwest.

### **2.5.2 Area Geology**

No Site-specific geologic information was available for the subject Site. According to the Surficial Geologic Map of New York – Finger Lakes Sheet, dated 1986, the surficial geology at the Site consists of lacustrine silt and clay. Lacustrine silt and clay is generally laminated clay and silt deposited in proglacial lakes which is generally calcareous and potential caused instability in the land.

According to the Geologic Map of New York – Finger Lakes Sheet, dated 1970, the geology at the Site consists of the Lockport Group, specifically the Oak Orchard and Penfield Dolostones which are both replaced eastwardly by the Sconodoa Formation (limestone and dolostone).

### ***2.5.3 Area Hydrogeology***

No Site-specific hydrogeologic information was available for the subject Site. In general, the depth to the water table varies but generally follows topography. Generally, groundwater flow follows topographic elevation of the area with flow migrating from higher to lower elevations. Based on LiRo's review of the Rochester East, New York topographic map, groundwater is anticipated to be present at a depth greater than 30 ftbg. The nearest surface water body is the Genesee River located approximately 4,000 feet west, flowing north, and down-gradient from the Site. Based on elevation of the Site, groundwater flow is anticipated to be to the north-northwest. Groundwater flow direction may also vary due to seasonal fluctuations in precipitation, local usage demands, local variation in geology, underground structures, or local dewatering operations.

### **3.0 User Provided Information**

#### **3.1 Title Record**

Representatives of the City of Rochester provided access to the Abstract of Title and deeds via microfilm for the Site parcels which did not identify any activities of potential environmental concern. The records primarily referred to single residential owners for the Site with the exception of 836 North Clinton Avenue which was sold to Yeoman's and Son, Inc. The nature of the on-site use at that time is unknown.

Based on the City of Rochester tax map, the total size of the Site is approximately 1.68 acres and is designated as vacant lots. A summary of the City of Rochester records for the Site is provided below:

<b>Lot No.</b>	<b>Lot Dimensions (feet)</b>	<b>Lot Area (sq. ft.)</b>	<b>Address</b>	<b>Site Use/Development</b>	<b>Owner</b>
<b>1</b>	29.5 x 143.08	4,221	844 N. Clinton Ave.	Vacant Land	City of Rochester
<b>2</b>	34.65 x 99.14	3,435	7 Sullivan St.	Vacant Land	City of Rochester
<b>3.1</b>	85 x 162.11	13,779	9-11 Sullivan St.	Vacant Land	City of Rochester
<b>75.2</b>	89 x 98.92	8,804	6-8 Hoeltzer St.	Vacant Land	City of Rochester
<b>78.1</b>	69.22 x 135.12	9,353	810-814 N. Clinton Ave.	Vacant Land	City of Rochester
<b>80.1</b>	65.02 x 236.82	15,398	818-822 N. Clinton Ave.	Vacant Land	City of Rochester
<b>82.1</b>	63.05 x 158.67	10,004	826-830 N. Clinton Ave.	Vacant Land	City of Rochester
<b>84.1</b>	69.7 x 125	8,712.5	840 N. Clinton Ave.	Vacant Land	City of Rochester

#### **3.2 Environmental Liens or Activity and Use Limitations (AUL)**

Based on the regulatory records and the City of Rochester Department of Environmental Quality (DEQ) environmental institutional control website, no restrictive and/or environmental declarations have been identified for the Site.

#### **3.3 Specialized Knowledge/Commonly Known or Reasonably Ascertainable Information**

The City of Rochester informed LiRo that the Site is currently vacant land.

### ***3.4 Owner, Property Manager, and Occupant Information***

According to records provided by the client, the City of Rochester is the property owner of the Site. Joseph Biondillo, representatives of the City of Rochester, was identified as the Site *Key Site Manager*.

### ***3.5 Reason for Performing a Phase I ESA***

According to the USEPA, the AAIs Final Rule is the process of evaluating a property's environmental conditions and assessing potential liability for any contamination. All appropriate inquiries must be conducted to obtain certain protections from liability under the federal Superfund Law (also known as CERCLA). The purpose of this assessment is to identify RECs, HRECS, CRECS, and ASTM non-scope considerations associated with the Site, as defined in the ASTM E1527-13 Standard.

This Phase I ESA was prepared solely for use of the City of Rochester.

## 4.0 Records Review

### 4.1 Standard Environmental Record Sources

The government records search developed by EDR includes federal, state, and local government databases of: known or suspected inactive hazardous waste sites; petroleum and chemical bulk storage tank sites; reported spills, including leaking underground storage tanks (USTs); air pollution point sources; toxic wastewater dischargers; and, hazardous waste generators and treatment, storage, and disposal facilities.

A complete list of the federal and state databases searched by EDR is provided in Attachment 1. A summary of the sites identified through the federal and state regulatory agency databases review, including the Site, is provided below.

Federal, State and City List	Last Update	Site Appears on List	Search Radius	No. of Sites within Search Radius
Corrective Action Sites (CORRACTS)	12/9/15	No	1 mile	1
Resource Conservation and Recovery Act (RCRA) Large Quantity Generator (LQG)	12/9/15	No	¼ mile	1
RCRA Conditionally Exempt Small Quantity Generator (CESQG)	12/9/15	No	¼ mile	1
NY State Hazardous Waste Site (NY SHWS)	5/17/16	No	1 mile	7
NY Vapor Reopened	8/1/15	No	1 mile	3
Leaking Storage Tank Incident Reports (LTANKS)	5/17/16	No	½ mile	9
UST	3/29/16	No	¼ mile	2
Aboveground Storage Tank (AST)	3/29/16	No	¼ mile	1
NY Engineering Controls (NY ENG CONTROLS)	9/10/15	No	½ mile	1
NY Institutional Controls (NY INST CONTROLS)	9/10/15	No	½ mile	1
NY Brownfields/US Brownfields	5/17/16 / 3/21/16	No	½ mile	1/1
NY Spills	5/17/16	No	⅛ mile	9
RCRA-Non Generator (NonGen)	12/9/15	No	¼ mile	5
Formerly Used Defense Sites (FUDS)	1/31/15	No	1 mile	1
NY Manifest/PA Manifest	5/1/16 / 12/31/14	No	¼ mile	3/1
Manufactured Gas Plant (MGP)	Not Applicable	No	1 mile	2
Historic Auto	Not Applicable	No	⅛ mile	11
Historic Cleaners	Not Applicable	No	⅛ mile	6

The following subsections provide a discussion of the Site and surrounding properties, which have been identified within the search radius and listed in the table.

#### 4.1.1 Corrective Action Listed Site (CORRACTS)

CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

The EDR report did not identify the Site or any adjacent sites as a CORRACTS site. The one identified CORRACTS site is located over one-half mile from the Site. Based on the location of this site, it is unlikely that this property had an environmental impact on the Site.

#### **4.1.2 RCRA Large Quantity Generator (LQG)**

The report identified one RCRA LQG site within the specified ASTM radius. LQGs generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

The EDR report did not identify the Site or any adjacent sites as a RCRA LQG site. The one identified RCRA LQG site is located over one-eighth mile from the Site. Based on the location of this site, it is unlikely that this property had an environmental impact on the Site.

#### **4.1.3 RCRA Conditionally Exempt Small Quantity Generator (CESQG)**

The report identified one RCRA CESQG sites within the specified ASTM radius. CESQG sites generate less than 100 kg of hazardous waste or less than 1 kg of acute hazardous waste per month. The one identified property is located over one-eighth mile from the Site. Based on the location of this site, it is unlikely that this property had an environmental impact on the Site.

#### **4.1.4 NY State Hazardous Waste Site (SHW)**

The report identified seven NY SHWSs within the specified ASTM radius. The SHWS records are the states' equivalent to Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS). These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data comes from the New York State Department of Environmental Conservation (NYSDEC) Inactive Hazardous waste Disposal Sites in New York State. All seven SHWSs are located over one-half mile from the Site. Based on the distance from the Site, it is unlikely that these properties had an environmental impact on the Site.

#### **4.1.5 NY Vapor Reopened**

"Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

The report identified three NY Vapor Reopened sites within the specified-ASTM radii. All three of the sites are located over one-half mile from the Site. Based on the distance from the Site, it is unlikely that these properties had an environmental impact on the Site.

#### **4.1.6 Leaking Tanks (LTANK)**

LTANK Incident Reports are records that contain an inventory of reported leaking storage tank incidents reported from April 1, 1986 through the most recent update. They can be either leaking USTs or leaking aboveground storage tanks (ASTs). The causes of the incidents are tank test failures, tank failures, or tank overfills.

The EDR report identified nine LTANK sites within the specified-ASTM radius. Of these nine LTANK sites, one is located within one-eighth mile of the Site while the remaining are located at least one-quarter mile from the Site. Information regarding the one LTANK site located within one-eighth mile of the Site is as follows.

- Ron's Arco, Clinton and Scrantom Streets – LTANK Spill No. 8201833 occurred February 1, 1983 and involved the removal of a few USTs. This property is assumed to be the same location as the current Valero Gas Station which is southwest adjacent to the Site. One tank was found to have several small holes. This spill was subsequently closed on October 20, 1999. No additional details regarding this LTANK were provided.

While the above listed spill has been closed by the NYSDEC, an open NY Spill is on file for this property. In addition, this property has been utilized as a gas station/automotive repair facility since at least at least 1970. Therefore, this property is considered a REC to the Site.

#### **4.1.7 Underground Storage Tank (USTs)**

The EDR report identified two UST sites within the specified-ASTM radii. UST sites are sites that contain USTs. Of the two properties, one is located within one-eighth mile from the Site while the other is located between one-eighth and one-quarter mile from the Site. The following is a summary of the one property located within one-eighth mile of the Site.

- F&D of Rochester, Inc., 799 North Clinton Avenue – This property is southwest adjacent to the Site. This facility is identified as a retail gas station with one in-service 15,000-gallon gasoline UST.

As indicated in Section 4.1.6 above, an open NY Spill is on file for this property. In addition, this property has been utilized as a gas station/automotive repair facility since at least at least 1970. Therefore, this property is considered a REC to the Site.

#### **4.1.8 Aboveground Storage Tank Database**

AST sites are sites that contain ASTs. The EDR report identified one AST site within the specified-ASTM radii. This one property is located over one-eighth mile from the Site. Based on the location of this site, it is unlikely that this property had an environmental impact on the Site.

#### **4.1.9 NY Engineering Controls**

NY Engineering Controls are environmental remediation sites that have engineering controls in place. The databases identified one NY Eng Controls site within the specified-ASTM radii. This property is located over one-quarter mile from the Site. Based on the location of this site, it is unlikely that this property had an environmental impact on the Site.

#### **4.1.10 NY Institutional Controls**

NY Institutional Controls are environmental remediation sites that have institutional controls in place. The databases identified one NY Inst Controls site within the specified-ASTM radii. This property is located over one-quarter mile from the Site. Based on the location of this site, it is unlikely that this property had an environmental impact on the Site.

#### **4.1.11 NY Brownfields/US Brownfields**

A Brownfields site is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant. The databases identified the presence of one NY Brownfields facility and one US Brownfields facility within the specified-ASTM radii. The two identified sites are located over one-quarter and one-eighth mile from the Site, respectively. Based on the location of these sites, it is unlikely that these properties had an environmental impact on the Site.

#### **4.1.12 NY Spill**

The report identified nine NY Spills within the specified-ASTM radii. NY Spill sites are sites that contain chemical and petroleum spill incidents. Of these nine spill sites, two properties are adjacent to the Site, one of which remains open by the NYSDEC. A summary of these two spill sites is as follows.

- Colon Auto Repair, 799 North Clinton Avenue – This property is southwest adjacent to the Site. Spill No. 02000094 occurred April 3, 2002 and involved the discovery of impacted soil during a subsurface investigation. This spill remains open by the NYSDEC.
- AutoZone, 852 North Clinton Avenue – This property is north adjacent to the Site. Spill No. 0811626 occurred January 22, 2009 and involved a release from a battery. This spill was closed by the NYSDEC on January 26, 2009.

Since the spill at the AutoZone only involved a battery and has been closed by the NYSDEC, this property does not pose an environmental concern to the Site. However, as indicated in Section 4.1.6 and within the above bullet, an open NY Spill is on file for 799 North Clinton Avenue. In addition, this property has been utilized as a gas station/automotive repair facility since at least at least 1970. Therefore, this property is considered a REC to the Site.

#### **4.1.13 RCRA – Non Generator**

The EDR report identified five RCRA-Non Generator (RCRA-NonGen) sites within the specified-ASTM radii. RCRA sites are sites that generate, transport, store, treat, and/or dispose of hazardous waste and RCRA-NonGen sites are sites that do not presently generate hazardous waste. Three of the five properties are located within one-eighth mile of the Site while the remaining two are located between one-eighth and one-quarter mile of the Site. The following is a summary of the properties located within one-eighth mile of the Site.

- Verizon New York, Inc., Wilson and Lindon – This property, which was also identified as a closed NY Spills site, has no open spills or violations on file.
- Eltrex Industries, Inc., 65 Sullivan Street – This property, which was also identified as a NY Manifest and US AIRS property, has no open spills or violations on file.

- Eastman Kodak – c/o Days Inn, 25 Sullivan Avenue, Liberty, NY – Based on the address provided, this property does not appear to be located within one-eighth mile of the Site and was apparently miss-plotted by EDR.

Based on the lack of records of any open release or violations, it is unlikely that these properties had an environmental impact on the Site.

#### **4.1.14 Formerly Used Defense Sites (FUDS)**

The FUDS listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions. Based on the EDR report, one FUDS site was identified within the specified-ASTM radii. This property is located over one-half mile of the Site. Based on the location of this site, it is unlikely that this property had an environmental impact on the Site.

#### **4.1.15 NY Manifest and Pennsylvania (PA) Manifest**

The EDR report identified three NY Manifest sites and one PA Manifest site within the specified-ASTM radii. Of these four listings, one is a duplicate listing through NY and PA. The Manifest database lists and tracks hazardous waste from the generator through transporters to a treatment, storage, disposal (TSD) facility. Two of the Manifest properties are located within one-eighth mile of the Site while one is located over one-eighth mile of the Site. The following is a summary of the two properties located within one-eighth mile of the Site.

- Eltrex Industries, Inc., 65 Sullivan Street – This property, which was also identified as a NY Manifest and US AIRS property, has no open spills or violations on file.
- Eastman Kodak – c/o Days Inn, 25 Sullivan Avenue, Liberty, NY – Based on the address provided, this property does not appear to be located within one-eighth mile of the Site and was apparently miss-plotted by EDR.

Based on the lack of records of any open release or violations, it is unlikely that these properties had an environmental impact on the Site.

#### **4.1.16 Manufactured Gas Plants**

The EDR report identified two manufactured gas plant (MGP) facilities within one mile of the Site. MGPs were used between the 1800's and 1950's to produce a gas that could be distributed and used as fuel. The byproduct from this process includes coal tar, sludges, and oils, which was frequently disposed of directly at MGP sites. These properties are both located over one-half mile from the Site. Based on the location of these properties, it is unlikely that these properties had an environmental impact on the Site.

#### **4.1.17 Historic Auto Facilities**

The EDR report identified 11 historic Auto facilities within one-eighth mile of the Site. EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. A summary of the 11 historic Auto facilities identified by EDR is as follows.

- 799 North Clinton Avenue – This property is southwest adjacent to the Site. Rocky's Atlantic Service Station – 1970-1975, Colon Arco/Colon Auto Repair – 1982-2003, Valero - 2012
- Rocky's Atlantic Service, 785 North Clinton Avenue – Rocky's Atlantic Service – 1965
- 780 North Clinton Avenue – Carl H. Schrodts Auto Repair – 1950, Mike's Repair Garage/Myron A. Cohen/Mike's Garage of Rochester Auto Repair – 1955-2000, Mike Cohen Auto Repair – 2000, Moorehead Collision – 2001-2003
- David Archibald Gas, 892 North Clinton Avenue – Standard Oil Co. of NY – 1935, Walter Yaeger II Gas Station – 1940-1945, David Archibald Gas Station – 1950, Henry and Rogers Service Station – 1955, Hank and Rogers Service – 1960, Roger Dewert Service Station – 1965-1970, Wilson Durant Service Gas Station – 1975-1982
- Lagos Garage, 6 Siebert Pl. – Lagos Garage - 1982
- Arthur J. Reiland Automobile, 1 Siebert Pl. – Arthur J. Reiland Automobile - 1926
- Jim's Automotive Service, 901 North Clinton Avenue – Normans Garage – 1945, Jim's Automotive Service – 1982-1985
- 12 Siebert Pl. – Jemz Transmission and Auto Repair - 2010
- Socony Station R1 Gasoline, 907 North Clinton Avenue – Socony Station R1 Gasoline - 1926
- R. Streb John G. Garage, 741 North Clinton Avenue – R. Streb John G. Garage - 1930
- Standard Oil Co. of NY Gasoline Station, 910 North Clinton Avenue – Standard Oil Co. of NY Gasoline Station - 1930

Based on the location of the majority of the above-mentioned sites, impact to the Site is not anticipated. However, as indicated in Section 4.1.6 and within the above bullet, an open NY Spill is on file for 799 North Clinton Avenue. In addition, this property has been utilized as a gas station/automotive repair facility since at least at least 1970. Therefore, this property is considered a REC to the Site.

#### **4.1.18 Historic Cleaners**

The EDR report identified six historic Cleaners within one-eighth mile of the Site. EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. A summary of the six historic Cleaners identified by EDR is as follows.

- Babbs Tailors and Cleaners, 837 North Clinton Avenue – This property appears to have been located west adjacent to the Site. Babbs Tailors and Cleaners – 1950
- Bobbs Tailors and Cleaners, 843 North Clinton Avenue – This property appears to have been located west adjacent to the Site. Bobbs Tailors and Cleaners – 1940
- Spiak N' Span Dry Cleaners/Vincent J. Filippone, 791 North Clinton Avenue – This property appears to be southwest adjacent to the Site. Bobbs Tailors and Cleaners – 1945, Spic N' Span Cleaners – 1950, Spiak N' Span Dry Cleaners/Vincent J. Filippone - 1955

- Thrifty Dry Cleaners, 884 North Clinton Avenue – Thrifty Dry Cleaners - 1940
- Wynars Laundry Equipment, 914 North Clinton Avenue – Wynars Laundry Equipment – 1965-1975
- Clinton Dry Cleaning, 927 North Clinton Avenue – Spic N’ Span Cleaners – 1945-1960, DeLux Cleaners – 1965, Clinton Dry Cleaners - 1970

Based on the adjacent location of some of the above-listed dry cleaning facilities and the lack of information relative to the environmental condition of those sites, impact to the Site is possible. Based on the location of the remaining above-mentioned sites, impact to the Site is not anticipated.

## **4.2 Historical Use Information on the Property/Adjoining Properties**

### **4.2.1 Sanborn Fire Insurance Maps**

Sanborn Fire Insurance maps (Sanborns) were obtained from EDR (Attachment 2) and the City of Rochester. Maps dating 1892, 1911, 1950, 1960s, and 1971 were reviewed to determine past or current land uses on and in the immediate vicinity of the Site that may be of environmental concern. A summary of the Sanborn maps is below.

<b>Year</b>	<b>Comments</b>
1892	<b>Site:</b> The Site appears to be developed with a few residential structures and a few commercial storefronts including a smoke house. No usage of potential environmental concern were noted. <b>Surrounding Properties:</b> The surrounding area appears to be developed primarily with residential and commercial storefronts and a church and school.
1911	<b>Site:</b> The Site appears to be developed with a few more residential structures than previously noted along with the previously noted commercial storefronts. No usage of potential environmental concern were noted. <b>Surrounding Properties:</b> The surrounding area generally appears as noted in 1892.
1950	The Site and surrounding area appear generally as noted in 1892 and 1911; however, a tin shop is identified on-site. . The surrounding areas was also noted to include an undertakers to the north of the Site, an auto repair facility to the south of the Site, and a dry cleaners to the southwest of the Site.
1960s	<b>Site:</b> The Site appears to be developed with a few more residential structures than previously noted along with the previously noted commercial storefronts. No usage of potential environmental concern were noted. <b>Surrounding Properties:</b> The surrounding area generally appears as noted from 1892 through 1950.
1971	<b>Site:</b> The Site appears as noted in 1950 and 1960s; however, the tin shop is no longer present. <b>Surrounding Properties:</b> The surrounding area appears as noted in 1950 and 1960s; however, a gas station is now present to the southwest of the Site.

Based on review of the Sanborn maps, no on-site RECs were identified. Review of the Sanborn Maps have identified surrounding land usage posing an environmental concern to the Site. Such land usage includes a gas station to the southwest of the Site (1970), an auto repair facility to the south of the Site (1950), and a dry cleaners to the southwest of the Site (1950).

### **4.2.2 Historical Topographic Maps**

LiRo reviewed available historical USGS Topographic Quadrangle Maps, dating 1895, 1898, 1912, 1920, 1931, 1935, 1952, 1969, 1971, 1978, and 2013, for information regarding past uses of the Site. The Topographic Quadrangle Maps were supplied through EDR. Copies of the topographic maps are included in Attachment 3.

Year	Comments
1895-1931	<b>Site:</b> The Site appears to be developed with a few structures. The nature of these structures is not clear based on the topographic maps. <b>Surrounding Properties:</b> The surrounding area appears to be developed. The nature of these structures is not clear based on the topographic maps.
1935-2013	Due to the highly developed nature of the Site and surrounding area, no structures, other than schools, are indicated on this map.

The review of Historical USGS Topographic Quadrangles did not indicate any RECs, HREC, or CREC at the Site or surrounding area.

### 4.2.3 Historical Aerial Photographs

Historical aerial photographs of the Site and surrounding areas were provided by EDR in order to identify historical land use that may have involved hazardous substances and petroleum products. These photographs date 1938, 1951, 1958, 1966, 1971, 1980, 1985, 1994, 2006, 2008, 2009, and 2011. Copies of the aerial photographs are included in Attachment 4. Additional historical aerial photographs were reviewed through the MCDOH office. These photographs date 1951, 1961, 1970, 1975, 1978, 1993, and 1999. A summary of the aerials reviewed are as follows.

Year	Comments
1938-1999	<b>Site:</b> The Site appears to be developed with multiple structures which are likely residential and/or commercial in nature based on their size and shape. <b>Surrounding Properties:</b> The surrounding area also appears to include residential and/or commercial structures.
2006-2011	<b>Site:</b> In 2006, all but one of the on-site structures has been razed. This structure, located at 844 North Clinton Avenue, appears to be commercial in nature. From 2008-2011, the Site appears to be vacant. <b>Surrounding Properties:</b> The surrounding area appears to be developed with residential and/or commercial structures as previously noted.

The review of aerial photographs did not indicate any RECs, HREC, or CREC at the Site or surrounding area.

### 4.2.4 City Directories

A review of historical city directories from 1926 through 2013 was conducted by EDR. The following table provides a general summary of Site and surrounding uses according to the city directories and specifically identifies tenants of potential environmental concern. A copy of the historical city directories can be found in Attachment 5.

The city directory search performed by EDR searches all addresses within 660 feet of the target property. In this case, the only addresses provided by the search were for the Site itself and information pertaining to surrounding properties.

Site:

Address	Dates / Comments
822 North Clinton Ave.	<b>1940:</b> Fritz Scientific Laboratory

**Surrounding Properties:**

<b>Address</b>	<b>Dates / Comments</b>

901 North Clinton Ave.	<b>1926:</b> William Neidermeier Garage <b>1930-1940:</b> Clinton and Clifford Garage <b>1945:</b> Norman's Garage <b>1982-1985:</b> Jim's Automotive Services
14 Kappel Pl.	<b>1955:</b> Wolitzky Sol Anna Globe Dry Cleaners and Dyers
16 Sullivan St.	<b>1965-1970:</b> Walter Brundage Painting Contractor
41 Sullivan Ave.	<b>1955:</b> Etkin Jacob Minnie Cleaners and Dyers

Based on review of the historical City Directories, no on-site RECs were identified. Operation of potential environmental concern in the surrounding area include gas stations and auto repair facilities and dry cleaners. These surrounding operations may have resulted in environmental impact to the Site and are therefore considered RECs.

#### **4.2.5 Municipal Building Department**

According to the City of Rochester municipal records, the Site consists of eight (8) tax parcels including Tax Section No. 106.39, Block No. 1, and Lot Nos. 1, 2, 3.1, 75.2, 78.1, 80.1, 82.1, and 84.1. The eight (8) parcels are currently owned by the City of Rochester. Prior Site owners have been identified as Angel Colon, Carlton Cote, Carl Cote, Carl Munding, Clifford Walker, Mahmood Aishaibi, Alicia Vargas, Armando Espinosa, Equity Systems Realty, LLC, and Allen J. Polvino. A copy of these records is included in Attachment 6.

#### **4.2.6 Previous Study**

LiRo was provided the “Environmental Phase II Site Assessment Report for Specified City-Owned Property within the North Clinton Avenue Urban Renewal District” which was prepared by Larsen Engineers (Larsen) of Rochester, New York and dated April 2003. It should be noted that this Phase II included a few additional parcels than included within the current Phase I ESA.

According to this report, a Phase I ESA was conducted by Larsen in September 2002 which recommended that a subsurface investigation be completed based on: the potential presence of USTs on-site; the former presence of a 1,000-gallon UST at 12 Hoeltzer Street; the presence of an old pole-mounted transformer and debris and trash at 12 Hoeltzer Street; and, the presence of an open NYSDEC listed spill at 799 North Clinton Avenue. The subsurface investigation was conducted in April 2003 and included a subsurface GeoProbe survey, soil characterization, headspace analysis, and soil sampling. Based on the headspace analysis, one soil sample was submitted for analysis at Paradigm Environmental Services, Inc. Based on the analysis of this sample via Spill Technology and Remediation Series (STAR) List using USEPA Methods 8021 and 8270, no contaminants were detected.

A copy of this previous study is included as Attachment 10.

#### **4.3 Foil Requests**

LiRo submitted FOIL requests to the City of Rochester, MCDOH, NYSDOH, NYSDEC, and USEPA. Correspondence with these agencies is provided in Attachment 8. Based on the responses received to date, no records have been identified for the Site. The City of Rochester will be notified of any relevant Site information once the remaining FOIL information has been received and reviewed.

#### **4.4 Vapor Migration**

To migrate or migration refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

Based on LiRo’s review of the regulatory records and observations of the Site (i.e., vacant land), vapor migration is not currently anticipated to be a concern to the Site. However, if development of the Site is to occur, vapor migration might pose an environmental concern due to the nature of some of the surrounding/nearby properties.

## 5.0 Site Reconnaissance

On August 18, 2016, Mr. Mitch Smith and Ms. Elizabeth Caggiano of LiRo performed the site reconnaissance. The Owner/Operator Questionnaire was completed by Mr. Joseph Biondillo, Senior Environmental Specialist for the City of Rochester. The site reconnaissance included a visual inspection and a site walk around the property to identify any evidence of activities or conditions that may be relevant to this assessment. Site photographs are included in Attachment 7. The Site Condition Report which summarizes the observations made during the Site reconnaissance and Owner/Operator Questionnaire are included in Attachment 9.

### Overview

The subject Site is currently vacant undeveloped land which includes grass, trees, and concrete sidewalks. No structures are located on-site. The Site has an approximate five percent slope from west to east. There are no surficial water bodies (including pits, ponds, or lagoons) located within the boundaries of the Site. The Genesee River is located approximately 2,000 feet west of the Site.

The Site is located within an area that is supplied with municipal sewer, water, natural gas, and electric. Since the Site is vacant, there are no heating or cooling systems present. In addition, no solid, hazardous, or regulated waste is currently generated on-site.

## 5.1 Methodology and Limiting Conditions

At the time the site visit was conducted, LiRo performed a general walk-over of the Site.

## 5.2 Observations

The following sections summarize the observations made during LiRo's site reconnaissance on August 18, 2016.

### 5.2.1 Current Uses of the Property

The Site lot is characterized by the following.

Lot No.	Lot Dimensions (feet)	Lot Area (sq. ft.)	Address	Site Use/Development
1	29.5 x 143.08	4,221	844 N. Clinton Ave.	Vacant Land
2	34.65 x 99.14	3,435	7 Sullivan St.	Vacant Land
3.1	85 x 162.11	13,779	9-11 Sullivan St.	Vacant Land
75.2	89 x 98.92	8,804	6-8 Hoeltzer St.	Vacant Land
78.1	69.22 x 135.12	9,353	810-814 N. Clinton Ave.	Vacant Land
80.1	65.02 x 236.82	15,398	818-822 N. Clinton Ave.	Vacant Land
82.1	63.05 x 158.67	10,004	826-830 N. Clinton Ave.	Vacant Land
84.1	69.7 x 125	8,712.5	840 N. Clinton Ave.	Vacant Land

## **5.2.2 Hazardous Substances and Petroleum Products in Connection with identified Uses**

At the time of the Site reconnaissance, there was no evidence of hazardous and/or regulated materials on-site. There were no visible signs of unidentified substance containers (unlabeled drums, etc.) noted at the time of the Site inspection.

## **5.2.3 Storage Tanks**

No chemical or petroleum storage tanks were observed at the Site.

## **5.2.4 Heating/Cooling**

Since the Site is undeveloped, no heating or cooling systems were noted.

## **5.2.5 Drains or Pits**

Since the Site is undeveloped, no floor drains or sumps were noted. No storm drains were noted.

## **5.2.6 Odors**

LiRo did not detect the presence of odors on the Site indicative of acute releases of hazardous substances or petroleum products.

## **5.2.7 Pools of Liquid**

No pools of liquid were observed.

## **5.2.8 Drums**

There were no drums observed at the Site.

## **5.2.9 Polychlorinated Biphenyls (PCBs)**

There were no suspect PCB-containing materials (e.g., transformers, hydraulic lifts, etc.) located on-site at the time of the Site inspection.

## **5.2.10 Surface Depressions, Ponds and Lagoons**

There are no surface depressions, ponds, or lagoons located on the Site or adjoining properties.

## **5.2.11 Stained Soil or Pavement**

There were no stained soils, stained pavement, or corroded surfaces noted on-site.

## **5.2.12 Stressed Vegetation**

No evidence of stressed vegetation was observed at the Site.

### **5.2.13 Solid Waste**

No solid, hazardous, or regulated waste is currently generated on-site. There were no visible signs of unidentified substance containers (unlabeled drums, etc.) noted at the time of the site inspection.

### **5.2.14 Waste Water**

Municipal sanitary and storm sewers service the area of the Site. Operations on the Site do not produce wastewaters that require any treatment or monitoring before release to the municipal sewer system. There was no evidence of a current or historic private septic system or cesspool on the Site.

### **5.2.15 Wells**

The Site is located within an area which is served by a municipal water supply system. There was no evidence of active or abandoned supply wells, drywells, irrigation wells, or monitoring wells on-site.

### **5.2.16 Suspect Asbestos Containing Materials (ACMs)**

Since the Site is undeveloped, ACMs do not pose a concern to the Site.

### **5.2.17 Suspect Lead-Based Paint**

Since the Site is undeveloped, lead-based paint does not pose a concern to the Site.

### **5.2.18 Mold**

Since the Site is undeveloped, mold does not pose a concern to the Site.

### **5.2.19 Other Environmental Concerns**

No other environmental concerns were noted at the time of the site reconnaissance.

## **6.0 Interviews**

### ***6.1 Current Owner and Occupants***

According to records provided by the client, the City of Rochester is the property owner of the Site. Joseph Biondillo, Senior Environmental Specialist for the City of Rochester, was identified as the Site *Key Site Manager*. The Owner/Operator Questionnaire was completed by Mr. Joseph Biondillo. No RECs, HREC, or CREC have been identified for the Site based on the interview.

## 7.0 Findings

Based on information gathered during this Phase I ESA, the following known or suspect RECs were identified.

- The southwest adjacent property address at 799 North Clinton Avenue has historically been utilized as a gasoline station and for automotive repair since at least 1970. Based on historical records, this site has been utilized as follows: Rocky's Atlantic Service Station, 1970-1975; Colon Arco/Colon Auto Repair, 1982-2003; and, Valero, 2012 to the present. Based on the regulatory records, one in-service 15,000-gallon gasoline UST is registered for this site under F&D of Rochester, Inc. The Site is also identified through the regulatory records as an open NY Spill site under Colon Auto Repair. Spill No. 02000094 occurred on April 3, 2002 and involved the discovery of impacted soil during a subsurface investigation. This spill remains open by the NYSDEC. In addition, this property may be associated with a closed LTANK spill listed for Ron's Arco located at Clinton and Scramton Streets (which is suspected to be 799 North Clinton Avenue. This LTANK, Spill No. 8201833, occurred on February 1, 1983 and involved the removal of a few USTs. One tank was found to have several small holes. This spill was subsequently closed on October 20, 1999. Based on the history of this adjacent property and an open NYSDEC listed spill, this property is considered a REC.
- A few dry cleaning facilities were also historically identified west adjacent to the Site. These dry cleaners include: Babbs Tailors and Cleaners, 837 North Clinton Avenue (1950); Bobbs Tailors and Cleaners, 843 North Clinton Avenue (1940-1945); Spik N' Span Dry Cleaners/Vincent J. Filippone, 791 North Clinton Avenue (1950); and, Spiak N' Span Dry Cleaners/Vincent J. Filippone (1955). Based on the adjacent location of these dry cleaning facilities and the lack of information relative to the environmental condition of those sites, impact to the Site is possible. Therefore, these properties are considered RECs.

The following de minimis condition was identified.

- Based on LiRo's review of the regulatory records and observations of the Site (i.e., vacant land), vapor migration is not currently anticipated to be a concern to the Site. However, if development of the Site is to occur, vapor migration might pose an environmental concern due to the nature of some of the surrounding/nearby properties.

No CRECs or HRECs were identified.

The following ASTM non-scope considerations was also identified.

- While suspect ACMs and/or suspect lead-based paint covered surfaces were not present at the time of the Site reconnaissance, LiRo was informed that the Site formerly included residences which were razed. Therefore, the potential exists for the presence of buried suspect ACMs and/or lead-based paint covered surfaces.
- Although a Site investigation was previously conducted at the Site, the previous work did not reach bedrock/groundwater (the most likely pathway by which off-site contamination would migrate).

## **8.0 Opinion of the Environmental Professional**

It is LiRo's professional opinion that there is a likelihood of environmentally impaired conditions at the Site as a result of historic on-site and/or historic and current operations on surrounding properties.

## **9.0 Data Gaps**

This report was prepared at the request of the City of Rochester and includes information that was available at the time it was prepared. Complete records have yet to be supplied to LiRo relative to the FOIL request submitted to the City of Rochester. The client will be notified of any relevant Site information once the FOIL information has been reviewed.

## 10.0 Conclusions

LiRo has conducted this Phase I ESA in accordance with the scope and limitations of ASTM practice E1527-13 and USEPA AAI Final Rule. Any exceptions are noted in Section 1.4. Based on the findings of the Phase I ESA, LiRo recommends the following relative to the known or suspect RECs identified above.

- A Phase II Environmental Subsurface Investigation (ESI) is recommended to confirm on-site soil and groundwater conditions. Due to the presence of most of the RECs to the west and southwest of the Site, the subsurface investigation should be focused along the westerly portion of the Site.

LiRo recommends the following relative to the de minimis condition identified above.

- Considering that the Site is currently vacant, a soil gas/vapor evaluation is not warranted at this time. A soil gas/vapor evaluation should be completed prior to any Site redevelopment that includes buildings.

LiRo recommends the following relative to the ASTM non-scope considerations identified above.

- Due to the likely presence of razed/buried building materials, it is possible that associated contaminants (i.e., metals, semi-volatile organic compounds (SVOCs), etc. are present in shallow soils. If redevelopment plans consider re-occupancy or buildings, LiRo recommends that the Phase II ESI work should include soil characterization testing to evaluate Site cover or soil disposal constraints on future development.
- If excavation activities are conducted on-site, caution should be taken relative to the potential presence of buried materials of concern including, but not limited to, building materials with suspect ACMs, lead-based paint covered surfaces, storage tanks, etc.

## **Environmental Professional Statement**

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of this part.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Qualifications for the following Environmental Professionals is included within Attachment 11.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>DUPONT ROCHESTER - S</b>	<b>69 SENECA AVENUE</b>	<b>N 1/2 - 1 (0.978 mi.)</b>	<b>59</b>	<b>222</b>

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>RITE AID #629</b>	<b>1000 N CLINTON AVE</b>	<b>NNW 1/8 - 1/4 (0.233 mi.)</b>	<b>F36</b>	<b>64</b>

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

#### ***State- and tribal - equivalent CERCLIS***

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state

## EXECUTIVE SUMMARY

funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/17/2016 has revealed that there are 7 NY SHWS sites within approximately 1 mile of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 08/01/2015 has revealed that there are 3 NY VAPOR REOPENED sites within approximately 1 mile of the target property.

### **State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/17/2016 has revealed that there are 9 NY LTANKS sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 05/01/2016 has revealed that there are 3 NY MANIFEST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

PA MANIFEST: Hazardous waste manifest information.

A review of the PA MANIFEST list, as provided by EDR, and dated 12/31/2014 has revealed that there is 1 PA MANIFEST site within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

GENESEE RIVER GORGE	DRIVING PARK BRIDGE	WNW 1/2 - 1 (0.896 mi.)	55	195

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 11 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 6 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was CH 05/20/02:LIMITED SUBSURFACE SOIL INVESTIGATION RECEIVED BY THE DEPT. ON 4/11/02. INVESTIGATION DONE AS PART OF PROPERTY TRANSACTION WHERE THE EXISTING OWNER WANTS TO SELL AND HAS A POTENTIAL BUYER. THE SITE HAD HISTORICALLY BEEN A DRY CLEANER AND PRINT SHOP FOR A SHORT PERIOD, BUT MAINLY HAS BEEN A GAS STATION. A TOTAL OF 16 BOREHOLES WERE INSTALLED TO A DEPTH OF 12 FEET OR REFUSAL. NO GROUNDWATER WAS ENCOUNTERED OR SAMPLED. BEDROCK WAS BELIEVED TO BE FROM 10.5-12 FT. THE HIGHEST PID READINGS WERE TYPICALLY FROM THE DEEPEST CORE SAMPLE. MINIMAL SOLVENT AND METAL CONTAMINATION WAS ENCOUNTERED. SEVERAL AREAS OF PETROLEUM CONTAMINATION WAS IDENTIFIED. BECAUSE ONLY AREAS OF CONCERN WERE INVESTIGATED THERE ARE BIG GAPS BETWEEN THE DATA POINTS THAT NEED TO BE INVESTIGATED TO ISOLATE THE CONTAMINATION. CH SENDS LETTER REQUESTING FURTHER INVESTIGATION AND INVESTIGATE GROUNDWATER. 5/17/02: CH MEETS WITH RON COLON TO DISCUSS THE SITE. MR COLON HAD LEASED THE PROPERTY FROM ATLANTIC RITCHFIELD FROM 1973 TO THE 1980'S. IN 1979 OR 80 MR. COLON HAD NOTICED AN ODOR OF GASOLINE AT THE SITE AND NOTIFIED ATLANTIC WHO CAME IN AND HAD TANKS TESTED. THE TANKS FAILED AND THE FIRE DEPT ODORED THE TANKS TO BE REMOVED.

**COLON AUTO REPAIR (Continued)**

**S103568476**

THERE WAS GASOLINE IN THE EXCAVATION WHEN THE TANKS WERE PULLED. ATLANTIC DID NOT REPLACE THE TANKS AT THAT TIME. MR COLON HELD OUT WAITING FOR ATLANTIC TO REPLACE THE TANKS AND THEY DID NOT. ATLANTIC EVENTUALLY BROKE THE LEASE AND OWED MR COLON A LARGE SUM OF MONEY. INSTEAD OF BEING SUED BY COLON ATLANTIC GAVE HIM THE PROPERTY FOR A DISCOUNTED PRICE. ATLANTIC NEVER ADDRESSED THE CONTAMINATION ON SITE. MR COLON HAD NO TANKS OR GASOLINE ON SITE UNTIL 1995 OR 96 WHEN HE INSTALLED HIS OWN TANKS. MR COLON BELIEVES ALL THE CONTAMINATION ON THE SITE IS FROM WHEN ATLANTIC OWNED THE SITE AND HE FEELS THEY SHOULD BE RESPONSIBLE FOR CLEANUP AND INVESTIGATION. CH EXPLAINS THAT COLON MAY BE HELD PARTIALLY RESPONSIBLE SINCE HE WAS THE OPERATOR OF THE SITE. CH WILL CHECK WITH THE CITY FIRE MARSHALLS OFFICE TO SEE IF THEY HAVE ANY RECORDS OF THE TANK TEST FAILURE AND THE TANK REMOVAL. 08/13/02: SPILL 9501681 WAS REFERED TO THIS SPILL FOR FOLLOW-UP. LETTER OF RESPONSIBILITY SENT TO SHEILA D'CRUZ, ARCO, 301 LINDENWOOD DRIVE, SUITE 102, MALVERN, PA. 19353. ALSO LETTER OF RESPONSIBILITY SENT TO COLON. 09/30/02:LCS SUBMITS RAP FOR THE SITE. THEY PROPOSE SOURCE REMOVAL IN THE AREAS IDENTIFIED AS HAVING THE HIGHEST CONCENTRATIONS OF CONTAMINATION. CH GIVES VERBAL APPROVAL OF RAP AND DRAFTS APPROVAL LETTER. LCS DID NOT RECOMMEND SAMPLING FOR 8270 SVOC'S. CH QUESTIONS LCS ON THIS AND LCS STATES THAT IN THEIR INVESTIGATIONS THEY NEVER ENCOUNTERED ANY SVOC'S THAT WERE ABOVE TAGM VALUES. THE SIGNIFICANT CONTAMINATION SEEMS TO BE ATTRIBUTED TO GASOLINE. LCS WILL NOTIFY THE DEPT. WHEN WORK IS SCHEDULED. 07/02/03: CH REVIEWS A WORK PLAN FOR REMEDIATION SUBMITTED BY GEOQUEST ENV. THEY PROPOSE REMEDIATING THE SITE WITH VAPOR EXTRACTION. THEY ARE ASSUMING THAT THE RADIUS OF INFLUENCE OF A VAPOR EXTRACTION WELL WOULD BE 10 FT. THAT IS BASED ON PAST EXPERIENCE IN SIMILAR SOILS. CH APPROVES THE PLAN WITH THE CONDITION THAT THE RADIUS OF INFLUENCE BE TESTED EITHER BEFORE OR AFTER THE SYSTEM IS IN PLACE. 04/29/09: IN AN EFFORT TO CLOSE OUT SPILLS, CH INSPECTS THE SITE TO DETERMINE THE STATUS OF THE PROPERTY. THE PROPERTY IS NOW AN OPERATIONAL GAS STATION. IT IS A VALERO. CH TO CHECK PBS RECORDS AND DETERMINE OWNER. 03/24/14: REVIEW OF THE FILE SHOWS THE PROPERTY HAS TRANSFERRED TO A NEW OWNER, PER THE PBS REGISTRATION, AND IS BEING OPERATED AS A GAS STATION. CH SENDS EMAIL TO KINYORDA FOGLEMAN OF SUNOCO TO SEE IF SHE HAS ANY RECORD THAT THIS WAS A SUNOCO HOLDING AS SUGGESTED BY THE PREVIOUS OWNER. 04/3/14: ON TODAY'S DATE THE DEPT RECEIVES THE FOLLOWING EMAIL RESPONSE FROM KINYORDA FOGLEMAN IN REGARDS TO SUNOCO OWNING THE PROPERTY OR TANKS: We never operated this one. This was an Atlantic site that didn't transfer over to Sunoco. 809 Clinton across the street is ours. 02/11/16: REVIEW FILE WITH PM. IT APPEARS REMEDIATION NEVER CONDUCTED AT SITE. LIKELY BEDROCK IMPACTED. LETTER SHOULD BE SENT TO NEW OWNER TO INVESTIGATE SUBSURFACE SOIL AND GROUNDWATER AND DEVELOP REMEDIAL ACTION SHOULD THE INVESTIGATION DETERMINE IMPACTS WARRANT IT. THE NEW OWNER IS DAWIT HASEN. SITE NAME IS F&D OF ROCHESTER, INC. SEE PBS# 8-600290 FOR INFO. 02/23/16: LETTER DRAFTED TO PROPERTY OWNER REQUESTING INVESTIGATION AND ACCEPTANCE OF RESPONSIBILITY. CONFIRMATION REQUESTED BY MARCH 18,2016. 05/16/16: THERE WAS NO RESPONSE TO FEBRUARY LTR. CH DRAFTS LETTER FOR PROPERTY OWNER TO ALLOW ACCESS TO DEC AND IT'S CONTRACTOR TO PERFORM NECESSARY WORK. DEADLINE FOR PROPERTY OWNER TO SIGN ACCESS AGREEMENT IS JUNE 15TH 2016"

Remarks:

"Surface investigation found gasoline contamination in the ground. analytical report to be forwarded to the Department. Faxed to MCHD on 04/03/02 at 1406 hrs."

Recipient name: Rochester, City of  
Grant type: Assessment  
Property name: 969-973 & 975-981 N CLINTON AVENUE  
Property #: 106.3-1-30; 106.3-1-29  
Parcel size: .27  
Property Description: Site was developed prior to 1872 and has been historically utilized for residential and commercial purposes. Occupants and/or owners of the Site appear to have included a grocery store and meat market, private residences, a furniture store and a jeweler. Properties surrounding the Site appear to have included residential and commercial properties. As such, there are no apparent REC's associated with the historic use of the Site and surrounding properties at this time.

**FINDS:**

Registry ID: 110064382706

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System  
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name: CLIFTON AYERS  
Contact Phone: (585) 262-6651  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was TW 06/11/2010: DEC LEAD TRANSFERRED FROM TWALSH TO DDAKE FOR FOLLOWUP. NO TANK CLOSURE REPORT FOUND IN FILE/EDOCS. CLOSED SPILL #0370381 ALSO HAD NO REPORT FOUND. DD ATTEMPTS TO CONTACT CLIFTON AYERS AND JOSEPH RICHARDSON AND LEAVES VOICEMAIL MESSAGES (OTHER NAMES AT #S NOW). CALLER INFORMATION IS ALSO NO LONGER VALID. RICHARDSON # IS INVALID IN MARYLAND. 07/21/2010: DD LEAVES SECOND MESSAGE FOR BOB SHAFFER 585-262-6669. 08/16/2010: DD LEAVES MESSAGE WITH KEN ZISK AND WITH BOB SHAFFER AT 2 DIFFERENT #S. 09/22/2010: DD TELECON WITH BOB SHAFFER, WHO WILL LOOK INTO IT. ALSO LEFT MESSAGE WITH CORPORATE ENV PERSON JOE RICHARDSON AT 410-684-7274. 10/25/2010: DD LEAVES VOICEMAILS WITH BOTH JOSEPH RICHARDSON AND NICOLE JOHNSON (410-684-7217). 11/01/2010: DD BRIEF TELECON WITH JOE RICHARDSON - DEC NEEDS COPY OF 2003 OR 2003 UST CLOSURE REPORT FOR REVIEW. HE WILL LOOK INTO. DD FORWARDS COPY OF SPILL SHEET TO RICHARDSON. 03/09/2011: NO RESPONSE FROM COCA COLA. FOLLOWUP EMAIL ALSO SENT TO RICHARDSON. PBS REGISTRATION ALSO EXPIRED IN 2008. DD TELECON WITH JOSEPH RICHARDSON (410-684-7274); THE COMPANY THAT DID THE UST CLOSURE REPORT IS NO LONGER IN BUSINESS, SO HE HAS RETAINED ANOTHER COMPANY/CONSULTANT TO REVIEW FILES ETC. HE BELIEVES THE FILE REVIEW IS BEING PERFORMED NOW AND WILL GET BACK TO DEC. RICHARDSON TELECON WITH WENDY STEVENSON RE: EXPIRED AST REGISTRATION. 03/11/2011: EMAIL RECEIVED FROM JOE RICHARDSON (SAVED TO EDOCS)- IT APPEARS A COMPANY IS DOING A FILE REVIEW, INSPECTING THE SITE, AND DEVELOPING A WORK PLAN. 03/27/2012: DDAKE TRIES TO REACH NICOLE JOHNSON, WHO NO LONGER IS WITH THE COMPANY. MESSAGE LEFT WITH JOE RICHARDSON. 05/03/2012: DDAKE RECEIVES CALL FROM AARON TOWNSLEY OF WOODARD & CURRAN (914-448-2266), WORKING FOR COCA-COLA. THEY COMPLETED A SUBSURFACE INVESTIGATION IN THE VICINITY OF THE FORMER USTs AND DISPENSERS/LINES. SOIL SAMPLES COLLECTED AT/ABOVE GROUNDWATER TABLE WERE CLEAN (NO GROUNDWATER SAMPLES COLLECTED). DID FIND SOME SHALLOW SOILS IMPACTS BENEATH THE DISPENSER AREAS. WILL DEVELOP A REMEDIAL ACTION PLAN TO EXCAVATION IMPACTED SOILS AND SUBMIT TO DEC FOR APPROVAL. INVESTIGATION REPORT ALSO TO BE SENT. 10/01/2012: DD TELECON WITH AARON TOWNSLEY - DEC STILL HAS NOT YET GOTTEN ANY DOCUMENTATION/SUMMARY REPORT/RAP; HE WILL LOOK INTO AND GET BACK TO THE DEPARTMENT. 10/02/2012: DD TELECON WITH AARON TOWNSLEY - STATED HE SENT A REPORT VIA EMAIL ON (5/14/12 BUT WAS NEVER RECEIVED BY DEC/WENT TO WRONG ADDRESS). REPORT TO BE RESENT (LATER RECEIVED AND SAVED TO eDOCS). 10/3/12: COPY OF 2004 'TANK CLOSURE REPORT' SAVED TO eDOCS. 10/4/12: DDAKE REVIEW OF 2004 TANK CLOSURE REPORT DATA AND INVESTIGATION WORK COMPLETED BY WOODARD & CURRAN IN 2011 (14 DIRECT PUSH SOIL BORINGS). BASED ON LAB ANALYTICAL RESULTS, IT APPEARS THERE ARE NO IMPACTED SOILS IN THE VICINITY OF THE FORMER UST AREA, BUT SHALLOW (LIKELY LESS THAN 3-FEET BGS) ELEVATED IMPACTS TO SOILS WERE ENCOUNTERED IN THE FORMER LINE/DISPENSER AREA (EAST OF THE TANKS). GROUNDWATER ESTIMATED TO BE BETWEEN 9 AND 10 FEET BGS. AARON TOWNSLEY OF WOODARD & CURRAN CONTACTED - DEC IS REQUESTING A BRIEF REMEDIAL WORK PLAN TO ADDRESS IMPACTED SOILS TO BE SUBMITTED WITHIN TWO WEEKS,

AS WELL AS A PROPOSED WORK SCHEDULE. 5/15/13: NO RESPONSE FROM WOODARD & CURRAN - EMAIL SENT TO AARON TOWNSLEY REQUESTING WORK PLAN BE SUBMITTED SOON. EMAIL RETURNED, DDAKE CONTACTS WOODARD & CURRAN AND AARON NO LONGER WORKS THERE - NEW CONTACT IS EVAN TRUMPATORI; DD DISCUSSES SITE BRIEFLY WITH EVAN AND FORWARDS INFO REQUESTING WORK PLAN. 8/21/13: DDAKE LEAVES MESSAGE FOR TRUMPATORI - NEED UPDATE. 8/22/13: EMAIL RECEIVED FROM TRUMPATORI (SAVED TO eDOCS) - NO REAL INFO/WILL UPDATE DEC SOON. 5/19/14: DD LEAVES VOICEMAIL MESSAGE WITH EVAN TRUMPATORI (914-448-2266) - DEC HAS NOT RECEIVED ANY INFO OR UPDATE. EMAIL ALSO SENT. 5/28/14: JOE RICHARDSON OF COCA-COLA CONTACTS DEC (410-533-6927) AND LATER FOLLOWS UP WITH EMAIL: Thanks for taking my call a few moments ago to discuss proposed remedial action for the Coca-Cola Refreshments facility in Rochester New York. As indicated in the investigation report prepared by Woodard & Curran, it is proposed to remove and dispose of shallow petroleum contaminated soils at the location of the former Fuel Islands and along the footprint of product delivery piping at the site. Coca-Cola is currently soliciting a revised proposal from OpTech Environmental Services to conduct the soil remediation at the site. We propose to begin remedial action in Mid-June 2014. As requested, I will forward the Scope of Work to you for your approval prior to commencing site activities. 9/9/14: DD TELECON WITH JOE RICHARDSON OF COCA-COLA - HE HAS A SIGNED CONTRACT WITH A CONTRACTOR TO DO THE DIGOUT, WHICH WILL BE SCHEDULED IN THE NEXT MONTH OR SO (BEFORE THE ONSET OF WINTER). DEC NEEDS A WORK PLAN, WHICH WILL BE SENT FOR OUR REVIEW/APPROVAL PRIOR TO THE WORK. 9/24/14: FRANK THOMAS OF OPTECH SUBMITS WORK PLAN FOR REMEDIATION, WHICH INVOLVES EXCAVATION OF AN APPROX. 10x20-FOOT AREA OF SHALLOW SOIL IN THE FORMER DISPENSER AREA. SINCE THE HORIZONTAL EXTENT OF SOIL IMPACTS IS NOT KNOWN, DEC EMAILS OPTECH AND REQUESTS ADDITIONAL SOIL BE REMOVED, IF ENCOUNTERED BEYOND THIS AREA. 10/13/2014: TH ON SITE AT 09:30 WITH OPTECH (FRANK THOMAS AND EQUIPMENT OPERATOR). THE CONCRETE PAD IS REMOVED FROM THE FORMER DISPENSER ISLAND TO ACCESS CONTAMINATION. BORING #5 LOG REVEALED IMPACT AT 4-10' BGS HOWEVER, A TEST PIT IN THIS LOCATION (SW CORNER OF ISLAND) SHOWED NO EVIDENCE OF IMPACT. THE AREA OF CONCERN IS IN THE CENTER OF THE FORMER ISLAND. GROSS CONTAMINATION IS 2-3' BGS (1' CONCRETE, 1' CRUSHED STONE, 1-2' CONTAMINATED SOIL). OPTECH ANTICIPATES COMPLETING THE EXCAVATION WORK TODAY. TH OFF SITE AT 11:45. 12/9/14: DDAKE SENDS FRANK THOMAS AT OPTECH EMAIL INQUIRING ON STATUS OF SUMMARY REPORT. THOMAS' EMAIL RESPONSE: I will be sending you a report this week. We ended up removing over 200 tons. 2/18/15: DDAKE LEAVES MESSAGE FOR FRANK THOMAS AT OPTECH - STILL HAVENT RECEIVED SUMMARY REPORT. 2/23/15: OPTECH SUBMITS SPILL REMEDIATION LETTER REPORT (SAVED TO eDOCS). REPORT STATES IMPACTED SOIL WAS ENCOUNTERED BENEATH TWO FORMER DISPENSER LOCATIONS (IN EXCESS OF WHAT WAS ANTICIPATED). IMPACTED SOILS WERE EXCAVATED DOWN TO TOP OF BEDROCK, AT DEPTH OF APPROX. 11-FEET BGS. FINAL EXCAVATION WAS 25-FEET x 20-FEET IN AREA. NO GROUNDWATER WAS ENCOUNTERED. PID SOIL HEADSPACE READINGS RANGED UP TO 2,000 PPM (NO SPECIFIC DATA INCLUDED IN REPORT). UPON REMOVAL OF IMPACTED SOIL, PID READINGS DECLINED TO LESS THAN 10 PPM. CONTAMINATION DID NOT REPORTEDLY EXTEND BEYOND THE DISPENSER ISLAND FOOTPRINT. CONFIRMATORY SIDEWALL (4) AND BOTTOM SOIL SAMPLES WERE COLLECTED AND ANALYZED FOR VOCs AND SVOCs. LABORATORY ANALYTICAL RESULTS INDICATED VERY LOW LEVELS (GENERALLY LESS THEN 100 UG/KG) IN ALL SAMPLES, WITH ALL DETECTED COMPOUNDS BELOW UNRESTRICTED USE CLEANUP OBJECTIVES. APPROX. 268-TONS OF IMPACTED SOIL WAS DISPOSED OFF-SITE AT A LOCAL LANDFILL (DISPOSAL RECEIPTS INCLUDED). A

SAMPLE OF THE BACKFILL MATERIAL WAS ANALYZED FOR PCBs (NON-DETECT) AS WELL AS RCRA METALS - RESULTS INDICATED A LEVEL OF TOTAL CHROMIUM OF 21.9 PPM, WHICH WAS FURTHER ANALYZED TO SHOW THERE WAS NO HEXAVALENT CHROMIUM IN THE SAMPLE. DD CONTACTS FRANK THOMAS AT OPTTECH WHO EMAILS A SEPARATE LAB REPORT (SAVED TO eDOCS) WHICH REPORTS A NON-DETECT LEVEL (LESS THAN 1.1 MG/KG) OF HEXAVALENT CHROMIUM FOR A SOIL SAMPLE COLLECTED IN 10/31/14. REPORT REQUESTS SPILL CLOSURE. The closure letter should be sent to: 2/23/15: BASED ON REMEDIAL WORK PERFORMED AND CONFIRMATORY SOIL SAMPLE ANALYTICAL RESULTS, NO FURTHER ACTIONS REQUIRED BY SPILLS UNIT AT THIS TIME/SPILL FILE CLOSED. NOTE THAT THERE MAY BE RESIDUAL IMPACTS ON THE SITE - IF ENCOUNTERED IN THE FUTURE ADDITIONAL INVESTIGATION/REMEDIAL WORK MAY BE REQUIRED BY THE DEPARTMENT. 'NO FURTHER ACTION' LETTER SENT TO: Coca-Cola Refreshments USA, Inc. PO Box 29165 Hot Springs, Arkansas 71913 Attn: Joseph Richardson"

Remarks:

"AN UNDERGROUND STORAGE TANK CLOSURE FOR THE REMOVAL OF 2-(10,000) UNDERGROUND TANKS INCLUDED ANALYTICAL RESULTS ABOVE THE LEVELS OF DETECTION FOR SEVERAL COMPOUNDS. THE TANKS WERE USED TO STORE GASOLINE AND DIESEL AND WERE REMOVED IN OCTOBER OF 2003. THE REPORT WAS PREPARED BY GEO CORE AND ENVIRONMNETAL SERVICES INC. FAXED TO MCHD ON 08/02/2004 AT 0753 HRS."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was  
CH 04/22/02: CH TELECON WITH ML. THERE WAS A REFRIGERATION UNIT  
WORKED ON TODAY. THE PLANT ALSO RECEIVED A DELIVERY OF ANHYDROUS  
AMMONIA AT 1630 HRS. IT IS UNKNOWN THE AMOUNT OR WHO DELIVERED IT.  
CURRENT WIND DIRECTION IS OUT OF N-NW AT 6MPH. CONTINUOUS MONITORING  
DOWNWIND WITH NO DETECTIONS. LEAK APPEARS TO BE ON THE ROOF WHERE  
THERE ARE THREE REFRIGERATION CONDENSORS. CH NOTIFIED LT DALE BALMER  
OF INCIDENT AT 2120 HRS. EAST OF THE PLANT, PEOPLE ARE NOTICING THE  
ODORS. WHEN THE FIRE DEPARTMENT RESPONDED, THEY IMMEDIATELY BEGAN AIR  
MONITORING WITH DRAEGER TUBES AND GOT NO DETECTION. THEY ALSO CHECKED  
THE GENESEE BREWERY THAT IS IN THE AREA AND THEY HAD NO PROBLEMS.  
THERE ARE THREE LARGE CONDENSORS ON THE ROOF OF THE PLANT AND THE  
FIRE DEPARTMENT GOT A READING OF 5 PPM IN ONE AREA, BUT THEY CANNOT  
ISOLATE THE EXACT AREA. THE ROOF IS A MAZE OF PIPING. THERE IS  
NOTHING AROUND THE PLANT FOR SEVERAL HUNDRED FEET. THE SUBSTATION IS  
900' DOWNWIND. ODORS WERE NOTICED AROUND 7PM. ALL THE OFFICERS  
IMPACTED WERE OUTSIDE AT THE TIME. THE SUBSTATION APPEARED TO BE THE  
ONLY BUILDING IMPACTED. IN THE AREA THERE IS A STRIP MALL, GROCERY  
STORE, MCDONALDS,AND THE SUBSTATION. THE MEDIA WAS ON SCENE. LT  
BALMER TO NOTIFY LT BAKER, WHO WILL PROBABLY RESPOND. PLANT ENGINEER  
ARRIVES ON SITE AT APPROXIMATELY 2150 HRS. ML TO UPDATE CH AFTER  
MEETING WITH THE PLANT ENGINEER. 04/23/02: CH TELECON WITH ML OF  
MCHD. THE PLANT MAINTENANCE SUPERVISOR ARRIVED ON SITE LAST NIGHT AND  
WENT THROUGH THE PLANT WITH EVERYONE. HIS NAME IS RICH ROBINSON. HE  
SAID THAT AFTER THE DELIVERY OF 2035 LBS OF ANHYDROUS AMMONIA  
YESTERDAY BY LA ROCHE INDUSTRIES OUT OF LYONS, HE WENT THROUGH THE

Updated By: FLSOWERS  
Site Description:

Location: The 690 Saint Paul Street site is located in an urban area in the City of Rochester, Monroe County, just north of the intersection of Saint Paul Street and Upper Falls Boulevard. Site Features: The site covers approximately 4.7 acres. The main site features include four buildings. Three of the buildings are interconnected, seven stories tall and made of brick. The fourth building is a metal framed slab on grade structure. These buildings have a total footprint of approximately 89,280 square feet. All of the buildings are at least partially occupied. A paved parking lot is located on the northern and eastern portions of the site. Lawn area and a small playground are on the eastern side of the site. Current Zoning and Land Use: The site is zoned for industrial uses. One of the large brick buildings is occupied by the Rochester City School District and a charter school. The remaining buildings are partially occupied but with significant vacancy. Current uses include a school, light industrial operations, and a workshop for creating theater sets. The site is bound by roads on all sides. Residential, commercial and vacant properties are located across from the site. Past Use of the Site: The site was developed prior to 1875 and was primarily used for residential purposes until the 1920s. From around 1920 until the late 1960s, the property was owned and operated by Bausch & Lomb (B&L) to manufacture lenses and other products. A foundry was also present near the northeast corner of the site. Since the early 1970s, the site has been used for storage as well as commercial and light industrial activities. Prior uses that appear to have led to site contamination include underground storage tanks (USTs) that may have leaked. These tanks appear to have contained chlorinated solvents including trichloroethene (TCE) and petroleum products including gasoline and fuel oil. In 2002, a 500-gallon UST was removed from the site and contaminated soil was encountered. The contaminated soil was used to backfill the area of the tank removal. In 2008, an investigation was performed to determine the extent of soil and groundwater contamination associated with the 2002 tank removal. The investigation identified an area of petroleum contaminated soil, but did not detect significant TCE soil contamination. The investigation was followed by the excavation of approximately 1,650 cubic yards of petroleum impacted soil and a previously undocumented UST. An area of petroleum impacted soil could not be safely removed because it was close to an underground electric line. Groundwater sample results from 2008 also identified an area impacted by chlorinated solvents, primarily TCE, near Building 14B which was occupied by the City of Rochester School District. The chlorinated solvent impact area did not appear to be associated with the petroleum impacted soils and UST that were removed from the site in 2008. A sub-slab depressurization system (SSDS) was subsequently

MAP FINDINGS

**690 SAINT PAUL STREET (Continued)**

**S109580083**

installed under Building 14B to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. An interim Site Management Plan was developed under the BCP to address the operation, maintenance, and monitoring of the SSDS. Indoor air monitoring results indicate that the SSDS has successfully controlled vapor migration into the building. Additionally, pressure field extension testing indicates that the SSDS has successfully created a negative pressure underneath the building slab. Site Geology and Hydrogeology: The ground surface at the site generally slopes to the south and west. The depth to bedrock ranges from less than two feet on the southern portion of the site to twelve feet on the northern portion. The overburden consists of a combination of fill and native soil. Where present, the fill material is up to eight feet thick and includes sand, crushed gravel and brick, construction and demolition debris, foundry sand, cinders, ash, and imported sandy soil. The underlying native soil is primarily a glacial till that is up to ten feet thick. The till contains silt, sand, and gravel in varying amounts. The Decew Dolomite (a type of bedrock) underlies the overburden at the site. The thickness of this unit is generally 8 to 12 feet. The Rochester Shale underlies the Decew Dolomite. The depth to groundwater ranges from approximately four to nine feet below the ground surface. Groundwater generally flows to the west and is likely influenced by the Genesee River Gorge which is approximately 1,000 ft to the west/southwest. The Genesee River in this area is also about 100 ft. below the Site. Although the overall groundwater flow in the overburden is towards the Genesee River Gorge, areas of the site may be influenced by preferential pathways (e.g., subsurface utilities and associated bedding materials).

Env Problem:

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include trichloroethene (TCE) and its associated degradation products, petroleum related compounds including light non-aqueous phase liquid (LNAPL), and polycyclic aromatic hydrocarbons (PAHs). Additional contaminants include some pesticides, polychlorinated biphenyls (PCBs) and metals. Investigation activities at the site focused on the eight (8) areas of concern (AOCs) described below: AOC 1: Former Oil House located in the central portion of the site; AOC 2: Former Foundry building located near the northeast corner of the site; AOC 3: Former Agitator Building located along the northern site boundary; AOC 4: A 125,000-gallon above-ground reservoir located on the ground floor of a former manufacturing building; AOC 5: The remaining on-site buildings; AOC 6: All portions of the site not covered by the other AOCs; AOC 7: A former dust collector located in the central portion of the site; and AOC 8: The northwest corner of the site. Soil: Concentrations of TCE identified in soil remaining on site (up to about 0.8 ppm) slightly exceed the soil cleanup objectives for the protection of groundwater (0.47 ppm). The TCE impacted soils are located under the parking lot in the northwest portion of the site (AOC 8) at depths of 8 feet to the top of bedrock (about 12 feet). TCE contaminated soils are not expected to extend off-site. Petroleum related compounds, primarily xylene, are present in the central portion of the site (AOC 6) and along the site boundary in the northeast corner of the site (AOC 2). Concentrations of xylene (up to about 33 ppm) in AOC 6 significantly exceed the soil cleanup objectives for unrestricted use (0.26 ppm). This area of petroleum impacts is located underneath buried electric lines and is approximately 30-ft wide starting at depths of about 4 ft below

MAP FINDINGS

**690 SAINT PAUL STREET (Continued)**

**S109580083**

ground surface to the top of bedrock (about 9 ft). Petroleum related compounds are expected to be present offsite near AOC 2. Concentrations of xylene (up to 5.6 ppm) along the northeast site boundary of AOC 2 moderately exceed the soil cleanup objectives for unrestricted use. This area represents the low level contamination remaining along the site boundary after the completion of an IRM. The impacted area is under pavement and is approximately 50-ft wide starting at depths of 8 to 10 ft below ground surface to the top of bedrock (about 12 ft). Xylene likely extends off site in this area. Off-site land use immediately adjacent to this area consists of a sidewalk and then Martin Street. PAHs, including benzo(a)pyrene (BaP), are present in the central portion of the site (AOC 6) and underneath site buildings (AOC 5). Concentrations of BaP (up to 2.7 ppm) in AOC 6 slightly exceed the soil cleanup objectives for restricted residential use (1 ppm). This area of PAH impacted soil covers approximately 2,000 square feet and is located underneath a demarcation layer and 2-ft of clean soil that was installed as an IRM. Impacts start just under the demarcation layer and extend to about 7 ft below ground surface. Concentrations of BaP (up to 45 ppm) in AOC 5 exceed the soil cleanup objectives for restricted residential use. Elevated levels of PAHs in AOC 5 soils were detected sporadically and AOC 5 soils are covered by building slabs. Site-related PAHs are not anticipated to extend off-site. Fill material below the asphalt parking lot (portions of AOCs 2, 3, 6, and 8) has the potential to sporadically contain manganese and lead at concentrations above the soil cleanup objectives for restricted residential use. Some pesticides, polychlorinated biphenyls (PCBs) and metals are also present sporadically throughout the site at concentrations above soil cleanup objectives for unrestricted use but below soil cleanup objectives for residential use and below 1 ppm for PCBs. Groundwater: Chlorinated solvents, specifically TCE and its associated degradation products, are present in the central portion of the site (AOC 1) and the northwest portion of the site (AOC 8). In AOC 1, chlorinated solvents significantly exceed groundwater standards (typically 5 ppb), with a maximum concentration of approximately 9,700 ppb (sum of TCE and associated degradation products). Vertically, TCE contamination in AOC 1 is limited to the shallow bedrock zone approximately 8.7 to 18.7 feet below ground. Chlorinated solvents did not exceed groundwater standards in the 27 to 37 foot depth interval. Chlorinated solvents associated with AOC 1 appear to be migrating offsite in the bedrock groundwater. Slight amounts (approximately 157 ppb) of TCE and associated degradation products are have migrated under site buildings and about 180 feet to the western site boundary along Saint Paul Street. TCE is the primary groundwater contaminant at AOC 8, significantly exceeding groundwater standards (5 ppb), with a maximum concentration of approximately 13,000 ppb. Vertically, TCE contamination is primarily associated with the overburden in this area. TCE in the shallow bedrock slightly exceeds groundwater standards ranging from 17 ppb to 34 ppb. TCE degradation products are also present at low levels. TCE from AOC 8 appears to be migrating offsite in the overburden groundwater. A moderate amount (approximately 2,000 ppb) of TCE has migrated about 60 feet to the western site boundary along Saint Paul Street. Light Non-Aqueous Phase Liquid (LNAPL): A thin layer of LNAPL is present in several wells in the central portion of the site (AOCs 1 and 6). This material is primarily Lube Oil, but also contains PCBs and TCE. LNAPL is not anticipated to extend off-site. Soil Vapor and Indoor Air:

MAP FINDINGS

**690 SAINT PAUL STREET (Continued)**

**S109580083**

Sub-slab and indoor air sampling indicated actions were needed to address soil vapor intrusion within each of the onsite buildings. PCE, TCE, and cis-1,2-DCE were detected at levels above those which are expected to be found in indoor air. TCE was detected in the indoor air of an unoccupied building at a concentration of 6.5 micrograms per cubic meter which slightly exceeds the NYSDOH guidance value of 5 micrograms per cubic meter. Sub-slab sampling results were relatively low, with maximum PCE, TCE, and cis-1,2-DCE levels of 2.6, 21, and 15 micrograms per cubic meter, respectively. A sub-slab depressurization system was installed under Building 14B in 2008 to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. Approximately 40 post-mitigation indoor air sampling events have been completed. For each sampling event, indoor air samples were collected from up to four locations within the building. The average TCE indoor air concentration for the four locations ranged from 1.2 to 2.2 micrograms per cubic meter. Property line soil vapor sampling indicated the potential for off-site soil vapor migration, particularly near AOC 8, with maximum levels of PCE, TCE, and cis-1,2-DCE levels of 32, 4,400, and 170 micrograms per cubic meter, respectively. Significant Threat: The site presents a significant threat to public health and/or the environment due to: The presence of two groundwater plumes with significant levels of chlorinated solvents (up to 9,700 ppb and 9,500 ppb); Off-site migration of chlorinated solvents in groundwater from each of the two plumes. Off-site migration appears to be most significant with the northernmost plume (AOC 8; TCE up to 2,000 ppb at the downgradient property line); and An area of LNAPL on the site. Health Problem: People are not likely to come into contact with contaminated soils because they have been removed from the site or are covered by buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab ventilation system has been installed in Building 14B to address exposures from soil vapor intrusion. Environmental sampling at the property boundary indicates that off-site vapor intrusion is a potential exposure pathway that warrants additional investigation.

An area of petroleum impacted soil could not be safely removed because it was close to an underground electric line. Groundwater sample results from 2008 also identified an area impacted by chlorinated solvents, primarily TCE, near Building 14B which was occupied by the City of Rochester School District. The chlorinated solvent impact area did not appear to be associated with the petroleum impacted soils and UST that were removed from the site in 2008. A sub-slab depressurization system (SSDS) was subsequently installed under Building 14B to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. An interim Site Management Plan was developed under the BCP to address the operation, maintenance, and monitoring of the SSDS. Indoor air monitoring results indicate that the SSDS has successfully controlled vapor migration into the building. Additionally, pressure field extension testing indicates that the SSDS has successfully created a negative pressure underneath the building slab. Site Geology and Hydrogeology: The ground surface at the site generally slopes to the south and west. The depth to bedrock ranges from less than two feet on the southern portion of the site to twelve feet on the northern portion. The overburden consists of a combination of fill and native soil. Where present, the fill material is up to eight feet thick and includes sand, crushed gravel and brick, construction and demolition debris, foundry sand, cinders, ash, and imported sandy soil. The underlying native soil is primarily a glacial till that is up to ten feet thick. The till contains silt, sand, and gravel in varying amounts. The Decew Dolomite (a type of bedrock) underlies the overburden at the site. The thickness of this unit is generally 8 to 12 feet. The Rochester Shale underlies the Decew Dolomite. The depth to groundwater ranges from approximately four to nine feet below the ground surface. Groundwater generally flows to the west and is likely influenced by the Genesee River Gorge which is approximately 1,000 ft to the west/southwest. The Genesee River in this area is also about 100 ft. below the Site. Although the overall groundwater flow in the overburden is towards the Genesee River Gorge, areas of the site may be influenced by preferential pathways (e.g., subsurface utilities and associated bedding materials).

Env Problem:

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include trichloroethene (TCE) and its associated degradation products, petroleum related compounds including light non-aqueous phase liquid (LNAPL), and polycyclic aromatic hydrocarbons (PAHs). Additional contaminants include some pesticides, polychlorinated biphenyls (PCBs) and metals. Investigation activities at the site focused on the eight (8) areas of concern (AOCs) described below: AOC 1: Former Oil House located in the central portion of the site; AOC 2: Former Foundry building located near the northeast corner of the site; AOC 3: Former Agitator Building located along the northern site boundary; AOC 4: A 125,000-gallon above-ground reservoir located on the ground

**690 SAINT PAUL STREET (Continued)**

**S109580083**

floor of a former manufacturing building;AOC 5: The remaining on-site buildings;AOC 6: All portions of the site not covered by the other AOCs;AOC 7: A former dust collector located in the central portion of the site; andAOC 8: The northwest corner of the site.Soil: Concentrations of TCE identified in soil remaining on site (up to about 0.8 ppm) slightly exceed the soil cleanup objectives for the protection of groundwater (0.47 ppm). The TCE impacted soils are located under the parking lot in the northwest portion of the site (AOC 8) at depths of 8 feet to the top of bedrock (about 12 feet). TCE contaminated soils are not expected to extend off-site.Petroleum related compounds, primarily xylene, are present in the central portion of the site (AOC 6) and along the site boundary in the northeast corner of the site (AOC 2). Concentrations of xylene (up to about 33 ppm) in AOC 6 significantly exceed the soil cleanup objectives for unrestricted use (0.26 ppm). This area of petroleum impacts is located underneath buried electric lines and is approximately 30-ft wide starting at depths of about 4 ft below ground surface to the top of bedrock (about 9 ft). Petroleum related compounds are expected to be present offsite near AOC 2. Concentrations of xylene (up to 5.6 ppm) along the northeast site boundary of AOC 2 moderately exceed the soil cleanup objectives for unrestricted use. This area represents the low level contamination remaining along the site boundary after the completion of an IRM. The impacted area is under pavement and is approximately 50-ft wide starting at depths of 8 to 10 ft below ground surface to the top of bedrock (about 12 ft). Xylene likely extends off site in this area. Off-site land use immediately adjacent to this area consists of a sidewalk and then Martin Street.PAHs, including benzo(a)pyrene (BaP), are present in the central portion of the site (AOC 6) and underneath site buildings (AOC 5). Concentrations of BaP (up to 2.7 ppm) in AOC 6 slightly exceed the soil cleanup objectives for restricted residential use (1 ppm). This area of PAH impacted soil covers approximately 2,000 square feet and is located underneath a demarcation layer and 2-ft of clean soil that was installed as an IRM. Impacts start just under the demarcation layer and extend to about 7 ft below ground surface. Concentrations of BaP (up to 45 ppm) in AOC 5 exceed the soil cleanup objectives for restricted residential use. Elevated levels of PAHs in AOC 5 soils were detected sporadically and AOC 5 soils are covered by building slabs. Site-related PAHs are not anticipated to extend off-site.Fill material below the asphalt parking lot (portions of AOCs 2, 3, 6, and 8) has the potential to sporadically contain manganese and lead at concentrations above the soil cleanup objectives for restricted residential use. Some pesticides, polychlorinated biphenyls (PCBs) and metals are also present sporadically throughout the site at concentrations above soil cleanup objectives for unrestricted use but below soil cleanup objectives for residential use and below 1 ppm for PCBs.Groundwater: Chlorinated solvents, specifically TCE and its associated degradation products, are present in the central portion of the site (AOC 1) and the northwest portion of the site (AOC 8). In AOC 1, chlorinated solvents significantly exceed groundwater standards (typically 5 ppb), with a maximum concentration of approximately 9,700 ppb (sum of TCE and associated degradation products). Vertically, TCE contamination in AOC 1 is limited to the shallow bedrock zone approximately 8.7 to 18.7 feet below ground. Chlorinated solvents did not exceed groundwater standards in the 27 to 37 foot depth interval. Chlorinated solvents associated with AOC 1

MAP FINDINGS

690 SAINT PAUL STREET (Continued)

S109580083

appear to be migrating offsite in the bedrock groundwater. Slight amounts (approximately 157 ppb) of TCE and associated degradation products are have migrated under site buildings and about 180 feet to the western site boundary along Saint Paul Street. TCE is the primary groundwater contaminant at AOC 8, significantly exceeding groundwater standards (5 ppb), with a maximum concentration of approximately 13,000 ppb. Vertically, TCE contamination is primarily associated with the overburden in this area. TCE in the shallow bedrock slightly exceeds groundwater standards ranging from 17 ppb to 34 ppb. TCE degradation products are also present at low levels. TCE from AOC 8 appears to be migrating offsite in the overburden groundwater. A moderate amount (approximately 2,000 ppb) of TCE has migrated about 60 feet to the western site boundary along Saint Paul Street.

Light Non-Aqueous Phase Liquid (LNAPL): A thin layer of LNAPL is present in several wells in the central portion of the site (AOCs 1 and 6). This material is primarily Lube Oil, but also contains PCBs and TCE. LNAPL is not anticipated to extend off-site.

Soil Vapor and Indoor Air: Sub-slab and indoor air sampling indicated actions were needed to address soil vapor intrusion within each of the onsite buildings. PCE, TCE, and cis-1,2-DCE were detected at levels above those which are expected to be found in indoor air. TCE was detected in the indoor air of an unoccupied building at a concentration of 6.5 micrograms per cubic meter which slightly exceeds the NYSDOH guidance value of 5 micrograms per cubic meter. Sub-slab sampling results were relatively low, with maximum PCE, TCE, and cis-1,2-DCE levels of 2.6, 21, and 15 micrograms per cubic meter, respectively. A sub-slab depressurization system was installed under Building 14B in 2008 to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. Approximately 40 post-mitigation indoor air sampling events have been completed. For each sampling event, indoor air samples were collected from up to four locations within the building. The average TCE indoor air concentration for the four locations ranged from 1.2 to 2.2 micrograms per cubic meter. Property line soil vapor sampling indicated the potential for off-site soil vapor migration, particularly near AOC 8, with maximum levels of PCE, TCE, and cis-1,2-DCE levels of 32, 4,400, and 170 micrograms per cubic meter, respectively.

Significant Threat: The site presents a significant threat to public health and/or the environment due to: The presence of two groundwater plumes with significant levels of chlorinated solvents (up to 9,700 ppb and 9,500 ppb); Off-site migration of chlorinated solvents in groundwater from each of the two plumes. Off-site migration appears to be most significant with the northernmost plume (AOC 8; TCE up to 2,000 ppb at the downgradient property line); and An area of LNAPL on the site.

Health Problem: People are not likely to come into contact with contaminated soils because they have been removed from the site or are covered by buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab ventilation system has been installed in Building 14B to address exposures from soil vapor intrusion. Environmental sampling at the property boundary indicates that off-site vapor intrusion is a potential exposure

Site Code: 411806

Site Description: Location: The 690 Saint Paul Street site is located in an urban area in the City of Rochester, Monroe County, just north of the intersection of Saint Paul Street and Upper Falls Boulevard. Site Features: The site covers approximately 4.7 acres. The main site features include four buildings. Three of the buildings are interconnected, seven stories tall and made of brick. The fourth building is a metal framed slab on grade structure. These buildings have a total footprint of approximately 89,280 square feet. All of the buildings are at least partially occupied. A paved parking lot is located on the northern and eastern portions of the site. Lawn area and a small playground are on the eastern side of the site. Current Zoning and Land Use: The site is zoned for industrial uses. One of the large brick buildings is occupied by the Rochester City School District and a charter school. The remaining buildings are partially occupied but with significant vacancy. Current uses include a school, light industrial operations, and a workshop for creating theater sets. The site is bound by roads on all sides. Residential, commercial and vacant properties are located across from the site. Past Use of the Site: The site was developed prior to 1875 and was primarily used for residential purposes until the 1920s. From around 1920 until the late 1960s, the property was owned and operated by Bausch & Lomb (B&L) to manufacture lenses and other products. A foundry was also present near the northeast corner of the site. Since the early 1970s, the site has been used for storage as well as commercial and light industrial activities. Prior uses that appear to have led to site contamination include underground storage tanks (USTs) that may have leaked. These tanks appear to have contained chlorinated solvents including trichloroethene (TCE) and petroleum products including gasoline and fuel oil. In 2002, a 500-gallon UST was removed from the site and contaminated soil was encountered. The contaminated soil was used to backfill the area of the tank removal. In 2008, an investigation was performed to determine the extent of soil and groundwater contamination associated with the 2002 tank removal. The investigation identified an area of petroleum contaminated soil, but did not detect significant TCE soil contamination. The investigation was followed by the excavation of approximately 1,650 cubic yards of petroleum impacted soil and a previously undocumented UST. An area of petroleum impacted soil could not be safely removed because it was close to an underground electric line. Groundwater sample results from 2008 also identified an area impacted by chlorinated solvents, primarily TCE, near Building 14B which was occupied by the City of Rochester School District. The chlorinated solvent impact area did not appear to be associated with the petroleum impacted soils and UST that were removed from the site in 2008. A sub-slab depressurization system (SSDS) was subsequently

installed under Building 14B to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. An interim Site Management Plan was developed under the BCP to address the operation, maintenance, and monitoring of the SSDS. Indoor air monitoring results indicate that the SSDS has successfully controlled vapor migration into the building. Additionally, pressure field extension testing indicates that the SSDS has successfully created a negative pressure underneath the building slab. Site Geology and Hydrogeology: The ground surface at the site generally slopes to the south and west. The depth to bedrock ranges from less than two feet on the southern portion of the site to twelve feet on the northern portion. The overburden consists of a combination of fill and native soil. Where present, the fill material is up to eight feet thick and includes sand, crushed gravel and brick, construction and demolition debris, foundry sand, cinders, ash, and imported sandy soil. The underlying native soil is primarily a glacial till that is up to ten feet thick. The till contains silt, sand, and gravel in varying amounts. The Decew Dolomite (a type of bedrock) underlies the overburden at the site. The thickness of this unit is generally 8 to 12 feet. The Rochester Shale underlies the Decew Dolomite. The depth to groundwater ranges from approximately four to nine feet below the ground surface. Groundwater generally flows to the west and is likely influenced by the Genesee River Gorge which is approximately 1,000 ft to the west/southwest. The Genesee River in this area is also about 100 ft. below the Site. Although the overall groundwater flow in the overburden is towards the Genesee River Gorge, areas of the site may be influenced by preferential pathways (e.g., subsurface utilities and associated bedding materials).

Env Problem:

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include trichloroethene (TCE) and its associated degradation products, petroleum related compounds including light non-aqueous phase liquid (LNAPL), and polycyclic aromatic hydrocarbons (PAHs). Additional contaminants include some pesticides, polychlorinated biphenyls (PCBs) and metals. Investigation activities at the site focused on the eight (8) areas of concern (AOCs) described below: AOC 1: Former Oil House located in the central portion of the site; AOC 2: Former Foundry building located near the northeast corner of the site; AOC 3: Former Agitator Building located along the northern site boundary; AOC 4: A 125,000-gallon above-ground reservoir located on the ground floor of a former manufacturing building; AOC 5: The remaining on-site buildings; AOC 6: All portions of the site not covered by the other AOCs; AOC 7: A former dust collector located in the central portion of the site; and AOC 8: The northwest corner of the site. Soil: Concentrations of TCE identified in soil remaining on site (up to about 0.8 ppm) slightly exceed the soil cleanup objectives for the protection of groundwater (0.47 ppm). The TCE impacted soils are located under the parking lot in the northwest portion of the site (AOC 8) at depths of 8 feet to the top of bedrock (about 12 feet). TCE contaminated soils are not expected to extend off-site. Petroleum related compounds, primarily xylene, are present in the central portion of the site (AOC 6) and along the site boundary in the northeast corner of the site (AOC 2). Concentrations of xylene (up to about 33 ppm) in AOC 6 significantly exceed the soil cleanup objectives for unrestricted use (0.26 ppm). This area of petroleum impacts is located underneath buried electric lines and is approximately 30-ft wide starting at depths of about 4 ft below

**690 SAINT PAUL STREET (Continued)**

**S109580083**

ground surface to the top of bedrock (about 9 ft). Petroleum related compounds are expected to be present offsite near AOC 2. Concentrations of xylene (up to 5.6 ppm) along the northeast site boundary of AOC 2 moderately exceed the soil cleanup objectives for unrestricted use. This area represents the low level contamination remaining along the site boundary after the completion of an IRM. The impacted area is under pavement and is approximately 50-ft wide starting at depths of 8 to 10 ft below ground surface to the top of bedrock (about 12 ft). Xylene likely extends off site in this area. Off-site land use immediately adjacent to this area consists of a sidewalk and then Martin Street. PAHs, including benzo(a)pyrene (BaP), are present in the central portion of the site (AOC 6) and underneath site buildings (AOC 5). Concentrations of BaP (up to 2.7 ppm) in AOC 6 slightly exceed the soil cleanup objectives for restricted residential use (1 ppm). This area of PAH impacted soil covers approximately 2,000 square feet and is located underneath a demarcation layer and 2-ft of clean soil that was installed as an IRM. Impacts start just under the demarcation layer and extend to about 7 ft below ground surface. Concentrations of BaP (up to 45 ppm) in AOC 5 exceed the soil cleanup objectives for restricted residential use. Elevated levels of PAHs in AOC 5 soils were detected sporadically and AOC 5 soils are covered by building slabs. Site-related PAHs are not anticipated to extend off-site. Fill material below the asphalt parking lot (portions of AOCs 2, 3, 6, and 8) has the potential to sporadically contain manganese and lead at concentrations above the soil cleanup objectives for restricted residential use. Some pesticides, polychlorinated biphenyls (PCBs) and metals are also present sporadically throughout the site at concentrations above soil cleanup objectives for unrestricted use but below soil cleanup objectives for residential use and below 1 ppm for PCBs. Groundwater: Chlorinated solvents, specifically TCE and its associated degradation products, are present in the central portion of the site (AOC 1) and the northwest portion of the site (AOC 8). In AOC 1, chlorinated solvents significantly exceed groundwater standards (typically 5 ppb), with a maximum concentration of approximately 9,700 ppb (sum of TCE and associated degradation products). Vertically, TCE contamination in AOC 1 is limited to the shallow bedrock zone approximately 8.7 to 18.7 feet below ground. Chlorinated solvents did not exceed groundwater standards in the 27 to 37 foot depth interval. Chlorinated solvents associated with AOC 1 appear to be migrating offsite in the bedrock groundwater. Slight amounts (approximately 157 ppb) of TCE and associated degradation products are have migrated under site buildings and about 180 feet to the western site boundary along Saint Paul Street. TCE is the primary groundwater contaminant at AOC 8, significantly exceeding groundwater standards (5 ppb), with a maximum concentration of approximately 13,000 ppb. Vertically, TCE contamination is primarily associated with the overburden in this area. TCE in the shallow bedrock slightly exceeds groundwater standards ranging from 17 ppb to 34 ppb. TCE degradation products are also present at low levels. TCE from AOC 8 appears to be migrating offsite in the overburden groundwater. A moderate amount (approximately 2,000 ppb) of TCE has migrated about 60 feet to the western site boundary along Saint Paul Street. Light Non-Aqueous Phase Liquid (LNAPL): A thin layer of LNAPL is present in several wells in the central portion of the site (AOCs 1 and 6). This material is primarily Lube Oil, but also contains PCBs and TCE. LNAPL is not anticipated to extend off-site. Soil Vapor and Indoor Air:

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include trichloroethene (TCE) and its associated degradation products, petroleum related compounds including light non-aqueous phase liquid (LNAPL), and polycyclic aromatic hydrocarbons (PAHs). Additional contaminants include some pesticides, polychlorinated biphenyls (PCBs) and metals. Investigation activities at the site focused on the eight (8) areas of concern (AOCs) described below: AOC 1: Former Oil House located in the central portion of the site; AOC 2: Former Foundry building located near the northeast corner of the site; AOC 3: Former Agitator Building located along the northern site boundary; AOC 4: A 125,000-gallon above-ground reservoir located on the ground floor of a former manufacturing building; AOC 5: The remaining on-site buildings; AOC 6: All portions of the site not covered by the other AOCs; AOC 7: A former dust collector located in the central portion of the site; and AOC 8: The northwest corner of the site. Soil: Concentrations of TCE identified in soil remaining on site (up to about 0.8 ppm) slightly exceed the soil cleanup objectives for the protection of groundwater (0.47 ppm). The TCE impacted soils are located under the parking lot in the northwest portion of the site (AOC 8) at depths of 8 feet to the top of bedrock (about 12 feet). TCE contaminated soils are not expected to extend off-site. Petroleum related compounds, primarily xylene, are present in the central portion of the site (AOC 6) and along the site boundary in the northeast corner of the site (AOC 2). Concentrations of xylene (up to about 33 ppm) in AOC 6 significantly exceed the soil cleanup objectives for unrestricted use (0.26 ppm). This area of petroleum impacts is located underneath buried electric lines and is approximately 30-ft wide starting at depths of about 4 ft below ground surface to the top of bedrock (about 9 ft). Petroleum related compounds are expected to be present offsite near AOC 2. Concentrations of xylene (up to 5.6 ppm) along the northeast site boundary of AOC 2 moderately exceed the soil cleanup objectives for unrestricted use. This area represents the low level contamination remaining along the site boundary after the completion of an IRM. The impacted area is under pavement and is approximately 50-ft wide starting at depths of 8 to 10 ft below ground surface to the top of bedrock (about 12 ft). Xylene likely extends off site in this area. Off-site land use immediately adjacent to this area consists of a sidewalk and then Martin Street. PAHs, including benzo(a)pyrene (BaP), are present in the central portion of the site (AOC 6) and underneath site buildings (AOC 5). Concentrations of BaP (up to 2.7 ppm) in AOC 6 slightly exceed the soil cleanup objectives for restricted residential use (1 ppm). This area of PAH impacted soil covers approximately 2,000 square feet and is located underneath a demarcation layer and 2-ft of clean soil that was installed as an IRM. Impacts start just under the demarcation layer and extend to

**690 SAINT PAUL STREET (Continued)**

**S109580083**

about 7 ft below ground surface. Concentrations of BaP (up to 45 ppm) in AOC 5 exceed the soil cleanup objectives for restricted residential use. Elevated levels of PAHs in AOC 5 soils were detected sporadically and AOC 5 soils are covered by building slabs. Site-related PAHs are not anticipated to extend off-site. Fill material below the asphalt parking lot (portions of AOCs 2, 3, 6, and 8) has the potential to sporadically contain manganese and lead at concentrations above the soil cleanup objectives for restricted residential use. Some pesticides, polychlorinated biphenyls (PCBs) and metals are also present sporadically throughout the site at concentrations above soil cleanup objectives for unrestricted use but below soil cleanup objectives for residential use and below 1 ppm for PCBs. Groundwater: Chlorinated solvents, specifically TCE and its associated degradation products, are present in the central portion of the site (AOC 1) and the northwest portion of the site (AOC 8). In AOC 1, chlorinated solvents significantly exceed groundwater standards (typically 5 ppb), with a maximum concentration of approximately 9,700 ppb (sum of TCE and associated degradation products). Vertically, TCE contamination in AOC 1 is limited to the shallow bedrock zone approximately 8.7 to 18.7 feet below ground. Chlorinated solvents did not exceed groundwater standards in the 27 to 37 foot depth interval. Chlorinated solvents associated with AOC 1 appear to be migrating offsite in the bedrock groundwater. Slight amounts (approximately 157 ppb) of TCE and associated degradation products are have migrated under site buildings and about 180 feet to the western site boundary along Saint Paul Street. TCE is the primary groundwater contaminant at AOC 8, significantly exceeding groundwater standards (5 ppb), with a maximum concentration of approximately 13,000 ppb. Vertically, TCE contamination is primarily associated with the overburden in this area. TCE in the shallow bedrock slightly exceeds groundwater standards ranging from 17 ppb to 34 ppb. TCE degradation products are also present at low levels. TCE from AOC 8 appears to be migrating offsite in the overburden groundwater. A moderate amount (approximately 2,000 ppb) of TCE has migrated about 60 feet to the western site boundary along Saint Paul Street. Light Non-Aqueous Phase Liquid (LNAPL): A thin layer of LNAPL is present in several wells in the central portion of the site (AOCs 1 and 6). This material is primarily Lube Oil, but also contains PCBs and TCE. LNAPL is not anticipated to extend off-site. Soil Vapor and Indoor Air: Sub-slab and indoor air sampling indicated actions were needed to address soil vapor intrusion within each of the onsite buildings. PCE, TCE, and cis-1,2-DCE were detected at levels above those which are expected to be found in indoor air. TCE was detected in the indoor air of an unoccupied building at a concentration of 6.5 micrograms per cubic meter which slightly exceeds the NYSDOH guidance value of 5 micrograms per cubic meter. Sub-slab sampling results were relatively low, with maximum PCE, TCE, and cis-1,2-DCE levels of 2.6, 21, and 15 micrograms per cubic meter, respectively. A sub-slab depressurization system was installed under Building 14B in 2008 to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. Approximately 40 post-mitigation indoor air sampling events have been completed. For each sampling event, indoor air samples were collected from up to four locations within the building. The average TCE indoor air concentration for the four locations ranged from 1.2 to 2.2 micrograms per cubic meter. Property line soil vapor sampling indicated the potential for off-site soil vapor migration, particularly near AOC 8, with maximum

MAP FINDINGS

**690 SAINT PAUL STREET (Continued)**

**S109580083**

levels of PCE, TCE, and cis-1,2-DCE levels of 32, 4,400, and 170 micrograms per cubic meter, respectively. Significant Threat: The site presents a significant threat to public health and/or the environment due to: The presence of two groundwater plumes with significant levels of chlorinated solvents (up to 9,700 ppb and 9,500 ppb); Off-site migration of chlorinated solvents in groundwater from each of the two plumes. Off-site migration appears to be most significant with the northernmost plume (AOC 8; TCE up to 2,000 ppb at the downgradient property line); and An area of LNAPL on the site.

Health Problem: People are not likely to come into contact with contaminated soils because they have been removed from the site or are covered by buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab ventilation system has been installed in Building 14B to address exposures from soil vapor intrusion. Environmental sampling at the property boundary indicates that off-site vapor intrusion is a potential exposure pathway that warrants additional investigation.

Site Code: 411806  
Site Description: Location: The 690 Saint Paul Street site is located in an urban area in the City of Rochester, Monroe County, just north of the intersection of Saint Paul Street and Upper Falls Boulevard. Site Features: The site covers approximately 4.7 acres. The main site features include four buildings. Three of the buildings are interconnected, seven stories tall and made of brick. The fourth building is a metal framed slab on grade structure. These buildings have a total footprint of approximately 89,280 square feet. All of the buildings are at least partially occupied. A paved parking lot is located on the northern and eastern portions of the site. Lawn area and a small playground are on the eastern side of the site. Current Zoning and Land Use: The site is zoned for industrial uses. One of the large brick buildings is occupied by the Rochester City School District and a charter school. The remaining buildings are partially occupied but with significant vacancy. Current uses include a school, light industrial operations, and a workshop for creating theater sets. The site is bound by roads on all sides. Residential, commercial and vacant properties are located across from the site. Past Use of the Site: The site was developed prior to 1875 and was primarily used for residential purposes until the 1920s. From around 1920 until the late 1960s, the property was owned and operated by Bausch & Lomb (B&L) to manufacture lenses and other products. A foundry was also present near the northeast corner of the site. Since the early 1970s, the site has been used for storage as

MAP FINDINGS

**690 SAINT PAUL STREET (Continued)**

**S109580083**

well as commercial and light industrial activities. Prior uses that appear to have led to site contamination include underground storage tanks (USTs) that may have leaked. These tanks appear to have contained chlorinated solvents including trichloroethene (TCE) and petroleum products including gasoline and fuel oil. In 2002, a 500-gallon UST was removed from the site and contaminated soil was encountered. The contaminated soil was used to backfill the area of the tank removal. In 2008, an investigation was performed to determine the extent of soil and groundwater contamination associated with the 2002 tank removal. The investigation identified an area of petroleum contaminated soil, but did not detect significant TCE soil contamination. The investigation was followed by the excavation of approximately 1,650 cubic yards of petroleum impacted soil and a previously undocumented UST. An area of petroleum impacted soil could not be safely removed because it was close to an underground electric line. Groundwater sample results from 2008 also identified an area impacted by chlorinated solvents, primarily TCE, near Building 14B which was occupied by the City of Rochester School District. The chlorinated solvent impact area did not appear to be associated with the petroleum impacted soils and UST that were removed from the site in 2008. A sub-slab depressurization system (SSDS) was subsequently installed under Building 14B to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. An interim Site Management Plan was developed under the BCP to address the operation, maintenance, and monitoring of the SSDS. Indoor air monitoring results indicate that the SSDS has successfully controlled vapor migration into the building. Additionally, pressure field extension testing indicates that the SSDS has successfully created a negative pressure underneath the building slab. Site Geology and Hydrogeology: The ground surface at the site generally slopes to the south and west. The depth to bedrock ranges from less than two feet on the southern portion of the site to twelve feet on the northern portion. The overburden consists of a combination of fill and native soil. Where present, the fill material is up to eight feet thick and includes sand, crushed gravel and brick, construction and demolition debris, foundry sand, cinders, ash, and imported sandy soil. The underlying native soil is primarily a glacial till that is up to ten feet thick. The till contains silt, sand, and gravel in varying amounts. The Decew Dolomite (a type of bedrock) underlies the overburden at the site. The thickness of this unit is generally 8 to 12 feet. The Rochester Shale underlies the Decew Dolomite. The depth to groundwater ranges from approximately four to nine feet below the ground surface. Groundwater generally flows to the west and is likely influenced by the Genesee River Gorge which is approximately 1,000 ft to the west/southwest. The Genesee River in this area is also about 100 ft. below the Site. Although the overall groundwater flow in the overburden is towards the Genesee River Gorge, areas of the site may be influenced by preferential pathways (e.g., subsurface utilities and associated bedding materials).

Env Problem:

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include trichloroethene (TCE) and its associated degradation products, petroleum related compounds including light non-aqueous phase liquid (LNAPL), and polycyclic aromatic hydrocarbons (PAHs). Additional contaminants include some pesticides, polychlorinated biphenyls (PCBs) and metals. Investigation activities at the site focused on the eight (8) areas of concern (AOCs) described below: AOC 1: Former

**690 SAINT PAUL STREET (Continued)**

**S109580083**

Oil House located in the central portion of the site; ACO 2: Former Foundry building located near the northeast corner of the site; AOC 3: Former Agitator Building located along the northern site boundary; AOC 4: A 125,000-gallon above-ground reservoir located on the ground floor of a former manufacturing building; AOC 5: The remaining on-site buildings; AOC 6: All portions of the site not covered by the other AOCs; AOC 7: A former dust collector located in the central portion of the site; and AOC 8: The northwest corner of the site. Soil: Concentrations of TCE identified in soil remaining on site (up to about 0.8 ppm) slightly exceed the soil cleanup objectives for the protection of groundwater (0.47 ppm). The TCE impacted soils are located under the parking lot in the northwest portion of the site (AOC 8) at depths of 8 feet to the top of bedrock (about 12 feet). TCE contaminated soils are not expected to extend off-site. Petroleum related compounds, primarily xylene, are present in the central portion of the site (AOC 6) and along the site boundary in the northeast corner of the site (AOC 2). Concentrations of xylene (up to about 33 ppm) in AOC 6 significantly exceed the soil cleanup objectives for unrestricted use (0.26 ppm). This area of petroleum impacts is located underneath buried electric lines and is approximately 30-ft wide starting at depths of about 4 ft below ground surface to the top of bedrock (about 9 ft). Petroleum related compounds are expected to be present offsite near AOC 2. Concentrations of xylene (up to 5.6 ppm) along the northeast site boundary of AOC 2 moderately exceed the soil cleanup objectives for unrestricted use. This area represents the low level contamination remaining along the site boundary after the completion of an IRM. The impacted area is under pavement and is approximately 50-ft wide starting at depths of 8 to 10 ft below ground surface to the top of bedrock (about 12 ft). Xylene likely extends off site in this area. Off-site land use immediately adjacent to this area consists of a sidewalk and then Martin Street. PAHs, including benzo(a)pyrene (BaP), are present in the central portion of the site (AOC 6) and underneath site buildings (AOC 5). Concentrations of BaP (up to 2.7 ppm) in AOC 6 slightly exceed the soil cleanup objectives for restricted residential use (1 ppm). This area of PAH impacted soil covers approximately 2,000 square feet and is located underneath a demarcation layer and 2-ft of clean soil that was installed as an IRM. Impacts start just under the demarcation layer and extend to about 7 ft below ground surface. Concentrations of BaP (up to 45 ppm) in AOC 5 exceed the soil cleanup objectives for restricted residential use. Elevated levels of PAHs in AOC 5 soils were detected sporadically and AOC 5 soils are covered by building slabs. Site-related PAHs are not anticipated to extend off-site. Fill material below the asphalt parking lot (portions of AOCs 2, 3, 6, and 8) has the potential to sporadically contain manganese and lead at concentrations above the soil cleanup objectives for restricted residential use. Some pesticides, polychlorinated biphenyls (PCBs) and metals are also present sporadically throughout the site at concentrations above soil cleanup objectives for unrestricted use but below soil cleanup objectives for residential use and below 1 ppm for PCBs. Groundwater: Chlorinated solvents, specifically TCE and its associated degradation products, are present in the central portion of the site (AOC 1) and the northwest portion of the site (AOC 8). In AOC 1, chlorinated solvents significantly exceed groundwater standards (typically 5 ppb), with a maximum concentration of approximately 9,700 ppb (sum of TCE and associated degradation

MAP FINDINGS

**690 SAINT PAUL STREET (Continued)**

**S109580083**

products). Vertically, TCE contamination in AOC 1 is limited to the shallow bedrock zone approximately 8.7 to 18.7 feet below ground. Chlorinated solvents did not exceed groundwater standards in the 27 to 37 foot depth interval. Chlorinated solvents associated with AOC 1 appear to be migrating offsite in the bedrock groundwater. Slight amounts (approximately 157 ppb) of TCE and associated degradation products are have migrated under site buildings and about 180 feet to the western site boundary along Saint Paul Street. TCE is the primary groundwater contaminant at AOC 8, significantly exceeding groundwater standards (5 ppb), with a maximum concentration of approximately 13,000 ppb. Vertically, TCE contamination is primarily associated with the overburden in this area. TCE in the shallow bedrock slightly exceeds groundwater standards ranging from 17 ppb to 34 ppb. TCE degradation products are also present at low levels. TCE from AOC 8 appears to be migrating offsite in the overburden groundwater. A moderate amount (approximately 2,000 ppb) of TCE has migrated about 60 feet to the western site boundary along Saint Paul Street. Light Non-Aqueous Phase Liquid (LNAPL): A thin layer of LNAPL is present in several wells in the central portion of the site (AOCs 1 and 6). This material is primarily Lube Oil, but also contains PCBs and TCE. LNAPL is not anticipated to extend off-site. Soil Vapor and Indoor Air: Sub-slab and indoor air sampling indicated actions were needed to address soil vapor intrusion within each of the onsite buildings. PCE, TCE, and cis-1,2-DCE were detected at levels above those which are expected to be found in indoor air. TCE was detected in the indoor air of an unoccupied building at a concentration of 6.5 micrograms per cubic meter which slightly exceeds the NYSDOH guidance value of 5 micrograms per cubic meter. Sub-slab sampling results were relatively low, with maximum PCE, TCE, and cis-1,2-DCE levels of 2.6, 21, and 15 micrograms per cubic meter, respectively. A sub-slab depressurization system was installed under Building 14B in 2008 to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. Approximately 40 post-mitigation indoor air sampling events have been completed. For each sampling event, indoor air samples were collected from up to four locations within the building. The average TCE indoor air concentration for the four locations ranged from 1.2 to 2.2 micrograms per cubic meter. Property line soil vapor sampling indicated the potential for off-site soil vapor migration, particularly near AOC 8, with maximum levels of PCE, TCE, and cis-1,2-DCE levels of 32, 4,400, and 170 micrograms per cubic meter, respectively. Significant Threat: The site presents a significant threat to public health and/or the environment due to: The presence of two groundwater plumes with significant levels of chlorinated solvents (up to 9,700 ppb and 9,500 ppb); Off-site migration of chlorinated solvents in groundwater from each of the two plumes. Off-site migration appears to be most significant with the northernmost plume (AOC 8; TCE up to 2,000 ppb at the downgradient property line); and An area of LNAPL on the site.

Health Problem: People are not likely to come into contact with contaminated soils because they have been removed from the site or are covered by buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is

objectives for unrestricted use (0.26 ppm). This area of petroleum impacts is located underneath buried electric lines and is approximately 30-ft wide starting at depths of about 4 ft below ground surface to the top of bedrock (about 9 ft). Petroleum related compounds are expected to be present offsite near AOC 2. Concentrations of xylene (up to 5.6 ppm) along the northeast site boundary of AOC 2 moderately exceed the soil cleanup objectives for unrestricted use. This area represents the low level contamination remaining along the site boundary after the completion of an IRM. The impacted area is under pavement and is approximately 50-ft wide starting at depths of 8 to 10 ft below ground surface to the top of bedrock (about 12 ft). Xylene likely extends off site in this area. Off-site land use immediately adjacent to this area consists of a sidewalk and then Martin Street. PAHs, including benzo(a)pyrene (BaP), are present in the central portion of the site (AOC 6) and underneath site buildings (AOC 5). Concentrations of BaP (up to 2.7 ppm) in AOC 6 slightly exceed the soil cleanup objectives for restricted residential use (1 ppm). This area of PAH impacted soil covers approximately 2,000 square feet and is located underneath a demarcation layer and 2-ft of clean soil that was installed as an IRM. Impacts start just under the demarcation layer and extend to about 7 ft below ground surface. Concentrations of BaP (up to 45 ppm) in AOC 5 exceed the soil cleanup objectives for restricted residential use. Elevated levels of PAHs in AOC 5 soils were detected sporadically and AOC 5 soils are covered by building slabs. Site-related PAHs are not anticipated to extend off-site. Fill material below the asphalt parking lot (portions of AOCs 2, 3, 6, and 8) has the potential to sporadically contain manganese and lead at concentrations above the soil cleanup objectives for restricted residential use. Some pesticides, polychlorinated biphenyls (PCBs) and metals are also present sporadically throughout the site at concentrations above soil cleanup objectives for unrestricted use but below soil cleanup objectives for residential use and below 1 ppm for PCBs. Groundwater: Chlorinated solvents, specifically TCE and its associated degradation products, are present in the central portion of the site (AOC 1) and the northwest portion of the site (AOC 8). In AOC 1, chlorinated solvents significantly exceed groundwater standards (typically 5 ppb), with a maximum concentration of approximately 9,700 ppb (sum of TCE and associated degradation products). Vertically, TCE contamination in AOC 1 is limited to the shallow bedrock zone approximately 8.7 to 18.7 feet below ground. Chlorinated solvents did not exceed groundwater standards in the 27 to 37 foot depth interval. Chlorinated solvents associated with AOC 1 appear to be migrating offsite in the bedrock groundwater. Slight amounts (approximately 157 ppb) of TCE and associated degradation products are have migrated under site buildings and about 180 feet to the western site boundary along Saint Paul Street. TCE is the primary groundwater contaminant at AOC 8, significantly exceeding groundwater standards (5 ppb), with a maximum concentration of approximately 13,000 ppb. Vertically, TCE contamination is primarily associated with the overburden in this area. TCE in the shallow bedrock slightly exceeds groundwater standards ranging from 17 ppb to 34 ppb. TCE degradation products are also present at low levels. TCE from AOC 8 appears to be migrating offsite in the overburden groundwater. A moderate amount (approximately 2,000 ppb) of TCE has migrated about 60 feet to the western site boundary along Saint Paul Street. Light Non-Aqueous Phase Liquid (LNAPL): A thin layer of LNAPL is present in

several wells in the central portion of the site (AOCs 1 and 6). This material is primarily Lube Oil, but also contains PCBs and TCE. LNAPL is not anticipated to extend off-site. Soil Vapor and Indoor Air: Sub-slab and indoor air sampling indicated actions were needed to address soil vapor intrusion within each of the onsite buildings. PCE, TCE, and cis-1,2-DCE were detected at levels above those which are expected to be found in indoor air. TCE was detected in the indoor air of an unoccupied building at a concentration of 6.5 micrograms per cubic meter which slightly exceeds the NYSDOH guidance value of 5 micrograms per cubic meter. Sub-slab sampling results were relatively low, with maximum PCE, TCE, and cis-1,2-DCE levels of 2.6, 21, and 15 micrograms per cubic meter, respectively. A sub-slab depressurization system was installed under Building 14B in 2008 to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. Approximately 40 post-mitigation indoor air sampling events have been completed. For each sampling event, indoor air samples were collected from up to four locations within the building. The average TCE indoor air concentration for the four locations ranged from 1.2 to 2.2 micrograms per cubic meter. Property line soil vapor sampling indicated the potential for off-site soil vapor migration, particularly near AOC 8, with maximum levels of PCE, TCE, and cis-1,2-DCE levels of 32, 4,400, and 170 micrograms per cubic meter, respectively. Significant Threat: The site presents a significant threat to public health and/or the environment due to: The presence of two groundwater plumes with significant levels of chlorinated solvents (up to 9,700 ppb and 9,500 ppb); Off-site migration of chlorinated solvents in groundwater from each of the two plumes. Off-site migration appears to be most significant with the northernmost plume (AOC 8; TCE up to 2,000 ppb at the downgradient property line); and An area of LNAPL on the site.

Health Problem: People are not likely to come into contact with contaminated soils because they have been removed from the site or are covered by buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab ventilation system has been installed in Building 14B to address exposures from soil vapor intrusion. Environmental sampling at the property boundary indicates that off-site vapor intrusion is a potential exposure pathway that warrants additional investigation.

intersection of Saint Paul Street and Upper Falls Boulevard. Site Features: The site covers approximately 4.7 acres. The main site features include four buildings. Three of the buildings are interconnected, seven stories tall and made of brick. The fourth building is a metal framed slab on grade structure. These buildings have a total footprint of approximately 89,280 square feet. All of the buildings are at least partially occupied. A paved parking lot is located on the northern and eastern portions of the site. Lawn area and a small playground are on the eastern side of the site. Current Zoning and Land Use: The site is zoned for industrial uses. One of the large brick buildings is occupied by the Rochester City School District and a charter school. The remaining buildings are partially occupied but with significant vacancy. Current uses include a school, light industrial operations, and a workshop for creating theater sets. The site is bound by roads on all sides. Residential, commercial and vacant properties are located across from the site. Past Use of the Site: The site was developed prior to 1875 and was primarily used for residential purposes until the 1920s. From around 1920 until the late 1960s, the property was owned and operated by Bausch & Lomb (B&L) to manufacture lenses and other products. A foundry was also present near the northeast corner of the site. Since the early 1970s, the site has been used for storage as well as commercial and light industrial activities. Prior uses that appear to have led to site contamination include underground storage tanks (USTs) that may have leaked. These tanks appear to have contained chlorinated solvents including trichloroethene (TCE) and petroleum products including gasoline and fuel oil. In 2002, a 500-gallon UST was removed from the site and contaminated soil was encountered. The contaminated soil was used to backfill the area of the tank removal. In 2008, an investigation was performed to determine the extent of soil and groundwater contamination associated with the 2002 tank removal. The investigation identified an area of petroleum contaminated soil, but did not detect significant TCE soil contamination. The investigation was followed by the excavation of approximately 1,650 cubic yards of petroleum impacted soil and a previously undocumented UST. An area of petroleum impacted soil could not be safely removed because it was close to an underground electric line. Groundwater sample results from 2008 also identified an area impacted by chlorinated solvents, primarily TCE, near Building 14B which was occupied by the City of Rochester School District. The chlorinated solvent impact area did not appear to be associated with the petroleum impacted soils and UST that were removed from the site in 2008. A sub-slab depressurization system (SSDS) was subsequently installed under Building 14B to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. An interim Site Management Plan was developed under the BCP to address the operation, maintenance, and monitoring of the SSDS. Indoor air monitoring results indicate that the SSDS has successfully controlled vapor migration into the building. Additionally, pressure field extension testing indicates that the SSDS has successfully created a negative pressure underneath the building slab. Site Geology and Hydrogeology: The ground surface at the site generally slopes to the south and west. The depth to bedrock ranges from less than two feet on the southern portion of the site to twelve feet on the northern portion. The overburden consists of a combination of fill and native soil. Where present, the fill material is up to eight feet thick and includes sand, crushed gravel and brick, construction

Env Problem:

and demolition debris, foundry sand, cinders, ash, and imported sandy soil. The underlying native soil is primarily a glacial till that is up to ten feet thick. The till contains silt, sand, and gravel in varying amounts. The Decew Dolomite (a type of bedrock) underlies the overburden at the site. The thickness of this unit is generally 8 to 12 feet. The Rochester Shale underlies the Decew Dolomite. The depth to groundwater ranges from approximately four to nine feet below the ground surface. Groundwater generally flows to the west and is likely influenced by the Genesee River Gorge which is approximately 1,000 ft to the west/southwest. The Genesee River in this area is also about 100 ft. below the Site. Although the overall groundwater flow in the overburden is towards the Genesee River Gorge, areas of the site may be influenced by preferential pathways (e.g., subsurface utilities and associated bedding materials).

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include trichloroethene (TCE) and its associated degradation products, petroleum related compounds including light non-aqueous phase liquid (LNAPL), and polycyclic aromatic hydrocarbons (PAHs). Additional contaminants include some pesticides, polychlorinated biphenyls (PCBs) and metals. Investigation activities at the site focused on the eight (8) areas of concern (AOCs) described below: AOC 1: Former Oil House located in the central portion of the site; AOC 2: Former Foundry building located near the northeast corner of the site; AOC 3: Former Agitator Building located along the northern site boundary; AOC 4: A 125,000-gallon above-ground reservoir located on the ground floor of a former manufacturing building; AOC 5: The remaining on-site buildings; AOC 6: All portions of the site not covered by the other AOCs; AOC 7: A former dust collector located in the central portion of the site; and AOC 8: The northwest corner of the site. Soil: Concentrations of TCE identified in soil remaining on site (up to about 0.8 ppm) slightly exceed the soil cleanup objectives for the protection of groundwater (0.47 ppm). The TCE impacted soils are located under the parking lot in the northwest portion of the site (AOC 8) at depths of 8 feet to the top of bedrock (about 12 feet). TCE contaminated soils are not expected to extend off-site. Petroleum related compounds, primarily xylene, are present in the central portion of the site (AOC 6) and along the site boundary in the northeast corner of the site (AOC 2). Concentrations of xylene (up to about 33 ppm) in AOC 6 significantly exceed the soil cleanup objectives for unrestricted use (0.26 ppm). This area of petroleum impacts is located underneath buried electric lines and is approximately 30-ft wide starting at depths of about 4 ft below ground surface to the top of bedrock (about 9 ft). Petroleum related compounds are expected to be present offsite near AOC 2. Concentrations of xylene (up to 5.6 ppm) along the northeast site boundary of AOC 2 moderately exceed the soil cleanup objectives for unrestricted use. This area represents the low level contamination remaining along the site boundary after the completion of an IRM. The impacted area is under pavement and is approximately 50-ft wide starting at depths of 8 to 10 ft below ground surface to the top of bedrock (about 12 ft). Xylene likely extends off site in this area. Off-site land use immediately adjacent to this area consists of a sidewalk and then Martin Street. PAHs, including benzo(a)pyrene (BaP), are present in the central portion of the site (AOC 6) and underneath site buildings (AOC 5). Concentrations of BaP (up to 2.7 ppm) in AOC 6 slightly exceed the soil cleanup objectives for restricted

S109580083

residential use (1 ppm). This area of PAH impacted soil covers approximately 2,000 square feet and is located underneath a demarcation layer and 2-ft of clean soil that was installed as an IRM. Impacts start just under the demarcation layer and extend to about 7 ft below ground surface. Concentrations of BaP (up to 45 ppm) in AOC 5 exceed the soil cleanup objectives for restricted residential use. Elevated levels of PAHs in AOC 5 soils were detected sporadically and AOC 5 soils are covered by building slabs. Site-related PAHs are not anticipated to extend off-site. Fill material below the asphalt parking lot (portions of AOCs 2, 3, 6, and 8) has the potential to sporadically contain manganese and lead at concentrations above the soil cleanup objectives for restricted residential use. Some pesticides, polychlorinated biphenyls (PCBs) and metals are also present sporadically throughout the site at concentrations above soil cleanup objectives for unrestricted use but below soil cleanup objectives for residential use and below 1 ppm for PCBs. Groundwater: Chlorinated solvents, specifically TCE and its associated degradation products, are present in the central portion of the site (AOC 1) and the northwest portion of the site (AOC 8). In AOC 1, chlorinated solvents significantly exceed groundwater standards (typically 5 ppb), with a maximum concentration of approximately 9,700 ppb (sum of TCE and associated degradation products). Vertically, TCE contamination in AOC 1 is limited to the shallow bedrock zone approximately 8.7 to 18.7 feet below ground. Chlorinated solvents did not exceed groundwater standards in the 27 to 37 foot depth interval. Chlorinated solvents associated with AOC 1 appear to be migrating offsite in the bedrock groundwater. Slight amounts (approximately 157 ppb) of TCE and associated degradation products are have migrated under site buildings and about 180 feet to the western site boundary along Saint Paul Street. TCE is the primary groundwater contaminant at AOC 8, significantly exceeding groundwater standards (5 ppb), with a maximum concentration of approximately 13,000 ppb. Vertically, TCE contamination is primarily associated with the overburden in this area. TCE in the shallow bedrock slightly exceeds groundwater standards ranging from 17 ppb to 34 ppb. TCE degradation products are also present at low levels. TCE from AOC 8 appears to be migrating offsite in the overburden groundwater. A moderate amount (approximately 2,000 ppb) of TCE has migrated about 60 feet to the western site boundary along Saint Paul Street. Light Non-Aqueous Phase Liquid (LNAPL): A thin layer of LNAPL is present in several wells in the central portion of the site (AOCs 1 and 6). This material is primarily Lube Oil, but also contains PCBs and TCE. LNAPL is not anticipated to extend off-site. Soil Vapor and Indoor Air: Sub-slab and indoor air sampling indicated actions were needed to address soil vapor intrusion within each of the onsite buildings. PCE, TCE, and cis-1,2-DCE were detected at levels above those which are expected to be found in indoor air. TCE was detected in the indoor air of an unoccupied building at a concentration of 6.5 micrograms per cubic meter which slightly exceeds the NYSDOH guidance value of 5 micrograms per cubic meter. Sub-slab sampling results were relatively low, with maximum PCE, TCE, and cis-1,2-DCE levels of 2.6, 21, and 15 micrograms per cubic meter, respectively. A sub-slab depressurization system was installed under Building 14B in 2008 to mitigate the potential for contaminant vapors to migrate through the floor and into the indoor air. Approximately 40 post-mitigation indoor air sampling events have been completed. For each sampling event, indoor air samples were collected from up to four locations

Health Problem:

within the building. The average TCE indoor air concentration for the four locations ranged from 1.2 to 2.2 micrograms per cubic meter. Property line soil vapor sampling indicated the potential for off-site soil vapor migration, particularly near AOC 8, with maximum levels of PCE, TCE, and cis-1,2-DCE levels of 32, 4,400, and 170 micrograms per cubic meter, respectively. Significant Threat: The site presents a significant threat to public health and/or the environment due to: The presence of two groundwater plumes with significant levels of chlorinated solvents (up to 9,700 ppb and 9,500 ppb); Off-site migration of chlorinated solvents in groundwater from each of the two plumes. Off-site migration appears to be most significant with the northernmost plume (AOC 8; TCE up to 2,000 ppb at the downgradient property line); and An area of LNAPL on the site. People are not likely to come into contact with contaminated soils because they have been removed from the site or are covered by buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab ventilation system has been installed in Building 14B to address exposures from soil vapor intrusion. Environmental sampling at the property boundary indicates that off-site vapor intrusion is a potential exposure pathway that warrants additional investigation.

Site Description: Location: OBI, LLC site is located in an urban area in the City of Rochester and is approximately 200 feet north of the intersection of Balfour Drive and Hollenbeck Street. The site is about 6.3 acres in size and consists of three parcels identified as: 245-265 Hollenbeck Street; 271 Hollenbeck Street; and 50 Balfour Drive. Site Features: The main site features include several large buildings surrounded by parking areas and roadways. Grass and tree covered areas are present along the northern and western edges of the site. Current Zoning and Land Use: The site is currently active and is zoned for industrial use. The surrounding parcels are currently either vacant or used for a combination of commercial, industrial, residential, and recreational purposes. The nearest residential area is adjacent to the site to the south. Past Use of the Site: The site was originally developed in 1923 for various industrial/manufacturing operations

that included printing, lithographing, appliance manufacturing, metal plating, sheet metal fabrication and metal stamping. Prior activities that appear to have contributed to site contamination include a trichloroethene (TCE) degreaser that was used at the site until approximately 1992. The owner sampled soil and groundwater at the site on several occasions between 1997 and 2013. NYSDEC was not involved with these investigations. A summary of the results was provided to NYSDEC in August 2013. The results indicated the presence of TCE contamination in on-site soil and groundwater. Based on these results, OBI, LLC signed an Order-On-Consent with NYSDEC to address the site contamination in November 2013. Site Geology and Hydrogeology: The ground surface at the site is relatively flat. The average depth to bedrock is approximately 11-ft. The overburden consists of a combination of fill and native soil. Where present, the fill material is up to five feet thick and includes sand, cinders, ash, and slag. The underlying native soil consists of a layer of silty sand followed by glacial till to the top of bedrock. The Rochester Shale underlies the overburden at the site. The depth to groundwater is approximately ten feet below the ground surface and appears to flow to the east.

Env Problem:

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern at the site are trichloroethene (TCE) and associated degradation products. Soil TCE is found in shallow soil (0 to 2 feet below grade), outside of the northwest portion of the main building. TCE is also found in deeper soil 6 to 8 feet below grade), underneath the building in the central portion of the site. TCE concentrations in the shallow soil (up to approximately 124 ppm) and the deeper soil (up to approximately 63 ppm) significantly exceed the soil cleanup objective (SCO) for unrestricted use (0.47 ppm). Groundwater TCE and associated degradation products are detected in groundwater throughout the site with the highest concentrations at the north end of the site, exceeding groundwater standards (typically 5 ppb), with a maximum total chlorinated volatile organic compound (CVOC) concentration of 4,990 ppb in the most recent sampling event. Total CVOC groundwater concentrations in previous sampling events exceeded 10,000 ppb. Off-site migration of TCE in groundwater does not appear to be a significant at this time. Soil Vapor and Indoor Air TCE was detected in on-site sub-slab soil vapor at elevated concentrations and was also detected in indoor air at concentrations ranging from non-detect up to 8.17 micrograms per cubic meter. TCE was not detected at elevated levels in off-site soil vapor. Significant Threat: The site presents a significant environmental threat due to the ongoing releases of contaminants from source areas (contaminated soil) into groundwater.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts to indoor air quality in the on-site building and actions are

recommended to address soil vapor intrusion. Sampling indicated that soil vapor intrusion is not a concern for off-site buildings.

Site Description: The site is located at 24 Spencer Street, City of Rochester, New York. The Site is located within a heavily developed light industrial and commercial area northwest of downtown Rochester. The 2.1 acre property is bordered by an abandoned railroad right of way to the north; Spencer Street to the south; the Genesee River to the east; and, Cliff Street to the west. Site Features: The property is currently being used to store equipment such as dumpsters and heavy equipment. The main site features at the site are 4 buildings; the subsurface foundation/basement of a building is still present at the site. Part of one building has been used for office space by the occupant in the past; the other three buildings have been used for equipment storage and/or equipment maintenance. It is unclear whether the site buildings are being used in a similar manner by the current owner. Current Zoning: The property is currently zoned as C-2 or as a commercial area. Historic Use(s): From the 1930s through 1987, the Site was reportedly owned and operated by John H. Rae, Inc. (Raeco) as a bulk storage, blending, packaging and distribution facility for chemicals and petroleum products. Poor practices over the years resulted in extensive site contamination. In 1995, the Raeco property was sold to P&P Properties, Inc. At that point the property was reportedly leased by a construction contractor, through the Spring 2009, who used the property to store and repair heavy construction equipment. The current owner (Dance Hall Entertainment, LLC) purchased the property in April 2009 and utilizes the site for equipment and vehicle storage. The site has been the subject of several regulatory investigations and inspections. Below is a brief summary of the regulatory activities at the site: Dye testing was conducted by Monroe County Health Department (MCHD) in 1970 to investigate three (3) pipe outlets that discharged into the gorge; The Rochester Police Department observed waste chemicals at the property in June 1994; NYSDEC, the Monroe County Health Department (MCI-ID), the USEPA, and the City of Rochester completed follow-up inspections of the Site in 1994, 1995, and 1996; USEPA removed 553 containers

**FORMER RAECO PRODUCTS (Continued)**

**S105114334**

(drums and 5-gallon pails) from the Site in 1997; NYSDEC completed a Preliminary Site Investigation in 2001; NYSDEC completed an RI/FS in 2009. The Record of Decision (ROD) was signed on March 30, 2010. The remedy includes: targeted shallow soil excavation and/or site cover, soil vapor extraction at the VOC source area and institutional controls. SVE Pilot study with solar fans at two different locations are in progress. The results from the pilot study indicates that the contamination concentration has gone down significantly and further reduction in concentration of contaminants will be achieved by the continued operation of the SVE. Site Geology and Hydrogeology: The Site is relatively flat with an elevation of approximately 460 ft above mean sea level (amsl). The terrain dips slightly to the east/northeast across the site. The eastern edge of the site slopes to a cliff face that forms the Genesee River gorge. The surface water of the Genesee River is approximately 70 feet below the ground surface at the site. The site consists of a few feet to over 49 feet of overburden on top of bedrock. During the RI bedrock was identified from a few feet below the ground surface (bgs) at the eastern side of the site to depths exceeding 49 feet at the west/southwest portion of the Site (possibly associated with historic sewer line installation and associated rock removal that may have occurred). The overburden is comprised primarily of fill material including silty sand and gravel with some miscellaneous construction and demolition debris (brick, concrete, wood, and ash fragments were noted during previous subsurface investigations). Deeper overburden consists primarily of silty clays and silty fine sands. Gravelly sands and clays were also noted at some areas of the Site. A clay layer of varying thickness exists just above the bedrock surface (bedrock at the Site is classified as dolomite with frequent fractures). Groundwater at the site is typically not observed in the overburden, with some exceptions including gravelly intervals (where depth to bedrock exceeded 20 feet bgs) and at the non-confining clay layer situated immediately above the bedrock. The depth to groundwater in three bedrock monitoring wells ranged from approximately 20 to 42 feet bgs. During the RI it was observed that the first significant water producing fractures were encountered at approximately 40 to 50 feet bgs. Locally, the shallow bedrock groundwater appears to have a source of recharge centrally located at the Site, with groundwater flowing radially from the central area of the site to the Genesee River and surrounding area. This trend is also apparent in deeper groundwater monitored at the Site, but deeper groundwater appears to have a steeper gradient of flow to the Genesee River to the east and a strong component of flow to the south/southeast. Groundwater at the site has a strong vertically downward gradient toward the adjacent Genesee River, which is situated approximately 70 feet below the ground surface of the site.

Env Problem:

Prior to Remediation: Contamination at the Site is related to historical releases to the soil from deteriorating drums and leaking storage tanks and drums. There is evidence of soil contamination on the Site, but habitat for endangered, threatened, or special concern species is not present on the Site. There are no ecological habitats on the Site, and the surrounding area is primarily commercial/industrial which is characterized as a terrestrial cultural (upland) community type. The Site is bordered on the east by the Genesee River gorge and forested areas are present within a half mile radius of the Site. Contaminated soil at the Site could be eroded during storm events and enter storm drains discharging to the

**S105114334**

Genesee River. However, no bottom/sediment/soil was observed during sampling of the river. Therefore, soils were not addressed further in the FWIA. The only potential contaminant migration pathway identified for the Site is the potential for groundwater to discharge to surface water. Based on previous investigations, groundwater flows towards the Genesee River. The contaminant concentration in groundwater was as high as 81000 parts per billion (ppb) or microgram per liter for cis-1,2 dichloroethene and 22000 ppb for vinyl chloride. The highest concentration of VOCs was detected in one monitoring well out of nineteen wells located at the site. The VOCs that were detected in the groundwater samples above surface water protection screening levels were not detected in the surface water samples. The two VOCs that were detected in the surface water samples were very low estimated values; toluene was reported below the screening level. Three metals were detected in both the groundwater and surface water samples above screening levels; aluminum, barium and iron. The results of these three metals are similar in all three surface water samples. Therefore, similar concentrations were found upstream of the Site, adjacent to the Site and downstream of the Site. Thus, the Site does not appear to be the source of the detections in the surface water. The FWIA did not identify any current or potential impacts to ecological resources. Post Remediation: Site related contamination is found in groundwater. The groundwater is not used as a source of potable water. The implementation of the selected remedy will address restoration of the groundwater quality at/near the site and address the soil contamination at the site. The surface soil contamination is no longer visible as the current owner has brought various types of fill to the site and the former contamination has been covered. Two soil vapor extraction systems as a pilot study was installed in 2012. One was installed in the north and one in the south in the areas where soil contamination was found to be significant. The SVE systems were installed to remove volatile contaminants from the soils at the site. The results from the pilot study indicates that the contamination concentration has gone down significantly and further reduction in concentration of contaminants will be achieved by the continued operation of the SVE.

Health Problem: Contact with contaminated soil by the general public is unlikely because public access is limited, however, there is a potential for trespassers to come into contact with contaminated surface soils. Groundwater at the site is not used for drinking water since the area is served by public water. The potential for exposures associated with soil vapor intrusion has been investigated and it was determined that further action is recommended to minimize the potential for exposures related to soil vapor intrusion.

DEC Memo: "SPILLS UNIT TO PERFORM SITE INSPECTION WITH COSTANZA. 4/29/09 MZ ON SITE WITH NICK COSTANZA (OWNER), GREG MACLEAN AND BOB LONG (DEC-REG 8), JIME MORAS (DEC CENTRAL OFICE), MCDOH & NYSDOH. MZ WALKED AROUND WITH COSTANZA TO VIEW STAINED AREAS, 55 GALLON DRUMS, 5 GAL BUCKETS AND AN APPROX 1000 GAL AST. DRUMS HAD SOME MATERIAL IN THEM, BUCKETS HAD WHAT APPEARED TO BE WASTE OIL IN THEM. DISCUSSED NEED TO CLEANUP ALL OIL STAINS AND PROPERLY DISPOSE OF DRUMS AND BUCKETS AND GET TANK CLEANED AND PROPERLY CLOSED. COSTANZA STATED THAT HE HAS USED SAW ENVIORNMENTAL IN THE PAST AND HE WILL CONTACT THEM REGARDING THIS CLEANUP. MZ TO SEND RESPONSIBILITY LETTER TO COSTANZA. 5/1/09 FAXED TO MCDOH 5/4/09 RESP. LETTER SENT TO COSTANZA. PLAN TO BE SUBMITTED BY JUNE 5, 2009. 2/1/2011 DEPT MET WITH CITY OF ROCHESTER (GREGOR, FORBES, BIONDOLILLO, PECK) TO DISCUSS STATUS OF SPILL SITE. CITY DID A SURVEY WHICH SHOWED THAT SOME OF THE PROPERTY THAT COSTANZA HAS BEEN USING BELONGS TO THE CITY. THERE ARE FENCES AND PART OF A BUILDING ON THE CITY PROPERTY. THE FILE IS BEING LOOKED AT BY THE CITIES LEGAL DEPT. MZ TO CHECK WITH SAW TO SEE IF ANY WORK WAS COMPLETED."

Remarks: "WHILE DOING A SITE INSPECTION AS PART OF THE SUPERFUND PROGRAM, MANY AREAS WITH SURFACE OIL SPILLS WERE NOTED ALONG WITH AN AST, SEVERAL FIFTY-FIVE GALLON DRUMS AND 5 GALLON BUCKETS."

Description: The Navy Reserve Center occupied less than 1 acre in Rochester, New York. The facilities were used for the training and conditioning of Navy personnel and included an indoor firing range for small arms. The backstop of the range could contain lead. The site is currently being used as a gymnasium.

History: The site was leased in July 1956 and used until December 1970, when the Navy built a new facility on Paul Road. The site was returned to New York State, which sold it in 1992 to a private party. A recommended project includes further investigation of the backstops of two small arms firing ranges for lead contamination.

Site Description: Location: The Rochester Metal Etching Company (RME) site is located at 100 Lake Avenue in Rochester, Monroe County, New York near the intersection of Lake Avenue and Spencer Street within a developed urban area of downtown Rochester. Site Features: The main feature of the 0.22 acre site is a two story building surrounded by paved parking areas and walkways. The site is generally flat with the exception of the southeast corner of the property, which dips to the east. Current Zoning: The site is located within the Community Center zoning district and is currently used for commercial purposes. The surrounding properties include commercial and industrial parcels which are covered by buildings and pavement (paved parking or roads). The site is bounded to the north by a mixed use building (commercial first floor/apartments upper floors) and a vehicle rental location across Spencer Street, to the west across Lake Avenue by parking lots, to the east by a frozen food facility, and to the south by a diner. Historical Uses: The RME facility manufactured etched and lithographed metal nameplates from 1967 until 1996 when manufacturing operations ceased. Ferric chloride was reportedly used to etch stainless steel and brass, and hydrofluoric acid and hydrochloric acid solutions were used to etch aluminum. Chlorinated VOCs consisting of tetrachloroethene (PCE), trichloroethylene (TCE), and 1,1,1-trichloroethane (1,1,1-TCA) were used for degreasing. Prior uses that appear to have led to site contamination include metal plating, machining and etching, along with the improper disposal of process wastewater into a series of sumps, drains and trenches. From 1998 to 1999, the NYSDEC conducted a preliminary investigation of the RME facility. The investigation data led to the listing of the Rochester Metal Etching (RME) Company site as a Class 2 Inactive Hazardous Waste Disposal Site in 2001 and the subsequent completion of the RME site remedial investigation/feasibility study (RI/FS) in 2007. An interim remedial measure (IRM) is conducted at a site when a source of contamination or exposure pathway can be effectively addressed before completion of the RI/FS. Although no IRMs were approved by the Department, The Brotherhood, MC Inc. (the current site property owner) conducted the following work: Concrete Filling of Basement Sumps and Collection Trenches The sumps and the trench associated with the RME site facility provided the primary preferential pathways identified for the transport and migration of site constituents to subsurface soil and groundwater. In 2005, the owners of the RME site filled in the sumps and the trench with concrete, eliminating these structures as potential pathways for the transport of materials from inside the facility to subsurface media. It is unknown if the trenches were properly cleaned prior to filling with concrete. Site Cover In 2009, the owners of the RME site paved the entire site with asphalt, including the previously exposed surface soil area located in the southeast corner of the site. The boundaries of the site are either covered by asphalt paving or the site building, thus eliminating the potential of direct contact with contaminated soils on site. Site Geology and Hydrogeology: Based on the monitoring wells and site topography, the groundwater flows to the east/northeast towards the Genesee River, located approximately 500 ft to the east of the RME site. At this location, the Genesee River is located within a gorge which is 100 feet below the elevation of the RME site. The RME site is underlain by unconsolidated glacial

till deposits consisting of fine sand and silt with varying amounts of fine to coarse gravel and Lockport Group bedrock. The overburden soil is generally unsaturated with localized occurrence of water at the overburden/bedrock interface. The thickness of overburden/depth to bedrock ranges from 3.5 ft beneath the site building to approximately 13 ft in the parking lot on the west side of the building.

Env Problem: Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs) trichloroethene (TCE), 1,1,1-trichloroethane (1,1,1-TCA) and tetrachloroethene (PCE), and inorganic compounds (metals) chromium and copper. VOCs are present in on-site groundwater and indoor air at concentrations exceeding the respective standards, criteria and guidance values (SCGs). Although VOCs exceeded the SCGs within the on-site overburden groundwater, no SCGs were exceeded in on-site soils (with the exception of acetone) or within the downgradient off-site deep bedrock monitoring wells. Metals contamination was detected within the on-site soils and overburden groundwater as well as within the downgradient off-site bedrock monitoring wells at concentrations exceeding the respective SCGs. Investigations did not reveal the presence of an on-site source area based on sampling conducted beneath the building foundation. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. A soil vapor extraction system has been installed at the facility to address vapor intrusion concerns. The RME site is surrounded by properties occupied by buildings and paved parking lots, therefore, the extensive pavement existing on-site eliminates most potential pathways to on-site receptors.

Health Problem: People are not drinking site-related contaminants in drinking water since the area is served by a public water supply not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Volatile organic compounds in the soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality. This impact is limited to one on-site building and two off-site buildings. Installation of a sub-slab depressurization system (a system that ventilates/removes air beneath the building) and follow-up monitoring has been recommended to reduce the levels of contaminants in the indoor air. However, actions have not been taken.

Site Description: Location: The West Station former manufactured gas plant (MGP) site Rochester Gas and Electric (RG&E) is located in the City of Rochester, Monroe County. The site is off Mill Street on the western eastern bank of the Genesee River just north of the northern half of the Inner Loop Highway. Site Features: The site is located within the Genesee River Gorge directly adjacent to the river. The site is relatively flat with the gorge wall rising to the west and the river to the east. The site is bounded by Mill Street, Falls Street and the Genesee River and is adjacent to the Upper Falls Dam. The site has several large structures associated with the former Beebe Station Power Plant. Most of the structures are currently vacant but RG&E maintains a few building for storage and office space. Beebe Station is scheduled for demolition starting the 2nd quarter of 2016. Current Zoning/Use(s): Industrial and residential. Past Use of the Site: The West Station Former MGP operated from about 1910 to 1952. Following the MGP the site was used as for a large coal-fired power generating facility (Beebe Station) which was removed from service in 1999. Operable Units: The site has only one operable unit. Site Geology and Hydrogeology: The site is located in the Genesee River Gorge, the floor and sidewalls of which are the Rochester Shale. The site is located on fill ranging from 4 to 37.5 feet in thickness. The fill is underlain by 0 to 19.5 feet of native alluvium which overlies the Rochester Shale bedrock. Groundwater exists in both the overburden and bedrock. Groundwater moves generally eastward and discharges to the river. A concrete retaining wall which is keyed into bedrock locally diverts overburden groundwater slightly to the south before it can resume its eastward course.

Env Problem: Nature and Extent of Contamination: The remedial investigation has noted coal tar and coal tar contaminated soil/wastes on-site. DNAPL seeps have been observed in the Genesee River along the banks and coal tar impacts have been noted in the river sediments adjacent to the site. Impacts of PAHs VOCs and SVOCs and DNAPL residuals were noted in the surface and subsurface soils at the site. There is evidence of groundwater impacts from the residual tars and DNAPLs in the soils. Special Resources Impacted/Threatened: The site is located

Site Description: The southern portion of the site known as Beebee Park was a disposal area for coal tar wastes from the former West Station manufactured gas plant. The site is bounded by the Genesee River, the Platt Street Bridge, and the river gorge wall. An IRM removal action was completed in 1997. Coal tars to a depth of up to 20 feet below ground surface were excavated and blended with coal fines for alternate fuel at Hickling Station in Steuben County. Residual contaminated soil and rock were disposed on-site and an 8 feet thick cap of clean soil was placed on top of the residual contamination. The remaining portion of the site is being investigated under the voluntary cleanup program (site V00593)

Env Problem: An IRM removal action was completed in the Beebee Park portion of this site in 1997. The remaining portion of the site is being investigated under the voluntary cleanup program (site V00593)

Health Problem: Not reported

Updated By: BXPUTZIG  
Site Description: Several drums of cyanide wastes and other materials were abandoned and not leaking on Mill Street. NYSDEC assumed responsibility for cleanup under the Superfund Drum Removal Program. A NYSDEC-hired contractor sampled and disposed of the drums off-site. The site was successfully remediated, and no further actions were required.  
Env Problem: The site was successfully remediated and no further actions were required.  
Health Problem: Municipal water serves the area so exposures via drinking water are not expected. The potential for exposure was eliminated once the discarded drummed wastes and other materials were removed from the site to an approved disposal facility.

(3) contiguous parcels are 245 Andrews Street, 151 and 159-169 Pleasant Street. Site Features: The main site feature is a vacant retail building that was the location of the former dry cleaner. Current Zoning and Land Use: The site is currently inactive and is zoned for mixed use - commercial and residential. The surrounding area is a mix of commercial and residential with the nearest residential located directly across the street from the site. Past Use of the Site: The 245 Andrews Street parcel was utilized as a dry cleaner, Silver Cleaners, from 1949 to 2011. The 159-169 Pleasant Street parcel was utilized as a filling station from 1935 to 1955. The Pleasant Street parcels are currently asphalt parking lots. Site Geology and Hydrogeology: The on-site soils consist of miscellaneous fill material that is underlain with fine sand with trace silt and gravel. The miscellaneous fill material consists of soil, concrete, and brick. The Genesee River is located approximately 0.2 miles west of the site. The local groundwater flow direction is to the north. The depth to groundwater in the area is approximately 6 to 9 feet below ground surface.

Env Problem: Nature and Extent of Contamination: The primary contaminants of concern are tetrachloroethene and petroleum related-compounds in groundwater and soils. Subsurface Soils: Subsurface soil samples were collected and analyzed for TCL VOCs. Petroleum related compounds (ethylbenzene, and o,m,p-xylene) concentrations ranged from non-detect to 5.9 parts per million. Groundwater: Groundwater samples were collected and analyzed for TCL VOCs. Petroleum related compounds (ethylbenzene, toluene, o,m,p-xylene, naphthalene, 1,2,4- and 1,3,5-trimethylbenzene) were detected and the concentrations ranged from non-detect to 3,450 ug/L. Tetrachloroethene was detected and the concentration ranged from non-detect to 88,500 ug/L.

Health Problem: People are not expected to come into direct contact with site-related contaminants in the soil because buildings and pavement cover most of the site. People may come into direct contact with site-related contaminants if they dig below the surface on-site. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that obtains its water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur on and near the site will be evaluated.

Site Description: Location: The Silver Cleaners site (Site) is located in an urban area of downtown City of Rochester. The Site is located on the southwest corner of Andrews Street and North Clinton Avenue. Site Features: The main site features are a vacant building and asphalt covered parking lots. The vacant building is approximately 3,750 square feet and is one story block construction on concrete slab with a wooden roof. Current Zoning/Uses: The Site is classified as Center City District B (CCD-B) which allows for mixed use residential and commercial. The surrounding parcels are currently used for a combination of commercial, institutional (school & YWCA), cultural/recreational, and residential. The nearest residential property is approximately 70 feet directly across the street from the Site. Past Use of the Site: The Site is comprised of three (3) parcels. The 245 Andrews Street parcel was originally a tailor shop. Permit records from the City of Rochester indicate a permit was issued in 1949 for the change of use from a tailor shop to a dry cleaning plant. Silver Cleaners and Launderers was located and operated at the 245 Andrews Street parcel from 1949 to 2011. The 151 Pleasant Street parcel was formally known as 149-169 Franklin Street prior to the City of Rochester reconfiguring the streets. A filling station was located on the 151 and 159-169 Pleasant Street parcels from 1935 to 1955. The filling station was known as Mid City Service Station (a/k/a Mid City Parking, Inc.). A Phase I and a Limited Phase II Environmental Site Assessment was completed June 2012 and December 2012, respectively. Geology/Hydrogeology: The surficial soils at the Site are mapped as lacustrine silt and clay deposits. The bedrock beneath the Site is mapped as Penfield Dolostone Unit of the Upper Silurian Lockport

Group. The local topography and proximity to nearby surface water features, and observations made at the Site groundwater flow direction is expected to be towards the Genesee River in a west-northwest direction.

Env Problem: Nature and Extent of Contamination: Based on investigations completed to date the primary contaminants of concern are tetrachloroethene (PCE) and petroleum related compounds (ethylbenzene, toluene, mixed xylenes, naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene). Sub-surface Soil: Sub-surface soil samples were analyzed for TCL VOCs. The analytical results indicate exceedance of the Protection of Groundwater SCO for ethylbenzene (1.3 ppm) and mixed xylenes (2.6 and 5.9 ppm). Groundwater: Groundwater samples were collected and analyzed for TCL VOCs. The analytical results indicate exceedance of the groundwater standards and guidance values of 5 ug/L for tetrachloroethene (7,890 and 88,500 ug/L), ethylbenzene (1,040 ug/L), toluene (309 ug/L), naphthalene (699 ug/L), 1,2,4-trimethylbenzene (1,650 ug/L), 1,3,5-trimethylbenzene (630 ug/L), and mixed xylenes (1,250 and 3,450 ug/L). The information presented above was submitted with the BCP application regarding the environmental condition at the site. The environmental assessment will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

. Waste code: D001

. Waste name: IGNITABLE WASTE

. Waste code: D002

. Waste name: CORROSIVE WASTE

. Waste code: U002

. Waste name: 2-PROPANONE (I) (OR) ACETONE (I)

. Waste code: U112

. Waste name: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

. Waste code: U117

. Waste name: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

. Waste code: U154

. Waste name: METHANOL (I) (OR) METHYL ALCOHOL (I)

. Waste code: U188

. Waste name: PHENOL

. Waste code: U197

. Waste name: 2,5-CYCLOHEXADIENE-1,4-DIONE (OR) P-BENZOQUINONE

Date form received by agency: 12/31/1979

Site name: DUPONT

Classification: Large Quantity Generator

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 67400

Corrective Action Summary:

Event date: 03/29/1993

Event: RFA Completed

Event date: 02/02/1994

Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 03/28/2001  
Event: Date For Remedy Selection (CM Imposed)

Event date: 02/13/2015  
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 02/13/2015  
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 02/19/2015  
Event: CA800YE

DEC Memo: "08/26/2008: PIPE FAILED RELEASING WASTE WATER TO CITY PROPERTY, BOTH ABOVE GROUND AND BELOW. WATER HAS LEVELS OF COOPER AND CHROME IN IT. MARCOR HIRED TO VACUUM UP POOLED WATER. 08/27/2008: DT SPOKE WITH ERNIE DANKERT OF DUPONT, VACUUMING IS STILL ONGOING. ROUGHLY 800 GALLONS OF WASTE WATER HAS BEEN RECOVERED THUS FAR. WASTE WATER HAS CONCENTRATIONS OF COPPER AT 1 PPM AND CHROME AT 0.1 PPM. PARADIGM HIRED TO SAMPLE WATER FOR CONTAMINANTS PER ECO HAAG'S REQUEST. DUPONT TO PROVIDE ADDITIONAL INFORMATION UPDATE ON CLEANUP PROGRESS TO SPILLS UNIT THIS AFTERNOON. DT/BF CONVERSATION WITH ERNIE DANKERT, WHO STATES THAT LEAKS COMING FROM SUMP AND NOT LINE. SPILL HAS BEEN FORWARDED TO WATER FOR PROPER FOLLOW UP. NO FURTHER ACTION IS NEEDED BY SPILLS. 09/05/2008: MZ MET WITH PRADEEP JANGBARI AND TODD CAFFOE (DEC) TO DISCUSS SITE AND FOLLOW UP. 09/10/2008: EMAIL FROM PRADEEP TO ERNIE DANKERT: Since our early morning walk through at your facility on 09/04/08, I have had an opportunity to talk to Todd Caffoe and Mike Zamiarski. We have reached a decision on our end that at the minimum Dupont should address all the visible contamination around the current hole and the area adjoining the vertical wall that shows the magenta dye color residue. Then a pumping system through a French drain parallel to the wall that runs the length of the visible contamination at or near the property line that is three feet wide with a 1% slope to the current hole would be a good start. The goal here is to use the existing stream you have intercepted to flush the area till the soil is returned to its background condition for all known parameters of concern that have been discovered to date, including by Joe Biondolillo. Once the current dark color disappears, Dupont could take a sample of the pumped water for RCRA metals and known parameters discovered so far. We are looking for clear water and contaminants including metals under GW standards. WRT the surface puddle and to what extent the surface soil should be removed and how far from the property line; we are looking for a grab composite of three locations from around the area where the puddle was observed. Please also collect a sample from the current hole. We would use part 375-6.8, as a guide for the soil standard. Dupont should take ownership of all the pumped out water and treat it through its existing treatment system prior to discharge in conformance with its local SIU permit issued by MCPW. Going forward this project will be under the leadership of Mike Zamiarski. Mike will issue a clean closure letter once we receive the sampling results as discussed above that comply with our standards and Joe Biondolillo has signed

off. 09/20/2010: MZ TELCON WITH PAUL MAZIERSKI (DUPONT - 716 278-5496) WHO STATED THAT LAST 2 ROUNDS OF WATER SAMPLING HAS BEEN BELOW GROUNDWATER STDS AND THAT SOIL PILE SAMPLING SHOWS ELEVATED LEVELS OF CHROME. MAZIERSKI TO ARRANGE FOR DISPOSAL OF SOIL AND SUBMIT CLEAN UP REPORT TO DEC. 10/20/15 MZ ON SITE WITH GLEN MURPHY (DUPONT) AND AECOM (JENNIFER). SOIL PILE BEING REMOVED FROM CITY OF ROCHESTER PROPERTY AND IS BEING DISPOSED OF AT HIGH ACRES LANDFILL. WILL COLLECT A GRAB SAMPLE FROM FOOTPRINT OF SOIL PILE. WILL ALSO DIG 2 TEST PITS WHERE TRENCH WAS PREVIOUSLY EXCAVATED ALONG FENCE LINE TO COLLECT SOIL SAMPLES. SAMPLES TO BE SAMPLED FOR AMMONIA, COPPER AND CROMIUM."

Remarks: "IT IS SUSPECTED THAT A FLOOR DRAIN FAILED; NOT CLEANED BUT ARE SHUTTING DOWN PRODUCTION TO FIND AND CORRECT PROBLEM."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was MZ 12/11/00 MZ TELCON WITH DANKERT WHO STATED THAT THEY ARE ASSUMING THE LEAK IS FROM A FAILED TANK BOTTOM. THEY ARE IN THE PROCESS OF EMPTYING THE TANK AND WILL PERFORM AN INTERNAL INSPECTION. THE WASTE WATER CONTAINED A MIX OF SULFATES, NITRATES, CHLORIDES AND POSSIBLY COPPER AND CHLOROFORM. DANKERT STATED THAT THERE IS A BOILER ROOM THAT IS DOWNGRADIENT FROM THE WASTE WATER TANK AND THAT IS WHERE THEY NOTICED THE WATER. THE TANK IS APPROXIMATELY 15 FEET FROM PROPERTY LINE. THERE IS AN AUTOBODY SHOP APPROXIMATELY 20 FT DOWNGRADIENT THAT HAS NO BASEMENT, BUT IT DOES HAVE A PIT FOR WORKING UNDER CARS. DANKERT SPOKE TO THE OWNER AND INFORMED HIM OF WHAT HAPPENED AND ASKED THE OWNER TO NOTIFY HIM IF THEY START TO NOTICE ANY WATER IN THE PIT. DANKERT STATED THEY WILL COLLECT SAMPLES. DANKERT TO SEND SITE SKETCH TO DEC SHOWING LOCATION OF TANK AND BOILER ROOM. 12/11/00 DANKERT CALLED DEC IN AFTERNOON AND STATED THAT IT WAS NOT THE TANK THAT LEAKED BUT IT WAS A SECTION OF STAINLESS STEEL PIPING THAT PASSED THROUGH A CONCRETE BLOCK WALL. THE PIPING HAD 5 OR SO PIN HOLES IN IT AND THE WATER LEAKED DOWN INSIDE THE CONCRETE BLOCK. THE PIPING WILL BE REPAIRED AND THE TANK WILL BY HYDROSTATICALLY TESTED PRIOR TO BEING PUT BACK INTO SERVICE. 12/12/00 MZ TELCON WITH DANKERT WHO STATED THAT THE PIPE HAS BEEN FIXED AND THE SYSTEM IS BACK ONLINE. DANKERT STATED THAT SAMPLES WERE COLLECTED FROM THE WASTE WATER AND ARE BEING WORKED ON BY THEIR CHEMISTS. DANKERT TO UPDATE DEC WITH RESULTS. 12/12/00 FAXED TO MCHD 1100 HR. 1/17/08 MZ TELCON WITH DANKERT WHO STATED THAT HE WILL FIND SAMPLING RESULTS AND SUBMIT. HE INDICATED THAT THE STEEL PIPE WAS REPLACED WITH A NON-METALLIC PIPE. 1/18/08 MZ REC'D WASTEWATER SAMPLING RESULTS FROM DANKERT. CHLOROFORM LEVELS WERE SLIGHTLY ABOVE GROUNDWATER STANDARDS. NO FURTHER ACTION REQUIRED BY SPILLS. PAPER FILE REMOVED PER FILE RETENTION POLICY. "

Remarks: "CALLER IS REPORTING A FAILED TANK THAT LEAKED MATERIAL INTO THE GROUND. NO CLEAN UP AT THIS TIME. DOES NOT REQUIRE A CALLBACK. FAXED TO MCHD ON 12/15/2000 AT 1030 HRS."

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was MZ 6/28/99 MZ ON SITE WITH DANKERT, JOE BIONDOLILLO (C/O ROCH), MARCOR, AND DAY ENGINEERING. SEVERAL GEOPROBE POINTS WERE ADVANCED ON DUPONTS PROPERTY BETWEEN THE TANK FARM AND THE FENCELINE. MAROCR NOW ON C/O ROCH PROPERTY INSTALLING ADDITIONAL POINTS. A TRIMETER IS BEING USED TO SCREEN SOILS FOR AMMONIA. SOIL SAMPLES TO BE COLLECTED (DUPONT AND CITY TO SPLIT SOME SAMPLES) AND ANALYZED FOR AMMONIA. 8/26/99 MZ TELCON WITH ERNIE DANKERT, PAUL MAZIERSKI AND DAN SHELDON (DUPONT). THEY STATED THAT THEY HAVE RESULTS FROM SAMPLING AND WOULD LIKE TO MEET TO DISCUSS. SOME OF THE RESULTS WERE IN THE 100 TO 200 PPM RANGE. MEETING SET FOR 9/14/99. 9/9/99 DEPT REC'D FAX COPY OF SOIL SAMPLE RESULTS. 9/14/99 MZ AND TIM WALSH MET WITH DANKERT, MAZIERSKI AND SHELDON (DUPONT), JOE BIONDOLILLO (R/O ROCH) AND JOHN BLANCHARD (DAY ENGR) TO DISCUSS RESULTS AND NEXT STEPS. MAZIERSKI STATED THAT UPON CONSULTING WITH SEVERAL LABS, THERE IS NO DIRECT METHOD TO TEST FOR AMMONIA IN SOILS. THE LAB USED BY THE CITY MIXED DISTILLED WATER WITH THE SAMPLE, DECANTED IT OUT AND THEN TESTED THE WATER. RESULTS WERE NON-DETECT FOR AMMONIA. DUPONT FIRST TRIED TO DO

**DUPONT ROCHESTER - SENECA SITE (Continued)**

**1000348640**

A DISTILLATION ON THE SOILS BUT DUE TO THE AMOUNT OF STONES/PEBBLES, THIS COULD NOT PROVIDE A RELIABLE RESULT (RESULTS WERE NON-DETECT BUT DETECTION LIMITS WERE VERY HIGH). DUPONT THEN HAD LAB RUN A METHOD SIMILAR TO THE WAY THE CITY DID. THESE ARE THE RESULTS THAT WERE PROVIDED TO THE DEC. MZ AND TW DISCUSSED THE NEED FOR A GROUNDWATER SAMPLE TO BE COLLECTED AND TESTED FOR AMMONIA (COULD BE COMPARED TO THE GROUNDWATER STANDARD). AT THIS TIME THERE IS NO STANDARD FOR AMMONIA IN SOILS. DANKERT STATED THAT HE WAS TOLD BY A RETIRED EMPLOYEE THAT THERE WAS ANOTHER AMMONIUM THIOSULFATE TANK (WHERE THE COMPRESSOR UNIT IS NOW). DANKERT STATED THAT TANK WAS IN GOOD CONDITION ACCORDING TO DUPONT PERSONNEL. DUPONT TO SUBMIT A PROPOSAL TO DEC FOR GROUNDWATER SAMPLING. 2/11/00 MZ TELCON WITH JOE ALBERT (MCHD) WHO HAD QUESTIONS REGARDING THIS SITE. MZ INFORMED ALBERT THAT THE DEPT HAS NOT YET REC'D RESULTS FROM THE GROUNDWATER SAMPLING. MZ TO CHECK WITH DUPONT. 2/11/00 MZ TELCON WITH DANKERT TO GET UPDATE. DANKERT STATED THAT THE WELLS WERE NEVER INSTALLED BECAUSE THE ATTORNEYS FOR THE CITY OF ROCHESTER AND DUPONT COULD NOT COME AN AGREEMENT ON AN ACCESS AGREEMENT. MZ STATED THAT UNLESS THE CITY AND DUPONT COME TO A RESOLUTION ON THIS VERY SOON, THE DEPARTMENT WOULD HIRE A CONTACTOR TO INSTALL THE WELLS AND COLLECT SAMPLES. DANKERT TO CONTACT DUPONT CORPORATE PEOPLE TO RELAY THE DEPT'S MESSAGE. DANKERT TO GET BACK TO DEC WITHIN A COUPLE DAYS. 3/10/00 MZ TELCON WITH DANKERT WHO INQUIRED ABOUT THE NEIGHBORHOOD GROUP MEETING ON 3/14/00. DANKERT ASKED IF DEC WOULD HAVE REPRESENTATION THERE. MZ STATED THAT DEC WOULD. DANKERT STATED THAT HE BELIEVES THAT DUPONT'S ATTORNEYS AND THE CITY OF ROCHESTER'S ATTORNEYS ARE GETTING CLOSER TO AN ACCESS AGREEMENT TO INSTALL THE WELLS AND SAMPLE THEM. 3/14/00 LETTER SENT TO DUPONT REQUIRING UPDATE ON ACCESS AGREEMENT NEGOTIATIONS AND STATING THAT IF AGREEMENT COULD NOT BE FINALIZED SOON, DEC WOULD TAKE OVER SPILL. ALSO REQUIRED A THIRD GROUNDWATER MONITORING WELL TO THE EAST (UPGRADIENT) OF THE FORMER AMMONIUM THIOSULFATE (ATS) TANKS. 4/17/00 MZ REC'D TELCAL FROM DANKERT WHO STATED THAT THE ACCESS AGREEMENT HAS BEEN SIGNED AND THAT DRILLING SHOULD COMMENCE VERY SOON. MZ REQUESTED THAT DEC BE NOTIFIED WHEN DRILLING WILL TAKE PLACE. 1/18/01 DEPT REC'D LIMITED GROUNDWATER INVESTIGATION REPORT. 3 WELLS INSTALLED (WELL DMW-3 IS ON DUPONT PROP AND DMW-1 & DMW-2 ARE ON CITY OF ROCH PROP). GROUNDWATER SAMPLES COLLECTED. RESULTS INDICATE AMMONIA IN EXCESS OF NYS GROUNDWATER STD (2 PPM) IN ALL 3 WELLS. DMW-1 = 18 PPM, DMW-2 = 58.9 PPM AND DMW-3 = 6 PPM. ADDITIONAL WELLS PROPOSED TO FURTHER INVESTIGATE. DEPT TO REVIEW WELL PROPOSAL AND COMMENT BACK TO DUPONT. 3/19/01 MZ TELCON WITH PAUL MAZIERSKI (DUPONT) TO DISCUSS LOCATIONS OF NEW WELLS. MZ STATED THAT DEPT REQUESTS WELLS BE CLOSER TO EXISTING WELLS. MAZIERSKI STATED THAT FINAL WELL LOCATIONS WILL BE BASED ON RESULTS OF SOIL GAS SURVEY, INPUT FROM DEC AND INPUT FROM C/O ROCH (REGARDING WHERE LOCATION OF POTENTIAL BLDGS/STRUCTURES WILL BE). 3/28/01 LETTER SENT TO MAZIERSKI (CC TO JOE BIONDOLILLO - C/O ROCH). 5/22/01 MZ REC'D FAX OF RESULTS FROM AMMONIA SOIL-GAS SURVEY. ALSO INCLUDES LOCATION FOR PROPOSED MONITORING WELLS. WELLS TO BE INSTALLED THE WEEK OF 5/29/01. 10/16/01 DEPT REC'D SUPPLEMENTAL GROUNDWATER INVESTIGATION REPORT. A SOIL GAS SURVEY WAS PERFORMED IN ORDER TO HELP IN DEFINING THE EXTENT OF AMMONIA CONTAMINATION. 4 NEW GROUNDWATER MONITORING WELLS WERE INSTALLED DOWNGRADIENT OF DUPONT'S FORMER TANK FARM TO ASSESS GROUNDWATER CONDITIONS. GROUNDWATER FLOW DIRECTION IS WEST - NORTHWEST. DEPTH TO GROUNDWATER RANGES FROM APPROX. 4 FT TO APPROX 11 FT BELOW GROUND SURFACE. SAMPLING RESULTS RANGED FROM NON DETECT FOR AMMONIA IN WELL DMW-7 TO A HIGH OF 107 PPM IN DMW-2. 1/31/02 MEMO

DUPONT ROCHESTER - SENECA SITE (Continued)

1000348640

SENT TO JOE ALBERT (MONROE COUNTY HEALTH DEPT) AND DAVE NAPIER (NYS DEPT OF HEALTH) WHICH INCLUDED COPIES OF THE 10/16/01 REPORT. 4/30/02 LETTER SENT TO ROBERT GENAU (DUPONT) REQUIRING THAT QUARTERLY SAMPLING BE CONDUCTED ON WELLS DMW-1 THROUGH DMW-7 STARTING IN MAY 2002 AND THAT A REPORT BE SUBMITTED 45 DAYS FOLLOWING THE DATE OF SAMPLING. COPIED DANKERT, BIONDOLILLO, ALBERT AND NAPIER ON LETTER. 10/17/02 DEC REC'D QUARTERLY SAMPLING RESULTS. ELEVATED LEVELS OF AMMONIA CONTINUE TO BE FOUND IN DMW-1 THRU DMW-4. 5/23/03 GROUNDWATER SAMPLING SUMMARY REPORT REC'D. AMMONIA LEVELS CONTINUE TO FLUCTUATE IN DMW-2. LEVELS IN OTHER WELLS HAVE DECREASED FOR THE MOST PART. 3/22/04 DEPT REC'D GROUNDWATER SAMPLING RESULT REPORT. AMONIA LEVELS DECREASED IN ALL BUT DMW-4 WHICH WENT FROM 5.8 PPM TO 16 PPM. LETTER TO ROBERT GANEAU STATING THAT MORE SAMPLING/MONITORING IS REQUIRED AT THIS TIME. 1/17/08 MZ TELCON WITH ERNIE DANKERT (DUPONT) TO GET UPDATE ON SITE. DANKERT STATED THAT THE NEW CORPORATE CONTACT FOR THE SITE IS JENNY LIU (518-382-9204). eMAIL SENT TO LIU REQUESTING ANOTHER ROUND OF SAMPLING OF THE WELLS TO GET UPDATED INFO. 9/20/10 MZ TELCON WITH PAUL MAZIERSKI (DUPONT - 716 278-5496) WHO STATED THAT HE WILL ARRANGE FOR THE WELLS TO BE RESAMPLED TO GET UPDATED GW QUALITY INFO."

Remarks:

"CALLER STATED THAT DURING THE DISMANTELING OF THE CONCRETE SECONDARY CONTAINMENT SYSTEM FLOOR, AN AMMONIA ODOR WAS NOTED IN THE GRAVEL BELOW THE CONTAINMENT FOR THE TWO AMMONIUM THIOSULFATE TANKS. NOT BELIEVED TO BE FROM THE TANKS THEMSELVES (TANKS WERE IN GOOD CONDITION). DANKERT STATED THAT HE WAS NOT AWARE OF ANY AMMONIUM THIOSULFATE RELEASES OR SPILLS SINCE HE HAS BEEN THERE. POSSIBLY FROM OLDER SPILLS OR OVERFILLS. DANKERT STATED THAT DUPONT WILL HAVE A GEOPROBE ON SITE WITHIN THE MONTH TO COLLECT SOIL BORINGS AND ANALYZE SOIL SAMPLES FOR AMMONIA. DANKERT TO CONTACT DEC WHEN WORK IS TO BE DONE."

**FINDS:**

Registry ID: 110000328039

**Environmental Interest/Information System**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

**TSCA SUBMITTER**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/07/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/07/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

### Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/07/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

## ***Federal CERCLIS list***

### FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/13/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/06/2016	Telephone: 703-603-8704
Date Made Active in Reports: 05/20/2016	Last EDR Contact: 07/06/2016
Number of Days to Update: 135	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Varies

### SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: 800-424-9346
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/22/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/31/2016
	Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

### SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: 800-424-9346
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 07/22/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/31/2016
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/09/2015	Source: EPA
Date Data Arrived at EDR: 03/02/2016	Telephone: 800-424-9346
Date Made Active in Reports: 04/05/2016	Last EDR Contact: 06/30/2016
Number of Days to Update: 34	Next Scheduled EDR Contact: 10/10/2016
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/09/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2016	Telephone: (212) 637-3660
Date Made Active in Reports: 04/05/2016	Last EDR Contact: 06/30/2016
Number of Days to Update: 34	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/09/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2016	Telephone: (212) 637-3660
Date Made Active in Reports: 04/05/2016	Last EDR Contact: 06/30/2016
Number of Days to Update: 34	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/09/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2016	Telephone: (212) 637-3660
Date Made Active in Reports: 04/05/2016	Last EDR Contact: 06/30/2016
Number of Days to Update: 34	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/09/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2016	Telephone: (212) 637-3660
Date Made Active in Reports: 04/05/2016	Last EDR Contact: 06/30/2016
Number of Days to Update: 34	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Varies

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/28/2015	Source: Department of the Navy
Date Data Arrived at EDR: 05/29/2015	Telephone: 843-820-7326
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 05/16/2016
Number of Days to Update: 13	Next Scheduled EDR Contact: 08/29/2016
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 09/10/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/11/2015	Telephone: 703-603-0695
Date Made Active in Reports: 11/03/2015	Last EDR Contact: 05/25/2016
Number of Days to Update: 53	Next Scheduled EDR Contact: 09/12/2016
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 09/10/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/11/2015	Telephone: 703-603-0695
Date Made Active in Reports: 11/03/2015	Last EDR Contact: 05/25/2016
Number of Days to Update: 53	Next Scheduled EDR Contact: 09/12/2016
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

### **ERNS: Emergency Response Notification System**

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 03/28/2016  
Date Data Arrived at EDR: 03/30/2016  
Date Made Active in Reports: 05/20/2016  
Number of Days to Update: 51

Source: National Response Center, United States Coast Guard  
Telephone: 202-267-2180  
Last EDR Contact: 06/28/2016  
Next Scheduled EDR Contact: 10/10/2016  
Data Release Frequency: Annually

## ***State- and tribal - equivalent CERCLIS***

### **SHWS: Inactive Hazardous Waste Disposal Sites in New York State**

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 05/17/2016  
Date Data Arrived at EDR: 05/19/2016  
Date Made Active in Reports: 07/07/2016  
Number of Days to Update: 49

Source: Department of Environmental Conservation  
Telephone: 518-402-9622  
Last EDR Contact: 05/19/2016  
Next Scheduled EDR Contact: 08/29/2016  
Data Release Frequency: Annually

### **VAPOR REOPENED: Vapor Intrusion Legacy Site List**

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 08/01/2015  
Date Data Arrived at EDR: 11/19/2015  
Date Made Active in Reports: 12/10/2015  
Number of Days to Update: 21

Telephone: 518-402-9814  
Last EDR Contact: 05/20/2016  
Next Scheduled EDR Contact: 08/29/2016  
Data Release Frequency: Varies

## ***State and tribal landfill and/or solid waste disposal site lists***

### **SWF/LF: Facility Register**

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 04/06/2016  
Date Data Arrived at EDR: 04/14/2016  
Date Made Active in Reports: 06/17/2016  
Number of Days to Update: 64

Source: Department of Environmental Conservation  
Telephone: 518-457-2051  
Last EDR Contact: 07/01/2016  
Next Scheduled EDR Contact: 10/17/2016  
Data Release Frequency: Semi-Annually

## ***State and tribal leaking storage tank lists***

### **INDIAN LUST R8: Leaking Underground Storage Tanks on Indian Land**

LUSTs on Indian land in Colorado, Montana, North Dakota, South Dakota, Utah and Wyoming.

## ***State and tribal institutional control / engineering control registries***

### ENV RES DECL: Environmental Restrictive Declarations

The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

Date of Government Version: 02/04/2016	Source: New York City Department of City Planning
Date Data Arrived at EDR: 03/24/2016	Telephone: 212-720-3300

### RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

## **State and tribal voluntary cleanup sites**

### VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

### ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

## ADDITIONAL ENVIRONMENTAL RECORDS

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Data Release Frequency: Annually

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### **HIST SPILLS: SPILLS Database**

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006  
Date Data Arrived at EDR: 03/01/2007

Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Next Scheduled EDR Contact: 08/29/2016  
Data Release Frequency: Varies

## HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

## **EDR HIGH RISK HISTORICAL RECORDS**

### ***EDR Exclusive Records***

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

Source: National Institutes of Health  
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## Public Schools

UTM Y (Meters): 4783191.0  
Elevation: 494 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map: 5938555 ROCHESTER EAST, NY  
Version Date: 2013  
  
West Map: 5938707 ROCHESTER WEST, NY  
Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

Target Property County  
MONROE, NY

FEMA Flood  
Electronic Data  
YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 36055C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

## **NATIONAL WETLAND INVENTORY**

NWI Quad at Target Property  
ROCHESTER EAST

NWI Electronic  
Data Coverage  
YES - refer to the Overview Map and Detail Map

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius: 1.25 miles  
Status: Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:  
Hydrologic Group: Not reported

Soil Drainage Class:  
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

### RADON

#### State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by The LiRo Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1926 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.
