Application for Access to Records  
Freedom of Information Law (FOIL)  
Monroe County, New York

I hereby apply to  inspect  obtain a copy of the following records:\*

I would like to inspect records from the Environmental Management Council for the purposes of performing a Phase I Environmental Assessment that include inactive Hazardous Waste Disposal Sites in New York State and historic aerial photographs from the years 1930, 1951, 1961, 1970, 1975, 1978, 1978, 1988, 1993, 1996, and 1999 in the geographic vicinity of the following parcel cluster of a city block:

- 6 Hoesitzer Street, Rochester, NY 14605
- 7 - 11 Sullivan Street, Rochester, NY 14605
- 814 - 844 N. Clinton Avenue, Rochester, NY 14605

Name: (please print) Jeffrey Perkins  
 Representing: (if applicable) LIRo Engineers, Inc.  
 Mailing Address: 250 Mill Street  
 City, state, zip code: Rochester, NY 14614

Signature: [Handwritten Signature]  
 Date: 8/11/16  
 Telephone: (include area code) 585-732-8542

\*There is no charge for the inspection of documents; however, if duplication is requested by you, a charge of \$.25 per page is payable to Monroe County.

Notice: You have a right to appeal denial of this application.

Send Request to:  
 Monroe County Access Officer  
 204 County Office Building • 39 West Main Street • Rochester, New York 14614  
 Phone: (585) 753-1080 • fax: (585) 753-1068 • www.monroecounty.gov

Jeffrey Perkins  
LiRo Engineers Inc.  
250 Mill St.  
Rochester, NY 14614

**RE: Freedom of Information Request # 16-2374**

Dear Mr. Perkins,

Your request for information under the Freedom of Information Law (F.O.I.L.) has been approved as to existing records.

Please remit payment in the amount of \$0.50, along with the enclosed invoice, to cover copying expenses. Checks can be made payable to Monroe County and mailed to: Freedom of Information, 39 West Main Street, Room 204, Rochester, New York, 14614.

At this time the Monroe County Department of Communication now considers this request closed.

You may appeal this decision, in writing, within 30 days. The Appeals Officer for Monroe County is Thomas Van Strydonck, 39 W. Main Street, Suite 110, Rochester, New York, 14614.

Sincerely,

A handwritten signature in cursive script that reads "William W. Napier".

William W. Napier

FOIL # 16-08-168

Dear Ms. Hewson:

This will acknowledge receipt of your request for records under the Freedom of Information Law, received by this office on August 10, 2016.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Danielle L. Rysedorph, Esq.

Re: FOIL #: 16-08-168

Dear Ms. Hewson:

This letter responds to your Freedom of Information Law request of August 11, 2016, in which you requested environmental records regarding the following locations in Rochester, New York:

"La Marketa Neighborhood  
6-8 Hoeltzer Street  
7-11 Sullivan Street  
810-844 North Clinton Avenue."

Please be advised that after conducting a diligent search, no records responsive to your request have been located.

Should you feel that you have been unlawfully denied access to records, you may appeal such denial in writing within 30 days to the Records Access Appeals Officer, Division of Legal Affairs, Empire State Plaza, 2438 Corning Tower, Albany, New York, 12237-0026.

If you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Danielle L. Rysedorph, Esq.

August 11, 2016

Dear Mrs. Amy Hewson,

EPA-R2-2016-009317 has been processed with the following final disposition:

This is in response to your Freedom of Information Act (FOIA) request, identified above, dated 08/11/2016, that you submitted to the U.S. Environmental Protection Agency (EPA). Your request seeks the following:

ESA for Site: La Marketa Neighborhood, 6-8 Hoeltzer Street, 7-11 Sullivan Street, 810-844 North Clinton Avenue in Rochester, NY

The information that you are seeking is publicly available on EPA's website at <http://www3.epa.gov/enviro/html/fil/myproperty/>. Because this information is publicly available, your FOIA request for this information is being administratively closed, in accordance with EPA's FOIA regulations. See 40 C.F.R. Part 2, Subpart A.

You may appeal this response by email at [hq.foia@epa.gov](mailto:hq.foia@epa.gov), or by mail to the National Freedom of Information Office, U.S. EPA, 1200 Pennsylvania Avenue, N.W. (2822T), Washington, DC 20460 (U.S. Postal Service Only). Only items mailed through the United States Postal Service may be delivered to 1200 Pennsylvania Avenue, N.W. If you are submitting your appeal via hand delivery, courier service, or overnight delivery, you must address your correspondence to 1301 Constitution Avenue, N.W., Room 6416J, Washington, DC 20001. Your appeal must be made in writing, and it must be received no later than 90 calendar days from the date of this letter. The Agency will not consider appeals received after the 90 calendar day limit. Appeals received after 5:00 pm EST will be considered received the next business day. The appeal letter should include the FOIA tracking number listed above. For quickest possible handling, the subject line of your email, the appeal letter, and its envelope, if applicable, should be marked "Freedom of Information Act Appeal." Additionally, you may seek assistance from EPA's FOIA Public Liaison at [hq.foia@epa.gov](mailto:hq.foia@epa.gov) or (202)566-1667, or from the Office of Government Information Services (OGIS). You may contact OGIS in any of the following ways: by mail, Office of Government Information Services, National Archives and Records Administration, Room 2510, 8610 Adelphi Road, College Park, MD 20740-6001; e-mail, [ogis@nara.gov](mailto:ogis@nara.gov); telephone, 301-837-1996 or 1-877-684-6448; and facsimile, 301-837-0348.

This letter concludes our response to your request. Thank you for your interest in this information.

Respectfully,

/s/

Mary Mears  
Director Public Affairs and Chief Public Outreach Branch  
U.S. EPA Region 2 (NJ, NY, PR, the US VI and eight Indian Nations)

**Re: Limited and Focused Subsurface Soil Investigation  
799 North Clinton Avenue  
Rochester, New York  
LCS Project #02R113.22**

*Colon Auto  
Rochester (city) Monroe  
Spill # 0200094*

Dear Ms. Puello:

At your request, LCS completed a Limited and Focused Subsurface Investigation for the above-referenced subject property (see Figure 1). This investigation was based on findings of LCS' Phase I Environmental Site Assessment report dated February 22, 2002, which identified the following recognized environmental conditions on-site.

- The subject property is currently and historically been utilized as a gasoline station;
- According to historical street directories, the subject property has previously been developed with a dry cleaning operation and commercial printing operation from at least 1950 through at least 1957;
- According to the City of Rochester municipal records, several gasoline underground storage tanks (USTs) have been installed and removed on-site since at least 1963;
- According to the site owner, at least one fuel oil UST was removed from the west side of the subject structure approximately eight years ago;
- According to the site owner, an in-ground hydraulic lift was removed from the subject property approximately six years ago;
- No documentation relative to removal and/or installation of the former gasoline or fuel oil USTs, including the impact, if any, to on-site soils proximate to the former USTs has been provided to LCS;
- No documentation relative to the removal of the former in-ground lift, including the impact, if any, to on-site soils proximate to the former USTs has been provided to LCS; and,
- An "active" New York State Department of Environmental Conservation (NYSDEC) spill is listed for the subject property (this spill is associated with contamination discovered during on-site construction activities in 1995).

Due to the lack of records indicating the location and contents of historic USTs, LCS recommended the completion of an intrusive investigation to better determine the environmental quality of the soils over the entire site. These areas include the areas of the former gasoline USTs, the former fuel oil UST, the former commercial printing facility area and the former dry cleaning facility area. This scope was not designed to quantify any contamination, if present. If impact is identified, additional investigation and/or remediation could be required. The proposal is delineated into specific Tasks identified below:

The purpose of this intrusive study was to determine the likelihood that soils in the areas of concern had been impacted by volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and/or inorganic compounds (metals), typically associated with petroleum, solvents and inks.

Ms. Leslie Puello- Page 2  
April 9, 2002

This investigation consisted of boreholes surrounding the subject structure in the identified areas of concern. Soil samples were collected with selected samples submitted for laboratory analyses. The following is a summary of the methods and results of the investigation. Due to the presence of petroleum-related compounds on-site, the NYSDEC was notified and spill ID# 0200094 was assigned.

### Methods of Investigation

Boreholes BH1 through BH16 were completed in the areas of the concern on March 18 and 19, 2002. A truck-mounted percussion and hydraulically driven drive system was used to advance an approximate 1.5-inch diameter, approximate 48 inch long macro-core sampler into the soil for each of the boreholes. Soil samples were generally collected within each borehole continuously from the ground surface until a depth of approximately 12 feet below the ground surface (ft. bgs) or until equipment refusal, whichever came first.

### Sample Analysis

Following labeling of the laboratory-supplied sample containers, soil samples selected for analysis were placed on ice. The soil samples were then submitted, under standard chain-of-custody, to a New York State Department of Health (NYSDOH) approved laboratory, for analysis for VOCs, SVOCs and Resource Conservation and Recovery Act (RCRA) Metals in accordance with United States Environmental Protection Agency (USEPA) SW-846 methods. The following summarizes the analytical testing performed and their respective sample locations:

Sample Location	Area of Concern	Analytical Method
BH3 (8-10 ft. bgs)	Former dry cleaning facility/ Former commercial printing facility	8260 (Target Compound List)
BH4 (10-12 ft. bgs)	Former dry cleaning facility/ Former commercial printing facility	8260 (Target Compound List)
BH5 (10-11 ft. bgs)	Pump Island/ Former commercial printing facility	8260 (Target Compound List)/RCRA Metals
BH7 (10-11.5 ft. bgs)	Former dry cleaning facility/ Former commercial printing facility	8021 (STARS List)
BH10 (10-12 ft. bgs)	Former gasoline USTs	8021 (STARS List)
BH11 (10-12 ft. bgs)	Former gasoline USTs	8021 (STARS List)
BH12 (10-12 ft. bgs)	Former gasoline USTs	8021 (STARS List)
BH13 (6-8 ft. bgs)	Former dry cleaning facility/ Former commercial printing facility/Former waste oil UST	RCRA Metals
BH13 (10-11.5)	Former dry cleaning facility/ Former commercial printing facility/Former waste oil UST	8260 (Target Compound List)/ 8270 (STARS List)/RCRA Metals
BH14 (10-12 ft. bgs)	Former fuel oil UST	8021 (STARS List)/8270 (STARS List)
BH16 (6-8 ft. bgs)	Pump Island	8021 (STARS List)

### **Results of Field Investigation**

Boreholes BH1 through BH16 were completed in the areas of concern in a manner to cover as much of the subject property as possible within one and one-half workdays. All of the areas of concern as described above were investigated, to the extent practical in that time limit.

Each borehole generally encountered silt, sand and gravel fill materials, with varying amounts of brick and concrete fragments, to a depth up to approximately 12 ft. bgs. Where fill materials were not encountered to the terminus of the borehole, native soils, consisting of clayey silt were generally encountered at approximately 10 ft. bgs to 12 ft. bgs. Apparent bedrock was encountered between 10.5 ft. bgs and 12 ft. bgs. Groundwater was not encountered on-site.

A total of 94 soil samples were screened for VOCs using a Photovac photoionization detector (PID). PID readings were above ambient air background levels (i.e. 0.0 parts per million (ppm)) in 85 of the 94 soil samples screened. PID readings ranged from 0.1 ppm (several locations) to 1,181 ppm (BH10, 10-12 ft. bgs). Some of these PID readings are indicative of potentially significant VOC impact. Of note, the highest PID measurement in each boring was generally the deepest sample collected.

### **Analytical Testing Results**

Soil samples were collected for analytical testing as follows as previously discussed. A total of 17 VOCs, three SVOCs and five RCRA metals were detected in the on-site soils tested. There were 10 VOCs detected on-site in exceedance of New York State Department of Environmental Conservation (NYSDEC) guidance values. These analytes include benzene, ethylbenzene, xylenes, isopropylbenzene, n-propylbenzene, tert-butylbenzene, n-butylbenzene, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene and isopropyltoluene. The analytes detected are typically indicative of petroleum-related contamination. There were no SVOCs or RCRA metals detected on-site in exceedance of NYSDEC guidance values. Refer to the tables below for a complete summary of analytes detected on-site. The respective concentrations as well as applicable regulatory guidance values are also listed for comparison. Analytes not detected are not shown.

NYSDEC Guidance Values = Division Technical and Administrative Guidance Memorandum No. 4046 (TAGM 4046):  
Determination of Soil Cleanup Objectives and Cleanup levels, August 2001.

< = analyte detected below method detection limit.

SB = Site Background.

\* = Site background for lead in metropolitan areas typically ranges from 200-500 µg/Kg.

█ = Analytes detected at concentrations above NYSDEC guidance values.

**Conclusion**

Petroleum-impacted soils are present on-site above NYSDEC guidance values. Areas of impact include the areas of the former gasoline USTs, east of the southern pump islands and proximate to the former fuel oil UST. The horizontal and vertical extent of impact is unknown. The analytes detected appear to be associated with the former gasoline USTs and/or current on-site operations. The analytes detected in the area of the former fuel oil UST appear to be gasoline constituents, and may be associated the former gasoline USTs, located to the east of this area (there were no SVOCs, typically indicative of fuel oil, detected within the soil sample collected from this borehole location).

Recommendation

LCS recommends that this report be forwarded to the NYSDEC for their comment and review. Upon review, the NYSDEC will indicate whether further investigation and/or remediation is warranted. LCS would be pleased to discuss the site with the NYSDEC and provide any further investigation, if warranted.

Thank you for allowing LCS to service your environmental needs. If you have any questions or require additional information, please do not hesitate to call our office.

Sincerely,

Michael Lesakowski  
General Manager, Rochester  
Environmental Scientist

## METHODOLOGIES

The specific methodologies employed in obtaining the analytical data reported are indicated on each of the result forms. The method numbers shown refer to the following U.S. Environmental Protection Agency Reference:

Methods for Chemical Analysis of Water and Wastes. EPA 600/4-79-020, March 1979, Revised 1983, U.S. Environmental Monitoring and Support Laboratory, Cincinnati, Ohio 45268.

Federal Register, 40 CFR Part 136: Guidelines Establishing Test Procedures for the Analysis of Pollutants Under the Clean Water Act. Revised July 1992.

Test Methods for Evaluating Solid Waste: Physical/Chemical Methods. Third Edition, Revised December 1996, U.S. EPA SW-846.

Annual Book of ASTM Standards, Volume II. ASTM, 100 Harbor Drive, West Conshohocken, PA 19428-2959.

Standard Methods for the Examination of Water and Wastewater. (20th Edition). American Public Health Association, 1105 18th Street, NW, Washington, D.C. 20036.

## ORGANIC DATA QUALIFIERS

- U -** Indicates compound was analyzed for but not detected.
- J -** Indicates an estimated value. This flag is used to qualify the following: when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed; a compound is detected in the sample but the result is less than the method quantitation limit but greater than the statistically calculated laboratory method detection limit; the result for a compound is estimated due to the analysis of a sample beyond the USEPA defined holding time; the result for a compound is estimated due to a quality control sample result that is outside the laboratory quality control recovery limits.
- C -** This flag applies to pesticide results where the identification has been confirmed by GC/MS.
- B -** This flag is used when the analyte is found in the associated blank as well as the sample.
- E -** This flag identifies all compounds whose concentrations exceed the calibration range of the GC/MS instrument of that specific analysis.
- D -** This flag identifies all compounds identified in an analysis at a secondary dilution factor.
- G -** Matrix spike recovery is greater than the expected upper limit of analytical performance.
- L -** Matrix spike recovery is less than the expected lower limit of analytical performance.
- # -** Indicates that a surrogate recovery was found to be outside the expected limits of analytical performance.
- \$ -** Indicates that the surrogate compound was diluted out. The sample had to be diluted to obtain analytical results and a recovery could not be calculated.
- (%) -** Indicates that the compound is a surrogate and that the value reported for this compound is in percent recovery. The quality control recovery limits are indicated in the detection limit or QC limits column.

Erin M. Crotty  
Commissioner

April 26, 2002

Mr. Michael Lesakowski  
General Manager  
LCS Inc.  
311 Alexander Street  
Suite 213  
Rochester, New York 14604

Dear Mr. Lesakowski:

RE: Colon Automotive  
799 North Clinton Avenue  
Rochester (C), Monroe County  
Spill No. 0200094

This Department has received and reviewed LCS's Limited and Focused Subsurface Soil Investigation dated April 9, 2002 for the above-referenced site. Based on the information provided, this Department requires the following:

- The contaminate plume present on site must be better identified. The contaminate plume in the areas of, but not limited to, BH 14, BH 12, BH10, and BH-16 should be isolated.
- Groundwater should be evaluated to determine water quality, depths and flow direction for the site.
- An Exposure Pathway and Receptor Analysis should be performed for the site.
- From all the information obtained, a Remedial Action Plan must be developed for the site.

A Stipulation Agreement (STIP) will be forwarded to the site owner for their signature. This STIP will have the dates required for the Corrective Action Schedule.

If you have any questions or comments regarding this matter, please contact me at the above address or by telephone.

Sincerely,

A handwritten signature in black ink that reads "Carl A. Hettenbaugh".

799 North Clinton Avenue  
Rochester, New York  
LCS Job #02R113.22#2**

SPILLS / BULK STORAGE  
NYS DEC REGION 8

*Colon Auto  
Rochester Monroe  
Spill # 0200094*

Dear Mr. Hettenbaugh:

As you are aware, Lender Consulting Services, Inc. (LCS) completed a Limited and Focused Subsurface Investigation at the above-referenced site, which is summarized in a report dated April 9, 2002. Based on the discovery of petroleum-contaminated soils on-site at that time, the New York State Department of Environmental Conservation (NYSDEC) was notified, as required by law, and Spill No. 0200094 was assigned to the site. LCS forwarded a copy of the report for that investigation to you for your comment and review.

In a letter dated April 26, 2002, you indicated that additional on-site investigation is required to more accurately evaluate on-site petroleum impact, to assess the groundwater for quality, depth and flow direction and to identify potential exposure pathways and receptors. You also indicated that a remedial action plan (RAP) would be required following the additional investigation and prior to performing any remedial work on-site.

Based on the scope of work forwarded by you, at the request of the site owner, LCS has prepared the following general investigation work plan for your review and comment.

**Task #1- Additional Soil Investigation**

The delineation of the extent of the soil impact will be completed through a series of test borings to allow for soil collection. This task includes:

- advancement of approximately 10 to 12 test borings to an approximate depth of 12 feet below ground surface (ft. bgs) to allow for the collection of soil samples to better define the extent of impacted soil on-site, specifically in the areas of BH 7, BH 10, BH 12, BH 14 and BH 16;
- inspection of soil samples with visual and olfactory senses as well as headspace screening with the use of a photoionization detector (PID); and,
- analysis of up to 10 soil samples for volatile organic compounds (VOCs) via USEPA SW-846 Test Method 8021 (STARS List).

Mr. Carl Hettenbaugh- Page 2  
May 24, 2002

**Task #2- Groundwater Investigation**

Overburden groundwater, if present, will be collected through a series of temporary monitoring wells. This task includes:

- installation of three temporary 1" diameter groundwater monitoring wells to allow for the collection of groundwater for analysis and to approximate groundwater flow;
- analysis of up to three groundwater samples for VOCs via USEPA SW-846 Test Method 8021 (STARS List); and,
- survey of each well to a common site datum for determination of groundwater flow direction.

**Task #2A (if required)- Bedrock Groundwater Investigation**

LCS will initially install overburden temporary groundwater monitoring wells and allow approximately two days prior to collection of samples. However, if groundwater is not available from within the overburden monitoring wells, bedrock wells will be installed up to 15 ft. into the on-site bedrock. If groundwater samples are collected from within the overburden wells, LCS proposes that bedrock wells not be installed. This task, if required, includes:

- installation of three bedrock groundwater monitoring wells, up to 15 ft. into the on-site bedrock, to allow for the collection of groundwater for analysis and to approximate groundwater flow;
- analysis of up to three groundwater samples for VOCs via USEPA SW-846 Test Method 8021 (STARS List); and,
- survey of each well to a common site datum for determination of groundwater flow direction.

**Task #3- Exposure Pathway and Receptor Analysis**

Based on current site conditions, using readily available documentation on supply wells, wetlands, etc., LCS will assess potential exposure pathways and receptors. This task includes:

- identification of any exposure pathways for on-site workers; and,
- identification of potential receptors of on-site contaminants, based on the concentration, location and matrix of identified contaminants.

Mr. Carl Hettenbaugh- Page 3  
May 24, 2002

**Task #4- Summary Report**

A summary report, describing the work completed, including all applicable documentation generated from the work, will be prepared for submittal to the NYSDEC.

Please advise on any questions or comments you may have relative to this submission. I shall make myself available at your convenience to discuss same.

With every kindest wish for your continued success, I remain;

Sincerely yours,

Michael A. Lesakowski

Dear Mr. Colon:

At your request, LCS completed an additional subsurface investigation for the above-referenced subject property (see Figure 1). This investigation was required by the New York State Department of Environmental Conservation (NYSDEC) based on the findings of LCS' previous Limited and Focused Subsurface Investigation report dated April 9, 2002. That report identified the presence of petroleum-impacted soils on-site above NYSDEC guidance values. Areas of impact included the areas of the former gasoline USTs, east of the southern pump islands and proximate to the former fuel oil UST. Constituents of concern included volatile organic compounds (VOCs) typically associated with gasoline products. (It should be noted that contaminants identified in the area of the former fuel oil UST appeared to be associated with the on-site gasoline range VOCs noted and not typical fuel oil range hydrocarbons).

Due to the presence of petroleum-impacted soils on-site, NYSDEC Spill No. 0200094 was assigned to the site. Mr. Carl Hettenbaugh, Environmental Program Specialist of the NYSDEC, is the contact for the site. In a letter dated April 26, 2002, Mr. Hettenbaugh indicated that further investigation of the subject property was warranted on-site to more accurately evaluate on-site petroleum impact within the soil, to assess the groundwater for quality, depth and flow direction and to identify potential exposure pathways and receptors. Mr. Hettenbaugh also indicated that a Remedial Action Plan (RAP) must be developed for the site prior to any remedial work.

On May 24, 2002, LCS submitted an Additional Investigation Work Plan to the NYSDEC for their review. In a conversation on June 17, 2002, Mr. Hettenbaugh indicated the approval of the NYSDEC of that work plan as submitted.

This investigation consisted of an intrusive investigation to better determine the environmental quality of the soils in the areas of test borings BH7, BH10, BH12, BH14 and BH16 (impacted areas identified in the previous study) and to better determine the groundwater conditions on-site. Soil and groundwater samples were collected with selected samples submitted for laboratory analyses. In addition, a qualitative exposure assessment and receptor analysis was completed to assess potential exposure pathways of contaminants noted on-site and identification of potential receptors of those contaminants.

The following is a summary of the methods and results of the investigation.

#### Methods of Investigation

Boreholes BH17 through BH28 were completed in the areas of the concern on March 18 and 19, 2002. A truck-mounted percussion and hydraulically driven drive system was used to advance an approximate 1.5 inch diameter, approximate 48 inch long macro-core sampler into the soil for each of the boreholes. Soil samples were generally collected within each borehole continuously from the ground surface until a

depth of approximately 12 feet below the ground surface (ft. bgs) or until equipment refusal. Temporary polyvinyl chloride (PVC) one-inch inside diameter groundwater monitoring wells TPMW1, TPMW2, TPMW3, TPMW4 and TPMW5 were installed within boreholes BH17, BH21 and BH22, BH26 and BH28, respectively. Each of the wells was constructed so that the screened interval spanned the apparent water table. Refer to the appended subsurface logs/well construction details for well design specification.

### Sample Analysis

Following labeling of the laboratory-supplied sample containers, soil samples selected for analysis were placed on ice. The soil samples were then submitted, under standard chain-of-custody, to a New York State Department of Health (NYSDOH) approved laboratory, for analysis for VOCs in accordance with United States Environmental Protection Agency (USEPA) SW-846 methods. The following summarizes the analytical testing performed and their respective sample locations:

Sample Location	Analytical Method
<b>Soil</b>	
BH17 (10-12 ft. bgs)	8021 (STARS List)

TPMW 5	8021 (STARS List)

### Results of Field Investigation

Soil borings BH17 through BH28 were completed in the areas of concern in a manner to cover as much of the subject property as possible within one and one-half work days with the purpose of delineating on-site soil and groundwater contamination. The areas of concern as described above were investigated.

Each borehole generally encountered silt, sand and gravel fill materials, with varying amounts of brick and concrete fragments to a depth up to approximately 11 ft. bgs. Native soils, consisting of clayey silt, was generally encountered below the fill materials to depths of up to approximately 12 ft. bgs. Apparent bedrock was encountered between 10.5 ft. bgs and 12 ft. bgs. Pockets of apparent perched groundwater was encountered on-site at approximately 10 ft. bgs in the areas of BH26/TPMW4 and at approximately 11 ft. bgs at BH27 and BH28/MW 5. The groundwater noted is not likely part of the regional aquifer.

A total of 72 soil samples were screened for VOCs using a Photovac photoionization detector (PID). PID readings were above ambient air background levels (i.e. 0.0 parts per million (ppm)) in 65 of the 72 soil samples screened. PID readings ranged from 0.4 ppm (BH25, 0-2 ft. bgs) to 1,623 ppm (BH26, 8-10 ft. bgs). Some of these PID readings are indicative of significant VOC impact.

### Analytical Testing Results

A total of 11 VOCs were detected above detection limits in the on-site soil tested. There were nine VOCs detected on-site in exceedance of NYSDEC guidance values. These analytes include benzene, toluene, ethylbenzene, xylenes, isopropylbenzene, n-propylbenzene, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, n-butylbenzene and naphthalene. Refer to the tables below for a complete summary of analytes detected on-site. The respective concentrations as well as applicable regulatory guidance values are also listed for comparison. Analytes not detected are not shown.

(10-12) = 10-12 ft. bgs

µg/kg = micrograms per kilogram

NYSDEC Guidance Values = Division Technical and Administrative Guidance Memorandum No. 4046 (TAGM 4046):  
Determination of Soil Cleanup Objectives and Cleanup levels, August 2001.

< = analyte detected below method detection limit.

MDL = method detection limit.

D = compounds identified at a secondary dilution factor.

\* = sum of m-,p- and o-xylenes.

\*\* = As per TAGM 4046, individual sum of VOCs not on table must be less than or equal to 10,000 µg/Kg.

█ = Analytes detected at concentrations above NYSDEC guidance values.

A total of 13 VOCs were detected above detection limits in the on-site groundwater tested. The 13 VOCs identified were detected on-site in exceedance of NYSDEC Standards or Guidance values in at least one well. These analytes include benzene, toluene, ethylbenzene, xylenes, isopropylbenzene, n-propylbenzene, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, sec-butylbenzene, p-isopropyltoluene, n-butylbenzene and naphthalene. See the following table. The analytes detected are typically indicative of gasoline-related contamination.

VOC Groundwater Analysis by 8021 STARS List

µg/L = micrograms per liter

NYSDEC Groundwater Standards or Guidance Values = Division of Water Technical and Operational Guidance Series (TOGS) (1.1.1), June 1998.

< = analyte detected below method detection limit.

D = compounds identified at a secondary dilution factor.

\* = applies to the sum of m- and p-xylenes.

B = analyte also detected in the associated method blank.

\*\* = As per TAGM 4046, individual sum of VOCs not on table must be less than or equal to 10,000 ug/Kg.

= Analytes detected at concentrations above NYSDEC guidance values.

As noted, the analytes detected are indicative of gasoline-related compounds. Of note, no MtBE was detected and generally larger compounds (i.e. xylenes, methylbenzenes, etc.) were present at greater concentrations than lighter compounds (i.e. benzene). Based on LCS' experience, this is typically indicative of an older petroleum release.

### Exposure Pathway and Receptor Analysis

LCS has performed a qualitative exposure pathway and receptor analysis for this site. This exposure pathway and receptor analysis consists of identifying the following: a contaminant source; contaminant release and transport mechanisms; a point of exposure; a route of exposure; and, a receptor population.

There appear to be two contaminant sources on-site. The first and more significant source appears to be on-site petroleum-impacted soils and groundwater in the vicinity of the historic USTs. Based on a historical review of the subject property, it appears the original source of petroleum contamination may be former on-site gasoline USTs, removed from the subject property in approximately 1983. This is based on the location of the contamination, the lack of methyl-tert-butyl ether (MtBE) in any of the soil or

groundwater samples collected and the lack of records indicating a release from the current gasoline UST, which was installed in approximately 1995. (It should be noted that according to the site owner, there were no gasoline USTs on-site from 1983 through 1995).

The second contaminant source appears to be soils in the area of at least one historical pump island (the southeastern most pump island). Contamination in this area appears to be limited.

Contaminant transport mechanisms include on-site soil, groundwater and air. Petroleum contamination identified on-site appears to have been transported from previous gasoline USTs and at least one pump island, through the subsurface soils, which contain a high percentage of loose, miscellaneous silt, sand and gravel fill materials, with varying amounts of brick and concrete, to depths down to approximately 11 ft. bgs. The subject property was historically improved with several buildings that were likely demolished on-site as the fill materials on-site appear to be associated in part to apparent historical demolition debris. The most significant impact was noted in the soils directly above the bedrock, identified on-site at approximately 12 ft. bgs. The native soil above the bedrock is generally a dry clayey silt type soil, with little to no plasticity. Based on a Geologic Map of New York State (Finger Lakes sheet, 1970), bedrock in the area is suspected to be Oak Orchard and Penfield Dolostones within the Lockport Group.

Groundwater was identified at limited locations on-site. The groundwater noted on-site does not appear to be a true aquifer; however, it appears that pockets of perched seasonal groundwater exist in the subsurface. As such, groundwater flow direction and velocity were not calculated and are unknown at this time. Based on United States Geological Survey (USGS) topographic maps, regional groundwater flow is westerly towards the Genesee River, which is located approximately one-half mile west of the subject property. However, groundwater flow through bedrock can be significantly impacted by the orientation of fractures in the area.

Exposure points for the contaminants identified on-site include basements of nearby residences and utility trenches beneath adjacent streets (if the trenches are greater than approximately eight ft. bgs). Petroleum-impacted soil and groundwater was identified along the southern, western and northeastern property boundary. The subject property is located in a highly developed urban area. The closest residential structure is located approximately 15 feet west of the subject property boundary. Also, utility trenches are present along Scrantom Street to the north of the site, Kappel Place to the south of the site and North Clinton Avenue to the east of the site.

Routes of potential exposure include inhalation and dermal adsorption of contaminants. Ingestion is an unlikely route of exposure as the area of the subject property is supplied with a municipal potable water supply system.

The potential receptor population for the contamination identified on-site include residents of nearby homes via VOC vapor inhalation as well as on-site and/or off-site construction workers who may be exposed via inhalation or dermal adsorption during future construction activities. Due to the depth of the most significant contamination, the lack of evidence of significant VOC vapors near the surface (based on PID readings) and the asphalt/concrete cover over the subject property (with the exception of a small grass-covered area to the west of the subject building, exposure to general on-site workers appears limited.

In summary, potential exposure pathways exist for nearby residents via inhalation of VOC vapors, which may diffuse into basement walls and/or floors as well as on-site and/or off-site construction workers via inhalation or dermal adsorption during future construction activities.

### **Conclusion**

Petroleum-impacted soils and groundwater are present above applicable NYSDEC standards or guidance values. The location and chemical nature of the contamination suggests the impact is related to historic, as opposed to current, USTs. With the exception of impacted soil in the area of one of the on-site pump islands, it appears that contamination is generally present from approximately eight to 12 ft. bgs on-site, above apparently competent bedrock. Some impacted test borings in this area identified a smaller zone of impacted soils, which appeared to be limited to 10 to 12 ft. bgs. The on-site soil from the ground surface to approximately eight ft. bgs does not appear to be significantly impacted in the area of the former gasoline USTs. Soil in the area of one of the pump islands appears to be impacted from approximately four to 12 ft. bgs.

It appears that the impacted soils have been delineated to the east and south in the former tank grave area. The northeastern extent of impacted soil and groundwater also appears to be delineated. However, further delineation of the contaminant plume was limited by the property boundaries.

Potential exposure pathways exist for nearby residents via inhalation of VOC vapors as well as for on-site and/or off-site construction workers via inhalation or dermal adsorption during future construction activities. No exposure has been documented to date.

### **Recommendation**

LCS recommends that this report be forwarded to the NYSDEC for their comment and review. Upon review, the NYSDEC will indicate whether further investigation or remediation is warranted.

As outlined in our contract dated June 19, 2002, LCS will develop a remedial action plan in accordance with the comments and recommendations of the NYSDEC, at your request, as an additional task.

Thank you for allowing LCS to service your environmental needs. If you have any questions or require additional information, please do not hesitate to call our office.

Sincerely,

Michael Lesakowski

## Analytical Data Report

Group Number: 2021-1602

Site: Colons Citgo

### Field and Laboratory Information

WST ID	Client ID	Matrix	Date Sampled	Date Received	Time
WT07375	TPMW-2	Aqueous	07/09/02	07/10/02	12:00
WT07376	TPMW-3	Aqueous	07/09/02	07/10/02	12:00
WT07377	TPMW-4	Aqueous	07/09/02	07/10/02	12:00
WT07378	TPMW-5	Aqueous	07/09/02	07/10/02	12:00

## METHODOLOGIES

The specific methodologies employed in obtaining the analytical data reported are indicated on each of the result forms. The method numbers shown refer to the following U.S. Environmental Protection Agency Reference:

Methods for Chemical Analysis of Water and Wastes. EPA 600/4-79-020, March 1979, Revised 1983, U.S. Environmental Monitoring and Support Laboratory, Cincinnati, Ohio 45268.

Federal Register, 40 CFR Part 136: Guidelines Establishing Test Procedures for the Analysis of Pollutants Under the Clean Water Act. Revised July 1992.

Test Methods for Evaluating Solid Waste: Physical/Chemical Methods. Third Edition, Revised December 1996, U.S. EPA SW-846.

Annual Book of ASTM Standards, Volume II. ASTM, 100 Harbor Drive, West Conshohocken, PA 19428-2959.

Standard Methods for the Examination of Water and Wastewater. (20th Edition). American Public Health Association, 1105 18th Street, NW, Washington, D.C. 20036.

## DETECTION LIMIT DEFINITIONS

MDL = Method Detection Limit. When reported, the MDL is the minimum concentration that can be measured and reported with 99 percent confidence that the concentration is greater than zero.

MQL = Method Quantitation Limit. The MQL is the minimum concentration that can be reliably reported. The MQL is equal to the concentration of the lowest standard used for the initial calibration of the instrument.

Reporting Limit = A reporting limit is the minimum concentration that can be measured and reported for analyses where initial calibration is not applicable. The reporting limit is based on the specifics of the analysis procedure.

## ORGANIC DATA QUALIFIERS

- U - Indicates compound was analyzed for but not detected at the stated MQL or Reporting Limit. If the MDL has been reported, U indicates that the compound was not detected at the MDL.
- J - Indicates an estimated value. This flag is used to qualify the following: when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed; a compound is detected in the sample but the result is less than the method quantitation limit but greater than the statistically calculated laboratory method detection limit; the result for a compound is estimated due to the analysis of a sample beyond the USEPA defined holding time; the result for a compound is estimated due to a quality control sample result that is outside the laboratory quality control recovery limits.
- C - This flag applies to pesticide results where the identification has been confirmed by GC/MS.
- B - This flag is used when the analyte is found in the associated blank as well as the sample.
- E - This flag identifies all compounds whose concentrations exceed the calibration range of the GC/MS instrument of that specific analysis.
- D - This flag identifies all compounds identified in an analysis at a secondary dilution factor.
- G - Matrix spike recovery is greater than the expected upper limit of analytical performance.
- L - Matrix spike recovery is less than the expected lower limit of analytical performance.
- # - Indicates that a surrogate recovery was found to be outside the expected limits of analytical performance.
- \$ - Indicates that the surrogate compound was diluted out. The sample had to be diluted to obtain analytical results and a recovery could not be calculated.
- (%) - Indicates that the compound is a surrogate and that the value reported for this compound is in percent recovery. The quality control recovery limits are indicated in the detection limit or QC limits column.

## METHODOLOGIES

The specific methodologies employed in obtaining the analytical data reported are indicated on each of the result forms. The method numbers shown refer to the following U.S. Environmental Protection Agency Reference:

Methods for Chemical Analysis of Water and Wastes. EPA 600/4-79-020, March 1979, Revised 1983, U.S. Environmental Monitoring and Support Laboratory, Cincinnati, Ohio 45268.

Federal Register, 40 CFR Part 136: Guidelines Establishing Test Procedures for the Analysis of Pollutants Under the Clean Water Act. Revised July 1992.

Test Methods for Evaluating Solid Waste: Physical/Chemical Methods. Third Edition, Revised December 1996, U.S. EPA SW-846.

Annual Book of ASTM Standards, Volume II. ASTM, 100 Harbor Drive, West Conshohocken, PA 19428-2959.

Standard Methods for the Examination of Water and Wastewater. (20th Edition). American Public Health Association, 1105 18th Street, NW, Washington, D.C. 20036.

## DETECTION LIMIT DEFINITIONS

MDL = Method Detection Limit. When reported, the MDL is the minimum concentration that can be measured and reported with 99 percent confidence that the concentration is greater than zero.

MQL = Method quantitation Limit. The MQL is the minimum concentration that can be reliably reported. The MQL is equal to the concentration of the lowest standard used for the initial calibration of the instrument.

Reporting Limit = A reporting limit is the minimum concentration that can be measured and reported for analyses where initial calibration is not applicable. The reporting limit is based on the specifics of the analysis procedure.

## ORGANIC DATA QUALIFIERS

- U** - Indicates compound was analyzed for but not detected at the stated MQL or Reporting Limit. If the MDL has been reported, U indicates that the compound was not detected at the MDL.
- J** - Indicates an estimated value. This flag is used to qualify the following: when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed; a compound is detected in the sample but the result is less than the method quantitation limit but greater than the statistically calculated laboratory method detection limit; the result for a compound is estimated due to the analysis of a sample beyond the USEPA defined holding time; the result for a compound is estimated due to a quality control sample result that is outside the laboratory quality control recovery limits.
- C** - This flag applies to pesticide results where the identification has been confirmed by GC/MS.
- B** - This flag is used when the analyte is found in the associated blank as well as the sample.
- E** - This flag identifies all compounds whose concentrations exceed the calibration range of the GC/MS instrument of that specific analysis.
- D** - This flag identifies all compounds identified in an analysis at a secondary dilution factor.
- G** - Matrix spike recovery is greater than the expected upper limit of analytical performance.
- L** - Matrix spike recovery is less than the expected lower limit of analytical performance.
- #** - Indicates that a surrogate recovery was found to be outside the expected limits of analytical performance.
- \$** - Indicates that the surrogate compound was diluted out. The sample had to be diluted to obtain analytical results and a recovery could not be calculated.
- (%)** - Indicates that the compound is a surrogate and that the value reported for this compound is in percent recovery. The quality control recovery limits are indicated in the detection limit or QC limits column.

Re: Colon Automotive  
Rochester (C), Monroe (C)  
Spill #9501681 & 0200094

Dear Ms. D'Cruz and Mr. Colon:

This is to inform you that as a result of an investigation by our Department, we consider your companies responsible for the referenced spills. Under Article 12 of the Navigation Law, Section 192, any person who discharges petroleum without a permit and fails to promptly clean up such prohibited discharge may be subject to a penalty of up to \$25,000 a day.

To expedite the cleanup, the Department has requested your company do the necessary work to remediate the situation. Please be advised that if you fail to complete the cleanup, the Department will hire a standby contractor to do the necessary work. Please advise us within ten days of receipt of this letter if you will accept responsibility for cleanup.

Refusal to accept responsibility will lead to the payment of the bill by the NYS Oil Spill Compensation Fund. The State will then bill you for all direct and indirect costs regarding the cleanup including all Department staff expenses. A penalty for non compliance with your responsibility under Article 12 of the Navigation Law may also be pursued by the Attorney General's Office.

If you have any questions or comments regarding this matter you may contact me at the above address or by telephone.

Sincerely,

*Carl A. Hettenbaugh*

**Re: NYSDEC Spill Number 0200094  
Colon's Citgo Station  
799 North Clinton Avenue  
Rochester, New York  
LCS Project Number 02R113.26**

Dear Mr. Hettenbaugh:

As you are aware, Lender Consulting Services, Inc. (LCS) completed intrusive investigations focussing on the soil and perched groundwater impact at the above-referenced site. The findings of those investigations were presented within reports dated April 9, 2002 and July 30, 2002. These studies were previously provided to the New York State Department of Environmental Conservation (NYSDEC). Generally those reports concluded that the site was impacted by petroleum-related volatile organic compounds (VOCs).

Please find enclosed a copy of the Remedial Action Plan (RAP) for the above-referenced subject property. If you have any questions regarding the RAP, please contact our office. Upon acceptance of the RAP, please issue an acknowledgement letter to LCS. Following receipt of the acceptance letter, LCS will contact our client regarding scheduling the work.

If you have any questions in the interim, please contact our office.

With every kindest wish for your continued success, I remain,

Sincerely yours,

Michael Lesakowski  
General Manager- Central New York  
Environmental Scientist

Douglas B. Reid

Environmental Scientist

cc: Philip Silver, Esq.

**REMEDIAL ACTION PLAN**  
**799 North Clinton Avenue**  
**Rochester, New York**  
**September 20, 2002**

**Background**

Lender Consulting Services, Inc. (LCS) completed a Phase I Environmental Site Assessment report dated February 22, 2002 (see Figure 1), which identified the following recognized environmental conditions on-site.

- The subject property is currently and historically has been utilized as a gasoline station;
- According to historical street directories, the subject property has previously been developed with a dry cleaning operation and commercial printing operation from at least 1950 through at least 1957;
- According to the City of Rochester municipal records, several gasoline underground storage tanks (USTs) have been installed and removed on-site since at least 1963;
- According to the site owner, at least one fuel oil UST was removed from the west side of the subject structure approximately eight years ago;
- According to the site owner, at least one waste oil UST was removed from the west side of the subject structure approximately eight years ago;
- According to the site owner, an in-ground hydraulic lift was removed from the subject structure approximately six years ago;
- No documentation relative to removal and/or installation of the former gasoline, fuel oil or waste oil USTs, including the impact, if any, to on-site soils proximate to the former USTs was available at that time;
- No documentation relative to the removal of the former in-ground lift, including the impact, if any, to on-site soils proximate to the former in-ground lift was available at that time; and,
- An "active" New York State Department of Environmental Conservation (NYSDEC) spill is listed for the subject property (this spill is associated with contamination discovered during on-site construction activities in 1995).

Due to the above-referenced recognized environmental conditions, LCS completed a Limited and Focused Subsurface Investigation on-site to better assess the environmental quality of the soils over the entire site. These areas included the areas of the current gasoline UST, the current pump islands, former gasoline USTs, the former fuel oil UST, the former waste oil UST, the former commercial printing facility area and the former dry cleaning facility area. That report, dated April 9, 2002, identified the presence of petroleum-impacted soils on-site with chemicals at concentrations above NYSDEC guidance values. Areas of impact included the areas of the former gasoline USTs, east of the southern pump islands and proximate to the former fuel oil UST. Constituents of concern included volatile organic compounds (VOCs), typically associated with gasoline products. There was no evidence of impact from the former dry cleaner or printing operations.

Due to the presence of petroleum-impacted soils documented on-site at the time of LCS' initial subsurface investigation, NYSDEC Spill No. 0200094 was assigned to the site. In a letter dated April 26, 2002, the NYSDEC indicated that further investigation of the subject property was warranted on-site. As such, LCS developed an Additional Site Investigation Work Plan (work plan), dated May 24, 2002, which was submitted to the NYSDEC. In a conversation with Carl Hettenbaugh of the NYSDEC on June 17, 2002, the NYSDEC indicated approved the work plan as submitted.

**REMEDIAL ACTION PLAN  
799 North Clinton Avenue  
Rochester, New York  
September 20, 2002**

LCS completed an additional subsurface investigation for the subject property; the results of that investigation are summarized within LCS Additional Subsurface Investigation report dated July 30, 2002. That investigation consisted of an intrusive investigation to better determine the environmental quality of the soils in the areas of impacted areas identified in the previous study and to better determine the groundwater conditions on-site. Soil and groundwater samples were collected with selected samples submitted for laboratory analyses. In addition, a qualitative exposure assessment and receptor analysis was completed to assess potential exposure pathways of contaminants noted on-site and identification of potential receptors of those contaminants.

The following summarizes the findings of LCS' investigations in the impacted areas.

Twenty-eight test borings and five temporary monitoring wells (TPMWs) were completed on-site (See Figure 2 – Site Investigation Map). Generally, VOC-impacted soils were identified at six to eight feet below ground surface (ft. bgs) in the area north of the pump islands and 10-12 ft. bgs in the other areas investigated on-site (one location, BH26, indicated VOC impact at eight to 10 ft. bgs). Generally, bedrock was encountered within 12 ft. bgs. VOC-impact was noted to the perched groundwater in three of the four TPMWs sampled. Due to the lack of MtBE in all of the samples for which it was tested, it appears that the petroleum release has not occurred within the last approximately 15 years. Refer to LCS' intrusive study reports dated April 9 and July 30, 2002 for detailed results of the studies.

#### **History of Petroleum Storage**

Based on research and observations by LCS, the subject property is developed with one structure, which is currently utilized as a mini-mart and as an automotive repair shop. According to the current owner, the current building was constructed in the late 1950s or early 1960s. Historic City of Rochester Street Directories and historic Sanborn maps confirm that the subject property has been utilized as a gasoline and/or automotive service station since the early 1960s.

A previous owner of the subject property has been identified as Atlantic Richfield Company (ARCO). According to the current owner, the previous owner also operated on-site as a gasoline and automotive service station until approximately 1983. City of Rochester building and fire department records indicate that gasoline and fuel oil USTs were installed on-site in 1963 and four gasoline USTs were removed from the site in 1983, prior to the current owner taking ownership. Furthermore, the current owner has indicated that the USTs removal was a stipulation of the sale at that time. Also according to the current owner, the subject property was utilized as an automotive service station, which did not include gasoline sales, from 1983 until 1995. The existing 15,000-gallon gasoline UST was installed in 1995.

#### **Water Supply**

According to research completed by LCS, the subject property and surrounding area is connected to municipal water.

**REMEDIAL ACTION PLAN**  
799 North Clinton Avenue  
Rochester, New York  
September 20, 2002

**Intended Future Property Use**

LCS has been informed that the operations on the subject property are to remain as currently conducted.

**REMEDIAL ACTION PLAN**

Prior to initiation of the site work, the NYSDEC will be notified of the proposed schedule such that they can monitor the work, if desired.

**Soil Removal**

Excavation of the impacted soil is a practical method to address the impacted areas north and west of the subject structure and north of the pump islands. Two separate excavations will be completed. The limits of the excavations will be based on the results of the previous work as well as field observations and PID screening; however, based on our current understanding of site conditions, the anticipated extent is shown on Figure 3 (Remedial Action Plan). The impacted soils and perched groundwater in the area west of the subject structure is discussed below.

At the completion of the excavations, composite confirmatory soil samples will be collected from each of the sidewalls and at least one composite soil sample will be collected from the bottom of each excavation (due to the shallow depth of bedrock, it is not clear that sampling of the base of the excavation will be possible). All confirmatory samples will be submitted to a NYSDOH approved laboratory for analysis in accordance with USEPA Method 8021 for Spill Technology and Remediation Series (STARS) parameters. The results will be compared to TAGM 4046 recommended soil cleanup objective guidance values. The environmental quality of the soils remaining will be documented through laboratory analysis.

Depending on the volume of soils, the excavated impacted soil will either be temporarily stockpiled on-site (on 10 mill plastic and covered with 6 mill plastic) or loaded directly into trucks for disposal. Excavated impacted soils will be disposed of at an approved waste disposal facility (documented with disposal receipts). Prior to shipping soils off-site for disposal, the soils will be characterized.

**Excavation Closure**

Following the completion of the excavations, they will be backfilled with segregated non-impacted soil/fill and gravel from an off-site source and brought to approximately the original grade.

**Groundwater Treatment**

Groundwater was collected from four temporary groundwater monitoring wells and is summarized within LCS' previous subsurface investigation report dated July 30, 2002. Based on the groundwater data collected to date, apparent seasonal perched groundwater was observed above bedrock in four of the five TPMWs installed on-site. TPMW1 was noted to be dry at the time of sample collection.

**REMEDIAL ACTION PLAN  
799 North Clinton Avenue  
Rochester, New York  
September 20, 2002**

Due to the apparent seasonal nature of on-site groundwater, it is anticipated that any groundwater that is encountered on-site during soil excavation activities will be pumped from the excavation into dedicated containers (i.e., drums or holding tanks), characterized as required and transported and disposed of at an approved off-site location. No other groundwater treatment is currently anticipated.

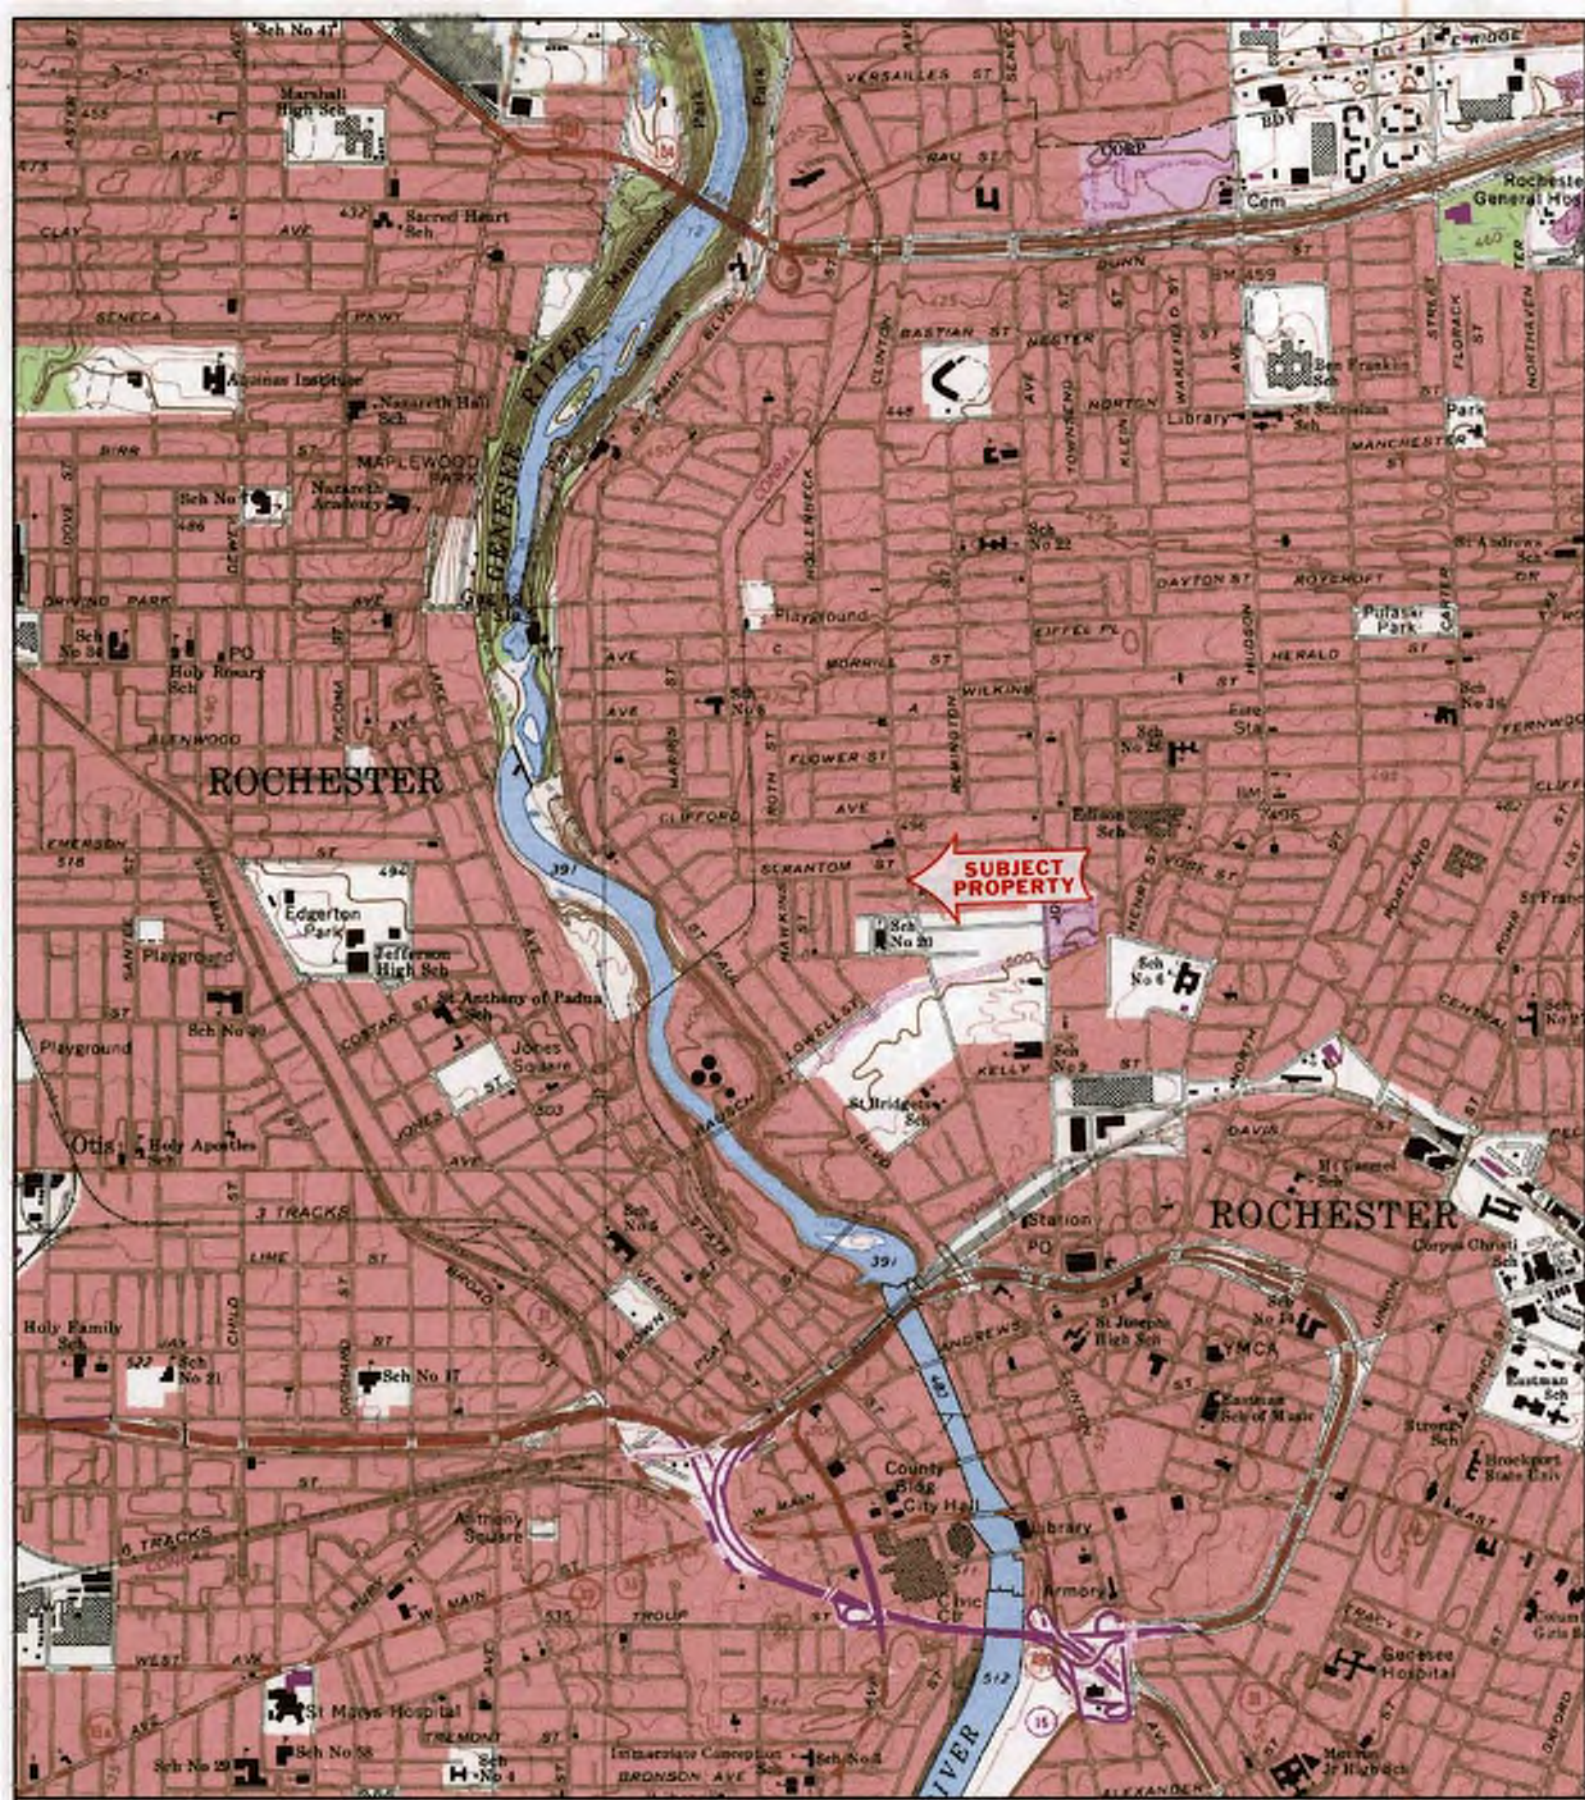

**Conclusion**

The remedial activities described above have been successful on other sites with similar contaminant concentrations and subsurface characteristics. As such, LCS believes these methods of remediation will adequately address the petroleum-impacted soil and groundwater.

**Report**

At the completion of the work described within the RAP, LCS will prepare a summary report describing the work activities completed including soil testing results and copies of all other relevant documentation generated.

Dear Carl:

We have been retained as environmental counsel for Colon Automotive. We have reviewed your August 12, 2002 letter.

While, as you know, our client is anxious to proceed with cleanup of the property, we disagree with your conclusion that our client is legally responsible for these spills. Based upon information to date, we believe the contamination on site likely arose prior to his purchase of the property and removal of tanks in 1983.

Thank you.

Very truly yours,

Dear Mr. Hettenbaugh:

In your August 12, 2002 letter you mentioned that an investigation by your Department was done of the above-mentioned property. This letter is a request for a copy of the written investigative report that your Department did on this property. This document will further add us in the investigation that we are conducting at this time.

Please immediately forward this report to me at the above-mentioned address. Should you have any questions or need to discuss this matter, please do not hesitate to contact me. Thank you very much for your assistance.

Very truly yours,

Carl,

Thanks for the reply. I spoke with my client this morning after you and I spoke...He inquired about finding impacted g/w on-site...specifically, if there is seasonal g/w, if present at all, what is their recourse on the remediation end...will we need to proceed with rock wells, or do you think we can deal with perched g/w when the soil is addressed.

Thanks as always for the input,

Mike Lesakowski

Avon, New York 14414-9519

**RE: WORK PLAN  
SOIL VAPOR EXTRACTION SYSTEM (SVE) - NYSDEC SPILL NO. 0200094  
COLON'S CITGO STATION  
799 NORTH CLINTON AVENUE  
ROCHESTER, NEW YORK 14605**

GeoQuest Environmental, Inc. (GeoQuest), is pleased to present this work plan for implementation of a soil vapor extraction system (SVE) as a proposed remedial action to remediate the petroleum impacted soil areas identified in Lender Consulting Services, Inc. (LCS) September 2002 Remedial Action Plan for the Colon's Citgo Station site. We understand that the department has approved LCS's work plan for the removal of petroleum impacted soil at this site (soil removal and disposal). The following work plan presents an alternative remedial action with scope of work, for implementation of a proposed SVE System for the remediation of petroleum (gasoline) impacted soil at the site. We believe that implementation of our proposed SVE System is a technically sound and cost effective remedial alternative for this site. We are providing this work plan for department approval.

#### **1.0 PROJECT UNDERSTANDING**

It is our understanding that Colon's Citgo Station intends to implement a remedial action to remediate the petroleum impacted soil areas identified in the Remedial Action Plan (LCS September 2002). It is our understanding that the NYSDEC has approved LCS's remedial action plan. GeoQuest recommends a SVE System as a remedial alternative for the remediation required at this site.

#### **2.0 OBJECTIVE**

The primary objective of the proposed remediation project work is to reduce the concentration of petroleum impacted soil to levels that meet NYSDEC PSSI requirements or NYSDEC TAGM 4046 Standards for petroleum impacted soil sites. Operation of the proposed SVE System should also reduce the concentration of petroleum impacted groundwater at the Site. An exposure pathway evaluation may be used to inactivate this spill when concentrations of petroleum compounds in soil reach or approach acceptable inactivation levels.

#### **4.0 SCOPE OF WORK**

An in-situ soil vapor extraction (SVE) system is proposed to reduce the petroleum chemical compounds in soil at the spill area that has been defined by LCS at the two areas shown on Figure 1. Effluent vapor monitoring will be conducted to evaluate the effectiveness of the SVE System during the active remediation period. Confirmatory soil samples will be collected after the SVE System is shut down to determine the concentrations of petroleum chemical compounds that may remain. The SVE System rationale, procedures, methods, locations, and analytical laboratory requirements are presented in the following scope of work sections.

#### **4.1 SOIL VAPOR EXTRACTION (SVE)**

Soil vapor extraction (SVE) is one of the most efficient and cost-effective in-situ methods of remediating volatile petroleum compounds that occur in gasoline. Most lighter petroleum hydrocarbons are highly volatile and are relatively easy to strip from the soil and groundwater. Two factors affect the efficiency of a given SVE system: the permeability of the soil and the volatility of the contaminants. These factors affect the contaminant concentration gradient generated in the overburden unsaturated zone and the upper portion of the saturated zone. The concentration gradient, in turn, affects the rate at which contaminants are removed or "stripped" from the petroleum impacted soils and top of the groundwater table. Typically, there is a large initial contaminant mass extraction rate that decreases exponentially with time.

#### **4.2 SOIL VAPOR EXTRACTION SYSTEM (SVE)**

SVE consists of drawing a flux of air (*i.e.*, by a vacuum) through one or more wells which have been completed in the unsaturated zone in the area of petroleum impacted groundwater. The air which moves through the area of contamination from the surface is essentially free of the contaminants of concern. Thus, as the air passes through the contaminated zones in the subsurface, the volatile contaminants will desorb into the air due to the concentration gradient that exists between the vapor concentrations in the soil pores and the fresh air pulled through the soil. Contaminants entrained in the air flow are pulled towards and into extraction wells where they are drawn to the surface. At the surface, these vapors can be released into the atmosphere or treated, depending on vapor concentrations and local regulations. In addition, SVE has the added benefit of aerating the soil, thereby enhancing the aerobic biodegradation process in the subsurface.

The design of an SVE system consists of establishing system design and operational parameters, such as vacuum applied, airflow rate, and radius of influence (ROI). The ideal design includes the positioning of SVE well(s) in the center of and screened across the most impacted areas of soil where the petroleum vapors are most likely to be captured.

#### **Conceptual Design**

The remediation system that has been specified for soil remediation consists of a soil vapor extraction system (SVE). The SVE system will consist of operating components such as: a blower motor, condensate tank, pressure and flow gauges, and the control system. The vacuum from the SVE portion of the system will be applied to the site unsaturated soils from two 2-inch Schedule 40 PVC wells. The wells will be installed to depths ranging from approximately 10 to 12 feet and screened from approximately 10 to 6 feet below ground surface.

A remediation shed (pre-fabricated system enclosure) will be installed around the SVE System equipment to protect the system from the elements. The soil vapor extraction manifold will also be enclosed within the remediation shed.

During start-up and testing of the system, a carbon adsorption system may be provided for air quality control, as it is estimated that during the initial operation of the system, the concentrations of VOCs in the off-gas may exceed the allowable emission limit for VOCs. Once contaminant levels have dropped in the effluent gas to

below the allowable emission limits, use of the carbon adsorption system may be discontinued.

### **System Design Parameters**

The following design parameters have been estimated based on the spill investigation data and our experience with similar subsurface conditions:

- SVE ROI
- Vacuum for achieving desired SVE ROI
- Air flowrate per SVE well at applied vacuum

Based on the soil types that were encountered during LCS's Limited and Focused Subsurface Soil Investigation and Additional Subsurface Investigation and our experience at similar sites, it is estimated that the ROI for the SVE wells will be in the range of approximately 10 feet. GeoQuest has estimated a ROI value of approximately 10 feet for the system design and selection of 16 SVE wells (V1 through V16) at locations shown on Figure 1. The ROI of the AS well is estimated to be approximately 15 feet assuming a ratio of horizontal air travel to vertical air travel being greater than three. Anticipated SVE and AS ROIs are shown on Figure 1.

The design vacuum and flow rate for the SVE blower were estimated to be approximately 20 scfm at 3 inches of mercury (in/hg) vacuum, respectively. However, the final SVE system requirements will be based on evaluation of the proposed SVE System after 180 day of operation. This will allow for monitoring of effluent vapors during the first two quarters of system operation. System adjustments may be made according to the monitoring results during the evaluation period. Adjustments may include additional SVE wells, and adjustments to vacuum rates, if necessary.

### **Final Design Scenario**

The design and installation process may consist of the following major tasks:

- Detailed design of remediation equipment, installation, and data analysis
- Preparation of process, instrumentation and control diagrams
- Treatment system layout and grading details for PVC wells and lateral trenches
- Utilities hookup identification and electrical work
- Preparation of well design details for SVE wells, including location of wells, size and depth of screens, placement of wells
- Well head, piping manifold, and piping/trenching design

Final design and construction specifications may be prepared concurrently with the design process for field installation. The as built SVE System layout will be based on the evaluation of the SVE System after two Quarters of operation and recorded on a diagram.

## **5.0 SYSTEM INSTALLATION - SVE SYSTEM**

Data generated from LCS's Limited and Focused Subsurface Soil Investigation, Additional subsurface

Investigation, and Remedial Action Plan were evaluated during our selection of a SVE System to remediate soil and overburden groundwater, remedial technology, estimation and design of remedial equipment, and selection of operational parameters. Based on the estimated radii of influence (ROI) for the SVE wells (10 feet) a minimum of 16 SVE wells will be required to cover the two petroleum impacted soil areas that have been identified by LCS, see Figure 1. Installation of additional SVE wells may be recommended upon availability of the first and second quarters of effluent air monitoring data, field operational data, and analysis of the data for effectiveness of the remediation program. Potential locations for an additional SVE wells are shown on Figure 1.

### **Electrical Requirements**

Installation of the SVE system will require a 220 volt (single phase or three phase) electric supply, a disconnect, electrical panel, and a timer. GeoQuest has assumed that the existing service at the site may be adapted to provide electrical power. The remediation compound shed and system equipment may be placed at the rear or northwest corner of the site building.

### **SVE Well Installation**

Drilling for installation of the SVE wells will be completed using truck or trailer-mounted hollow-stem auger drilling techniques. Soil sampling will not be conducted during the installation of SVE wells. However, a photoionization detector will be used to screen soil cuttings from the drilling operations.

The SVE wells will consist of approximately three to five feet of 0.010-inch slotted 2-inch diameter PVC well screen and approximately 5 feet of 2-inch blank PVC casing extending to ground surface. A sand pack of Number 3 Monterey silica sand will be placed from the bottom of each screened interval to approximately one foot above the top of the well screen. A bentonite seal will then be placed on top of each sand pack and hydrated. The annular space above the bentonite seal to the ground surface will not be backfilled until SVE lateral pipe is connected to each SVE well. At the ground surface, each SVE well head will be connected to a lateral pipe and connected to the manifold with vacuum blower motor at the remediation shed.

### **Trenching and Piping**

The piping which connects the SVE well heads to the manifold system will consist of 2-inch PVC (Schedule 40). Lateral pipe will be installed into trenches that are approximately 18 inches to two feet below ground surface. Lateral pipe connections will be cement glued prior to backfilling of trenches. The final SVE system requirements for lateral pipe and trenches will be based on the evaluation of the SVE System after two quarters of operation.

### **Disposal of Debris**

Excavated soils will be used as trench backfill. In the event that elevated photoionization detector (PID) readings are observed from soils generated from SVE well installations, the soils will be tested in accordance with the required laboratory analysis prior to transportation for proper off-site disposal. Petroleum impacted soils generated from the installation (drilling) of proposed SVE wells that may require off-site soil disposal based on the results of the previous investigations.

## 6.0 SYSTEM STARTUP AND OPERATIONS & MAINTENANCE (O&M)

It is estimated that the SVE system will be operated for a period of approximately one to two years or until mass removal reaches an asymptote, or the target cleanup levels (NYSDEC Guidance Values for soil and groundwater) are reached. The following sections describe activities to be completed during the one to two year remedial period and additional one year of groundwater monitoring. A revised SVE System operational schedule may be determined upon successful operation and reduction of petroleum concentrations in effluent vapor monitoring during the first two quarters of active remediation.

The site will be initially visited on a daily basis following system startup for a minimum of 5 days to optimize operating conditions. Thereafter, the site will be visited at least once monthly by a technician to check system operation (weekly during the first two months of operation). During these visits, the technician will check the operation of each portion of the SVE System, check the flow rates, vacuum, and check system effluent vapor using a PID.

Accumulated condensate (from the extraction blower) will be collected in the condensate tank (approximately 50-gallon capacity) provided with the system. Once filled, the condensate tank can be manually emptied or auto-drain system may be used. For manual draining, the technician will monitor liquid levels in these tanks via level sensors and/or sight glass. Once the levels in a tank have approached the tank capacity, the technician will transfer condensate flow to an empty 55-gallon tank (as required). Alternately, an auto-drain system may be used, which will automatically pump out the condensate to the designated 55-gallon tank once the system tank becomes full. Condensate generated is a factor of air temperature and humidity, soil moisture levels, and extraction rates. The quantity of condensate generated may fluctuate with operation of the system and seasonally. Therefore, estimates of the total amount of the condensate that will be generated have not been determined. Condensate may be discharged to the sanitary sewer in accordance with an executed NYSDEC stipulation agreement.

### System Monitoring and Reporting

As part of the proposed soil remediation and in accordance with the State (NYSDEC) approved requirements, system monitoring and reporting will be completed during (and after) operation of the SVE system. Periodic monitoring will be conducted on a quarterly/monthly basis and will include the following:

**Monthly PID Monitoring:** PID readings will be monitored from the vapor emissions at the extraction blower and a monthly basis during the first three months of operation and the during the quarterly sampling events. This will be completed to evaluate system operations and determine the rate of mass removal of petroleum volatile organics.

**Quarterly Vapor Effluent Sampling:** Quarterly sampling of the effluent from the extraction blower may be conducted to determine air discharge parameters. The effluent may be analyzed for concentrations of the BTEX compounds in accordance with U.S. EPA Method 8020 (modified for air). The samples may be collected in Tedlar® bags, labeled and sample information entered onto the chain-of-custody forms, and stored away from sunlight until delivered to the laboratory. The effluent vapor will be field monitored with a PID for total organic vapors. The result of the total organic vapor measurement (PID reading) will be discussed with

the NYSDEC and a decision to collect an effluent air sample for laboratory testing will be made based on the total organic vapor measurement (PID reading).

Following receipt of analytical data from each quarterly sampling event, a quarterly sampling report will be prepared in accordance with NYSDEC STARS requirements summarizing activities completed at the site during the previous quarter. The report will include tabulated analytical data, system and operating data, maps showing conditions at the site, laboratory reports, and original chain-of-custody documentation.

## **8.0 PERMITS**

It is anticipated that permits will not be required to discharge vapors from the proposed combined SVE System. Since, Colon's Citgo Station may execute a stipulation agreement for the site spill work with the NYSDEC. However, a construction permit from the City of Rochester may be required for the construction activities at the site for the proposed remediation shed. GeoQuest will assist Colon's Citgo with City of Rochester permits, if required.

## **9.0 REMEDIATION TIME FRAME**

It is estimated that a period of approximately one to two years of operating the SVE system, at rates ranging from approximately 20 to 25 scfm per well at 3 inches of Hg (based on the soil types), may be required to reduce contaminant concentration at or below the proposed NYSDEC cleanup levels. Due to the depth to groundwater, the proposed low flow vacuums will be adequate to capture vapors which may volatilize from both the saturated zone and unsaturated zone. A revised remediation time frame may be determined after the data from the SVE effluent monitoring is reviewed. At the end of the remediation time frame, three groundwater samples will be collected and evaluated for spill inactivation.

Following concurrence by the NYSDEC that the site has been adequately remediated, the remediation system will be abandoned. The abandonment of SVE wells will be conducted in general accordance with the NYSDEC requirements. The SVE System piping that is below the ground surface will remain in place and will be abandoned by grouting the vapor extraction wells with associated laterals in place. The surface expression may be restored in an attempt to match the existing ground surface expression.

## **10.0 HEALTH AND SAFETY**

A site health and safety plan (HASp) will be developed for remedial activities and will also be maintained on-site during the project work activities. A GeoQuest representative will act as an on-site health and safety coordinator for GeoQuest employees.

## **11.0 SCHEDULE**

GeoQuest is prepared to begin with the project work immediately. Based on final design specifications and plans it is anticipated that the combined SVE System installation will require approximately four to six weeks for SVE well installations and lateral pipe installation. Approximately one to two weeks for remediation shed installation and electrical connections, and three to four weeks for SVE equipment delivery.

NYSDEC Spill No.0200094  
Colon's Citgo Station  
Rochester, New York

GeoQuest Proposal No. 011303  
January 23, 2003  
Page 7

Quarterly monitoring effluent vapor (air) reports will be submitted by the end of the month following each quarter during the estimated one-year to two-year remediation period.

## 12.0 ACCEPTANCE

If the scope of work described in this work plan are acceptable, please contract us so that we may begin project work for the clean-up.

GeoQuest looks forward to implementing the proposed SVE System as a remedial alternative for petroleum remediation at Colon's Citgo Station.

Respectfully Submitted,

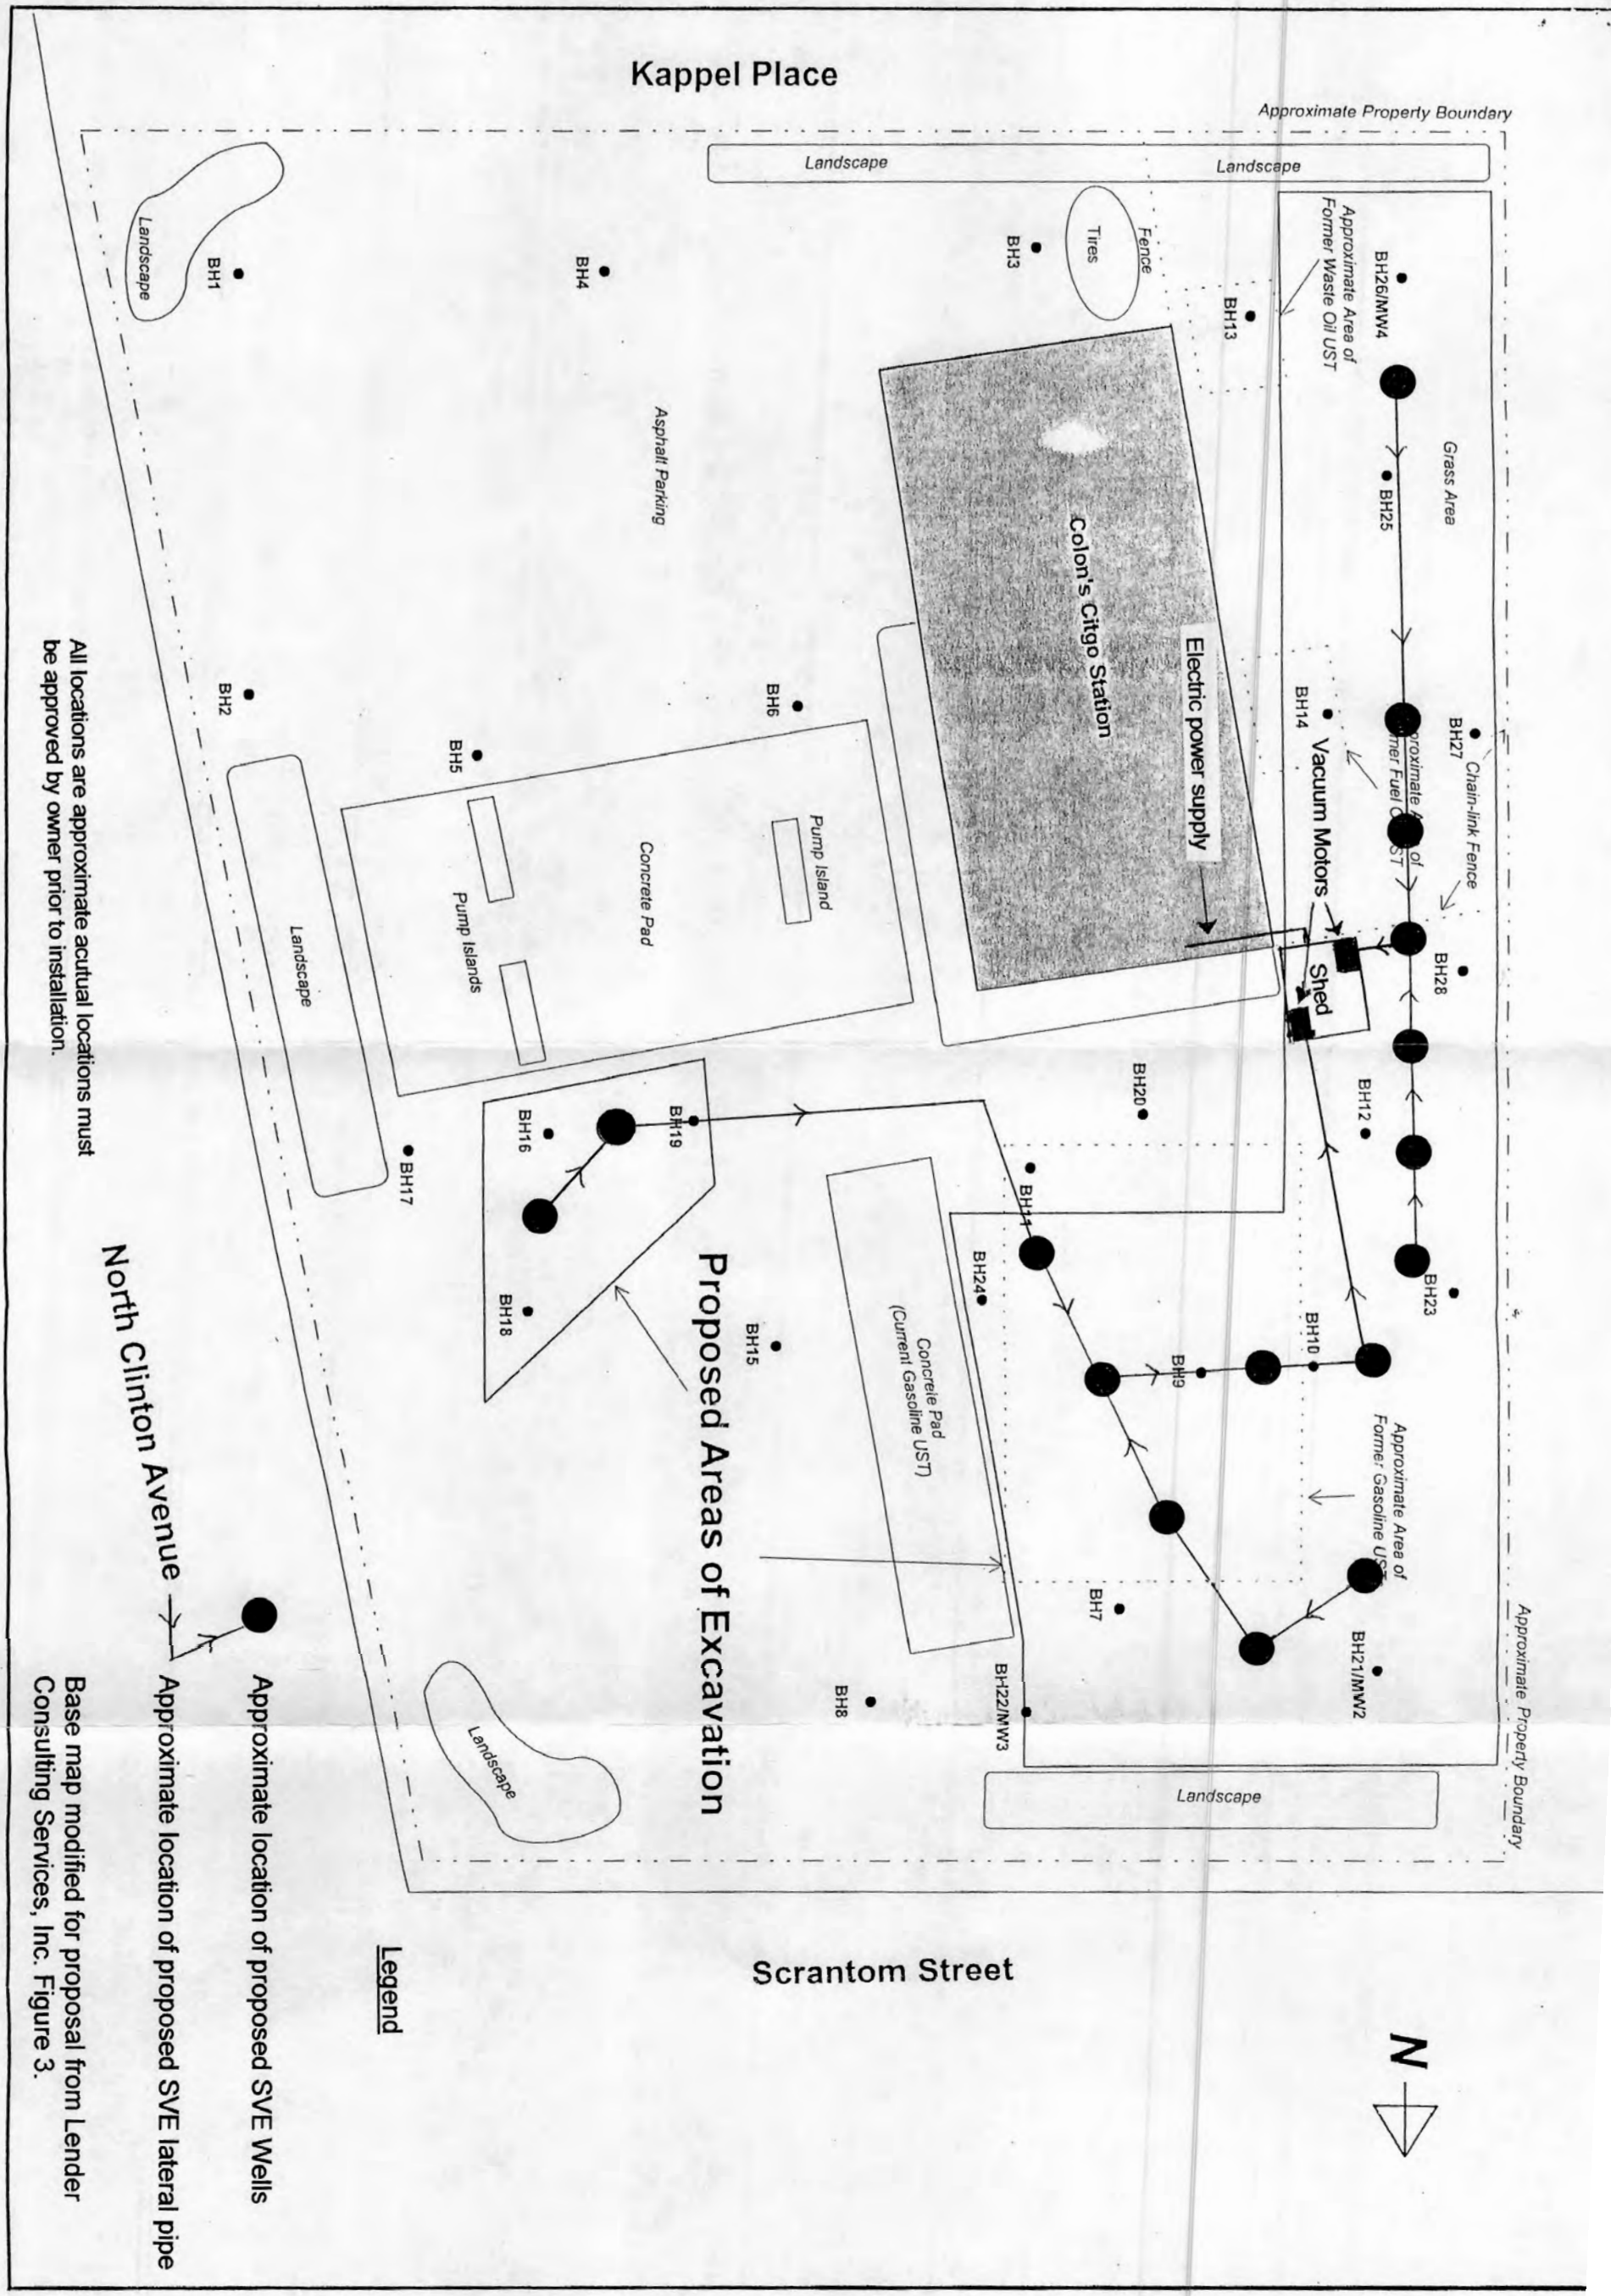

**GeoQuest Environmental, Inc.**

Stephen J. DeMeo  
Principal

Commissioner

July 3, 2003

Mr. Stephen DeMeo  
GeoQuest Environmental, Inc.  
1134 Titus Avenue  
Rochester, New York 14617

Dear Mr. DeMeo:

RE: Colon Automotive  
Rochester (C), Monroe County  
Spill No. 0200094

This Department has received and reviewed your Remedial Work Plan for the above-referenced site.

The proposed Work Plan is approved on the condition the assumed radius of influence of ten feet is confirmed by on-site pilot testing either before or after the system is operational. If the radius of influence is less than the assumed ten feet, additional extraction points must be installed to ensure adequate coverage of the contaminant plume.

The proposed work may begin at your earliest convenience. Please notify this Department at least two days prior to the commencement of my on-site work to allow for scheduling Department oversight.

If you have any questions or concerns regarding this matter, you may contact me at the above address or by telephone.

Sincerely,

Carl A. Hettenbaugh  
Environmental Program Specialist  
Division of Environmental Remediation

**FACILITY REGISTRATION**

1. Is the registration certificate posted at the facility? See Part 612.2. Yes
2. Is registration information current & correct? See Part 612.2. Yes
3. **Monitoring wells** are marked and secured-Part 613.3(b)(4). NONE

Registration Identification Number	<u>001</u>				
Underground or Aboveground Tank	<u>UST</u>				
Product Stored/Tank Volume if different than registered	<u>GASOLINE</u> <u>15,000</u>				
Date Installed	<u>7/1/95</u>				
4. Tanks permanently closed properly? Y/N/X	<u>X</u>				
5. Tanks temporarily closed properly? Y/N/X	<u>X</u>				
6. Were any unreported spills observed during the inspection? Y/N	<u>N</u>				
7. Have tank top and dispenser sumps and fill port catch basins been properly maintained? Y/N (accumulation of product)/1 (poor condition)	<u>Y</u>				
8. The <b>fillport</b> is <b>color coded</b> to identify the product in the tank. See 613.3(b).	<u>Y</u>				
9. Motor fuel tank has pressurized piping and is equipped with <b>shear valve</b> . Y/N/1 (Inoperative)	<u>1</u>				

**Underground Tanks**

10. Tank installed after 12/86, <b>tank system meets standards</b> . If no, missing items? (1) corrosion resistant, (2) secondary containment, (3) leak monitoring, (4) overfill prevention (auto shut-off valve, high level alarm or ball float valve) and have (5) corrosion resistant piping with (6) leak monitoring (line leak detector for pressurized piping) or (7) only having one check valve under the pump in suction piping system (8) tank label (9) as-built plans or drawings.	<u>8,9</u>	<u>TANK LABEL</u>			
11. <b>Leak monitoring</b> (UST) being done (2- wall tank - interstice is checked) Y/N/1 (inoperative system)/2(monitored records not maintained)/3(inappropriate method)	<u>N</u>				
12. <b>Cathodic protection</b> for steel UST and piping systems monitored annually Y/N(missing both)/ 1(no monitoring on tank)/ 2(no monitoring on line/ 3 (records not maintained)/ 4 (system not maintained to achieve protection)/5 (inadequate method)	<u>N</u>	<u>better form</u>			
13. <b>Inventory records</b> (USTs) metered Mark (1) for no records, (2) for poor equipment, (3) for no reconciliation, (4) for reconciliation performed other than 10 days.	<u>Y</u>				
14. <b>Unmetered tanks</b> -have annual standpipe, or tank test or other leak detect method	<u>X</u>				
15. <b>Tightness testing</b> (USTs) has been conducted on the tank and piping system Check for both tank and piping. Y/N/ 1(entire tank not tested)/2 (no test on line)	<u>X</u>				

Registration form is required to be posted at the facility [612.2(e)]. Ideally it should be posted in a conspicuous place that would be visible when the facility is not open.

The registration information must be current. [612.2(d)] Check on the owner/operator information as well as the information on the tanks.

All monitoring wells must be labeled and secured [613.3(b)(4)]. The wells should preferably be locked closed so that no delivery can be made into the well or other vandalism can be done.

Proper closure means that the tank has been emptied, cleaned and either removed or filled with a solid, inert material (sand/concrete/foam) [613.9(b)].

Check for tanks that are no longer in service but have not been properly closed. If the tank is to stay in temporary closure, the owner must keep the tank registered and comply with all testing and inspection requirement. [613.9(a)]

Check the areas around the tank for any areas of contamination/product accumulations. [613.8]

Check the tank top and dispenser sumps and fill catch basins to be sure that no product has accumulated and that the equipment is in good condition so that if a spill occurs that it would be contained. [613.3(d)]

All ASTs and USTs must have the fill port color coded. See Subdivision 613.3(b) for proper color and symbols.

Motor fuel dispensers with pressurized piping must have a shear valve at the base of the dispenser [613.3(c)(1)]. Check to see that the valve was installed properly (flush with the top of the concrete and bolted to the form). Inoperative means that the valve was either installed improperly or that the condition of the valve is so poor that it is obvious that it would not work.

10. **USTs** must be installed in conformance with Part 614.
11. USTs meeting the standards for new construction must be monitored for leaks at least weekly [613.5(b)(3)]. If the tank is double wall, the interstitial space **MUST** be monitored [614.5(b)]. The interstice can be monitored manually or electronically. If another secondary containment system has been used, the other leak monitoring systems that can be used would be an automatic tank gauge or monitoring wells inside the secondary containment system (vault or excavation liner) [614.5]. If the leak monitoring is performed electronically (continuous), the electronics need to be checked monthly to be sure that the system is operational. **Monitoring records must be kept on the premises for a period of one year.**
12. USTs with cathodic protection systems must be monitored at least annually [613.5(b)(2)]. Most systems use sacrificial anodes and will be monitored using a copper/cooper sulfate reference cell and a high impedance volt meter. While the regulations are not specific, there needs to be at least 3 readings per tank and 1 per piping system that is cathodically protected. Acceptable readings are those that are more negative than -0.85 volts. Inadequate method means that not enough readings were taken to demonstrate that the tank or piping system was receiving adequate protection.
13. Inventory records are required for all USTs[613.4]. If the tank has a **metered dispenser** (motor fuels) then records must be kept of sales, deliveries etc. Stick readings need to be taken to the closest 1/8". Check the condition of the stick to be sure unbroken. Check for reconciliation every 10 days (inventory discrepancies), a calculation of a threshold and comparison of the discrepancy with the threshold to see if there is an apparent product loss. If there is an apparent product loss, determine if it has been properly investigated to determine cause.
14. If the tank is **unmetered** (heating oil) then there is a need for inventory losses to be detected in an alternative manner [613.4(a)(2)]. Acceptable options would include an annual standpipe analysis or tank test or monitoring for inventory losses during the off season. See SPOTS #4.
15. USTs not exempt under Paragraph 613.5(a)(2) must have a tightness test once every 5 years (this includes tanks that have been retrofitted with cathodic protection, a tank liner or both to meet the EPA requirements). It is important that this test include the entire tank system - both the tank and the piping system. This can be done in one of three ways. 1. An overfilled tank test (Petro-Tite). With pressurized piping systems, a separate line test is required. 2. An underfill product test, ullage test and piping line test. 3. A non-volumetric test (Tracer or Vacuum). With the vacuum tests, it is important that the presence of groundwater be determined next to the tank. While making this determination, the tester must check for any contamination to the environment. A separate line test is required for pressurized piping systems and for suction piping with the check valve at the tank.

Aboveground Tanks

16. Tank installed after 12/86, <b>tank system meets standards</b> . If no, missing items? Y/N/X ASTs must be (1)welded steel with adequate (2)surface coating (paint), if on soil have (3)cathodic protection and if on grade have an (4)impermeable barrier under the tank with the ability to (5)monitor for leaks.						
17. <b>Monthly inspections</b> for all ASTs Y/N/1 (records not maintained)						
18. <b>Ten year inspections</b> for ASTs Y/N/X/1 (records not maintained)						
19. <b>Secondary containment</b> (ASTs ≥ 10,000 gallons) good condition/design Y/N/1 (not maintained) (ASTs < 10,000 gallons) If using alternatives to secondary containment SPOTS #17 issues addressed. Y/N/1 (equipment not maintained)						
20. <b>Dike drain valves</b> are locked in a closed position Y/N/X						
21. <b>Gauge, high level alarm or other equivalent device</b> for ASTs Y/N/1 (inoperative)						
22. <b>Design/working capacity, and id number</b> - marked on AST and at gauge.						
23. <b>Solenoid</b> or equivalent valve in place for gravity-fed motor fuel dispensers Y/N/1 (inoperative)/X (not applicable)						
24. <b>Check valve</b> in place for pump-filled tanks with remote fills. Y/N/1 (inoperative)/X(not applicable)						
25. <b>Operating valve</b> in place on every line with gravity head Y/N/1 (inoperative)/X (not applicable)						

FEDERAL UST Questions

001

26. For permanent closed USTs, site assessment performed? Y/N/X/1 (inadequate)	X					
27. Is the <b>tank corrosion resistant</b> ? N/A(Installed corrosion resistant)/B(interior lining)/C(retrofit c.p.)	A					
28. Is the <b>pipng system corrosion resistant</b> ? N/A(Installed corrosion resistant)/B(retrofit c.p.)	A					
29. Is <b>spill catch basin</b> installed and operational? Y/N/1 (inoperative)	Y					
30. Is <b>overflow prevention system</b> installed and operational? N/A(shutoff valve)/B(high level alarm)/C(ball float valve)/1 (inoperative)	C					
31. <b>Tank Leak detection</b> method being used: N(None)/ A -Tank testing and inventory monitoring (only if retrofitted corrosion protection or installed less than 10 years ago; if more, then other leak detection method required), B- ATG, C - Manual Tank Gauging (MTG) (limited to tanks ≤ 1000 gal), D- SIR, E-interstitial, F- Groundwater monitoring wells, G - Vapor monitoring wells, H- Other	C					
32. <b>Piping Leak Detection</b> being used: N (None)/ Suction: exempt (X) or A - line test every 3 years/B- monthly monitoring Pressurized: C - line leak detector, and either D - annual Line Test, or E - monthly monitoring of interstitial, SIR, GW well, vapor, other	C					

33. General Facility Condition? Good/Fair/Poor  
Comments:

Notice of Violation attached? YES NO  
Comment Sheet attached? YES NO

16. ASTs must be installed in conformance with Part 614.9 - 11.
17. Owners or operators of ASTs must document that they perform a visual inspection of the tank system on at least a monthly basis [613.6(a)]. The inspection must include the exterior of the tanks, pipes, and valves for leaks and maintenance problems as well as a check of the other equipment associated with the tank for operability.
18. Owners or operators of ASTs that are 10,000 gallons or larger (or smaller tanks if could discharge to waters of the State) and are resting on the ground with no impermeable barrier under the tank, must have an internal inspection performed on the AST to check on the structural integrity of the tank floor and shell [613.6(b)]  
 Owners or operators of ASTs that are 10,000 gallons or larger must provide secondary containment systems for the tank [613.3(c)(6)]. This secondary containment must be large enough to hold 100% of the largest tank system within the diked area plus room for freeboard. Numerous materials can be used as long as they are impermeable to the petroleum. Check for the condition of the system to be sure that if a leak occurred that it would be contained. In addition, check to see if there is proper distance from the tank to the dike wall so that if a leak occurred at the top of the tank it would not go over the dike wall to the environment.  
 For ASTs less than 10,000 gallons, owners/operators may not need to provide secondary containment if all the issues in SPOTS #17 have been addressed so that the tank would not reasonably be expected to have a discharge to the environment. Look for the overflow prevention valve (not just a high level alarm or gauge) as well as containment at the fill port, location of the valves, vehicular traffic patterns impacting the tank, flooding situations, fire exposure and potential vandalism with ballistics.
20. Impermeable secondary containment systems will collect precipitation. Owners/operators will need to have some way to remove this precipitation from the dike. Many times this involves a dike drain valve. This valve needs to be locked closed and only open when precipitation is being drained. [613.3(c)(6)(iii)]  
 All ASTs must be equipped with a gauge, high level alarm or overflow prevention valve [613.3(c)(3)]. If a gauge is used, it must be accessible to the carrier. High level alarms must be heard/seen at the fill port. Inoperative means that the condition of the equipment is such that it is not working.  
 The design capacity, working capacity and identification number of the tank must be marked on the tank and at the gauge [613.3(c)(3)(iii)]. The working capacity is generally the safe-fill level or the level at which the alarm/overflow prevention valve will trigger. This is normally at 90% capacity.  
 Solenoid valve (normally closed) or other anti-siphon valve is needed at the tank top so that if the piping system broke, the tank would not be emptied [613.3(c)(2)]. This is only required for tanks connected to motor fuel dispensers. Inoperative means that the valve is in obviously poor condition and not working.
24. Pump-filled ASTs with remote fills are required to have check valves at the fill port to prevent back flow from the tank [613.3(c)(4)]. Inoperative means that the valve would be leaking. This will be obvious by drips at the fillport.
25. All lines with a gravity head must be equipped with an operating valve to control the flow of product [613.3(c)(5)]. This would include any line that drops below the liquid level in the tank including any remote fill lines. Inoperative means that the condition of the valve is so poor that it is obvious that the valve is broken (drops/spills at the valve).

**These Federal UST questions pertain to tanks that are 10% or more underground that are 110 gallons or larger that store any petroleum product except for 1. Tanks storing heating oil (or other heating substitute) used consumptively on the premises and 2. Tanks less than 1,100 gallons storing motor fuel at a residence or a farm.**

26. When EPA USTs are closed an assessment of the environment around the tank and piping system must be performed [280.72]. See SPOTS #14. A site assessment would be considered inadequate if it is obvious that not enough samples were taken.
27. Tanks had to be corrosion resistant by 12/98. The options were to have a tank that was installed corrosion resistant [280.20] (STI-P3, FRP, FRP clad steel or jacketed steel), install an interior lining [280.21(b)(1)](had to meet Part 614.6 requirements), retrofit cathodic protection (c.p.) [280.21(b)(2)](tank had to be assessed to ensure structural integrity) or have both the lining and the c.p. [280.21(b)(3)]
28. Piping systems also had to be corrosion resistant by 12/98. The options were to have a system that was installed corrosion resistant [280.20(b)] or retrofit c. p. [280.21(c)] (the retrofit design had to be done by a corrosion specialist not by the contractor).
29. A spill catch basin is required at the fill port [280.20(c); 280.21(d)]. A basin would be considered inoperative if not functional.
30. An overflow prevention system had to be installed [280.20(c); 280.21(d)]. A shutoff valve and the ball float valve cannot be used with pump fill deliveries. The ball float valve cannot be used with suction piping and stage 1 coaxial vapor recovery. The high level alarms must be visible and/or audible to the delivery person. A system would be considered inoperative if not functioning.
31. Leak detection must be upgraded to something other than tank testing within 10 years of the tank being corrosion resistant [280.41(a)]. For the 10 years after a tank is corrosion resistant, the o/o can use tank testing every 5 years in conjunction with inventory. After a leak detection system must be used to monitor for leaks once per month (minimum).
32. Piping systems must have a leak detection system unless it is a suction system with the check valve under the dispenser with the piping sloped back to the tank [280.41(b)]. Pressurized piping must have two forms of leak detection [280.41(b)(1)] - line leak detector (or continuous monitoring of the interstitial space/sump) plus a monthly monitoring system or an annual line test.
33. To determine the general facility condition, look at general housekeeping practices, look for abandoned tanks, look at the fill ports, catch basins, under dispensers, tank top sumps and any other areas where leaks may be prevalent. If everything is clean, give the facility a good condition, if things are not well maintained give a fair condition, if spills have been discovered, give a poor condition.

RE: F & D of Rochester Inc.  
North Clinton St.  
Rochester, New York

Dear Carl,

Okar Equipment Co. Inc. was contracted by the Griffith Oil Co. during the mid 1990's to supply and install an underground storage tank and piping along with dispensers and canopy at the above location.

The installed tank is a Highland double wall P-3 tank, 15,000 gallons with a bulkhead split 10,000 and 5,000 gallons. The underground piping is Enviroflex primary inside of Enviroflex secondary piping, terminated in containment sumps at tanks and dispensers.

Further please note that the tank and piping system has been installed in compliance with the New York State Standards for New and Substantially Modified Petroleum Storage Facilities, 6 NYCCR Part 614.

Sincerely yours,

  
John R. Campbell

## PETROLEUM BULK STORAGE (PBS) IN NOTICE OF VIOLATION

**PLEASE TAKE NOTICE THAT**

based upon an inspection conducted at PBS Facility # 8-600290, on 9-26-06  
there is reason to believe that you are in violation of Article 17 of the New York Environmental  
Conservation Law and the regulation promulgated thereunder 6NYCRR Parts 612, 613 and/or 614.  
**PLEASE TAKE FURTHER NOTICE THAT** according to 71-1929 of the ECL, the sanctions for  
such violations include a CIVIL PENALTY of up to \$37,500 per day for each violation. DEC  
reserves the right to take civil or administrative enforcement action for any violation noted in this  
NOTICE or any other violation of the Environmental Conservation Law. Delays in correcting the  
violations will affect the amount of penalties for which you may be liable. In addition, a person may  
be held criminally liable if any of the violations was the result of intentional, knowing or criminally  
negligent conduct.

Refer to the PBS INSPECTION FORM for the violations that were noted. The law requires that  
you comply fully with the PBS regulations. Items of non-compliance identified in the inspection report  
require your immediate attention. Note that the inspection may not have disclosed all violations that  
exist at your site. You are responsible for ensuring that the entire facility is in compliance with  
applicable requirements. Except where a shorter time frame is expressly required, within thirty  
(30) days from the date of this notice you must submit to the attention of the DEC inspector at the  
address above, either documentation that the violations have been corrected or a plan to achieve  
compliance. Refer to the VIOLATIONS CORRECTIVE ACTIONS FORM (Attachment #2) for  
the violation citations, and for general information on the documents or plan to achieve compliance  
which you must submit. In accordance with any corrective action plan, you must submit  
documentation after compliance is achieved.

Please note that if violations of the Federal EPA Underground Storage Tank regulations, 40 CFR  
Part 280 were observed during the inspection, that information will be provided to EPA Region 2  
for their follow-up. (On the inspection form, questions # 26-32 apply to the federal regulations).

Inspection Performed By: THOMAS GRASEK Title: ENVIR. ENG. TECH

DEC Representative's Signature: Thomas Grasek Date 9-26-06

I, Dan T. W. Hasen, have been told of the alleged violations and the need to remedy  
these violations immediately. I have been told that within the next thirty (30) days NYS DEC must  
be provided with documentation to show that the facility is in compliance or a plan to achieve  
compliance.

Owner/Operator Signature: Dan T. W. Hasen

Title: President Date: 9/26/06

RE: Petroleum Bulk Storage (PBS) Program Site Inspection  
6NYCRR Part 612-614  
Notice of Violation Issued: 09/26/06  
F&D of Rochester  
799 North Clinton Avenue  
Rochester, Monroe County  
PBS No. 8-600290

Dear Mr. Hasen:

This is to confirm that a Notice of Violation was issued on for Petroleum Bulk Storage Violations (6NYCRR Part 613-614) for the above-referenced PBS facility.

You are hereby requested to attend a settlement conference with me in this office on January 11, 2007 at 10:00 AM. The purpose of this settlement conference is to ensure that the proper compliance steps have been completed to resolve the PBS violations documented in the Notice of Violation. In addition, you will be given the opportunity to settle this case with a Consent Order. The terms of that Order will be discussed at the settlement conference in detail.

If you do not attend the settlement conference, I will conclude that you are unwilling to resolve this matter to the satisfaction of the Department. I will then forward this case to our Regional Attorney for commencement of formal legal action. At such a proceeding, you may expect staff to seek a larger penalty than will be offered to you at the settlement conference.

Thank you for your prompt attention to this matter. I look forward to working with you to resolve this matter on a cooperative basis.

Very truly yours,

Bruce W. Finster, P.E.  
Regional Spill Engineer  
Division of Environmental Remediation

Rochester, NY 14605

RE: Case No. 20070116-10  
PBS No. 8-600290  
F&D of Rochester, Inc.  
799 North Clinton Avenue  
Rochester, NY 14605

Dear Mr. Hansen:

This is in furtherance of the recent settlement conference held in this office on January 11, 2007. The purpose of this settlement conference was to discuss resolution of violations of 6NYCRR Part 612-614. As we discussed at that time, enclosed you will find a draft Consent Order for your review. If you are willing to settle this case, please have the Order signed by an authorized individual and return the signed Order and penalty check to me no later than February 5, 2007. After the Order is signed by Regional Director, Sean Hanna, on behalf of the Commissioner of Environmental Conservation, a photocopy will be sent to you for your records.

If I do not receive the signed Order by February 5, 2007, I will assume you are unwilling to resolve this matter, and I will refer it to our Regional Attorney's office for commencement of a formal legal action. At such a proceeding, you may expect staff to seek a larger penalty than that offered in the enclosed Order.

Thank you for your prompt attention to this matter

Very truly yours,

Bruce W. Finster, P.E.

**Case No. R8-20070116-10**

Dear Mr. Hansen:

Enclosed please find your copy of the Order in the above-referenced case, which has been signed by Regional Director Sean T. Hanna on behalf of the Department, and is now in effect. Also enclosed is the original receipt for penalty payment.

Thank you for your efforts to resolve this matter.

Very truly yours,

A handwritten signature in black ink that reads "Bruce W. Finster". The signature is written in a cursive, flowing style.

STATE OF NEW YORK  
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

-----X  
**In the Matter of Alleged Violations of  
Article 17 of the New York State Environmental  
Conservation Law, and Parts 612-614 of Title 6 of  
the New York Codes, Rules and Regulations ("6NYCRR")**

**ORDER ON  
CONSENT**

**Case No. R8-20070116-10  
PBS No. 8-600290**

-by-

**F&D of Rochester, Inc.  
22 Fifth Street  
Rochester, NY 14605  
Dawit Hansen**

**Respondent.**

-----X  
**WHEREAS:**

- 1 The New York State Department of Environmental Conservation (the "Department") is a department of the State of New York which, pursuant to Titles 3 and 10 of Article 17 of the Environmental Conservation Law (ECL), is authorized to regulate the storage and handling of petroleum in the State of New York.
- 2 Respondent, F&D of Rochester, Inc. is an entity authorized to do business in the State of New York, which owns and/or operates a Petroleum Bulk Storage facility located at **F&D of Rochester, Inc., 799 North Clinton Avenue, Rochester, NY 14605.**
- 3 The Department Staff conducted an inspection of the facility on **September 26, 2006** and discovered that Respondent violated the following Sections of 6NYCRR:
  - a. §Part 613.3(d), shear valve not operational;
  - b. §Part 613.5(b)(3), no leak monitoring performed;
  - c. §Part 613.5(b), failure to monitor cathodic protection.
- 4 Representatives of Respondent and the Department have conferred and agreed to execute this Consent Order in settlement of Respondent's civil liability for the violation(s) described above.
- 5 Respondent affirmatively waives its right to a hearing in this matter, consents to the issuance of this Order and agrees to be bound by the provisions, terms and conditions of this Order.

NOW, being duly advised and having considered the matter, **IT IS ORDERED THAT:**

- I. **Civil Penalty.** Relative to and in settlement of the alleged violations described above, Respondent is hereby assessed a civil penalty in the amount of **\$1,250** which shall be paid together with the return of the executed Order to the Department, by submitting a check or money order (payable to the Department of Environmental Conservation) to the Regional Spill Engineer of the Department's Region 8 office located at 6274 East Avon-Lima Road, Avon, New York 14414 by **February 5, 2007**.
- II. **Status of Non-Compliance.** As of the effective date of this Order, Respondent has represented to the Department that the above described violation(s) have been remedied.
- III. **Duration.** This Order shall take effect when it is signed by the Regional Director as the authorized representative of the Commissioner of Environmental Conservation, and shall expire when Respondent has fully complied with the requirements of this Order.
- IV. **Modifications.** No change in this Order shall be made or become effective except as specifically set forth by written order of the Commissioner, being made either upon written application of Respondent, or upon the Commissioner's own findings after notice and opportunity to be heard have been given to Respondent.
- V. **Binding Effect.** The provisions, terms, and conditions of this Order shall be deemed to bind Respondent and Respondent's heirs, legal representatives, receivers, trustees in bankruptcy, successors and assigns.

Dated: 2-5-07

INSPECTION NARRATIVE (Sketch, Discussions, Agreements, Observations):

In an effort to close out spills I inspect the site to determine the status of the property. The property is now an operational gas station. It is a Valero station. I will check the DBS records to determine if there has been a change of ownership.

COMPLIANCE WITH REGULATORY REQUIREMENTS WAS ASSESSED VIA THE FOLLOWING METHODS:  
 FIELD OBSERVATION, RECORDS REVIEW, AND/OR INTERVIEW WITH FACILITY REPRESENTATIVE

1. Registration form is required to be posted at the facility [612.2(e)]. Ideally it should be posted in a conspicuous place that would be visible when the facility is not open.
2. The registration information must be current. [612.2(d)] Check on the owner/operator information as well as the information on the tanks.
3. All monitoring wells must be labeled and secured [613.3(b)(4)]. The wells should preferably be locked closed so that no delivery can be made into the well or other vandalism can be done.
4. Check the dispenser sumps to be sure that no product has accumulated and that the equipment is in good condition so that if a spill occurs that it would be contained. [613.3(d)]
5. Motor fuel dispensers with pressurized piping must have a shear valve at the base of the dispenser [613.3(c)(1)]. Check to see that the valve was installed properly (flush with the top of the concrete and bolted to the form). Inoperative means that the valve was either installed improperly or that the condition of the valve is so poor that it is obvious that it would not work.
6. Proper closure means that the tank has been emptied, cleaned and either removed or filled with a solid, inert material (sand/concrete/foam) [613.9(b)].
7. Check for tanks that are no longer in service but have not been properly closed. If the tank is to stay in temporary closure, the owner must keep the tank registered and comply with all testing and inspection requirement. [613.9(a)]
8. Check the areas around the tank for any areas of contamination/product accumulations. [613.8]
9. Check the tank top sumps to be sure that no product has accumulated and that the equipment is in good condition so that if a spill occurs that it would be contained. [613.3(d)]
10. Check the fillport catch basins to be sure that no product has accumulated and that the equipment is in good condition so that if a spill occurs that it would be contained. [613.3(d)]
11. All ASTs and USTs must have the fill port color coded. See Subdivision 613.3(b) for proper color and symbols.

#### **UNDERGROUND STORAGE TANKS**

12. USTs must be installed in conformance with Part 614.
13. USTs meeting the standards for new construction must be monitored for leaks at least weekly [613.5(b)(3)]. If the tank is double wall, the interstitial space **MUST** be monitored [614.5(b)]. The interstice can be monitored manually or electronically. If another secondary containment system has been used, the other leak monitoring systems that can be used would be an automatic tank gauge or monitoring wells inside the secondary containment system (vault or excavation liner) [614.5]. If the leak monitoring is performed electronically (continuous), the electronics need to be checked monthly to be sure that the system is operational. **Monitoring records must be kept on the premises for a period of one year.**
14. USTs with cathodic protection systems must be monitored at least annually [613.5(b)(2)]. Most systems use sacrificial anodes and will be monitored using a copper/cooper sulfate reference cell and a high impedance volt meter. While the regulations are not specific, there needs to be at least 3 readings per tank and 1 per piping system that is cathodically protected. Acceptable readings are those that are more negative than -0.85 volts. Inadequate method means that not enough readings were taken to demonstrate that the tank or piping system was receiving adequate protection.
15. Inventory records are required for all USTs[613.4]. If the tank has a **metered dispenser** (motor fuels) then records must be kept of sales, deliveries etc. Stick readings need to be taken to the closest 1/8". Check the condition of the stick to be sure unbroken. Check for reconciliation every 10 days (inventory discrepancies), a calculation of a threshold and comparison of the discrepancy with the threshold to see if there is an apparent product loss. If there is an apparent product loss, determine if it has been properly investigated to determine cause.
16. If the tank is **unmetered** (heating oil) then there is a need for inventory losses to be detected in an alternative manner [613.4(a)(2)]. Acceptable options would include an annual standpipe analysis or tank test or monitoring for inventory losses during the off season. See SPOTS #4.
17. USTs not exempt under Paragraph 613.5(a)(2) must have a tightness test once every 5 years (this includes

**Underground Storage Tanks (continued)**

	001									
	T	P	T	P	T	P	T	P	T	P
13. Is <b>leak monitoring</b> being done? Y / N / 1 (inoperative system) / 2 (weekly leak detection records not maintained) / 3 (monthly operability records not maintained) / 4 (interstitial space on double-walled tanks and/or piping not monitored) / X (Category A or B tank system)	Y	Y								
14. Is <b>cathodic protection</b> for steel tank and piping systems monitored annually? Y / N (no monitoring on either) / 1 (no monitoring on tank) / 2 (no monitoring on line) / 3 (records not maintained) / 4 (minimum protection not provided) / 5 (inadequate monitoring) / X (Category A or B steel tank system or not steel tank system)	Y									
15. Does the facility have adequate <b>inventory records</b> for <u>metered</u> tanks? Y / X (unmetered tank) If not, which items are deficient? 1 (no records) / 2 (no tank bottom water measurements) / 3 (equipment not capable of 1/8" measurement) / 4 (meter not calibrated) / 5 (no reconciliation of records) / 6 (improper reconciliation) / 7 (no investigation of discrepancy)	Y									
16. Do <b>unmetered tanks</b> have annual standpipe analysis or tank test, or other acceptable leak detection method? Y / N / X (metered tank)										
17. Has <b>tightness testing</b> been conducted on the tank and piping system (typically Category A or B) within the last 5 years? Y / N (no test on either tank or line) / 1 (no tank test) / 2 (no line test) / 3 (test report not submitted) / X (exempt from tightness testing)										

**Aboveground Storage Tanks**

18. For <u>AST</u> systems installed after Dec. 27, 1986, does the <b>tank system meet standards</b> ? Y / X (tank system installed prior to Dec. 27, 1986) If not, which items are deficient? 1 (tank not welded steel) / 2 (no surface coating) / 3 (tank resting on soil; no cathodic protection) / 4 (tank on grade; no impermeable barrier) / 5 (no leak monitoring between tank & barrier)										
19. Does the facility conduct <b>monthly inspections</b> for all ASTs? Y / N / 1 (records not maintained)										
20. Does the facility conduct <b>ten-year inspections</b> for ASTs? Y / N / 1 (records not maintained) / X (not required for tanks <10,000 gal)										
21. For <u>ASTs &gt;10,000 gallons</u> (or for <u>ASTs &lt;10,000 gallons where secondary containment is required</u> ), is the <b>secondary containment</b> adequately designed and in good condition? Y / N / 1 (secondary containment not maintained) / 2 (poor design) For <u>ASTs &lt;10,000 gallons</u> , if using <b>alternatives to secondary containment</b> , are SPOTS #17 issues addressed? Y / N / 3 (equipment not maintained) / X (not required)										
22. Are <b>dike drain valves</b> <u>locked</u> in a <u>closed</u> position? Y / N (unlocked) / 1 (no valve on discharge pipe) / X (no dike)										
23. Does the AST have a <b>gauge, high level alarm</b> or <b>other equivalent device</b> ? Y / N / 1 (inoperative)										
24. Is the <b>design/working capacity</b> , and <b>ID number</b> marked on the tank and at the gauge? Y / N / 1 (tank not labeled) / 2 (not marked at gauge)										
25. Is a <b>solenoid</b> or equivalent valve in place for gravity-fed motor fuel dispensers? Y / N / 1 (inoperative) / X (not motor fuel/gravity-fed)										
26. Is a <b>check valve</b> in place for pump-filled tanks with remote fills? Y / N / 1 (inoperative) / X (not remote fill)										
27. Is an <b>operating valve</b> in place on every line with gravity head? Y / N / 1 (inoperative) / X (no gravity head on line)										

COMPLIANCE WITH REGULATORY REQUIREMENTS WAS ASSESSED VIA THE FOLLOWING METHODS:  
FIELD OBSERVATION, RECORDS REVIEW, AND/OR INTERVIEW WITH FACILITY REPRESENTATIVE

tanks that have been retrofitted with cathodic protection, a tank liner or both to meet the EPA requirements). It is important that this test include the entire tank system - both the tank and the piping system. This can be done in one of three ways. 1. An overfilled tank test (Petro-Tite). With pressurized piping systems, a separate line test is required. 2. An underfill product test, ullage test and piping line test. 3. A non-volumetric test (Tracer or Vacuum). With the vacuum tests, it is important that the presence of groundwater be determined next to the tank. While making this determination, the tester must check for any contamination to the environment. A separate line test is required for pressurized piping systems and for suction piping with the check valve at the tank.

### **ABOVEGROUND STORAGE TANKS**

18. **ASTs** must be installed in conformance with Part 614.9 - 11.
19. Owners or operators of ASTs must document that they perform a visual inspection of the tank system on at least a monthly basis [613.6(a)]. The inspection must include the exterior of the tanks, pipes, and valves for leaks and maintenance problems as well as a check of the other equipment associated with the tank for operability.
20. Owners or operators of ASTs that are 10,000 gallons or larger (or smaller tanks if could discharge to waters of the State) and are resting on the ground with no impermeable barrier under the tank, must have an internal inspection performed on the AST to check on the structural integrity of the tank floor and shell [613.6(b)]
21. Owners or operators of ASTs that are 10,000 gallons or larger must provide secondary containment systems for the tank [613.3(c)(6)]. This secondary containment must be large enough to hold 100% of the largest tank system within the diked area plus room for freeboard. Numerous materials can be used as long as they are impermeable to the petroleum. Check for the condition of the system to be sure that if a leak occurred that it would be contained. In addition, check to see if there is proper distance from the tank to the dike wall so that if a leak occurred at the top of the tank it would not go over the dike wall to the environment. For ASTs less than 10,000 gallons, owners/operators may not need to provide secondary containment if all the issues in SPOTS #17 have been addressed so that the tank would not reasonably be expected to have a discharge to the environment. Look for the overfill prevention valve (not just a high level alarm or gauge) as well as containment at the fill port, location of the valves, vehicular traffic patterns impacting the tank, flooding situations, fire exposure and potential vandalism with ballistics.
22. Impermeable secondary containment systems will collect precipitation. Owners/operators will need to have some way to remove this precipitation from the dike. Many times this involves a dike drain valve. This valve needs to be locked closed and only open when precipitation is being drained. [613.3(c)(6)(iii)]
23. All ASTs must be equipped with a gauge, high level alarm or overfill prevention valve [613.3(c)(3)]. If a gauge is used, it must be accessible to the carrier. High level alarms must be heard/seen at the fill port. Inoperative means that the condition of the equipment is such that it is not working.
24. The design capacity, working capacity and identification number of the tank must be marked on the tank and at the gauge [613.3(c)(3)(iii)]. The working capacity is generally the safe-fill level or the level at which the alarm/overfill prevention valve will trigger. This is normally at 90% capacity.
25. Solenoid valve (normally closed) or other anti-siphon valve is needed at the tank top so that if the piping system broke, the tank would not be emptied [613.3(c)(2)]. This is only required for tanks connected to motor fuel dispensers. Inoperative means that the valve is in obviously poor condition and not working.
26. Pump-filled ASTs with remote fills are required to have check valves at the fill port to prevent back flow from the tank [613.3(c)(4)]. Inoperative means that the valve would be leaking. This will be obvious by drips at the fillport.
27. All lines with a gravity head must be equipped with an operating valve to control the flow of product [613.3(c)(5)]. This would include any line that drops below the liquid level in the tank including any remote fill lines. Inoperative means that the condition of the valve is so poor that it is obvious that the valve is broken (drops/spills at the valve).

### **FEDERAL UST -- RELEASE DETECTION**

**Federal UST Questions – Release Prevention**

	001				
28. Is the <b>spill prevention device</b> (catch basin) present and functional? Y / N (not present) / 1 (not functional – holes or cracks present) / X (tank receives <25 gal. at one time)	Y				
29. Is the <b>overflow prevention device</b> (i.e., automatic shut-off, high-level alarm ball float valve) present? Y / N / X (tank receives <25 gal. at one time)	Y				
30. Is the <b>overflow prevention device</b> operational? Y / X (tank receives <25 gal. at one time) If not operational: 1) Automatic shut-off is not operational (i.e., device tampered with or inoperable; gauging stick in drop tube). 2) High-level alarm is not operational. 3) Alarm is not audible or visible to the delivery driver. Ball float is not operational because: 4) Stage I vapor recovery is present. 5) Piping system is suction. 6) Drain valve on spill catch basin is broken or is impaired by debris, causing drain valve to act as an emergency vent.	Y				
31. Were <b>structurally repaired tanks and piping</b> tightness tested within 30 days of repair completion (not required w/ internal inspections after repair or if release detection equipment is in use)? Y / N / X (no structural repair)	<del>X</del>				
32. If cathodically protected tank or piping was structurally repaired, were <b>CP systems tested/inspected</b> within 6 months of repair? Y / N / X (no CP system/structural repair)	<del>X</del>				
33. Is <b>buried metal tank and piping</b> (including fittings, connections, etc.) protected from corrosion? Y / X (no buried metal components) If not: 1) Buried metal piping components (such as swing joints, flex-connectors, etc.) are not isolated from the ground or cathodically protected. For new USTs (tanks and piping installed after 12/22/1988): 2) Tank or piping does not meet new tank/piping standards for corrosion. For existing USTs (tanks and piping installed on or before 12/22/1988): 3) Steel tank is not internally lined OR retrofitted with cathodic protection. 4) Metal piping is not retrofitted with cathodic protection.	Y				
34. Was <b>corrosion protection system</b> tested within required time frame and does it provide continuous protection? Y / X (no CP system) If system does <u>not</u> provide continuous protection: 1) CP system was not tested. 2) CP system is not performing adequately based on results of testing. 3) Operator is not conducting or has not completed appropriate repair in response to test results.	Y				
35. If an <b>impressed current system</b> is in use, has system been operated continuously? Y / X (no impressed current system) If system has <u>not</u> been operated continuously: 1) Rectifier is not operational. 2) Rectifier does not have electrical power 24/7. 3) Clock shows that power has been turned off.	<del>X</del>				
36. Is <b>impressed current system</b> inspected every 60 days? (Operator is only required to keep 6 months of readings; at least 2 of last 3 readings are required if system is operational at time of inspection.) Y / N / X (no impressed current system)	<del>X</del>				
37. Do reports indicate that <b>lined tanks</b> are inspected periodically (within 10 years of installation and every 5 years thereafter) and that lining is in compliance? Y / N (no report) / 1 (lining was inspected and failed) / 2 (inspection procedure not acceptable) / X (tank not lined)	<del>X</del>				

COMPLIANCE WITH REGULATORY REQUIREMENTS WAS ASSESSED VIA THE FOLLOWING METHODS:  
 FIELD OBSERVATION, RECORDS REVIEW, AND/OR INTERVIEW WITH FACILITY REPRESENTATIVE

**These Federal UST questions pertain to tanks that are 10% or more underground that are 110 gallons or larger that store any petroleum product except for 1. Tanks storing heating oil (or other heating substitute) used consumptively on the premises and 2. Tanks less than 1,100 gallons storing motor fuel at a residence or a farm.**

28. A spill catch basin is required at the fill port [280.20(c); 280.21(d)]. A basin would be considered inoperative if not functional.
- 29.-30. An overfill prevention system had to be installed [280.20(c); 280.21(d)]. A shutoff valve and the ball float valve cannot be used with pump fill deliveries. The ball float valve cannot be used with suction piping and stage 1 coaxial vapor recovery. The high level alarms must be visible and/or audible to the delivery person. A system would be considered inoperative if not functioning.
- 31.-32. If a cathodically protected tank or piping system is structurally repaired, the CP system must be tested within six (6) months of the repair and a report of the results must be submitted to the Department. [40 CFR 280.31(b)]
- 33-36. Tanks had to be corrosion resistant by 12/98. The options were to have a tank that was installed corrosion resistant [280.20] (STI-P3, FRP, FRP clad steel or jacketed steel), install an interior lining [280.21(b)(1)](had to meet Part 614.6 requirements), retrofit cathodic protection (c.p.) [280.21(b)(2)](tank had to be assessed to ensure structural integrity) or have both the lining and the c.p. [280.21(b)(3)]. Piping systems also had to be corrosion resistant by 12/98. The options were to have a system that was installed corrosion resistant [280.20(b)] or retrofit c. p. [280.21(c)] (the retrofit design had to be done by a corrosion specialist not by the contractor).
- 37-56. Leak detection must be upgraded to something other than tank testing within 10 years of the tank being corrosion resistant [280.41(a)]. For the 10 years after a tank is corrosion resistant, the o/o can use tank testing every 5 years in conjunction with inventory. After a leak detection system must be used to monitor for leaks once per month (minimum). Piping systems must have a leak detection system unless it is a suction system with the check valve under the dispenser with the piping sloped back to the tank [280.41(b)]. Pressurized piping must have two forms of leak detection [280.41(b)(1)] - line leak detector (or continuous monitoring of the interstitial space/sump) plus a monthly monitoring system or an annual line test.
57. When EPA USTs are closed an assessment of the environment around the tank and piping system must be performed [280.72]. See SPOTS #14. A site assessment would be considered inadequate if it is obvious that not enough samples were taken.
58. To determine the general facility condition, look at general housekeeping practices, look for abandoned tanks, look at the fill ports, catch basins, under dispensers, tank top sumps and any other areas where leaks may be prevalent. If everything is clean, give the facility a good condition, if things are not well maintained give a fair condition, if spills have been discovered, give a poor condition.

**Federal UST Questions – Release Detection (only complete applicable sections)**

	001									
<p>Specify method(s) of <b>tank release detection</b> used:                  (NOTE: Methods B&amp;C and C&amp;D can only be used for 10 years after a tank has been installed or upgraded)                  A. Automatic Tank Gauging (ATG) – answer questions 38-40, 56                  B. Manual Tank Gauging (MTG) for tanks ≤1000 gal. – answer questions 41-43, 56                  B&amp;C. Manual Tank Gauging (MTG) &amp; Tightness Testing for tanks &gt;1000 gal. and ≤2000 gal. – answer questions 41-46, 56                  C&amp;D. Inventory Control with Tank Tightness Testing – answer questions 44-46, 56                  E. Groundwater or Vapor Monitoring – answer questions 47-50, 56                  F. Interstitial Monitoring – answer questions 51-52, 56                  H. Statistical Inventory Reconciliation (SIR) – answer questions 55, 56</p>	F									
<p>Specify second method of <b>pressurized piping release detection</b> used:                  (NOTE: “G. Automatic Line Leak Detector [ALLD]” is <u>always</u> required for pressurized piping) – answer questions 53-54, 56                  C. Tightness Testing – answer questions 44-46, 56                  E. Groundwater or Vapor Monitoring – answer questions 47-50, 56                  F. Interstitial Monitoring – answer questions 51-52, 56                  H. Statistical Inventory Reconciliation (SIR) – answer questions 55, 56</p>	C G	G	G	G	G					
<p>Specify method of <b>suction piping release detection</b> used:                  (NOTE: safe [European] suction piping does not require RD – mark “X”)                  C. Tightness Testing – answer questions 44-46, 56                  E. Groundwater or Vapor Monitoring – answer questions 47-50, 56                  F. Interstitial Monitoring – answer questions 51-52, 56                  H. Statistical Inventory Reconciliation (SIR) – answer questions 55, 56                  X. Exempt Suction Piping</p>										
<b>A. Automatic Tank Gauging (ATG)</b>										
38. Is ATG on National Work Group on Leak Detection Evaluations (NWGLDE) list? Y / N	<del>X</del>									
39. Is ATG set up properly? Y / N / X (unable to confirm)										
40. Did ATG conduct test while tank contained routinely highest level of product? Y / N										
<b>B. Manual Tank Gauging (MTG)</b>										
41. Is tank size appropriate for using MTG? Y / N	<del>X</del>									
42. Do records indicate that MTG method is being conducted correctly? Y / N										
43. Is MTG equipment capable of 1/8” measurement? Y / N										
<b>C. Tightness Testing</b>										
44. Is tightness testing method on National Work Group on Leak Detection Evaluations (NWGLDE) list? Y / N	T	P	T	P	T	P	T	P	T	P
45. Is tightness testing conducted per manufacturer’s instructions? (Compare test report with NWGLDE specifications for test method.) Y / N	X	Y								
46. Is tightness testing conducted within the specified time frames for the following equipment? Y / 1 (tanks – not tested every 5 years) / 2 (pressurized piping – not tested annually) / 3 (non-exempt suction piping – not tested every 3 years)	X	Y

Activity: UST Inspection

Inspection Conclusion Data Sheet1) Did you observe deficiencies (preferred violations) during the on-site inspection? **YES**

Deficiencies observed: (Put an X for each observed deficiency)

- Potential failure to complete or submit a notification, report, certification, or manifest
- Potential failure to follow or develop a required management practice or procedure
- Potential failure to maintain a record or failure to disclose a document
- Potential failure to maintain/inspect/repair meters, sensors, and recording equipment
- Potential failure to report regulated events, such as spills, accidents, etc.

2) If you observed deficiencies, did you communicate the deficiencies to the Facility during the inspection? **Yes/No**3) Did you observe the Facility take any actions during the inspection to address the deficiencies noted? **Yes/No**

If yes, what actions were taken?

4) Did you provide general Compliance Assistance in accordance with the policy on the role of the EPA Inspector in providing Compliance Assistance during Inspections? **Yes/No**5) Did you provide site-specific Compliance Assistance in accordance with the policy on the role of the EPA Inspector in providing Compliance Assistance during the inspection? **Yes/No**

### Release Prevention Compliance Measures Matrix

Regulatory Subject Area	Measure #	SOC Measure / Federal Citation	In Compliance?		
			N/A	Y	N
I. Spill Prevention	1	Spill prevention device is present and functional. [280.20(c)(1)(i), 280.21(d)]		✓	
II. Overfill Prevention	2	Overfill prevention device is present and operational. [280.20(c)(1)(ii), 280.21(d)]			✓
		<input type="checkbox"/> Automatic shutoff is operational (ie., device not tampered with or inoperable ) [280.20(c)(1)(ii)(A), 280.21(d)] <input type="checkbox"/> Alarm is operational. [280.20(c)(1) (ii)(B), 280.21(d)] <input type="checkbox"/> Alarm is audible or visible to delivery driver. [280.20(c)(1) (ii)(B), 280.21(d)] <input type="checkbox"/> Ball float is operational. [280.20(c)(1)(ii)(B), 280.21(d)]			
III a. Operation and Maintenance	3	Repaired tanks and piping were tightness tested within 30 days of repair completion (not required w/internal inspections or if monthly monitoring is in use). [280.33(d)]	✓		
III b. Operation and Maintenance of Corrosion Protection	4	CP systems were tested/inspected within 6 months of repair of any cathodically protected UST system. [280.33(e)]	✓		
	5	Corrosion protection system is properly operated and maintained to provide continuous protection. [280.31(a)(b), 280.70(a)]  <input type="checkbox"/> UST system (Choose one) <input type="checkbox"/> UST in operation <input type="checkbox"/> UST in temporary closure  <input type="checkbox"/> CP System is properly operated and maintained <input type="checkbox"/> CP system is performing adequately based on results of testing. [280.31(b)]; - or - <input type="checkbox"/> CP system tested within required period and operator is conducting or has completed appropriate repair in response to test results reflecting CP system not providing adequate protection.			✓

[280.20(a)(4)(ii), 280.20(b)(3)(ii)]  For existing USTs - tanks and piping installed on or before 12/22/88 [280.21(b), 280.21(c)]: <input type="checkbox"/>  Tank and piping meet new UST requirements [280.21(a)(1)]  <input type="checkbox"/> Steel tank is internally lined. [280.21 (b)]  <input type="checkbox"/> Metal tank and piping are cathodically protected. [280.21(b)(2), 280.21(c)]			TANK METAL AS STEEL, OPERATION CHANGE FIBERGLASS

Notes: N/A - Indicates that the measure is not applicable.

Any mark in the "N" (No) column means that the facility is not in Significant Operational Compliance (SOC) with Release Prevention Compliance Measures. In order for a compliance measure to be in SOC, all applicable check-box items must be in compliance.

### Release Detection Compliance Measures Matrix

*Instructions - To Determine Compliance Status of Measures #1-7,  
Work Through the Worksheet "Commonly Used Release Detection Methods" Below.*

Regulatory Subject Area	Measure #	SOC Measure/ Federal Citation	In Compliance?		
			N/A	Y	N
I. Release Detection Method Presence and Performance Requirements	1	Release detection method is present. [280.40(a)]		✓	
	2	Release detection system is operating properly (i.e., able to detect a release from any portion of the system that routinely contains product). [(280.40(a)(1))]		✓	
	3	Release detection system meets the performance standards at 280.43 or 280.44. [(280.40(a)(3))]		✓	
	4	Implementing agency has been notified of suspected release as required. [(280.40(b))] <input type="checkbox"/> Non-passing results reported and resolved in accordance with implementing agency's directions. [280.40(b)]	✓		
II. Release Detection Testing	5	Tanks and piping are monitored monthly for releases and records are available (must have records for the two most recent consecutive months and for 8 months of the last 12 months). [280.41(a), and 280.45(b)]			✓
III. Hazardous Substance UST Systems	6	Hazardous substance UST system leak detection meets the requirements (i.e., either secondarily contained or otherwise approved by the implementing agency). [280.42(b)]	✓		
IV. Temporary Closure	7	Release detection requirements are complied with (i.e., method present, operational, releases investigated and reported as required) for UST systems containing product. [280.70(a)]	✓		

#### Worksheet - Commonly Used Release Detection Methods

Tank <small>(Choose one)</small>	Pressurized Pipe <small>(Choose Two)</small>	Non-exempt Suction Pipe <small>(Choose one)</small>	Release Detection Method
<input type="checkbox"/>			A. Inventory Control with Tank Tightness Testing (T.T.T) <ul style="list-style-type: none"> <li><input type="checkbox"/> Inventory control is conducted properly.                             <ul style="list-style-type: none"> <li><input type="checkbox"/> T.T.T. performed as required (See "D" below).</li> <li><input type="checkbox"/> Inventory volume measurements for inputs, withdrawals, and remaining amounts are recorded each operating day and reconciled as required. [280.43(a)(1), 280.43(a)(3)]</li> <li><input type="checkbox"/> Equipment is capable of 1/8-inch measurement. [280.43(a)(2)]</li> <li><input type="checkbox"/> Product dispensing is metered and recorded within local standards for meter calibration to required accuracy. Hi Carl

We never operated this one. This was an Atlantic site that didn't transfer over to Sunoco. 809 Clinton across the street is ours.

Kinyorda

---

**From:** Carl Hettenbaugh <cahetten@gw.dec.state.ny.us>

**To:** SLIWIAK, KINYORDA D  
**Subject:** Former Atlantic Station, 799 North Clinton St, Rochester, Spill#0200094

Kinyorda: I'm not sure if I have ever asked you about the referenced site or not, but I was trying to close out some old spills that have had no action for many years and came across this one. In reviewing the notes, the former owner claims, Atlantic used to own the tanks and was responsible for the spill. Do you or Sunoco have any information on this site? Attached for your reference is our spill sheet. Thanks for any help you can provide. Carl

Re: Petroleum Bulk Storage (PBS) Program Site  
Inspection -6NYCRR Parts 612-614  
PBS# 8-600290, Inspection#  
FANDD OF ROCHESTER INC  
799 NORTH CLINTON AVENUE  
ROCHESTER, NY 14605

Dear : DAWIT HASEN

On Tuesday, July 15, 2014, Mitch Koski from CDM Smith inspected the FANDD OF ROCHESTER INC facility to determine compliance with New York State's PBS regulations. The following violations were identified during that inspection and need your immediate attention to bring your facility into compliance. Citations to the applicable regulations are noted in brackets and pertain to the tank(s) that is listed. A copy of the inspection checklist is enclosed for your reference. The PBS regulations (6 NYCRR Parts 612-614) can be accessed online at <http://www.dec.ny.gov/regs/2490.html>.

The law requires that you comply fully with the PBS regulations. You must correct all of the violations noted below within thirty (30) days and submit required documentation.

PBS Registration Certificate - Accuracy of information - [Section 612.2]. The registration information is not current and valid. It is your responsibility to inform the Department of the current status of your facility and/or the current status of any particular tank. You can obtain a registration application by contacting your Regional DEC office or by downloading a blank application from the DEC website at [http://www.dec.ny.gov/docs/remediation\\_hudson\\_pdf/pbsrenewal.pdf](http://www.dec.ny.gov/docs/remediation_hudson_pdf/pbsrenewal.pdf).

TANK # 001, TANK # UNREG1

New underground tanks - [Subdivision 614.2(a)]; [Paragraph 614.3(a)(1)]; [Subdivision 614.7(d)] and [Section 614.14]. All new underground petroleum storage facilities must meet the requirements listed in Subdivision 614.2(a). This tank(s) is deficient in the areas listed below.

TANK # 001, TANK # UNREG1

- This tank(s) does not have as-built plans. The owner must maintain an accurate drawing or as-built plans which show the size and location of any new underground tank and piping system. These plans must include a statement by the installer that the system has been installed in compliance with PBS regulations 6 NYCRR Part 614.

TANK # 001

The registration information for Piping Leak Detection 2 is not current and valid.

***Corrective Action and Penalties***

As a result of these violations, you are subject to penalties. Pursuant to Environmental Conservation Law Section 71 - 1929, you may be liable for a civil penalty of up to \$37,500 per day for each of the above violations. The violations identified in this require your immediate attention. Delays in correcting the violations noted above will affect the amount of penalties for which you will be liable. In addition, under Environmental Conservation Law Section 71-1933, a person may be held criminally liable if any of the foregoing violations was the result of intentional, knowing or criminally negligent conduct.

Note that the inspection may not have disclosed all violations that exist at your site. You are responsible for ensuring that the entire facility is in compliance with applicable requirements.

Additional enforcement action may be warranted by the preceding inspection findings. A follow-up settlement conference may be required. The Department will contact you to schedule an appointment, if necessary. You have thirty (30) days from the date of this letter to submit documentation to Mitch Koski at CDM Smith, 6800 Old Collamer Road, Suite 3, East Syracuse, NY 13057, that shows how the preceding violations have been cured. If work is contracted or completed before the date of your settlement conference, please bring that documentation with you to the settlement conference. Contact Mitch Koski at 3154343200 with any questions about this inspection or its results.

### ***Federal Violations***

No federal tank violations observed.

Sincerely,

MITCH KOSKI

15. Does the facility have adequate <b>inventory records</b> for metered tanks? Y / X (unmetered tank) If not, which items are deficient? 1 (no records) / 2 (no tank bottom water measurements) / 3 (equipment not capable of 1/8" measurement) / 4 (meter not callibrated) / 5 (no reconciliation of records) / 6 (improper reconciliation) / 7 (no investigation of discrepancy)	<input type="checkbox"/> 5	<input type="checkbox"/> 6	<input type="checkbox"/> 5	<input type="checkbox"/> 6	<input type="checkbox"/> 5	<input type="checkbox"/> 6	<input type="checkbox"/> 5	<input type="checkbox"/> 6	<input type="checkbox"/> 5	<input type="checkbox"/> 6
	<input type="checkbox"/> 7		<input type="checkbox"/> 7		<input type="checkbox"/> 7		<input type="checkbox"/> 7		<input type="checkbox"/> 7	
	X		X							
16. Do <b>unmetered tanks</b> have annual standpipe analysis or tank test, or other acceptable leak detection method? Y / N / X (metered tank)	X		X							
	X		X							
17. Has <b>tightness testing</b> been conducted on the tank and piping system within the last 5 years? Y / N (no test on either tank or line) / 1(no tank test)/ 2(no line test) / 3 (test report not submitted) / X (exempt from tightness testing)	X		X							
	X		X							

**Aboveground Storage Tanks**

18. For AST systems installed after Dec.27, 1986, does the <b>tank system meet standards</b> ? Y / X (tanksystem installed prior to Dec. 27, 1986) If not, which items are deficient? 1 (tank not welded steel) / 2 (no surface coating) / 3 (tank resting on soil; no cathodic protection) / 4 (tank on grade; no impermeable barrier) / 5 (no leak monitoring between tank and barrier)										
	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 1	<input type="checkbox"/> 2
	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 3	<input type="checkbox"/> 4
	<input type="checkbox"/> 5		<input type="checkbox"/> 5		<input type="checkbox"/> 5		<input type="checkbox"/> 5		<input type="checkbox"/> 5	

19. Does the facility conduct <b>monthly inspections</b> for all ASTs? Y / N / 1 (records not maintained)					
20. Does the facility conduct <b>ten-year inspections</b> for ASTs? Y / N / 1 (records not maintained) / X (not required per Part 613.6(b))					
21. For ASTs >= 10,000 gallons (or for ASTs < 10k gal. where 2andary containment is req'd), Is the <b>secondary containment</b> adequately designed and in good condition? Y / N / 1 (secondary containment not maintained) / 2 (poor design)					
For ASTs < 10,000 gallons if using <b>alternatives to secondary containment</b> , Y/N/1(secondary containment not maintained)/ 2(poor design) are SPOTS #17 issues addressed?Y/N/3 (equipment not maintained) / X (not req'd)					
22. Are dike drain valves locked in a closed position? Y / N (unlocked) / 1 (no valve on discharge pipe) / X (no dike)					
23. Does the AST have a <b>gauge, high level alarm or other equivalent device</b> ? Y / N / 1 (inoperative)					
24. Is the <b>design / working capacity</b> , and <b>ID number</b> marked on the tank and at the gauge? Y / N / 1(tank not labeled) / 2 (not marked at gauge)					
25. Is a <b>solenoid</b> or equivalent valve in place for gravity-fed motor fuel dispensers? Y / N / 1 (inoperative) / X (not motor fuel/gravity-fed)					
26. Is a <b>check valve</b> in place for pump-filled tanks with remote fills? Y / N / 1(inoperative) / X (not remote fill)					
27. Is an <b>operative valve</b> in place on every line with gravity head? Y / N / 1 (operative) / X (no gravity head on line)					

**Federal UST Questions - Release Prevention**

28. Is the spill prevention device (catch basin) present and functional? Y / N (not present) / 1 (not functional - holes or cracks present) / 2 (no access) / X (tank receives <25 gal. at one time)	Y	Y			
29. Is the overflow prevention device (i.e., automatic shut-off, high-level alarm, ball float valve) present? Y / N / X (tank receives <25 gal. at one time)	Y	Y			
30. Is the overflow prevention device operational? Y / X (tank receives <25 gal. at one time) If not operational: 1) Automatic shut-off is not operational (i.e., device tampered with or inoperable; gauging stick in drop tube). 2) High-level alarm is not operational. 3) Alarm is not audible or visible to the delivery driver. Ball float is not operational because: 4) Stage I vapor recovery is present. 5) Piping system is suction. 6) Drain valve on spill catch basin is broken or impaired by debris, causing drain valve to act as an emergency vent.	Y	Y			
	<input type="checkbox"/> 1 <input type="checkbox"/> 2	<input type="checkbox"/> 1 <input type="checkbox"/> 2	<input type="checkbox"/> 1 <input type="checkbox"/> 2	<input type="checkbox"/> 1 <input type="checkbox"/> 2	<input type="checkbox"/> 1 <input type="checkbox"/> 2
	<input type="checkbox"/> 3 <input type="checkbox"/> 4	<input type="checkbox"/> 3 <input type="checkbox"/> 4	<input type="checkbox"/> 3 <input type="checkbox"/> 4	<input type="checkbox"/> 3 <input type="checkbox"/> 4	<input type="checkbox"/> 3 <input type="checkbox"/> 4
	<input type="checkbox"/> 5 <input type="checkbox"/> 6	<input type="checkbox"/> 5 <input type="checkbox"/> 6	<input type="checkbox"/> 5 <input type="checkbox"/> 6	<input type="checkbox"/> 5 <input type="checkbox"/> 6	<input type="checkbox"/> 5 <input type="checkbox"/> 6
31. Were structurally repaired tanks and piping tightness tested within 30 days of repair completion (not required w/ internal inspections after repair or if release detection equipment is in use)? Y/N/X (no structural repair)	X	X			
32. If cathodically protected tank or piping was structurally repaired, were CP systems tested/inspected within 6 months of repair? Y / N / X (no CP system/structural repair)	X	X			
33. Is buried metal tank and piping (including fittings, connections, etc.) protected from corrosion? Y / X (no buried metal components) If not: 1) Buried metal piping components (such as swing joints, flex-connectors, etc.) are not isolated from the ground or cathodically protected. For new USTs (tanks and piping installed after 12/22/1988): 2) Tank or piping does not meet new tank/piping standards for corrosion. For existing USTs (tanks and piping installed on or before 12/22/1988): 3) Steel tank is not internally lined OR retrofitted with cathodic protection. 4) Metal piping is not retrofitted with cathodic protection.	Y	Y			
	<input type="checkbox"/> 1	<input type="checkbox"/> 1	<input type="checkbox"/> 1	<input type="checkbox"/> 1	<input type="checkbox"/> 1
	<input type="checkbox"/> 2	<input type="checkbox"/> 2	<input type="checkbox"/> 2	<input type="checkbox"/> 2	<input type="checkbox"/> 2
	<input type="checkbox"/> 3	<input type="checkbox"/> 3	<input type="checkbox"/> 3	<input type="checkbox"/> 3	<input type="checkbox"/> 3
	<input type="checkbox"/> 4	<input type="checkbox"/> 4	<input type="checkbox"/> 4	<input type="checkbox"/> 4	<input type="checkbox"/> 4
34. Was corrosion protection system tested within required time frame and does it provide continuous protection? Y / X (no CP system) If system does not provide continuous protection: 1) CP system was not tested 2) CP system is not performing adequately based on results of testing. 3) Operator is not conducting or has not completed appropriate repair in response to test results.	Y	Y			
	<input type="checkbox"/> 1	<input type="checkbox"/> 1	<input type="checkbox"/> 1	<input type="checkbox"/> 1	<input type="checkbox"/> 1
	<input type="checkbox"/> 2	<input type="checkbox"/> 2	<input type="checkbox"/> 2	<input type="checkbox"/> 2	<input type="checkbox"/> 2
	<input type="checkbox"/> 3	<input type="checkbox"/> 3	<input type="checkbox"/> 3	<input type="checkbox"/> 3	<input type="checkbox"/> 3
35. If an impressed current system is in use, has system been operated continuously? Y / X (no impressed current system) If system has not been operated continuously: 1) Rectifier is not operational. 2) Rectifier does not have electrical power 24/7. 3) Clock shows that power has been turned off.					
	<input type="checkbox"/> 1	<input type="checkbox"/> 1	<input type="checkbox"/> 1	<input type="checkbox"/> 1	<input type="checkbox"/> 1
	<input type="checkbox"/> 2	<input type="checkbox"/> 2	<input type="checkbox"/> 2	<input type="checkbox"/> 2	<input type="checkbox"/> 2
	<input type="checkbox"/> 3	<input type="checkbox"/> 3	<input type="checkbox"/> 3	<input type="checkbox"/> 3	<input type="checkbox"/> 3
36. Is impressed current system inspected every 60 days? (Operator is only required to keep 6 months of readings; at least 2 of last 3 readings are required if system is operational at time of inspection.) Y / N / X (no impressed current system)					
37. Do reports indicate that lined tanks are inspected periodically (within 10 years of installation and every 5 years thereafter) and that lining is in compliance? Y / N (no report) / 1 (lining was inspected and failed) / 2 (inspection procedure not acceptable) / X (tank not lined)					

**Federal UST Questions - Release Detection (only complete applicable sections)**

Specify method(s) of tank release detection used: (NOTE: Methods B&C and C&D can only be used for 10 years after a tank has been installed or upgraded) A. Automatic Tank Gauging (ATG) - answer questions 38-40, 56 B. Manual Tank Gauging (MTG) for tanks <=1000 gal. - answer questions 41-43, 56 E. Groundwater or Vapor Monitoring - answer questions 47-50, 56 F. Interstitial Monitoring - answer questions 51-52, 56 H. Statistical Inventory Reconciliation (SIR) - answer questions 55, 56	<input type="checkbox"/> A	<input type="checkbox"/> A	<input type="checkbox"/> A	<input type="checkbox"/> A	<input type="checkbox"/> A
	<input type="checkbox"/> B	<input type="checkbox"/> B	<input type="checkbox"/> B	<input type="checkbox"/> B	<input type="checkbox"/> B
	<input type="checkbox"/> E	<input type="checkbox"/> E	<input type="checkbox"/> E	<input type="checkbox"/> E	<input type="checkbox"/> E
	<input checked="" type="checkbox"/> F	<input checked="" type="checkbox"/> F	<input type="checkbox"/> F	<input type="checkbox"/> F	<input type="checkbox"/> F
	<input type="checkbox"/> H	<input type="checkbox"/> H	<input type="checkbox"/> H	<input type="checkbox"/> H	<input type="checkbox"/> H
Specify second method of pressurized piping release detection used: (NOTE: "G. Automatic Line Leak Detector [ALLD]" is always required for pressurized piping) - answer questions 53-54, 56 C. Tightness Testing - answer questions 44-46, 56 E. Groundwater or Vapor Monitoring - answer questions 47-50, 56 F. Interstitial Monitoring - answer questions 51-52, 56 H. 	<input type="checkbox"/> X	<input type="checkbox"/> X	<input type="checkbox"/> X	<input type="checkbox"/> X	<input type="checkbox"/> X

**A. Automatic Tank Gauging (ATG)**

38. Is ATG on National Work Group on Leak Detection Evaluations (NWGLDE) list? Y / N					
39. Is ATG set up properly? Y / N / X (unable to confirm)					
40. Did ATG conduct test while tank contained routinely highest level of product? Y / N					

**B. Manual Tank Gauging (MTG)**

41. Is tank size appropriate for using MTG? (<= 1000 gal. only) Y / N					
42. Do records indicate that MTG method is being conducted correctly? Y/N					
43. Is MTG equipment capable of 1/8" measurement? Y / N					

**C. Tightness Testing**

	T	P	T	P	T	P	T	P	T	P
44. Is tightness testing method on National Work Group on Leak Detection Evaluations (NWGLDE) list? Y / N		<input checked="" type="checkbox"/> Y <input type="checkbox"/> N		<input checked="" type="checkbox"/> Y <input type="checkbox"/> N		<input type="checkbox"/> Y <input type="checkbox"/> N		<input type="checkbox"/> Y <input type="checkbox"/> N		<input type="checkbox"/> Y <input type="checkbox"/> N
45. Is tightness testing conducted per manufacturer's instructions? (Compare test report with NWGLDE specifications for test method.) Y / N		<input checked="" type="checkbox"/> Y <input type="checkbox"/> N		<input checked="" type="checkbox"/> Y <input type="checkbox"/> N		<input type="checkbox"/> Y <input type="checkbox"/> N		<input type="checkbox"/> Y <input type="checkbox"/> N		<input type="checkbox"/> Y <input type="checkbox"/> N
46. Is tightness testing conducted within the specified time frames for the following equipment? Y / 1 (tanks - not tested every 5 years) / 2 (pressurized piping - not tested annually) / 3 (non-exempt suction piping - not tested every 3 years)		<input checked="" type="checkbox"/> Y <input type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3		<input checked="" type="checkbox"/> Y <input type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3		<input type="checkbox"/> Y <input type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3		<input type="checkbox"/> Y <input type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3		<input type="checkbox"/> Y <input type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3

**Federal UST Questions - Release Detection (continued)**

<b>D. Inventory Control - not valid as release detection for EPA as of 12/22/2008</b>											
<b>E. Groundwater or Vapor Monitoring</b>	T	P	T	P	T	P	T	P	T	P	
47. Does owner have the site assessment report indicating location and number of vapor or groundwater monitoring wells? Y / N (answer '1' for questions 48-50)	<input type="checkbox"/> Y <input type="checkbox"/> N	<input type="checkbox"/> Y <input type="checkbox"/> N	<input type="checkbox"/> Y <input type="checkbox"/> N	<input type="checkbox"/> Y <input type="checkbox"/> N	<input type="checkbox"/> Y <input type="checkbox"/> N	<input type="checkbox"/> Y <input type="checkbox"/> N	<input type="checkbox"/> Y <input type="checkbox"/> N	<input type="checkbox"/> Y <input type="checkbox"/> N	<input type="checkbox"/> Y <input type="checkbox"/> N	<input type="checkbox"/> Y <input type="checkbox"/> N	
48. According to site assessment report, is groundwater always detectable in the monitoring well (i.e., never more than 20 feet from the ground surface)? Y / N / 1 (no report) / X (no groundwater monitoring wells)	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	
49. Is vapor monitoring well not affected by high groundwater? Y / N / 1 (no report) / X (no vapor monitoring wells)	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1 <input type="checkbox"/> X	
50. Are wells properly designed and positioned? Y / N / 1 (no report)	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1	<input type="checkbox"/> Y <input type="checkbox"/> N <input type="checkbox"/> 1

As an authorized representative of the above named facility, I affirm under penalty of perjury that the information displayed on this form is correct to the best of my knowledge. Additionally, I recognize that I am responsible for ensuring that this facility is in compliance with all sections of 6 NYCRR Part 613, 614, 615 and 616, and applicable sections of 6 NYCRR Subpart 176.2 (and all amendments) set forth therein and hereby.

The facility must be re-inspected if there is a transfer of ownership, manufacturing, or permanently closing a customer tank.

The facility must be operated in accordance with the rules for storage procedures, 6NYCRR Part 613.

Any new facility or substantially modified facility must comply with 6NYCRR Part 614.

This certificate must be signed and posted on the premises at all times. Posting must be at the tank, at the entrance of the facility, or the main office where the storage tanks are located.

Any person with knowledge of a spill, leak or discharge must report the incident to DEC, either by calling 1-800-457-7663.

6/25/2011  
 Dawit Hasen, Operator

TOTALS		<u>4700</u>	<u>8255</u>				<u>34</u>

AT THE END OF THE 10 DAY PERIOD, DETERMINE WHICH OF THE TOTALS SHOWN ABOVE IS LARGEST. TOTAL GALLONS PUMPED; TOTAL GALLONS DELIVERED; OR TOTAL GALLONS TANK VOLUME. THEN COMPLETE THAT LEAK CHECK METHOD SHOWN BELOW.

**LEAK CHECK METHOD #1: BASED ON TOTAL GALLONS PUMPED**  
 LEAK CHECK: 8255 (TOTAL GALLONS PUMPED) X 0.75 = 619 ALLOWABLE VARIANCE  
 IS "TOTAL GALLONS OVER OR SHORT" LARGER THAN THE ALLOWABLE VARIANCE? YES  NO  (CIRCLE ONE)

**LEAK CHECK METHOD #2: BASED ON TOTAL GALLONS DELIVERED**  
 LEAK CHECK: 4700 (TOTAL GALLONS DELIVERED) X 0.75 = 352 ALLOWABLE VARIANCE  
 IS "TOTAL GALLONS OVER OR SHORT" LARGER THAN THE ALLOWABLE VARIANCE? YES  NO  (CIRCLE ONE)

**LEAK CHECK METHOD #3: BASED ON TOTAL GALLONS TANK VOLUME**  
 LEAK CHECK: 10000 (TOTAL TANK SYSTEM VOLUME) X 0.75 = 7500 ALLOWABLE VARIANCE  
 IS "TOTAL GALLONS OVER OR SHORT" LARGER THAN THE ALLOWABLE VARIANCE? YES  NO  (CIRCLE ONE)

\* IF THE "TOTAL GALLONS OVER OR SHORT" IS LARGER THAN THE ALLOWABLE VARIANCE, OR THERE WAS A RECEIVING ACCUMULATION OF WATER IN THE BOTTOM OF THE TANK, THE OPERATOR MUST INITIATE AN INVESTIGATION INTO POSSIBLE CAUSES. IF WITHIN 48 HOURS THE CAUSES CANNOT BE EXPLAINED BY INACCURATE RECORDKEEPING, TEMPERATURE VARIATIONS OR OTHER FACTORS NOT RELATED TO LEAKAGE, THE TANK IS TO BE TAKEN OFF-LINE FOR REPAIR.

RETURN RECEIPT REQUESTED**

Mr. Ronald Colon  
Colon's Auto Repair Shop  
799 North Clinton Avenue  
Rochester, New York 14605

**FILE COPY**

Dear Mr Colon:

**RE: Colon's Auto Repair Shop  
799 North Clinton Avenue  
Rochester (C), Monroe County**

Enclosed is a copy of the Petroleum Bulk Storage Regulations (6NYCRR, Part 612-614). These regulations are issued by the New York State Department of Environmental Conservation (DEC) under authority of Article 17, Titles 3 and 10 of the Environmental Conservation Law to reduce leaks and spills of petroleum products to the waters of New York State.

These regulations, which became legally effective December 27, 1985, generally require that owners:

- register storage facilities with the Department;
- comply with standards for handling and storing petroleum;  
and
- construct new tanks in accordance with Department requirements.

Please be advised it is the legal responsibility of the tank owner to ensure that all requirements of the NYS Petroleum Bulk Storage Regulations are complied with at this facility. I have enclosed a copy for your information.

It is my understanding that your company is the owner of the above-referenced property and the associated petroleum tank. It is your responsibility to complete the enclosed registration application form and submit it along with the required registration fee to my attention at this office.

I am requesting that the registration be sent to my attention at the above address no later than thirty days from receipt of this letter. Failure to comply with this request may result in the initiation of formal legal action against you in this matter.

Violators of any provision of the Petroleum Bulk Storage Law shall be liable for possible civil, administrative, and criminal penalties set forth in Article 71 of the Environmental Conservation Law.

If you have any questions about these regulations, please contact me at the above address or by telephone.

Sincerely,

Wendy Stevenson  
Environmental Program Specialist I  
Division of Spills Management

### **DEC REMARKS:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "CH"  
 05/20/02:LIMITED SUBSURFACE SOIL INVESTIGATION RECEIVED BY THE DEPT . ON 4/11/02. INVESTIGATION DONE AS PART OF PROPERTY TRANSACTION WHERE THE EXISTING OWNER WANTS TO SELL AND HAS A POTENTIAL BUYER. THE SITE HAD HISTORICALLY BEEN A DRY CLEANER AND PRINT SHOP FOR A SHORT PERIOD, BUT MAINLY HAS BEEN A GAS STATION . A TOTAL OF 16 BOREHOLES WERE INSTALLED TO A DEPTH OF 12 FEET OR REFUSAL. NO GROUNDWATER WAS ENCOUNTERED OR SAMPLED . BEDROCK WAS BELIEVED TO BE FROM 10.5-12 FT. THE HIGHEST PID READINGS WERE TYPICALLY FROM THE DEEPEST CORE SAMPLE . MINIMAL SOLVENT AND METAL CONTAMINATION WAS ENCOUNTERED . SEVERAL AREAS OF PETROLEUM CONTAMINATION WAS IDENTIFIED . BECAUSE ONLY AREAS OF CONCERN WERE INVESTIGATED THERE ARE BIG GAPS BETWEEN THE DATA POINTS THAT NEED TO BE INVESTIGATED TO ISOLATE THE CONTAMINATION . CH SENDS LETTER REQUESTING FURTHER INVESTIGATION AND INVESTIGATE GROUNDWATER .

5/17/02: CH MEETS WITH RON COLON TO DISCUSS THE SITE. MR COLON HAD LEASED THE PROPERTY FROM ATLANTIC RITCHFIELD FROM 1973 TO THE 1980'S. IN 1979 OR 80 MR. COLON HAD NOTICED AN ODOR OF GASOLINE AT THE SITE AND NOTIFIED ATLANTIC WHO CAME IN AND HAD TANKS TESTED . THE TANKS FAILED AND THE FIRE DEPT ODORED THE TANKS TO BE REMOVED . THERE WAS GASOLINE IN THE EXCAVATION WHEN

**DEC REGION:** 8 **SPILL NUMBER:** 0200094  
**SPILL NAME:** COLON AUTOMOTIVE **DEC LEAD:** MFZAMIAR

THE TANKS WERE PULLED. ATLANTIC DID NOT REPLACE THE TANKS AT THAT TIME . MR COLON HELD OUT WAITING FOR ATLANTIC TO REPLACE THE TANKS AND THEY DID NOT . ATLANTIC EVENTUALLY BROKE THE LEASE AND OWED MR COLON A LARGE SUM OF MONEY . INSTEAD OF BEING SUED BY COLON ATLANTIC GAVE HIM THE PROPERTY FOR A DISCOUNTED PRICE . ATLANTIC NEVER ADDRESSED THE CONTAMINATION ON SITE . MR COLON HAD NO TANKS OR GASOLINE ON SITE UNTIL 1995 OR 96 WHEN HE INSTALLED HIS OWN TANKS . MR COLON BELIEVES ALL THE CONTAMINATION ON THE SITE IS FROM WHEN ATLANTIC OWNED THE SITE AND HE FEELS THEY SHOULD BE RESPONSIBLE FOR CLEANUP AND INVESTIGATION . CH EXPLAINS THAT COLON MAY BE HELD PARTIALLY RESPONSIBLE SINCE HE WAS THE OPERATOR OF THE SITE . CH WILL CHECK WITH THE CITY FIRE MARSHALLS OFFICE TO SEE IF THEY HAVE ANY RECORDS OF THE TANK TEST FAILURE AND THE TANK REMOVAL.

08/13/02: SPILL 9501681 WAS REFERED TO THIS SPILL FOR FOLLOW -UP. LETTER OF RESPONSIBILITY SENT TO SHEILA D'CRUZ, ARCO, 301 LINDENWOOD DRIVE, SUITE 102, MALVERN, PA. 19353. ALSO LETTER OF RESPONSIBILITY SENT TO COLON.

09/30/02:LCS SUBMITS RAP FOR THE SITE. THEY PROPOSE SOURCE REMOVAL IN THE AREAS IDENTIFIED AS HAVING THE HIGHEST CONCENTRATIONS OF CONTAMINATION . CH GIVES VERBAL APPROVAL OF RAP AND DRAFTS APPROVAL LETTER . LCS DID NOT RECOMMEND SAMPLING FOR 8270 SVOC'S. CH QUESTIONS LCS ON THIS AND LCS STATES THAT IN THEIR INVESTIGATIONS THEY NEVER ENCOUNTERED ANY SVOC'S THAT WERE ABOVE TAGM VALUES . THE SIGNIFICANT CONTAMINATION SEEMS TO BE ATTRIBUTED TO GASOLINE . LCS WILL NOTIFY THE DEPT. WHEN WORK IS SCHEDULED.

07/02/03: CH REVIEWS A WORK PLAN FOR REMEDIATION SUBMITTED BY GEOQUEST ENV . THEY PROPOSE REMEDIATING THE SITE WITH VAPOR EXTRACTION . THEY ARE ASSUMING THAT THE RADIUS OF INFLUENCE OF A VAPOR EXTRACTION WELL WOULD BE 10 FT. THAT IS BASED ON PAST EXPERIENCE IN SIMILAR SOILS . CH APPROVES THE PLAN WITH THE CONDITION THAT THE RADIUS OF INFLUENCE BE TESTED EITHER BEFORE OR AFTER THE SYSTEM IS IN PLACE.

04/29/09: IN AN EFFORT TO CLOSE OUT SPILLS, CH INSPECTS THE SITE TO DETERMINE THE STATUS OF THE PROPERTY. THE PROPERTY IS NOW AN OPPERATIONAL GAS STATION . IT IS A VALERO . CH TO CHECK PBS RECORDS AND DETERMINE OWNER.

03/24/14: REVIEW OF THE FILE SHOWS THE PROPERTY HAS TRANSFERRED TO A NEW OWNER, PER THE PBS REGISTRATION, AND IS BEING OPERATED AS A GAS STATION . CH SENDS EMAIL TO KINYORDA FOGLEMAN OF SUNOCO TO SEE IF SHE HAS ANY RECORD THAT THIS WAS A SUNOCO HOLDING AS SUGGESTED BY THE PREVIOUS OWNER.

04/3/14: ON TODAY'S DATE THE DEPT RECEIVES THE FOLLOWING EMAIL RESPONSE FROM KINYORDA FOGLEMAN IN REGARDS TO SUNOCO OWNING THE PROPERTY OR TANKS: We never operated this one. This was an Atlantic site that didn't transfer over to Sunoco. 809 Clinton across the street is ours.

02/11/16: REVIEW FILE WITH PM. IT APPEARS REMEDIATION NEVER CONDUCTED AT SITE . LIKELY BEDROCK IMPACTED. LETTER SHOULD BE SENT TO NEW OWNER TO INVESTIGATE SUBSURFACE SOIL AND GROUNDWATER AND DEVELOP REMEDIAL ACTION SHOULD THE INVESTIGATION DETERMINE IMPACTS WARRANT IT. THE NEW OWNER IS DAWIT HASEN. SITE NAME IS F&D OF ROCHESTER, INC. SEE PBS# 8-600290 FOR INFO.

02/23/16: LETTER DRAFTED TO PROPERTY OWNER REQUESTING INVESTIGATION AND ACCEPTANCE OF RESPONSIBILITY. CONFIRMATION REQUESTED BY MARCH 18,2016.

05/16/16: THERE WAS NO RESPONSE TO FEBRUARY LTR . CH DRAFTS LETTER FOR PROPERTY OWNER TO ALLOW ACCESS TO DEC AND IT'S CONTRACTOR TO PERFORM NECESSARY WORK . DEADLINE FOR PROPERTY OWNER TO SIGN ACCESS AGREEMENT IS JUNE 15TH 2016

06/14/16: CH TELECON WITH PAUL FROM NYTECH . THEY HAVE BEEN HIRED BY THE PROPERTY OWNER TO ADDRESS THE CONTAMINATION IDENTIFIED AT THE SITE . NYTECH IS RECOMMENDING EITHER SOURCE

REMOVAL OR VAPOR EXTRACTION. THEY ARE GOING TO RECOMMEND THE SOURCE REMOVAL AS THE BEST OPTION OF THE TWO.

7/5/16: DEC LEAD TRANSFERRED FROM CARL HETTENBAUGH (RETIRED) TO MIKE ZAMIARSKI.

7/7/16 MZ SENT EMAIL TO PAUL BUIRCH (NYETECH) TO INFORM HIM THAT ALL CORRESPONDENCE SHOULD BE SENT TO MZ GOING FORWARD.

**ENVIRONMENTAL SITE ASSESSMENT  
PROPERTY OWNER QUESTIONNAIRE**

LiRo Engineers, Inc. (LiRo) is preparing a Phase I Environmental Site Assessment of the following property:

Property Location: La MacKeta [6 Hoeltzer St., 7-11 Sullivan St., 814, 822, 830, 840, 844 North Clinton Av.]

Block/Lot No.: Multiple, Refer to tax maps provided by City DEQ

Name of Person Completing Questionnaire: Joseph Biondolillo

As part of the Environmental Site Assessment, it is necessary to obtain, to the extent possible, detailed information regarding the environmental condition of the referenced site. Please take a few moments to answer the following questions as completely as possible.

1. Do you believe that any asbestos containing building materials are present on-site?  
None above ground.
2. Do you believe that lead based paint was ever used on the property?  
No Knowledge.
3. Have any other type of environmental assessments/investigations ever been performed on the property?  
Yes, previous Phase I ESA and Phase II ESA on portion of site.
4. Do any of the on-site buildings have fluorescent light fixtures?  
Not Applicable, No buildings on-site
5. Has the property ever been used as any of the following? **No**
  - Industrial/Manufacturing Operation
  - Gasoline Station
  - Automotive Repair Facility
  - Commercial Printing Facility
  - Junk Yard/Scrap Yard
  - Landfill
  - Waste Treatment Storage/Treatment Facility
  - Disposal Processing/Recycling Facility
  - Photo Developing Facility
6. Are there currently, or have there been any individual containers of chemicals and/or paints?  
No Knowledge
7. Has fill material ever been brought onto the property?  
No Knowledge

8. Are there currently, or have there ever been underground storage tanks (USTs) located on the property?  
None best of Knowledge
9. Have there ever been any spills (> 5 gallons) of oil or chemicals that have occurred on-site?  
None, best of Knowledge
10. Are there currently any above ground storage tanks (ASTs) located on the property?  
None
11. If there are ASTs present on-site, have there ever been any spills/discharges associated with the ASTs?  
Not Applicable
12. Are there any wells located on-site?  
None, best of Knowledge
13. Are there any recharge basins, retention basins, or holding basins located on the property?  
None best of Knowledge
14. Are there any septic/cesspool systems located on the property?  
None best of Knowledge
15. Are the on-site buildings served by local water, sanitary, and storm water utilities?  
Not Applicable
16. Are there currently, or have there previously been any electrical transformers (PCB-Containing) located on the property?  
No, best of Knowledge
18. Has the property ever been tested for the presence of Radon?  
No, best of Knowledge
19. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?  
No
20. Are you aware of any AUL's such as engineering controls land use restrictions or institutional controls that are in place at the site and /or have been filed or recorded in a registry under federal tribal state or local law?  
No
21. Based on your knowledge and experience related to the property are there any obvious indications that point to the presence or likely presence of contamination at the property?  
None on-site. Gasoline service station across street with active NY SDEC petroleum spill file, and former dry cleaner across street based on historic Samborn Fire Insurance Map [Circa 1960s].

## EXECUTIVE SUMMARY

This Report presents the results of a Phase II Environmental Site Assessment (Phase II ESA) performed by Larsen Engineers, with New York Environmental Technologies, Inc., on selected City-Owned Properties in the North Clinton Avenue Urban Renewal District (District). These properties are located within the area of 804 to 844 North Clinton Avenue, 6 to 12 Hoeltzer Street and 7 to 13 Sullivan Street, Rochester, New York (see Appendix A).

The District is primarily a retail corridor, closely connected to the downtown area of the City of Rochester. While many of the buildings within this Renewal District are presently vacated or have been demolished, the area mirrors the heritage of a traditional neighborhood center within the City of Rochester. The District with a combined lot size of approximately 3.1 acres is identified, according to a Conditions Analysis Report prepared for the City of Rochester Economic Development Department, as a “blighted” area under Article 15 of the New York State General Municipal Law.

In September 2002, Larsen Engineers performed a Phase I Environmental Site Assessment (Phase I ESA) of properties (within the District). Since, the study could not represent that these properties did not contain hazardous substances, petroleum products (including buried fuel oil tanks), other latent conditions (including former building foundations or other building debris) beyond that observed during site visits; Larsen recommended to conduct a subsurface investigation.

At the request of Mr. Philip J. Banks, Assistant Commissioner of the City of Rochester Economic Development Department and in accordance with Larsen’s proposal dated March 20, 2003 (see Appendix B) a Phase II ESA was conducted at eight (8) City-Owned Properties that are listed in Section 1.

On April 8, 2003 and April 11, 2003 Larsen Engineers, with New York Environmental Technologies, Inc., performed an intrusive investigation of areas in the selected City-Owned Properties that included a sub-surface geo-probe survey, soil characterization, headspace analysis and soil sampling. Based on a headspace analyses, detection of 56.4 on the HNu meter, one (1) soil sample (GP-16) was submitted to Paradigm Environmental Services, Inc. for laboratory analysis. The analytical test data for STARS (Spill Technology and Remediation Series), Petroleum – contaminated soil using EPA Methods 8021, 8270 found that the soil sample from boring location GP-16 is non-detect for contaminants. These methods are used to differentiate between fuel oil and gasoline.

The HNu detection of soil at twelve feet below ground, with laboratory testing negative, implies that it may be an analyte, that is not included in the EPA Method 8021 or 8270 from the gas station on 799 North Clinton. As the GP-16 area, when developed, will have a parking lot on it, there is little likelihood of further impact.

## 1.0 INTRODUCTION

This Report presents the results of a Phase II Environmental Site Assessment (Phase II ESA) performed by Larsen Engineers, in-cooperation with New York Environmental Technologies, Inc., on selected City-Owned Properties in the North Clinton Avenue Urban Renewal District (District). These properties are located within the area of 804 to 844 North Clinton Avenue, 6 to 12 Hoeltzer Street and 7 to 13 Sullivan Street, Rochester, New York.

At the request of Mr. Philip J. Banks, Assistant Commissioner of the City of Rochester Economic Development Department and in accordance with Larsen's proposal dated March 20, 2003; a Phase II ESA was conducted at eight (8) City-Owned Properties that are listed below:

Property Address	Tax ID #	Land Use Type
840 N. Clinton Avenue	106 390 0001 084 001	Commercial Mixed-Use ROW
826 N. Clinton Avenue	106 390 0001 081 000	Vacant land
814 N. Clinton Avenue	106 390 0001 078 000	Vacant Land
810 N. Clinton Avenue	106 390 0001 077 000	Vacant Land
13 Sullivan Street	106 390 0001 005 000	Vacant Residential
6 Hoeltzer Street	106 390 0001 075 001	Vacant Residential
8 Hoeltzer Street	106 390 0001 074 001	Vacant Residential
12 Hoeltzer Street	106 390 0001 072 000	Educational Facility

The purpose of the Phase II ESA was to evaluate potential impacts to the soil and / or groundwater from suspected underground fuel storage tanks (USTs) identified in a Phase I ESA conducted for the subject *Property* as well as the potential for migrating petroleum and / or other hazardous material contamination from off-site sources.

## 2.0 SUMMARY OF PREVIOUS ENVIRONMENTAL SITE ASSESSMENTS

In September 2002, Larsen Engineers performed a Phase I Environmental Site Assessment (Phase I ESA) of properties (within the North Clinton Avenue Urban Renewal District) which are listed below:

Property Address	Owner	Tax ID #	Land Use Type
844 N. Clinton Avenue	Salah Ahmed	106 390 0001 001 000	Commercial Mixed-Use ROW
840 N. Clinton Avenue	City of Rochester	106 390 0001 084 001	Commercial Mixed-Use ROW
830 N. Clinton Avenue	Rafael & Marisol Sotelo	106 390 0001 082 000	Converted Residence
826 N. Clinton Avenue	City of Rochester	106 390 0001 081 000	Vacant land
822 N. Clinton Avenue	Armando Espinosa	106 390 0001 080 000	Commercial Mixed-Use ROW
818 N. Clinton Avenue	Ronald Schollnick	106 390 0001 079 000	Two Family Residence
814 N. Clinton Avenue	City of Rochester	106 390 0001 078 000	Vacant Land
810 N. Clinton Avenue	City of Rochester	106 390 0001 077 000	Vacant Land
804 N. Clinton Avenue	Alan & Tommy Lin	106 390 0001 076 000	Commercial Mixed-Use ROW
7 Sullivan Street	Clifford Walker	106 390 0001 002 000	Single Family Residence
9 Sullivan Street	George Eckerdt	106 390 0001 003 000	Three Family Residence
11 Sullivan Street	Carl Cote	106 390 0001 004 000	Two Family Residence
13 Sullivan Street	City of Rochester	106 390 0001 005 000	Vacant Residential
15 Sullivan Street	Elizabeth Santiago	106 390 0001 006 000	Two Family Residence
6 Hoeltzer Street	City of Rochester	106 390 0001 075 001	Vacant Residential
8 Hoeltzer Street	City of Rochester	106 390 0001 074 001	Vacant Residential
10 Hoeltzer Street	City of Rochester	106 390 0001 073 000	Single Family Residence
12 Hoeltzer Street	-----	106 390 0001 072 000	Educational Facility

This Phase I ESA consisted of the following tasks:

- Site Reconnaissance, Interviews with individuals' knowledgeable with the subject Property, Historic Records Review and an Environmental Database Review.

The primary goal of the Phase I ESA was to formally identify recognized environmental conditions associated or in connection with the North Clinton Urban Renewal District. This means the presence or likely presence of any hazardous substances or petroleum products on, within, or near the North Clinton Urban Renewal District.

The Phase I ESA Report concluded that there are properties both within and near the North Clinton Urban Renewal District, which present minor recognized environmental conditions. These environmental issues ranged from the potential for buried building debris (including foundations) and fuel oil tanks, to former underground fuel storage tanks (which since have been removed) and numerous NYSDEC Spill incident sites, which surround the North Clinton Urban Renewal District. Information regarding these properties that may present minor recognized environmental conditions is noted below:

Based upon the information gathered as part of the Phase I ESA, the following was a summary of those properties within the District, which could represent a potential recognized environmental condition:

- 810 North Clinton Avenue      The City of Rochester issued a permit in April of 2000 to demolish a 1-family frame dwelling. It is possible that the former building foundation(s) and / or fills (i.e.: building debris, backfill material, buried fuel tanks) are present beneath the ground surface on this property. This property is owned by the City of Rochester.
  
- 814 North Clinton Avenue      The City of Rochester issued a permit in January of 1981 to demolish the existing 2 ½ story, 2-family dwelling. It is possible that the former building foundation(s) and / or fills (i.e.: building debris, backfill material, buried fuel tanks) are present beneath the ground surface on this property. This property is owned by the City of Rochester.
  
- 13 Sullivan Street              According to historical information, a 2 story 1-family dwelling and a 1-car garage were previously present on the parcel. A permit to demolish a fire damaged 2 story 1-family dwelling and a 1-car garage was issued by the City of Rochester for this address on January 1, 1980. There is a potential that the former building foundation and / or other debris (i.e.: building debris, backfill material, buried fuel tanks) are present beneath the ground surface on this property. This property is owned by the City of Rochester.
  
- 12 Hoeltzer Street              According to historical information, there was a permit issued by the City of Rochester in July of 1989 to remove a 1,000-gallon tank from this property. Also, an older looking pole mounted electric transformer was observed along the northern property boundary of this site. An unusual accumulation of trash / litter and debris was observed throughout this property. There was a mounded area in the southeastern corner of this property that consisted of asphalt paving material. This property is owned by the City of Rochester.

- 8 Hoeltzer Street                      A permit to demolish a fire damaged 2-½ story 2-family dwelling and a 1-car garage was issued by the City of Rochester for this address on February 20, 1980. There is a potential that the former building foundation and / or other debris (i.e.: building debris, backfill material, buried oil tanks) are present beneath the ground surface on this property. This property is owned by the City of Rochester.

Furthermore, based upon the information gathered as part of the Phase I ESA, the following off-site properties, or those not included in the District but close enough to the project area that a potential environmental incident could be of concern:

- 799 North Clinton Avenue              This property is located 200 feet southwest of the corner of North Clinton Avenue and Hoeltzer Street. While digging footers for a new canopy, contaminated soil was encountered. A limited subsurface soil investigation was performed on April of 2002 and included 16 boreholes to a depth of 12 feet below ground surface (bgs). No groundwater was encountered or sampled, and bedrock was believed to be located 10.5 – 12 feet bgs. The highest contaminate readings were encountered at the deepest cores. Several areas of petroleum contamination were identified. The NYSDEC requested further subsurface soil and groundwater investigations in May of 2002. A letter of responsibility was sent to Mr. Colon as well as Sheila D’Cruz (Arco) of Malvern, PA. Presently, this spill incident is unresolved, with little analytical data to identify the extent (including quantity) of subsurface contamination.

### 3.0 SUBSURFACE INVESTIGATION

#### 3.1 Scope of Work

Larsen conducted a subsurface investigation, which advanced twenty-one (21) soil borings by utilizing a 2-inch direct push drill Geoprobe® 5400 rig. This was performed by New York Environmental Technologies, Inc.

In accordance with the existing Professional Services Agreement (024904) between Larsen Engineers (Larsen) and the City of Rochester: Department of Environmental Services, Larsen performed this investigation per the following approved scope of work:

- Provided a truck-mounted Geoprobe with a qualified operator to perform a Geoprobe, Subsurface Investigation of the North Clinton Urban Renewal District.
- Included 21 continuously sampled borings advanced approximately 12 to 16 feet below the existing ground surface (bgs) or to a point of auger refusal or to the presence of groundwater.
- Provided a qualified Field Technician to characterize soil samples, perform headspace analysis (PID or HNu meter), and collect any soil and / or water samples for analysis.
- A lab approved to perform work for the City of Rochester provided laboratory analysis.
- Provided a qualified Field Technician to perform a site assessment to locate of any buried steel tanks or lines. This assessment used a metro 810 Tracer and / or a Magnatrac 102 or approved equal equipment.
- Compiled field and laboratory data to generate a Phase II Subsurface Investigation Report that will summarize the analysis results, provide conclusions on subsurface characteristics, and recommend the potential need for further corrective site remediation, if applicable.
- Provided a cost estimate and schedule for the implementation of additional remedial measures as described in the Phase II Subsurface Investigation Report, if applicable.

This Scope of Work was prepared assuming the following information:

- Larsen Engineers would be responsible for the collection, transport and submission of all soil samples collected to an appropriate laboratory.
- Electric service and water would not be available at the site.
- Larsen or its agent would be responsible for calling in a U.F.P.O. stakeout prior to the commencement of Geoprobe activities.
- Larsen or its agent would be responsible for any repairs to damaged pavement as a result of the Geoprobe investigation.

### 3.2 Soil Boring and Locations

On April 8, 2003 April 11, 2003 Larsen Engineers, with New York Environmental Technologies, Inc., performed an intrusive investigation that included a sub-surface geo-probe survey, soil characterization, as well as headspace analysis and soil sampling. Larsen advanced twenty-one (21) soil borings to approximately 10 to 12 feet below the existing ground surface (bgs) or to a point of auger refusal, as well as characterized and collected soil samples for additional laboratory analysis.

The Scope of Work was to advance twenty-four (24) geo-probe borings, GP-1 to GP-24 (see Appendix E), to a depth of approximately 10 to 12 feet below the existing ground surface (bgs) or to a point of auger refusal. This was revised to twenty-one (21) geo-probe borings when GP-2, GP-3 and GP-4 could not be advanced since it was discovered shortly after boring GP-1 that the property where GP-1 to GP-4 were to be bored was not City-owned property.

The soil borings that were advanced in the City-owned properties in the District are located on a map (see Appendix G).

### 3.3 Sampling Method

The soil borings were advanced using a hydraulically driven probe rod and recovered soil samples were collected using cylinder shaped acetate liners.

Each boring was driven to a depth of approximately 5 to 12 feet below the existing ground surface (bgs) or to a point of auger refusal twenty (20) borings point of auger refusal ranged from 5 to 11.5 feet. Only one (1) boring advanced to 12 feet (Three [3] borings were not advanced). There were no soil borings advanced beyond 12.0 feet.

Soil samples from each boring were continuously collected at 2.0-foot intervals; characterized and placed in sealed containers. Furthermore, each soil sample was screened for the presence of volatile organic compounds (VOCs) by using a photoionization detector (PID) and standard headspace screening methods. The PID meter has a VOC detection range of 1.0 parts per million (ppm) to 2,500 ppm. The purpose for conducting a headspace analysis is to identify the relative level of VOCs present within the headspace vapor. Unfortunately, this analysis does not represent an accurate display of VOC concentrations that may exist within the soil profile. Therefore, soil samples that were identified as having elevated PID readings were submitted to Paradigm Environmental Services, a State certified laboratory, for additional analysis.

Based on the headspace analyses, one (1) soil sample with a PID reading of 56.4 was submitted to Paradigm Environmental Services, Inc. for additional laboratory analysis. This sample was 10-12 foot soil interval at boring location GP-16. This sample was hand delivered, under chain-of-custody to Paradigm Environmental Services, Inc. of Rochester, NY. The PID analysis results are shown in the boring log reports.

### **3.4 Soil Conditions**

Fill material consisting of various amounts of top soil ranging in depths from 1 to 2 feet; moist and dry sand ranging in depths from 1 to 10.5 feet; gravel from 0 to 8 feet; stone, concrete and other fill material ranged from 1 to 10 feet; and shale from 7 to 11.5 feet. Soil characteristics can be reviewed in the boring log reports included.

### **3.5 Soil Analytical Results**

The soil sample was analyzed for volatile organic compounds using the Semi-Volatile and Volatile Stars Method.

As indicated in the boring log reports, the soil / groundwater interface was not encountered and therefore, groundwater samples were not collected as part of this site investigation.

The analytical test data for STARS, Petroleum – contaminated soil using EPA Methods 8021 and 8270 compounds indicated that the soil sample from boring locations GP-16 is non-detect for contaminants.

From the analytical data, the results do not identify or suggest the presence or residual presence of petroleum or other hazardous based materials within the subject *Property*. Furthermore, the analytical test data does not support the likelihood of any off-site migration of petroleum or hazardous based materials onto the selected City-Owned Properties (see Appendix H).

## 4.0 CONCLUSIONS and RECOMMENDATIONS

The following conclusions are based on the results of this Phase II ESA, which was performed at the request of Mr. Philip J. Banks, Assistant Commissioner of the City of Rochester Economic Development Department and in accordance with Larsen's proposal dated March 20, 2003. Based on the results of this Phase II ESA presented herein, Larsen makes the following conclusions:

### 4.1 Conclusions

Based on the headspace analyses, one (1) soil sample with a P.I.D. reading of 56.4 was submitted to Paradigm Environmental Services, Inc. for additional laboratory analysis. This sample was 10-12 foot soil interval at boring location GP-16. This sample was hand delivered, under chain-of-custody to Paradigm Environmental Services, Inc. of Rochester, NY. The PID analysis results are shown in the boring log reports.

The analytical test data for the soil sample resulted in non-detect readings for compounds.

In addition to the geo-probe subsurface investigation, a limited magnameter survey was conducted before advancing any borings. Although there was indication of buried metal, there was no indication suspected USTs. Therefore, it can be concluded that any USTs have either been removed as the part of a past site redevelopment project, or are presently buried below the existing grade selected City-Owned Property in the District. In either case, the evidence collected as the result of this investigation does not identify the likelihood of leakage or spillage associated with the suspected USTs and does not support evidence off-site migration of petroleum or other hazardous based materials onto the selected City-Owned Property in the District. Thus, the site does not appear to contain petroleum or other hazardous materials that may cause risk to public health or the surrounding environment.

The HNu detection of soil at twelve feet below ground, with laboratory testing negative, implies that it may be an analyte from the gas station at 799 North Clinton, that is not included in the EPA Method 8021 or 8270. As the GP-16 area, when developed, will have a parking lot on it, there is little likelihood of further impact.

### 4.2 Recommendations

Based on the evidence collected as part of this investigation, the Properties in the District do not contain recognized environmental conditions that would cause significant risk to public health and / or the surrounding environment.

**Re: North Clinton Avenue Urban Renewal District  
Phase II Site Investigation, Rochester, New York**

Dear Mr. Banks & Ms. Adonis:

We are pleased to submit a proposal for a Phase II Site Investigation at the above referenced location. This proposal is in accordance with our Professional Services Agreement (024904) with the City of Rochester and includes a project understanding, background objectives, as well as, the scope of work and all associated engineering fees.

*Project Understanding*

The purpose of this proposal is to provide the City of Rochester with a Phase II Site Investigation and Summary Report, which will include remedial alternatives and costs (if necessary) for properties within the North Clinton Avenue Urban Renewal District. Our understanding of this project is derived from our meeting on March 18, 2003.

*Background Objectives*

Larsen Engineers will provide a Phase II Site Investigation to determine the potential of contaminated soil or groundwater within the Renewal District. This site investigation will also determine, to the extent practicable, whether buried fuel tanks/lines are present within the boundaries of the Urban Renewal District. Larsen will also provide a Summary Report that will compile all field and laboratory data, summarize analysis results, present conclusions, and offer recommendations for further corrective remediation, if applicable.

*Project Scope*

Please refer to the enclosed Expanded Scope of Work for details of work proposed at the above referenced site.

Economic Development Department  
North Clinton Avenue Urban Renewal District  
March 20, 2003

Fee

The total fee for this project, as outlined in the Fee Proposal and Invoice Form, will not exceed \$12,100.00 and includes all direct reimbursable expenses anticipated for the project.

Should you have any questions regarding our proposal, please do not hesitate to call me. We look forward to working with you on this project.

Very truly yours,

S. Ram Shrivastava, P.E.  
President and CEO

## Expanded Scope of Work

### Phase II Site Investigation Proposal North Clinton Avenue Urban Renewal District Rochester, New York

In accordance with the existing Professional Services Agreement (024904) between Larsen Engineers (Larsen) and the City of Rochester (COR), Larsen is pleased to submit a cost estimate and schedule to perform the following services at the referenced site:

#### Scope of Work:

- Provide a truck-mounted Geoprobe with a qualified operator to perform a Geoprobe, Subsurface Investigation of the North Clinton Urban Renewal District. This investigation will include 22 continuously sampled borings advanced approximately 12 to 16 feet below the existing ground surface or to a point of auger refusal or to the presence of groundwater. The location or placement of each boring will be determined in the field by City of Rochester and Larsen personnel (see attached Preliminary Work Plan).
- Provide a qualified Field Technician to characterize soil samples, perform headspace analysis (PID or HNu meter), and collect any soil and/or water samples for analysis. Note: assume that 20 groundwater samples and 20 soil samples will be analyzed for total petroleum hydrocarbons. A lab approved to perform work for the City of Rochester will provide laboratory analysis. The number and cost of samples proposed reflect the "worst case scenario" of the project area.
- Provide a qualified Field Technician to perform a site assessment to locate of any buried steel tanks or lines. This assessment will use a metro 810 Tracer and/or a Magnatrac 102 or approved equal equipment. See attached Preliminary Work Plan for properties in question.
- Compile field and laboratory data to generate a Phase II Subsurface Investigation Report that will summarize the analysis results, provide conclusions on subsurface characteristics, and recommend the potential need for further corrective site remediation, if applicable.
- Provide a cost estimate and schedule for the implementation of additional remedial measures as described in the Phase II Subsurface Investigation Report, if applicable.

This Scope of Work has been prepared assuming the following information:

- Larsen Engineers will be responsible for the collection, transport and submission of all soil samples collected to an appropriate laboratory.
- Electric service and water will not be available at the site.
- Larsen or its agent will be responsible for calling in a U.F.P.O. stakeout prior to the commencement of Geoprobe activities.
- Larsen or its agent will be responsible for any repairs to damaged pavement as a result of the Geoprobe investigation.
- The costs associated with any soil or groundwater laboratory analysis shall be billed and paid for directly by the City of Rochester.

RECEIVED  
MAR 24 2003

March 20, 2003

Mr. Eric Williams  
Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

RE: O'BRIEN STREET PROJECT, ROCHESTER, NY

Dear Eric,

New York Environmental Technologies, Inc. (NYETECH) is pleased to present for your review and approval the following estimate to perform a tank location investigation, install 22 Geoprobe points to a depth of 16-20 feet below ground surface, and to perform soil characterization and headspace analysis at the site referenced above. Please refer to the following:

**Associated Charges:**

	Site Mobilization: . . . . .	\$800.00
	Field Vehicle (per day): . . . . .	\$96.00
Field Technician to Perform Soil Characterization (per hour): . . . . .		\$55.00
	Geoprobe Rig (per day): . . . . .	\$1,200.00
	Photoionization Detector (per day): . . . . .	\$85.00
	Metro-Line Tracer (per day): . . . . .	\$95.00
	Mag Track Metal Detector (per day): . . . . .	\$85.00
	Geoprobe Pipe Sleeves (per 4' length): . . . . .	\$4.50
	Miscellaneous materials to be billed at cost plus 15%	

This estimate is based upon a two-day project with Geoprobe, operator, and two field technicians: . . . . . **\$5,900.00 + sales tax**

**Scope of Work Notes:**

- This proposal is an estimate only. Client will be billed for actual time spent and equipment used.

Work will conform to local, state and federal regulations. Other work beyond the scope of work described above, unless agreed to in writing, will be billed at the current Time and Material rates.

This estimate is valid for 30 days from the above date and subject to verification thereafter. **Applicable taxes are separate items.** Standard payment terms are cash in advance, Visa/MasterCard, or phased billing with credit approval on net 10 days. Service charges may be imposed at 1.5 percent per month on all past due balances. The customer will be responsible for all costs of collection, including, but not limited to, reasonable attorney's fees, court costs, and collection service fees.

The customer agrees to indemnify, exonerate, and hold New York Environmental Technologies, Inc. harmless against loss, damage, or expense, by reasons of suits, claims, demands, judgements, and causes of action for personal injury, death, or property damage rising out of or in any way in consequence of the performance of all work undertaken by New York Environmental Technologies, Inc. except that in no instance shall the customer be held responsible for any liability claim demand or cause of action attributable solely to the negligence of New York Environmental Technologies.

Thank you for the opportunity to provide you with this quotation for your review. If you have any questions, please do not hesitate to contact me at 585.436.5660.

Very truly yours,

**NEW YORK ENVIRONMENTAL TECHNOLOGIES, INC.**

## **APPENDIX C**

## SERVICE CONSTRAINTS

### 1. Preliminary Findings

The following limitation is applicable if the report is stamped “**DRAFT**” or otherwise identified as preliminary: Larsen has prepared this Preliminary Report at the specific request of the client. Accordingly, the studies, data, information, and findings contained in this Preliminary Report are not the final conclusions of Larsen, but merely basic information requested by the client upon which the Client may draw its own conclusions. Client agrees that Larsen shall not be liable for any claims, loss, damage, or expenses incurred by the Client or others arising out of the use of, or reliance on, any information contained in this Preliminary Report.

### 2. General

- A. This Report was prepared for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained therein without the express written consent of Larsen.
- B. This Report was prepared pursuant to an Agreement between the Client and Larsen. All uses of and reliance upon this Report are subject to, and deemed acceptance of, the conditions and restrictions contained therein.

### 3. Scope of Services

The observations and conclusions described in this Report are based solely on the Scope of Services provided pursuant to the Agreement between Client and Larsen. Larsen has not performed any additional observations, investigations, studies, or testing not specifically stated therein. Larsen shall not be liable for the existence of any condition, the discovery of which required the performance of services not authorized under the Agreement. Unless otherwise specified in the introduction of this Report, Larsen did not evaluate the presence of contaminated water.

### 4. Conclusions

The conclusions stated in this Report are based upon: observations of existing physical conditions; our interpretation of site history and site usage information; information provided by the Client; and information and/or analyses provided by independent testing and information services or laboratories upon which Larsen is entitled to reasonably rely. Larsen was not authorized and did not attempt to independently verify the accuracy or completeness of information or materials received from third parties during the performance of its services. Larsen shall not be liable for any conditions, information, or conclusion, the discovery of which required information not available or independent investigation of information provided to Larsen unless otherwise indicated. Any site drawing(s) provided within this Report is not meant to be an accurate base plan, but is used to present the general, relative locations of features on, and surrounding, the site.

## APPENDIX D

City of Rochester  
North Clinton Avenue Urban Renewal Project

# **SECTION I**

## **EXECUTIVE SUMMARY**

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

### EXECUTIVE SUMMARY

This report presents the results of a Phase I Environmental Site Assessment (Assessment) conducted by Larsen Engineers (Larsen) of 18 properties located in the west central portion of the City of Rochester (Appendix A – Location Map). These properties constitute the North Clinton Avenue Urban Renewal District and are specifically located directly west of North Clinton Avenue, north of Hoeltzer Street, and south of Sullivan Street.

The North Clinton Avenue area is primarily a retail corridor, closely connected to the downtown area of the City of Rochester (Appendix B – Aerial Photography). The properties, which are listed below, consist mainly of two & three family residences as well as mixed commercial/residential businesses.

Property Address	Owner	Tax ID #	Land Use Type
1. 844 N. Clinton Avenue	Salah Ahmed	106 390 0001 001 000	Commercial Mixed-Use ROW
2. 840 N. Clinton Avenue	City of Rochester	106 390 0001 084 001	Commercial Mixed-Use ROW
3. 830 N. Clinton Avenue	Rafael & Marisol Sotelo	106 390 0001 082 000	Converted Residence
4. 826 N. Clinton Avenue	City of Rochester	106 390 0001 081 000	Vacant land
5. 822 N. Clinton Avenue	Armando Espinosa	106 390 0001 080 000	Commercial Mixed-Use ROW
6. 818 N. Clinton Avenue	Ronald Schollnick	106 390 0001 079 000	Two Family Residence
7. 814 N. Clinton Avenue	City of Rochester	106 390 0001 078 000	Vacant Land
8. 810 N. Clinton Avenue	City of Rochester	106 390 0001 077 000	Vacant Land
9. 804 N. Clinton Avenue	Alan & Tommy Lin	106 390 0001 076 000	Commercial Mixed-Use ROW
10. 7 Sullivan Street	Clifford Walker	106 390 0001 002 000	Single Family Residence
11. 9 Sullivan Street	George Eckerdt	106 390 0001 003 000	Three Family Residence
12. 11 Sullivan Street	Carl Cote	106 390 0001 004 000	Two Family Residence
13. 13 Sullivan Street	City of Rochester	106 390 0001 005 000	Vacant Residential
14. 15 Sullivan Street	Elizabeth Santiago	106 390 0001 006 000	Two Family Residence
15. 6 Hoeltzer Street	City of Rochester	106 390 0001 075 001	Vacant Residential
16. 8 Hoeltzer Street	City of Rochester	106 390 0001 074 001	Vacant Residential
17. 10 Hoeltzer Street	City of Rochester	106 390 0001 073 000	Single Family Residence
18. 12 Hoeltzer Street	-----	106 390 0001 072 000	Educational Facility

While many of the buildings within this Renewal District are presently vacated or have been demolished, the area mirrors the heritage of a traditional neighborhood center within the City of Rochester. The Renewal District has a combined lot size of approximately 3.1 acres and has been identified, according to a Conditions Analysis Report prepared for the City of Rochester Economic Development Department as a “blighted” area under Article 15 of the New York State General Municipal Law.

Larsen has performed this Phase I Environmental Site Assessment in conformance with the scope and requirements of the American Society of Testing and Materials (ASTM) Standard Practice E 1527-00 for Environmental Site Assessments, and included a Site Reconnaissance, Interviews with individuals’ knowledgeable with the subject property, Historic Records Review and an Environmental Database Review. The purpose for conducting such a detailed property assessment of the entire North Clinton Urban Renewal District is to identify, by customary good commercial real estate practices, the range of contaminants present and within the scope of the

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). As such, the ASTM E 1527-00 Standard Practice is intended to “permit a user to satisfy one of the requirements to qualify for the innocent landowner defense under CERCLA liability. That is the method which constitutes ‘all appropriate inquiry into previous ownership and use of the property,’ as defined in 42 USC 9601 (35) (B).”

The primary goal of this investigation is to formally identify recognized environmental conditions associated or in connection with the North Clinton Urban Renewal District. This means the presence or likely presence of any hazardous substances or petroleum products on, within, or near the North Clinton Urban Renewal District.

Based upon the information gathered as part of this Assessment, the following is a summary of those properties within the North Clinton Urban Renewal District, which may represent a potential recognized environmental condition:

Property #	Address	Tax ID #	Owner (s)	Potential Environmental Concern (s)
4	13 Sullivan Street	106 390 0001 005 000	City of Rochester	According to historical information, a 2 story 1-family dwelling and a 1-car garage were previously present on the parcel. A permit to demolish a fire damaged 2 story 1-family dwelling and a 1-car garage was issued by the City of Rochester for this address on January 01, 1980. There is a potential that the former building foundation and/or other debris (i.e.: building debris, backfill material, buried fuel tanks) are present beneath the ground surface on this property.
6	12 Hoeltzer Street	106 390 0001 072 000	City of Rochester	According to historical information, there was a permit issued by the City of Rochester in July of 1989 to remove a 1,000-gallon tank from this property. Also, an older looking pole mounted electric transformer was observed along the northern property boundary of this site. An unusual accumulation of trash/litter and debris was observed throughout this property. There was a mounded area in the southeastern corner of this property that consisted of asphalt paving material.
8	8 Hoeltzer Street	106 390 0001 074 001	City of Rochester	A permit to demolish a fire damaged 2-½ story 2-family dwelling and a 1-car garage was issued by the City of Rochester for this address on February 20, 1980. There is a potential that the former building foundation and/or other debris (i.e.: building debris, backfill material, buried oil tanks) are present beneath the ground surface on this property.
11	810 North Clinton Avenue	106 390 0001 077 000	City of Rochester	The City of Rochester issued a permit in April of 2000 to demolish a 1-family frame dwelling. It is possible that the former building foundation(s) and/or fills (i.e.: building debris, backfill material, buried fuel tanks) are present beneath the ground surface on this property.
12	814 North Clinton Avenue	106 390 0001 078 000	City of Rochester	The City of Rochester issued a permit in January of 1981 to demolish the existing 2 ½ story, 2-family dwelling. It is possible that the former building foundation(s) and/or fills (i.e.: building debris, backfill material, buried fuel tanks) are present beneath the ground surface on this property.
-----	Various properties within or near the Urban Renewal District	-----	Private Residential Owners	According to Mr. Yurkstas has indicated that from the Health Department's experience many homes within the North Clinton Urban Renewal District have abandoned, yet partially filled fuel oil tanks buried under porches or in backyards.

Note: this section also includes information gathered via FOIL requests to the New York State Department of Environmental Conservation, Monroe County Environmental Management Council, and the Monroe County Health Department. Also refer to Appendix F for FOIL Requests and Responses.

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

Furthermore, based upon the information gathered as part of this Assessment, the following off-site properties, or those not included in the North Clinton Urban Renewal District but close enough to the project area that a potential environmental incident maybe of concern, include the following:

Address	Distance from/to Urban Renewal District	Owner (s)	Potential Environmental Concern (s)
30 Sullivan Street	Directly Adjacent to the Urban Renewal District along Sullivan Street	James Residence	This incident, which released 10 to 15 gallons of #2 fuel oil in the backyard is considered closed and a corrective action was taken. According to the NYSDEC, no further action is required (November 1999), as approximately 200 lbs. of contaminated soil was removed from the site and properly disposed of. Note: this incident is mentioned only because of the proximity to the North Clinton Urban Renewal District. There is no evidence or report of groundwater contamination or contaminate migration associated with this incident. No further investigation or follow-up testing is warranted at this time.
25 Kappell Place	This property is located approximately 350 feet southwest of the North Clinton Urban Renewal District.	Unreported Owner	Although this incident reported two 55-gallon drums with an unknown hazardous material abandoned along the street, the City of Rochester properly disposed of the material and containers. According to a NYSDEC Spill Report Form, no further action was required and the incident was closed in August of 1997. Note: this incident is mentioned only because of the proximity to the North Clinton Urban Renewal District.
Intersection of North Clinton Ave. & Scrantom Street	This property is directly west of the Urban Renewal District.	Rons Arco	This incident released an unknown quantity of hydraulic oil into the sewer. The release was also reported as affecting groundwater within the immediate area of the spill. Although this incident is closed and corrective actions were taken, it is mentioned only because of the proximity to the Urban Renewal District and due to the fact that it does not meet NYSDEC clean-up standards.
799 North Clinton Avenue	This property is located 200 feet southwest of the North Clinton Urban Renewal District.	Colon Auto Repair	While digging footers for a new canopy, contaminated soil was encountered. A limited subsurface soil investigation was performed on April of 2002 and included 16 boreholes to a depth of 12 feet below ground surface (bgs). No groundwater was encountered or sampled, and bedrock was believed to be located 10.5 – 12 feet bgs. The highest contaminate readings were encountered at the deepest cores. Several areas of petroleum contamination were identified. The NYSDEC requested further subsurface soil and groundwater investigations in May of 2002. A letter of responsibility was sent to Mr. Colon as well as Sheila D'Cruz (Arco) of Malvern, PA. Presently, this spill incident is unresolved, with little analytical data to identify the extent (including quantity) of subsurface contamination.

Note: this section also includes information gathered via FOIL requests to the New York State Department of Environmental Conservation, Monroe County Environmental Management Council, and the Monroe County Health Department. Also refer to Appendix F for FOIL Requests and Responses

CONTINUED...

Address	Distance from/to Urban Renewal District	Owner (s)	Potential Environmental Concern (s)
420 Clifford Avenue	This property is located approximately 600 feet north of the North Clinton Urban Renewal District.	Burns Binnert Plating	This site is an abandoned industrial property, which was formerly used as a plating facility. A Neighborhood Improvement Team (NIT) Member reported numerous drums on the site (within the building). This report was forwarded on to the NYSDEC, the City of Rochester, and the Monroe County Health Department. Optec was retained to sample the unknown material within the containers and transport the drums off-site to a more secure location. The drums were transported to another facility for temporary storage pending disposal arrangements. Optec finished transporting the drums in July of 2001 and the clean-up was ceased in August of 2001. According to the NYSDEC, this incident meets clean-up standards.
1000 North Clinton Avenue	This property is located approximately 1,300 feet north of the North Clinton Urban Renewal District.	Unreported Owner	Water samples taken from six geoprobe points resulted in the identification of elevated readings of BTEX compounds. This information was forwarded on to the Monroe County Health Department. This incident is mentioned only because of the proximity to the Urban Renewal District and due to the fact that it does not meet NYSDEC clean-up standards.
60 Hoeltzer Street	This property is located approximately 750 feet east of the North Clinton Urban Renewal District	Unreported Owner	Gasoline contaminated soil was discovered during the excavation of a foundation of a Habitat for Humanity home. Note: this property was an abandoned residential home. The contaminated soil was removed from the site and the City of Rochester was planning to install a groundwater monitoring well in the spring of 2001. Based upon information obtained from the New York State Department of Environmental Conservation, no further remedial (corrective) action required at this site (Appendix E – Foil Requests & Responses). This spill incident is considered closed and meets current "clean-up" standards.
65 Sullivan Street	This property is located approximately 700 feet east of the North Clinton Urban Renewal District.	Eltrex Industries	This facility is defined as a site that generates, stores, treats, or disposes of 1,000 kg – 6,000 kg of hazardous wastes, 1 kg or more of acutely hazardous waste, and/or 100 kg- 1,000 kg of any residue or contaminated soil, hazardous waste or other contaminated debris. According to reported information, ELTREX Industries handles 2-Butanone (I,T) & Methyl Ethyl Ketone (MEK) (I,T), Ethane, 1,1,1-Trichloro & Methyl Chloroform, Ethene Trichloro & Trichloroethylene, benzene Dimethyl- (I,T) & Xylene (I). Based upon a 1999 Hazardous Waste Compliance Inspection conducted by the NYSDEC, ELTREX Industries was free of all regulatory violations.
24 Sullivan Street	This property is located approximately 300 feet east of the North Clinton Urban Renewal District.	Vacant land	An abandoned fuel oil tank was observed along the road frontage of Sullivan Street. The remaining portion of the property is vacant. 9/5/02: The fuel oil tank has been removed from the property.
Various properties within or near the Urban Renewal District	-----	Private Residential Owners	Mr. Yurkstas has indicated that from the Health Department's experience many homes near the North Clinton Urban Renewal District have had abandoned, yet partially filled fuel oil tanks buried under porches or in backyards. Current residential homes within the North Clinton Urban Renewal District may be contain similar situations.

Note: the information outlined above includes that revealed via FOIL requests to the New York State Department of Environmental Conservation, the Monroe County Environmental Management Council, and the Monroe County Health Department, as well as a State and Federal Environmental Database Search conducted by Environmental Data Resources, Inc. (Appendix F).

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

*Summary Conclusion:*

As outlined above, there are properties both within and near the North Clinton Urban Renewal District, which present minor recognized environmental conditions. The environmental issues identified as part of this Assessment range from the potential for buried building debris (including foundations) and fuel oil tanks, to former underground fuel storage tanks (which since have been removed) and numerous NYSDEC Spill incident sites, which surround the North Clinton Urban Renewal District. Note: see Appendix F – NYSDEC Spill Incident Location Map, which relates the location of each NYSDEC Spill incident site to the North Clinton Urban Renewal District.

This Assessment has reveal no reported incidences (spills or leaks) of petroleum or other hazardous material releases within the properties of the North Clinton Avenue Renewal District. However, Larsen cannot represent that the North Clinton Urban Renewal District Project Area does not contain hazardous substances, petroleum products (including buried fuel oil tanks), other latent conditions, or buried debris (including former building foundations or other building debris) beyond that observed during site visits or indicated herein by our personnel during the development of this Assessment. No subsurface chemical screenings of soil or groundwater were authorized or completed within the North Clinton Avenue Urban Renewal District as part of this Assessment. No other data was generated regarding latent subsurface conditions that may be the result of on-site or off-site sources.

Although there were no reported / observed incidences or conditions directly within the proposed North Clinton Avenue Urban Renewal District that would cause an environmental or public health risk, it may be in the City of Rochester's best interest, prior to any significant below grade excavation, to conduct the following:

1. A subsurface magnetometer survey to further confirm whether buried fuel oil storage tanks are present within this proposed Urban Renewal District.
2. Excavate test-pits in the suspect areas to determine the likely presence of buried building debris (including foundations and various fill material) that may potentially be present in vacant, former residential areas.

Furthermore, this Assessment has revealed no reported incidences (spills or leaks) of petroleum or other hazardous material releases within the properties of the North Clinton Avenue Renewal District. However, there have been numerous NYSDEC Spill incident sites revealed that have taken place directly adjacent to or near the North Clinton Urban Renewal District. These incident sites, which are described above, vary in degree and type of contamination. It may be in the City of Rochester's best interest to further investigate or identify whether known off-site contamination has migrated into the North Clinton Avenue Renewal District project area.

City of Rochester  
North Clinton Avenue Urban Renewal Project

## **SECTION II**

# **ENVIRONMENTAL SCREENING ASSESSMENT REPORTS**

Note: A Site Inspection Checklist for each of the 18 properties within the North Clinton Urban Renewal District has been provided for review in Appendix C.

***SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS***

Based upon the information gathered during a site visit, there was no observable evidence of significant recognized environmental conditions in connection with this property. This property is presently a residential property that contains a single-family wood frame, 1-story house with an enclosed porch. There was a small amount of trash/litter accumulated within this property. There were no observable aboveground tanks, drums, an accumulation of paints/thinners or other hazardous materials presents within the boundaries of this property. Note: all observations of the property were limited to what could be seen from the Sullivan Street right-of-way.

Access to the interior of the building was not provided; therefore, direct on-site observations of the property or the interior of the building were not performed. This assessment is subject to any state of fact that on-site observations of this parcel and the interior of the building would have revealed. According to tax account information, the residential structure was originally built in 1896, therefore, prior to demolition (if necessary) a pre-demolition asbestos survey should be performed. If laboratory testing (analytical examination) should indicate the presence of Asbestos Containing Materials (ACM), the ACM should be removed in accordance with all applicable State and Federal Asbestos Regulations, prior to demolition.

<b>ADDRESS:</b>	9 Sullivan Street
<b>FORMER ADDRESS:</b>	-----
<b>TAX ACCOUNT NO.:</b>	106 390 0001 003 000
<b>PARCEL SIZE:</b>	Approximately 0.10 Acres
<b>IMPROVEMENTS:</b>	Fence / Plumbing / Interior Electric
<b>CURRENT USE:</b>	Three Family Residence
<b>CURRENT OWNER:</b>	Mr. George Eckerdt
<b>PAST USE:</b>	Residential

---

***SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS***

Based upon the information gathered during a site visit, there was no observable evidence of significant recognized environmental conditions in connection with this property. This property is presently a residential property that contains a three-family wood frame, 2-story house and a fenced backyard. There was a small amount of trash/litter accumulated in the front, along the roadside face of Sullivan Street, of this property. There were no observable aboveground tanks, drums, an accumulation of paints/thinners or other hazardous materials presents within the boundaries of this property. Note: all observations of the property were limited to what could be seen from the Sullivan Street right-of-way.

Access to the interior of the building was not provided; therefore, direct on-site observations of the property or the interior of the building were not performed. This assessment is subject to any state of fact that on-site observations of this parcel and the interior of the building would have revealed. According to tax account information, the residential structure was originally built in 1900, therefore, prior to demolition (if necessary) a pre-demolition asbestos survey should be performed. If laboratory testing (analytical examination) should indicate the presence of Asbestos Containing Materials (ACM), the ACM should be removed in accordance with all applicable State and Federal Asbestos Regulations, prior to demolition.

***SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS***

Based upon the information gathered during a site visit, there was no observable evidence of significant recognized environmental conditions in connection with this property. This property is presently vacant land within a residential area along Sullivan Street. There were no observable aboveground tanks, drums, an accumulation of paints/thinners or other hazardous materials presents within the boundaries of this property. Note: all observations of the property were limited to what could be seen from the Sullivan Street right-of-way.

Note: Review of historical information indicates that a 2 story 1-family dwelling and a 1-car garage were previously present on the parcel. A permit to demolish a fire damaged 2 story 1-family dwelling and a 1-car garage was issued by the City of Rochester for this address on January 01, 1980. There is a potential that the former building foundation and/or other debris (i.e.: building debris, backfill material, buried fuel tanks) are present beneath the ground surface on this property.

### PROPERTY #6 (see Site Inspection Checklist in Appendix C)

---

ADDRESS:	12 Hoeltzer Street
FORMER ADDRESS:	-----
TAX ACCOUNT NO.:	106 390 0001 072 000
PARCEL SIZE:	Approximately 1.10 Acres
IMPROVEMENTS:	Paving / Brick addition / Interior remodeling
CURRENT USE:	Educational Facility
CURRENT OWNER:	City of Rochester
PAST USE:	Private Club

---

### SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS

Based upon the information gathered during a site visit, there was no observable evidence of significant recognized environmental conditions in connection with this property. Note: there was an unusual accumulation of trash/litter, including a small number of used paint cans, within the boundaries of this property. Also, there was a significant accumulation of asphalt that was dumped in the southeastern corner of this property. This property consists of 2-story brick structure that was constructed in 1940.

According to historical information, there was a permit issued by the City of Rochester in July of 1989 to remove a 1,000-gallon tank from this property. Note: there was what appeared to be an older looking pole mounted electric transformer along the northern property boundary of this site.

Access to the interior of the building was not provided; therefore, direct on-site observations of the property or the interior of the building were not performed. This assessment is subject to any state of fact that on-site observations of this parcel and the interior of the building would have revealed. Also, prior to demolition, if necessary, a pre-demolition asbestos survey should be performed. If laboratory testing (analytical examination) should indicate the presence of Asbestos Containing Materials (ACM), the ACM should be removed in accordance with all applicable State and Federal Asbestos Regulations, prior to demolition.

<b>ADDRESS:</b>	10 Hoeltzer Street
<b>FORMER ADDRESS:</b>	-----
<b>TAX ACCOUNT NO.:</b>	106 390 0001 073 000
<b>PARCEL SIZE:</b>	Approximately 0.14 Acres
<b>IMPROVEMENTS:</b>	Garage (1920), Electrical (1994)
<b>CURRENT USE:</b>	Single Family Residence
<b>CURRENT OWNER:</b>	City of Rochester
<b>PAST USE:</b>	Residential

---

**SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS**

Based upon the information reviewed to date, there were no recognized environmental conditions identified or observed on this property. This property is presently a residential property that contains a single-family wood frame, 1.5 story house and a fenced backyard. There were no observable aboveground tanks, drums, an accumulation of paints/thinners or other hazardous materials presents within the boundaries of this property. Note: all observations of the property were limited to what could be seen from the Hoeltzer Street right-of-way.

According to Tax Account Information, this residential structure does presently or did contain fuel oil. Therefore, a fuel oil tank may still be present within the basement of this structure. Furthermore, this structure was constructed in 1920, and according to the City of Rochester, permits were issued in March and September of 1994 to make improvements to the interior electric and plumbing. Access to this property or the interior of the building was not provided; therefore, direct on-site observations of the property or the interior of the building were not performed. This assessment is subject to any state of fact that on-site observations of this parcel and the interior of the building would have revealed. Also, prior to demolition (if necessary) a pre-demolition asbestos survey should be performed. If laboratory testing (analytical examination) should indicate the presence of Asbestos Containing Materials (ACM), the ACM should be removed in accordance with all applicable State and Federal Asbestos Regulations, prior to demolition.

**PROPERTY #8 (see Site Inspection Checklist in Appendix C)**

---

<b>ADDRESS:</b>	8 Hoeltzer Street
<b>FORMER ADDRESS:</b>	-----
<b>TAX ACCOUNT NO.:</b>	106 390 0001 074 000
<b>PARCEL SIZE:</b>	Approximately 0.08 Acres
<b>IMPROVEMENTS:</b>	None
<b>CURRENT USE:</b>	Vacant Residential
<b>CURRENT OWNER:</b>	City of Rochester
<b>PAST USE:</b>	Residential

---

**SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS**

Based upon the information reviewed to date, there were no recognized environmental conditions identified or observed on this property. There was a small amount of trash/litter evident on this property, particularly near the street.

**Note:** Review of historical information indicates that a 2-½ story 2-family dwelling and a 1-car garage were previously present on the parcel. **Note:** The 1930 Aerial Photograph depicts a structure on this property. A permit to demolish a fire damaged 2-½ story 2-family dwelling and a 1-car garage was issued by the City of Rochester for this address on February 20, 1980. There is a potential that the former building foundation and/or other debris (i.e.: building debris, backfill material, buried fuel tanks) are present beneath the ground surface on this property.

<b>IMPROVEMENTS:</b>	None
<b>CURRENT USE:</b>	Vacant Residential
<b>CURRENT OWNER:</b>	City of Rochester
<b>PAST USE:</b>	Residential

---

***SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS***

Based upon the information reviewed to date, there were no recognized environmental conditions identified or observed on this property. There was an unusual accumulation of trash/litter evident on this property, particularly near the street. Note: this property is fenced along its west, east and southern property boundaries. Also, it appears that the western portion of this property is used as a vehicle (tractor-trailer) access for 818 or 822 North Clinton Avenue. Note: Aerial Photography clearly illustrate a vehicle access on this property to serve either 818 or 822 North Clinton Avenue as well as 7, 9, or 11 Sullivan Street. There were no spills or petroleum deposits associated with this apparent use on the ground surface within this property. Note: according to Aerial Photography (dated 1970), there appears to be a shed or garage on this property. However, this structure is missing in the 1975 Aerial Photo.

Although there was no historic record information available for this property, past uses were residential; therefore, a potential exists that former building foundation and/or other debris (i.e.: building debris, backfill material, buried fuel tanks) are present beneath the ground surface on this property.

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

**ENVIRONMENTAL SCREENING ASSESSMENT REPORT**

**PROPERTY #10 (see Site Inspection Checklist in Appendix C)**

<b>ADDRESS:</b>	804 North Clinton Avenue
<b>FORMER ADDRESS:</b>	-----
<b>TAX ACCOUNT NO.:</b>	106 390 0001 076 000
<b>PARCEL SIZE:</b>	Approximately 0.08 Acres
<b>IMPROVEMENTS:</b>	Plumbing / Fire Suppression / Electrical / Gas
<b>CURRENT USE:</b>	Commercial Mixed-Use ROW Type -- Chinese Restaurant & Grocery (Wangs)
<b>CURRENT OWNER:</b>	Alan & Tommy Lin
<b>PAST USE:</b>	General Store / Doctors office / Restaurant & Apartment

**SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS**

Based upon the information reviewed to date, there were no recognized environmental conditions identified or observed on this property. There is a trash dumpster located in the rear of this structure, within a fenced area of the property. The ground surface in the eastern portion of this property appears to be asphalt in nature; however, grasses and weeds are now inhabiting this area

Note: a review of historical information indicates that a permit to demolish a fire damaged 2 ½ story single family dwelling was issued in 1980 by the City of Rochester. Note: according to Aerial Photography (dated 1970), there is what appears to be a secondary structure in the rear portion of this property. This structure was missing in the 1988 Aerial Photo. The property was issued a permit to remodel/repair fire damage in November of 1985 by the City of Rochester.

Access to this property or the interior of the building was not provided; therefore, direct on-site observations of the property or the interior of the building were not performed. This assessment is subject to any state of fact that on-site observations of this parcel and the interior of the building would have revealed. Also, prior to demolition, if necessary, a pre-demolition asbestos survey should be performed. If laboratory testing (analytical examination) should indicate the presence of Asbestos Containing Materials (ACM), the ACM should be removed in accordance with all applicable State and Federal Asbestos Regulations, prior to demolition.

**SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS**

Based upon the information reviewed to date, there were no recognized environmental conditions identified or observed on this property. This property consists of 2-story, 2-family residential structure with a small out building or shed directly behind the house. Note: either this property or 822 North Clinton Avenue uses the property at 6 Hoeltzer Street for vehicle access. Note: there is an unusual accumulation of trash/little piled in the southwest corner of this property.

Note: a review of historical information indicates that this residential structure does presently or did contain fuel oil. Therefore, a fuel oil tank may still be present within the basement of this structure.

Access to this property or the interior of the building was not provided; therefore, direct on-site observations of the property or the interior of the building were not performed. This assessment is subject to any state of fact that on-site observations of this parcel and the interior of the building would have revealed. This structure was originally constructed in 1925 (according to Tax Account Information) and prior to demolition, if necessary, a pre-demolition asbestos survey should be performed. If laboratory testing (analytical examination) should indicate the presence of Asbestos Containing Materials (ACM), the ACM should be removed in accordance with all applicable State and Federal Asbestos Regulations, prior to demolition.

**SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS**

Based upon the information reviewed to date, there were no recognized environmental conditions identified or observed on this property. This property consists of 2-story grocery store, which faces North Clinton Avenue and a 2-story, 2-family residential structure with an attached garage directly behind the house. Note: either this property or 818 North Clinton Avenue uses the property at 6 Hoeltzer Street for vehicle access. There was an unusual accumulation of trash/litter in the northeastern corner of the property.

Note: a review of historical information indicates that this property has had minor improvements, including an attached garage, furnaces, plumbing, and electrical.

Access to this property or the interior of the building was not provided; therefore, direct on-site observations of the property or the interior of the building were not performed. This assessment is subject to any state of fact that on-site observations of this parcel and the interior of the building would have revealed. This structure was originally constructed in 1910 (according to Tax Account Information) and prior to demolition, if necessary, a pre-demolition asbestos survey should be performed. If laboratory testing (analytical examination) should indicate the presence of Asbestos Containing Materials (ACM), the ACM should be removed in accordance with all applicable State and Federal Asbestos Regulations, prior to demolition.

***SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS***

Based upon information reviewed to date, there were no recognized environmental conditions identified or observed within this property. There is a small amount of trash/little scattered throughout the property. Note: the ground surface consists of broken asphalt concrete as well as vegetative growth. There is a dense amount of vegetative growth in the rear northeast corner of this property. This growth limited the visual observation of surface conditions in this area of the property.

Note: a review of historical information indicates that the City of Rochester issued a permit construct a 1-car garage in November of 1936. Furthermore, the City of Rochester issued a permit in July of 1972 to erect a fire escape for the second floor apartment. Finally, the City of Rochester issued a permit in March of 1983 to demolish the existing 2 ½ story, 2-family dwelling. It is possible that former building foundation(s) and/or fills (i.e.: building debris, backfill material) are present beneath the ground surface on this property.

***SUMMARY OF POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS***

Based upon the information reviewed to date, there were no recognized environmental conditions identified or observed on this property. This property consists of a storefront, which faces North Clinton Avenue associated with an apartment. Note: during site visits, there were two (2) dumpsters observed in the rear of this property.

Note: a review of historical information indicates that this property has had minor improvements, including interior plumbing and remodeling work. The uses of this property include a store, amusement center, restaurant, and an office & classrooms. Note: there is also a 1-family apartment located in the rear of this structure.

A portion of this property is vacant land with a broken asphalt surface. According to Aerial Photography, from the Monroe County Environmental Management Council, this area served as a vehicle parking lot for the commercial structures at 840 & 844 North Clinton Avenue.

Access to this property or the interior of the building was not provided; therefore, direct on-site observations of the property or the interior of the building were not performed. This assessment is subject to any state of fact that on-site observations of this parcel and the interior of the building would have revealed. ### **SECTION III**

## **NOTES REGARDING POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS – OFF-SITE PROPERTIES**

Note: this section includes information gathered from a State and Federal Environmental Database Search as well as from FOIL requests submitted to the Monroe County Health Department, the New York State Department of Environmental Conservation (NYSDEC), and the Monroe County Environmental Management Council. Refer to Appendix D for the complete Environmental Database Report (EDR Radius Map with Geocode). Note: FOIL Requests and Responses have been provided in Appendix E.

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

### *State & Federal Database Search*

The Environmental Database Review process consists of a search of publicly available State and Federal Environmental Database Records, which may reveal a recognized environmental condition within or near the North Clinton Urban Renewal District. As such, Larsen has contracted with Environmental Data Resources, Inc. (EDR) to perform this search, which meets and/or exceeds the requirements of the ASTM E 1527-00 Standard (Phase I Environmental Site Assessments). A copy of the EDR database search report can be reviewed in Appendix D. A listing and description of each database searched is provided below:

- National Priority List (NPL), NPL Deletions (**Delisted NPL**), Correction Action Report (**CORRACTS**), Consent Decrees (**CONSENT**), Records of Decision (**ROD**), Coal Gas (**Coal Gas**) and State Hazardous Waste Disposal Sites (**SHWS**) were searched to 1.00 miles from the North Clinton Urban Renewal District;
- Comprehensive Environmental Response, Compensation, and Liability Information System (**CERCLIS**), Resource Conservation and Recovery Information System (**RCRIS-TSD**), State Landfill (**LF**), Major Oil Underground Storage Facilities Database (**MOSF UST**), Major Oil Aboveground Storage Facilities Database (**MOSF AST**), Leaking Storage Tank Incident Record (**LTANKS**) Voluntary Cleanup Agreements (**VCP**) and Hazardous Substance Waste Disposal Site Inventory (**HSWDS**) were searched to 0.50 miles from the North Clinton Urban Renewal District; and
- No Further Remedial Action Planned (**CERC-NFRAP**), Resource Conservation and Recovery Information System (**RCRIS Lg. Quan. Gen./Sm. Quan. Gen.**), Petroleum Bulk Storage (PBS) Database (**UST**), Chemical Bulk Underground Storage Database (**CBS UST**), Mines Master Index File (**MINES**), and Chemical Bulk Aboveground Storage Database (**CBS AST**) and NY Spills (**NY Spills**) were searched to 0.25 miles from the North Clinton Urban Renewal District.

### *Database Search Results*

Based upon the results of the database search, there are no **NPL, Proposed NPL, Delisted NPL, CORRACTS, ROD, CONSENT, or Coal Gas** facilities within the ASTM Standard E-1527-00 specified 1.00-mile radius of the North Clinton Avenue Urban Renewal District. There was however, two **SHWS** (State listed Hazardous Waste Facilities) sites identified as being within the ASTM E 1527-00 specified 1.00-mile radius of the Renewal District. This information has come from the NYSDEC's Inactive Hazardous Waste Disposal Site List. These sites are referred to as the Former Raeco Products Company located at 24 Spencer Street and the former Rochester Metal Etching Company located at 100 Lake Avenue.

The former Raeco Products Company is reported as a significant threat to public health and/or the environment. This facility is located in a commercial section of the City of Rochester, west of the Genesee River near the gorge and operated as a bulk storage, mixing, blending, canning, packaging and distribution facility for various types of chemicals and oils, including trichloroethylene, turpentine and mineral spirits. Numerous investigations have revealed

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

significant levels of Volatile Organic Compounds (VOCs) and semi-Volatile Organic Compounds (SVOCs) in the groundwater and soil below this property. It is strongly suspected that this site has impacted the Genesee River, as there is a strong vertical groundwater gradient from this site to the river. Although this site is a significant threat to public health and the environment, it poses little to no immediate threat to the North Clinton Avenue Urban Renewal District, as the distance between these two sites is approximately 1 mile. Furthermore, the Genesee River separates the two sites, which would limit the migration of contaminated groundwater from reaching the North Clinton Urban Renewal District. No further investigation or follow-up testing is warranted at this time.

The former Rochester Metal Etching Company is also reported as a significant threat to public health and/or the environment. This facility is also located in a commercial section of the City of Rochester, west of the Genesee River near the gorge and operated a manufacturer of etched and lithographed metal nameplates. Numerous investigations have revealed significant levels of heavy metals and chlorinated solvents in the groundwater and soil below this property. Although this site is a significant threat to public health and the environment, it poses little to no immediate threat to the North Clinton Avenue Urban Renewal District, as the distance between these two sites is approximately 1 mile. Furthermore, the Genesee River separates the two sites, which would limit the migration of contaminated groundwater from reaching the North Clinton Urban Renewal District. No further investigation or follow-up testing is warranted at this time.

According to State and Federal Environmental Database search, there are no **RCRIS-TSD, CERCLIS, SWF/LF, MOSF UST, MOSF UST, MOSF AST VCP, SWTIRE, SWRCY or HSWDS** facilities within the ASTM Standard E 1527-00 specified 0.50-mile radius of the North Clinton Renewal Project.

There was however, eight **LTANKS** sites identified as being within the ASTM E 1527-00 specified 0.50-mile radius of the subject property. These sites include the Rochester Coca-Cola Bottling Corporation located at 123 Upper Falls Blvd (3 separate **LTANK** incidents), an unreported owner at 729 Joseph Avenue, a Mobil Station at 771 Joseph Avenue, Franklin (General) Prop located at 48 Radio Street, the Leo J Roth Corporation located at 220 Clifford Avenue, and Associated Textile rental Service located at 548 St Paul Street. All of these sites, except for the unreported owner incident at 729 Joseph Avenue and the Franklin (General) Prop incident, are listed as known releases that create a minimal potential for fire or other hazard (public or environmental) and currently meet NYSDEC clean-up standards. No further investigation or follow-up testing is warranted at this time.

The unreported owner **LTANK** incident at 729 Joseph Avenue is listed as a possible release with minimal potential for fire or hazard. It is reported that this incident was caused by a tank failure, which release approximately 4 gallons of fuel oil into the basement of this residence. The Monroe County Health Department and Rochester City Fire Department used absorbents to collect the released material and disposed of the material in a suitable off-site location. There are no significant environmental or public health threats resulting from this incident that would cause risk to the properties of the North Clinton Avenue Urban Renewal Project. Note: this incident site is approximately 0.50-miles from the Renewal District and a corrective action was taken. No further investigation or follow-up testing is warranted at this time.

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

The Franklin (General) Prop **LTANK** incident is listed as a known release with potential for fire or hazard. It is reported that this incident was caused by a tank failure, which release approximately 120 gallons of fuel oil into the basement of this location (48 Radio Street). The release was contained to the concrete basement floor. Note: no material was lost through the basement floor drain. The Monroe County Health Department and Rochester City Fire Department performed the clean up of the released material. This incident had little to no impact on the surrounding environmental (groundwater and soil) and is located approximately 0.50-miles from the Renewal District. Therefore, no further investigation or follow-up testing is warranted at this time.

Similarly, there are no **CERC-NFRAP, RCRIS-SQG, MINES, MOSF UST, MOSF AST, AST, MINES, CBS UST, or CBS AST** facilities within the ASTM Standard E 1527-00 specified 0.250-mile radius of the subject property.

There was however, two **UST** incident sites identified as being within the ASTM E 1527-00 specified 0.25-mile radius of the Renewal Project Area. These sites include Colon Automotive located at 799 North Clinton Avenue and a Rochester City Jr. High School located at 54 Oakman Street. There are no reported spills or tank failures associated with these underground fuel storage tanks. Note: the underground fuel storage tanks from the Rochester City Jr. High School have been removed or closed in place. No further investigation or follow-up testing is warranted at this time.

There was one **RCRIS –LGQ** site identified as being within the ASTM E 1527-00 specified 0.25-mile radius of the Urban Renewal Project Area. This site is identified as **ELTREX Industries, Inc.** located at 65 Sullivan Street. This facility is defined as a site that generates, stores, treats, or disposes of 1,000 kg – 6,000 kg of hazardous wastes, 1 kg or more of acutely hazardous waste, and/or 100 kg- 1,000 kg of any residue or contaminated soil, hazardous waste or other contaminated debris. According to reported information, **ELTREX Industries** handles 2-Butanone (I,T) & Methyl Ethyl Ketone (MEK) (I,T), Ethane, 1,1,1-Trichloro & Methyl Chloroform, Ethene Trichloro & Trichloroethylene, benzene Dimethyl- (I,T) & Xylene (I). Based upon a 1999 Hazardous Waste Compliance Inspection conducted by the NYSDEC, **ELTREX Industries** was free of any regulatory violations. No further investigation or follow-up testing is warranted at this time.

There were 18 **NY SPILL** incidents identified as being within the ASTM E 1527-00 specified 0.25-mile radius of the Urban Renewal Project Area. These include 5 “active” **NY SPILL** incidents and 13 “closed/inactive” **NY SPILL** incidents. Note: a **NY SPILL** incident reported as “closed/inactive” typically indicates that additional studies and/or remedial efforts have taken place at that particular site and no longer poses a significant environmental or public health risk to a particular property or surrounding properties. The 5 “active” **NY SPILL** incidents include the following:

- Vacant City Property – 115 Rauber Street: This site is an abandoned residential property, owned by the City of Rochester. The spill, which released approximately 5 gallons of #2 fuel oil, resulted from the abandonment of a 275-gallon tank located in the backyard of the property. This incident is identified as a known release with minimal potential for hazard. A “corrective action” was taken as Marcor

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

Environmental was retained to conduct the cleanup, which included the excavation and proper disposal of a small amount of contaminated soil. The NYSDEC SPILL Identification Number associated with this incident is 0170105. No further investigation or follow-up testing is warranted at this time.

- 1000 North Clinton Avenue: Water samples taken from six geoprobe points resulted in the identification of elevated readings of BTEX compounds. This information was forwarded on to the Monroe County Health Department. The NYSDEC SPILL Identification Number associated with this incident is 9800585 (see more information below).
- Rite Aid – 1000 North Clinton Avenue: There were two fifty-five gallon containers with waste oil abandoned behind the Rite Aid building. The NYSDEC SPILL Identification Number associated with this incident is 9707088. According to the NYSDEC, a corrective action was taken, as the abandon drums were removed from the property and properly disposed. No further investigation or follow-up testing is warranted at this time.
- Colon Auto Repair – 799 North Clinton Avenue: While excavating new footings for canopy, contaminated soil was encountered. The NYSDEC SPILL Identification Number associated with this incident is 9501681 (see more information below).
- Flower City Habitat – 60 Hoeltzer Street: While constructing a Habitat for Humanity home on a vacant lot within a residential area, contaminated soil was discovered. The NYSDEC SPILL Identification Number associated with this incident is 9703396 (see more information below).

Note: the EDR report has identified seventy-five (75) “orphan” incident sites (NY Spills, VCP, SWF/LF, RCRIS-SQG, and LTANKS) potentially close in proximity to the North Clinton Urban Renewal District. An “orphan” site is defined as having poor or inadequate address information. As such, certain information with regard to the location of each “orphan” site has been independently researched and more accurately assessed. The distance / location of the remaining “orphan” sites and/or the significance of each of incidence sites, suggests no apparent environmental or public health impact to the Urban Renewal District.

#### *State & Federal Database Search Conclusion*

Based upon the information gathered as part of the Sate and Federal Environmental Database search, there are eight incident sites which, regardless of their regulatory status, took place in close proximity to the North Clinton Avenue Urban Renewal Project Area. Note: refer to Appendix F for a map of the location of these incident sites in relation to the North Clinton Avenue Urban Renewal District. These properties include the following:

- Sarah Lee James Residence – 30 Sullivan Street: This property is directly adjacent to the North Clinton Urban Renewal District. This incident, which released 10 to 15 gallons of #2 fuel oil in the backyard is considered closed and a corrective action was taken. According to the NYSDEC, no further action is required (November 1999), as

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

approximately 200 lbs. Of contaminated soil was removed from the site and properly disposed of. Note: this incident is mentioned only because of the proximity to the North Clinton Urban Renewal District. There is no evidence or report of groundwater contamination or contaminate migration associated with this incident. The NYSDEC SPILL Identification Number associated with this incident is 9870038. No further investigation or follow-up testing is warranted at this time.

- 25 Kappell Place: This property is located approximately 350 feet southwest of the North Clinton Urban Renewal District. Although this incident reported two 55-gallon drums with an unknown hazardous material abandoned along the street, the City of Rochester properly disposed of the material and containers. According to a NYSDEC Spill Report Form, no further action was required and the incident was closed in August of 1997. Note: this incident is mentioned only because of the proximity to the North Clinton Urban Renewal District. The NYSDEC SPILL Identification Number associated with this incident is 9705720.
- Rons Arco – This property is directly west of the Urban Renewal District. This incident released an unknown quantity of hydraulic oil into the sewer. The release was also reported as affecting groundwater within the immediate area of the spill. Although this incident is closed and corrective actions were taken, it is mentioned only because of the proximity to the Urban Renewal District and due to the fact that it does not meet NYSDEC clean-up standards. The NYSDEC SPILL Identification Number associated with this incident is 8201833.
- Colon Auto Repair – 799 North Clinton Avenue: This property is located 200 feet southwest of the North Clinton Urban Renewal District. While digging footers for a new canopy, contaminated soil was encountered. A limited subsurface soil investigation was performed on April of 2002 and included 16 boreholes to a depth of 12 feet below ground surface (bgs). No groundwater was encountered or sampled, and bedrock was believed to be located 10.5 – 12 feet bgs. The highest contaminate readings were encountered at the deepest cores. Several areas of petroleum contamination were identified. The NYSDEC requested further subsurface soil and groundwater investigations in May of 2002. A letter of responsibility was sent to Mr. Colon as well as Sheila D’Cruz (Arco) of Malvern, PA. Presently, this spill incident is unresolved, with little analytical data to identify the extent (including quantity) of subsurface contamination.
- Burns Binnert Plating - 420 Clifford Avenue: This site is an abandoned industrial property, which was formerly used as a plating facility. A Neighborhood Improvement Team (NIT) Member reported numerous drums on the site (within the building). This report was forwarded on to the NYSDEC, the City of Rochester, and the Monroe County Health Department. Optec was retained to sample the unknown material within the containers and transport the drums off-site to a more secure location. The drums were transported to another facility for temporary storage pending disposal arrangements. Optec finished transporting the drums in July of 2001 and the clean-up was ceased in August of 2001. According to the NYSDEC,

this incident meets clean-up standards. The NYSDEC SPILL Identification Number associated with this incident is 0170202.

- 1000 North Clinton Avenue: Water samples taken from six geoprobe points resulted in the identification of elevated readings of BTEX compounds. This information was forwarded on to the Monroe County Health Department. This incident is mentioned only because of the proximity to the Urban Renewal District and due to the fact that it does not meet NYSDEC clean-up standards. The NYSDEC SPILL Identification Number associated with this incident is 9800585.
- Flower City Habitat – 60 Hoeltzer Street: While constructing Habitat for Humanity homes on a vacant lot within a residential area, contaminated soil was discovered. The soil was removed from the site and the City of Rochester planned on installing a groundwater monitoring well in the late spring of 2001. This incident is mentioned only because of the proximity to the Urban Renewal District and due to the fact that it does not meet NYSDEC clean-up standards. The NYSDEC SPILL Identification Number associated with this incident is 9703396.
- ELTREX Industries, Inc.- 65 Sullivan Street. This facility is defined as a site that generates, stores, treats, or disposes of 1,000 kg – 6,000 kg of hazardous wastes, 1 kg or more of acutely hazardous waste, and/or 100 kg- 1,000 kg of any residue or contaminated soil, hazardous waste or other contaminated debris. According to reported information, ELTREX Industries handles 2-Butanone (I,T) & Methyl Ethyl Ketone (MEK) (I,T), Ethane, 1,1,1-Trichloro & Methyl Chloroform, Ethene Trichloro & Trichloroethylene, benzene Dimethyl- (I,T) & Xylene (I). Based upon a 1999 Hazardous Waste Compliance Inspection conducted by the NYSDEC, ELTREX Industries was free of all regulatory violations, however, it is mentioned only because of the proximity to the Urban Renewal District and the type of hazardous materials associated with this facility. No further investigation or follow-up testing is warranted at this time.

#### *FOIL Responses*

According to information provided by Mr. Edward Yurkstas of the Monroe County Department of Health, there are no documents of health related (including environmental) issues directly associated or in connection with the properties identified in the North Clinton Urban Renewal Project. Mr. Yurkstas has indicated that Eltrex Industries, located at 65 Sullivan Street, regularly conducts hazardous waste compliance inspections with the NYSDEC (as stated above). Also, Mr. Yurkstas identified the James Residence, located at 30 Sullivan Street, as a spill incident which involved the release of 10 to 15 gallons of #2 fuel oil. All impacted soil was excavated and removed for this site. The NYSDEC Spill Number is 9870038. Note: Mr. Yurkstas has indicated that from the Health Department's experience many homes near the North Clinton Urban Renewal District have had abandoned, yet partially filled fuel oil tanks buried under porches or in backyards. Furthermore, Mr. Yurkstas also stated that a 15 gallon drum and 5 gallon bucket of waste oil & lacquer thinner was found at 64 Hoeltzer Street. The City of Rochester removed the drums from the site and properly disposed of the material. Lastly, Mr. Yurkstas indicated that gasoline contaminated soil was discovered at 60 Hoeltzer Street during the excavation of a

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

foundation of a Habitat for Humanity home. Note: this property was an abandoned residential home. The NYSDEC Spill Number is 9703396. The contaminated soil was removed from the site and the City of Rochester was planning to install a groundwater monitoring well in the spring of 2001.

According to information received from the NYSDEC, there are no properties within the proposed North Clinton Avenue Urban Renewal District, which are listed on the Inactive Waste Site Registry. Furthermore, there are no properties within the North Clinton Urban Renewal District, which contain 'other records' on file with the NYDEC. By definition, the NYSDEC identifies 'other records' as the Divisions of Air, Water, Solid Waste, Hazardous Substance Regulations, Hazardous Waste Remediation, Regulatory Affairs, Pesticides and Legal.

Based upon information gathered from the Monroe County Environmental Management Council, there are no reported or known hazardous waste or fill sites within the North Clinton Avenue Urban Renewal District. Furthermore, there are no reported or known hazardous waste sites or fill sites directly adjacent to the North Clinton Avenue Urban Renewal District. Please refer to Appendix G for information regarding hazardous waste sites, junkyards, scrap material areas, etc. in the northcentral portion of the City of Rochester. Note: the site identified as '76' indicates a hazardous waste site (NYSDEC ID: 828047); site '151' indicates a Construction & Demolition site; site '175' indicates a junkyard; site '178' indicates and scrap material yard; '192' indicates an industrial facility; and site '199' indicates another hazardous waste site (NYSDEC ID 828106). Also, sites identified as 'x' indicate those areas where filling with an unknown material has taken place.

### **HISTORIC MAP INFORMATION**

Larsen Engineers  
700 West Metro Park  
Rochester, NY 14623

Based upon information gathered as part of a review of Historic City of Rochester Mapping, there was no additional information that indicated the presence or likely presence of gasoline or fuel oil storage tanks within or near the North Clinton Urban Renewal District. There was however, an indication in the 1939 Sanborn Map that solvent tanks were once located at 843 North Clinton Avenue. This facility is located at the corner of North Clinton Avenue and Evergreen Street and was once a dry cleaning facility. Presently, this former dry cleaning facility is currently an active commercial fish market and what appears to be a residential apartment building.

This search and review consisted of the following Historic Maps:

- Sanborn Maps;
- the City Atlas of Rochester;
- the Plat Book of the City of Rochester,
- G.M. Hopkins and Company Maps; and
- Polk Directories

Note: the dates and reference of each map reviewed is included in **SECTION VI – REFERENCE** of this report.

## **Attachment 11**

### Environmental Professionals Qualifications

## Robert Kreuzer

Vice President/Principal-in-Charge

### Education

B.S., Geological Science, State University of New York College at Buffalo

### Licenses/Registrations

NYS DOL Asbestos Contractor/Supervisor

NYS DOL Asbestos Project Monitor

### Certifications

OSHA 40 Hazwoper

OSHA 8 Certified

OSHA 10 Certified

OSHA Confined Space Entry Certified

### PROFESSIONAL PROFILE

Mr. Kreuzer has over 24 years of experience including managing, coordinating, and supervising hazardous waste investigations, remediation, asbestos, and decommissioning/demolition projects. He has worked on petroleum remediation projects, industrial waste management projects, and asbestos/lead paint projects. During his career, he has demonstrated an exceptional ability to manage and coordinate a wide range of environmental projects for public and private sector clients throughout the country. Throughout his career, he has been involved with numerous projects involving Federal agency remedial efforts (USACE, AFCEE) and New York State/Superfund site characterization and remediation in accordance with CERCLA requirements.

### EXPERIENCE

**Spaulding Fibre Plant Environmental Restoration Program, Tonawanda NY:** Project Manager responsible for environmental subsurface investigations at a 47-acre former industrial facility. Responsible for development of subsurface investigation work plans, coordination of subcontractor activities, performing subsurface sampling, and interpretation of subsurface conditions and environmental sampling results. The project remedial design team's effort developed remedial plans and specifications, provided bid support services, reviewed Contractor submittals and coordinated the site inspection for a \$3 million site remediation/foundation demolition program. The remedial design incorporated onsite crushing and re-use of uncontaminated concrete slabs and foundations to minimize costs for imported fill and worked extensively on site grading plans to limit project imported fill costs.

**Erie Canal Harbor Development Corporation – Buffalo Outer Harbor Parcel OH Site Improvements:** Project Principal for the redevelopment design of two parcels on Fuhrmann Boulevard located on the Outer Harbor in Buffalo, New York. The project consists of preparing approximately 15 acres for future development along with providing amenities for public access. The work included shoreline enhancements, public walkways and bike paths, water taxi docking facilities, landscape features, parking, site lighting and the rehabilitation of an existing metal building for use as a comfort station and storage building. Landscape features included rain gardens and retention ponds for runoff. Previous site usage and contamination required placement of an earthen cap over the entire site and removal of an underground petroleum storage tank and the associated piping.

**ESDC Midtown Plaza Phase II Hazardous Materials Survey, Abatement/Demolition Design and Construction Management Services:** Project Manager for two consecutive work assignments from Empire State Development Corporation (ESDC). The first work assignment involved detailed asbestos and hazardous materials survey for the largest abatement/demolition project currently being conducted in New York State. The Midtown site comprises approximately 2 million square feet of office/retail space on an 8.6 acre block in Downtown Rochester, New York. Mr. Kreuzer managed all aspects of the site inspections and surveys and development of the site abatement and demolition design documents. LiRo was subsequently awarded a Construction Management work assignment.

**Transmitter Park, Greenpoint, NY:** Project Manager responsible for all aspects of environmental services performed for this project. The Transmitter Park is a new waterfront esplanade on the former WNYC transmitter site in Greenpoint, Brooklyn. This project site consisted of approximately 1.5 acres of open waterfront space that was overgrown with vegetation and contained piles of debris and contaminated soil. LiRo provided oversight for contaminated soil excavation/backfilling, removal of an abandoned pier, installation of the new bulkhead and tidal inlet with a bridge, and installation of new plantings and storm water biofiltration system for the Park. LiRo also provided community air monitoring services in compliance NYCDEP Remedial Action Plan (RAP) requirements. Under the program, approximately 9,500 tons of contaminated

## Robert Kreuzer

Vice President/Principal-in-Charge

historic fill was removed from the site and properly disposed of at an off-site facility. LiRo also reviewed analytical results for proposed imported fill to ensure the material complied with RAP requirements.

**Hunters Point South Waterfront Redevelopment, NY:** Project Manager responsible for review and implementation of the Remedial Action Plan (RAP) for development of the Hunters Point South Site in Queens New York. The Site is constructed on made land that was filled in the early 1900s with contaminated fill. LiRo provided design review for soil management, site remediation, infrastructure installation, and Park construction. LiRo has also provided construction Management for the work. Other LiRo responsibilities include community air monitoring, contaminated soil disposition and all ancillary site remedial activities. Early in the demolition phase of the project, petroleum contamination associated with a leaking UST was discovered. LiRo coordinated the spill response with the New York State Department of Environmental Conservation (NYSDEC) and prepared a spill excavation Work Plan that was reviewed and approved by NYSDEC. Mr. Frank directed the soil excavation and confirmation sampling work, prepared a spill closure report for submittal to NYSDEC and acquired a spill closure letter for the project owner.

**Owl Hollow Soccer Fields Site Redevelopment, NY:** Project Manager for this project in which LiRo provided professional engineering services for this New York City Parks reclamation of New York City Department of Sanitation properties adjacent to Fresh Kills Landfill. NYC Parks was re-developing the site to house a new Soccer Complex with perimeter walking paths. In order to develop the site for Parks use, LiRo conducted focused environmental investigations to identify landfilled areas and contaminated surface soils that could potentially pose a health risk to future Park users. LiRo worked with the Parks project designer to develop site grading and cut and fill plans to minimize the quantity of soil requiring off-site disposal. The grading plans also incorporated re-use of uncontaminated site soil for use in capping contaminated portions of the site to mitigate potential health risks to future public Park users.

**Old Highway Garage Redevelopment, Town of Chili, NY –** Mr. Kreuzer was Project Principal for the Environmental and Planning Consulting Services for decommissioning the Old Highway Garage in the Town of Chili. The Town would like to understand the level of potential environmental concern, plan for future uses that may be appropriate for the site, and develop probable costs associated with decommissioning the Old Highway Garage.

**New York City Mayor's Office of Environmental Remediation (MOER) Environmental Consulting Services:** Program Manager for a multi-site task order based contract to conduct United States Environmental Protection Agency (USEPA)-compliant Environmental Site Assessments (ESAs) and investigations of brownfield sites for the City of New York MOER under a USEPA Brownfield Grant program. LiRo has also been assigned a petroleum tank audit and tightness testing assignment under this contract to evaluate over 600 petroleum tank systems for compliance with State and Federal regulatory requirements. LiRo is currently performing ESA, Phase II investigations, and petroleum tank audits at more than 20 sites.

**New York City Department of Design and Construction (NYCDDC) Bureau of Environmental and Geotechnical Services (BEGS), Requirements Contract for Environmental Services:** Project Manager for work-order based contract to perform Phase I/Phase II Environmental Site Assessments (ESAs) and corridor studies in support of NYCDDC property acquisition and corridor rehabilitation projects. More than 150 task orders have been issued and completed. Mr. Kreuzer is the Project Manager responsible for the coordination of field activities and implementation of Phase I ESAs in accordance with ASTM standards. He is also responsible for: the development and implementation of Phase II/Corridor Investigation work plans; and, the review and management of all aspects of the program including records reviews, data acquisition, work plan development, oversight of subsurface investigation work, data review, and report preparation. Mr. Kreuzer also oversees all administrative functions for project tracking and invoicing.

## Stephen Frank

### Environmental Assessment Team Leader

#### Education

B.S., Geology, Cleveland State University

#### Licenses/Registrations:

OSHA 40 Hr. HAZWOPER Certified

OSHA 10 Hr. Certified

OSHA 8 Hr. Training

National Groundwater Association

American Red Cross Standard First Aid and Adult CPR

#### PROFESSIONAL PROFILE

Mr. Frank is an Environmental Project Manager with more than 24 years of experience in site evaluations, corridor studies, environmental sampling, soil management, supervision of field activities, aquifer testing, groundwater modeling, project coordination, and report development. He has extensive experience working on New York re-development projects as well as with the New York State Department of Environmental Conservation (NYSDEC) under various brownfield and consent order programs. He also has specialized experience coordinating field investigation, reporting, and design tasks for work-order based contracts through New York City based organizations such as New York City Department of Design and Construction (NYCDDC) Bureau of Environmental and Geotechnical Services (BEGS), New York City Health and Hospitals Corporation (HHC), and New York City Mayor's Office of Environmental Remediation (MOER), among others.

#### EXPERIENCE

**Spaulding Fibre Plant Environmental Restoration Program, Tonawanda NY:** Project Coordinator responsible for environmental subsurface investigations at a 47-acre former industrial facility. Responsible for development of subsurface investigation work plans, coordination of subcontractor activities, performing subsurface sampling, and interpretation of subsurface conditions and environmental sampling results. Mr. Frank also lead the Project remedial design team effort, developed remedial plans and specifications, provided bid support services, reviewed Contractor submittals and is coordinated the site inspection for a \$3 million site remediation/foundation demolition program. Prepared NYSDEC IRM Construction completion reports, Site Management Plan and Final Engineering Report.

**NYSOGS – Statewide Environmental Consulting Services, NY:** Environmental Project Manager for investigation, evaluation and remediation at NYSOGS sites throughout New York State. Work has included Phase I ESAs and Phase II Site Investigations of firing ranges, UST/tank areas, buried waste areas at Department of Corrections and Community Supervision facilities, remedial design for lead-contaminated firing range soil, new firing range evaluations, and demolition design in support of NYSOGS client needs. The work has included coordinating with the NYSDEC on jurisdictional review issues, wetlands/permitting, and coordination of historical/archeological work.

**RG&E Beebee and Russell Power Station Demolition and Remediation Design, Rochester NY:** Environmental Project Manager who supervised the collection of environmental data for the demolition and remediation of the retired Beebee Station electric generating station, located on the bank of the Genesee River, and the retired Russell Station coal-fired electric generating station, located at the Southern shore of Lake Ontario. The design also included protection of existing switch yard and transmission infrastructure, utility terminations, tunnel closures, access road repairs and site restoration.

**New York City Department of Design and Construction (NYCDDC) Bureau of Environmental and Geotechnical Services (BEGS), Requirements Contract for Environmental Services:** Mr. Frank serves as Project Technical Lead and coordinator for work-order based contract to perform Phase I/Phase II Environmental Site Assessments (ESAs), spill investigations, hazardous waste investigations, incinerator wastes, and corridor studies in support of NYCDDC property acquisition and corridor rehabilitation projects. More than 150 task orders have been issued and completed including sites with radioactive waste concerns, drummed hazardous wastes, and petroleum wastes. Responsible for coordinating all aspects of the program including scheduling, client/regulatory agency communications, data acquisition, work plan development, oversight of subsurface investigation work, data review, and report preparation.

## Stephen Frank

Environmental Assessment Team Leader

**New York City Mayor's Office of Environmental Remediation (MOER) Environmental Consulting Services:** Project Technical Lead Scientist for a multi-site task order based contract to conduct United States Environmental Protection Agency (USEPA)-compliant Environmental Site Assessments (ESAs) and investigations of brownfield sites for the City of New York MOER under a USEPA Brownfield Grant program. LiRo has also been assigned a petroleum tank audit and tightness testing assignment under this contract to evaluate over 600 petroleum tank systems for compliance with State and Federal regulatory requirements. LiRo is currently performing ESA, Phase II investigations, and petroleum tank audits at more than 20 sites.

**Former Trico Plant, NY:** Environmental Project Manager for the Draft Environmental Impact Statement (DGEIS) for the adaptive reuse of a 2.1 acre, six story, multiple building former manufacturing plant located in a downtown urban location in Buffalo, New York. The facility is listed on the National Registry of Historical Places, is in a state of disrepair, and contained asbestos, lead paint, and other hazardous materials. The proposed plan included partial demolition of the historic structures and incorporation of remaining historical buildings into a new technology center. The project required completion of all aspects of the SEQRA process and submission of a DGEIS that incorporated multiple master plans. The project was completed on a very short schedule.

**NYCDDC Remediation Programs:** Mr. Frank was the Project Technical Lead Investigator for the implementation of a comprehensive site investigation and remediation program at over New York City owned petroleum spill sites. Duties included development and implementation of work plans and Investigation Summary and Remedial Plans (ISRPs) to comply with NYSDEC consent order, remedial design development, pilot testing, design analysis reporting, compliance monitoring, and system operation/troubleshooting. For each site, LiRo established the nature and extent of contamination, determined the need for site remediation, performed an evaluation of remedial alternative, and recommended site remedies for NYSDEC approval. Upon approval, LiRo's design team prepared Plans and Specification for the approved alternative, provided New York City with bidding assistance, and provided construction oversight for the remedial system construction.

**Old Highway Garage Redevelopment, Town of Chili, NY –** Mr. Frank was Project Scientist for the Environmental and Planning Consulting Services for decommissioning the Old Highway Garage in the Town of Chili. The Town would like to understand the level of potential environmental concern, plan for future uses that may be appropriate for the site, and develop probable costs associated with decommissioning the Old Highway Garage.

**New York City Housing and Preservation Department (NYCHPD) Environmental Site Assessment and Remedial Design, NY:** Mr. Frank served as Lead Geologist for a multiple site indefinite delivery contract to perform environmental assessments in support of property redevelopment projects conducted by the NYCHPD. Mr. Frank coordinated the investigation and preparation of Phase I ESAs, the implementation of Phase II investigations (including the preparation of Health and Safety Plan (HASP) and Sample Analysis Plan (SAP) documents), vapor intrusion evaluations, and sub-slab vapor barrier system design and construction. Projects included spill sites, uncontrolled waste disposal sites, USEPA Brownfield program sites, and the investigation of chlorinated solvent groundwater contamination in the 40-block Melrose Commons Urban Renewal Area. The Melrose project was conducted using Triad and involved a cooperative effort between USEPA, NYSDEC, New York State Department of Health (NYSDOH) and NYCHPD with LiRo as the lead investigator.

**NYSDEC Standby Contract - Busy Bee Disposal Site, NY:** Project Geologist for the Remedial Investigation/Feasibility Study at the Busy Bee Disposal Site, Alfred, NY Supervised field investigations and completed hydrogeological and chemical transport evaluations at a hilltop landfill with complex bedrock stratigraphy. Responsible for design of specialized wells to monitor multiple water bearing zones while minimizing drilling costs.

## Jeffrey Perkins, PE, PMP

### Project Manager

#### Education

B.S., Civil Engineering, Rochester  
Institute of Technology

#### Licenses/Registrations

Professional Engineer, New York  
Professional Engineer, Pennsylvania

#### Certifications

OSHA 40 Hazwoper

#### PROFESSIONAL PROFILE

Mr. Perkins has successfully managed teams on several design and construction projects that required the integration of multiple architectural and engineering design components. Mr. Perkins has over 25 years consulting engineering experience in a wide variety of areas of infrastructure development services. He has performed engineering on a multitude of private, public, industrial, institutional, and federal campuses up to 300 acre sites. Each of these sites required some level of mapping, planning, grading, drainage, utilities work, landscaping, parking, roadways, and traffic design. His project experience in environmental planning and adaptive reuse includes the Rochester Midtown Plaza utility work, RG&E civil engineering and adaptive reuse evaluation, U of R College Town, and the Old highway Garage in the Town of Chili. Mr. Perkins building and utility design associated with new and re-development projects have included: Heating and/or Cooling Distribution systems; Electrical Distribution and switchgear systems; Electrical Substations; Tele/Data Distribution systems; Gas Distribution systems; Water Distribution systems; Irrigation systems; Sanitary Sewer systems and pumping stations; Storm water management systems; Parking and control systems; Traffic studies; Pedestrian Walks and plazas, landscape and site amenities; athletic and recreational facilities; signage; Surveying and utility locating; Geo-technical investigations and other site design work.

Mr. Perkins is experienced in geological and groundwater contamination studies, RI/FS, contaminant fate and transport modeling, remedial design and construction-phase services, and groundwater remediation systems design. Mr. Perkins is familiar with both EPA and New York State cleanup requirements. He is responsible for senior-level design and implementation of all phases of the hazardous waste site investigation, soil sampling and groundwater monitoring, engineering design, and site remediation. His remedial Site Investigations are targeted toward cost effective and achievable remedial solutions.

#### EXPERIENCE

**Midtown Plaza Redevelopment Project, Rochester, NY** - Midtown Plaza was once the retail center for the Rochester region, opened in 1962 as the nation's first fully enclosed downtown mall. This pioneering development included a 1,820 space underground parking garage, hotel, office buildings, retail shops and restaurants and covered 8.6 acres of prime downtown real estate with over 1 million sq. ft. of vacant space. NY Empire State Development (ESD) has invested \$55 million, along with \$20 million from the City of Rochester for the environmental remediation, removals of the buildings.

Mr. Perkins was a Senior Engineer providing local construction management services to assist with the environmental/demolition phase of the project. The construction management services include community coordination with City Water Bureau, Monroe County Pure Waters, and Rochester Gas and electric public agencies for sewer, water and power utilities during the remediation/demolition phase of the project. Mr. Perkins is providing contractor oversight as agency construction manager coordinating submittals, additional utility engineering, construction/demolition, and record drawings.

**RG&E Beebee and Russell Power Station Demolition and Remediation Design, Rochester NY:** Engineering Project Manager for the demolition and remediation of the retired Beebee Station electric generating station, located on the bank of the Genesee River, and the retired Russell Station coal-fired electric generating station, located at the Southern shore of Lake Ontario. In addition, LiRo conducted an adaptive reuse study of the Beebee Station. The design also included protection of existing switch yard and transmission infrastructure, utility terminations, tunnel closures, access road repairs and site restoration.

**Former Trico Plant, NY:** Project Engineer for the Draft Environmental Impact Statement (DGEIS) for the adaptive reuse of a 2.1 acre, six story, multiple building former manufacturing plant located in a downtown urban location in Buffalo, New York. The facility is listed on the National

## Jeffrey Perkins, PE, PMP

### Project Manager

Registry of Historical Places, is in a state of disrepair, and contained asbestos, lead paint, and other hazardous materials. The proposed plan included partial demolition of the historic structures and incorporation of remaining historical buildings into a new technology center. The project required completion of all aspects of the SEQRA process and submission of a DGEIS that incorporated multiple master plans. The project was completed on a very short schedule.

**College Town Redevelopment, College Town Rochester, LLC, Rochester, NY** - Mr. Perkins was the Project Manager for Environmental Consulting Services for the redevelopment environmental due diligence for the College Town redevelopment project adjacent to the University of Rochester. The developer wanted to understand the level of potential environmental concern, plan for future development and construction, and develop probable costs associated with construction impacted by the recognized environmental conditions at the 16 acre parcel. Work consisted of Phase I & II Environmental Site Assessments including test pits, soil boring and monitoring wells laboratory analysis, and reports recommending cautionary construction recommendations.

**Kodak Demolition Program, Eastman Kodak Company, Rochester, New York** - Eastman Kodak Company once was one of the largest industrial and chemical plants in the US. Kodak Park was over 1000 acres with more than 200 buildings totaling over 15 million square feet of industrial facilities. It included its own power plants, system of roads, and utility services. Engineering design and coordination was necessary for consolidation, relocation, or demolition of buildings at Kodak Park. Utilities needed to be re-routed to maintain service to the remaining operational facilities.

**Parking Lot 54, Eastman Kodak Company, Rochester, NY** - Mr. Perkins was the Senior Engineer for the redevelopment of a Brownfield parcel at Eastman Kodak Company. Parking Lot 54 was constructed on the surface of a NYSDEC-Listed Inactive Hazardous Waste Site. The parking lot was designed to act as a barrier between the subsurface soils and occupied surfaces to minimize risk to human health. Surface water from storm run-off was stored in large subsurface conduits to minimize the potential of contaminant migration into the storm water.

**Old Highway Garage Redevelopment, Town of Chili, NY** – Mr. Perkins is the Project Manager for Environmental and Planning Consulting Services for decommissioning the Old Highway Garage in the Town of Chili. The Town would like to understand the level of potential environmental concern, plan for future uses that may be appropriate for the site, and develop probable costs associated with decommissioning the Old Highway Garage.

The existing Highway Garage was originally constructed in the 1930s with additions in subsequent years including two locations of underground storage tanks for fueling. LiRo recommends that lead, asbestos, hazardous material and subsurface soil sampling be performed to characterize the Site in the immediate vicinity of the existing Highway Garage. The following environmental services will be assessed:

- Phase I & II Environmental Site Assessment
- Hazardous Material Survey
- Facility Condition Survey for Demolition

The Town would like to determine the best and most cost effective use for the Existing Highway Garage facility and use this study as an opportunity to consider the reuse of adjoining Memorial Park with the intent enhancing its inventory of public parklands. This might be accomplished by (1) conversion of the existing Highway Garage structure for community use, (2) extending and reconfiguring the existing park by repurposing adjacent properties under the Town's control, (3) enhancing visibility of, access to and circulation within, and amenities for Memorial Park.

**Pinnacle Road Pump Station Improvements, Monroe County, NY. Project Manager** – Mr. Perkins managed the design renovations of a 2.5MGD pump station for Monroe County to upgrade the existing Pinnacle Road Pump Station to meet flows ranging from today's low flows to the 20-year full build-out peak wet weather flow. The County wanted to have the

## Jeffrey Perkins, PE, PMP

### Project Manager

improvements bring the pump station into the County Category No. 2 Pump Station Standards compliance and minimize future maintenance expense. Site planning included design of grading, drainage, utilities, parking, traffic controls, and landscape architecture that would complement the building architecture. Building design included equipment utility services, HVAC, fire protection, electrical services, lighting, structural and architecture.

**Erie Station Business Park, Henrietta, New York** - Mr. Perkins was the Program Manager for the Erie Station Business Park Program, which consisted of developing a 300-acre light industrial park. The development required relocating the Touring Route of State Route 253 through the industrial park. Traffic studies, extensive drainage studies, wetland mitigation, FEMA flood studies, and individual site developments were also required. Industrial Access Program was utilized. All design considerations supported the full development of a high-end aesthetic business park.

**Department of Public Works Facility Upgrade, Livingston County, New York** - As the Environmental Engineer, Mr. Perkins designed components to separate drainage with the potential of oil contamination from surface water systems as an upgrade on a municipal equipment facility. His responsibilities included evaluating existing storm water and building drainage systems. An independent drainage system was designed to collect contaminated water from floor drains and equipment yard storm water, and an independent storm water collection and conveyance system was also designed for non-contaminated runoff. He attended project progress meetings and prepared appropriate meeting documentation.

**Federal Industries, Albion NY:** Mr. Perkins was the Project Manager for the Site Characterization, Remedial Investigation, Feasibility Study, Remedial Design, and Construction Management phases of this project, which involved the removal of multiple underground storage tanks at this industrial facility. The Construction Management phase of the project included reworking the stockpiled petroleum-contaminated soil into the construction of a passive vapor extraction remediation system.

## Amy Hewson

### Senior Environmental Analyst

#### Education

B.S., Geology/Environmental Science, State University of New York College at Cortland

#### Licenses/Registrations

NYS DOL Asbestos Project Supervisor

USEPA Lead Risk Assessor

#### Certifications

OSHA 40 Hr. HAZWOPER Certified

OSHA 10 Hr. Certified

OSHA 8 Hr. Training

ASTM Environmental Assessments for Commercial Real Estate

#### PROFESSIONAL PROFILE

Ms. Hewson is a Senior Environmental Analyst with over 15 years of experience including managing, coordinating, and supervising environmental investigations and remediation. She has worked primarily on petroleum remediation projects. During her career, she has demonstrated an exceptional ability to manage and coordinate multi-million dollar portfolios. She has been involved with numerous projects involving the New York State Department of Environmental Conservation (NYSDEC), the New York State Thruway Authority (NYSTA), and ExxonMobil Environmental Services (EMES).

Ms. Hewson has been assigned to task-order based contracts performing Phase I and Phase II investigations for property transfer/corridor projects in New York City and New Jersey. Phase I investigations include the collection and evaluation of topographic maps, regulatory database searches, soil/geologic information, historical records, municipal records, aerial photographs, a site reconnaissance, review of all previous site investigation reports, and a report summarizing the findings and recommendations. Phase II investigations include development of a work plan, soil and/or groundwater sampling, testing, and analysis, and reporting of the findings and recommendations.

#### EXPERIENCE

**NYCDDC BEGS Requirements Contract for Environmental Services:** Environmental Scientist for work-order based contract to perform Phase I and Phase II Environmental Site Assessments (ESAs) and corridor studies in support of NYCDDC property acquisition and corridor rehabilitation projects. Ms. Hewson has assisted in completing the Phase I ESAs in accordance with ASTM and client-specific standards. Based upon the Phase I results, Ms. Hewson has also developed and implemented Phase II/Corridor Investigation work plans.

**NYCDDC UST Investigation/Remediation, City-wide New York City:** Environmental Scientist responsible for site coordination, investigation, remedial planning and design and post installation system monitoring, evaluation and optimization for a multi-site long-term project with NYC Department of Design and Construction.

**NYC Mayor's Office of Environmental Remediation (OER):** Environmental Services: Environmental Scientist to perform Phase I and Phase II ESAs in support of OER brownfield programs in NYC. Ms. Hewson has assisted in completing the Phase I ESAs in accordance with ASTM, USEPA Brownfield Assessment Grant Program, and client-specific requirements/standards. Ms. Hewson has also developed and implemented Phase II Investigation work plans.

**Monadnock Construction, Inc.:** Environmental Services: Environmental Scientist to perform Phase I ESAs on multiple properties. Ms. Hewson has assisted in completing the Phase I ESAs in accordance with ASTM, USEPA All Appropriate Inquiry (AAI), and client-specific requirements/standards.

**JetBlue Phase I/II Site Assessments, Geotechnical Investigations and Terminal 5 Redevelopment at JFK International Airport:** Environmental Scientist for the environmental remediation phase of JetBlue's Terminal 5 Development at JFK. The environmental program included the removal of an underground jet fueling system, the demolition of old jet way and hangar structures and the installation of a new fueling system and terminal building as support facilities. The hydrant fueling system work was complicated by the presence of asbestos-wrapped underground fueling system pipe. LiRo also performed an extensive evaluation of "baseline" subsurface conditions to document the nature and extent of pre-existing contamination for JetBlue to incorporate into their lease agreement with the airport owner.

## Amy Hewson

### Senior Environmental Analyst

**Delta Air Lines Terminal 4 Redevelopment at JFK International Airport:** Environmental Scientist for the environmental remediation phase of Delta's Terminal 4 Redevelopment at JFK. The environmental program included the removal of an underground jet fueling system, the installation of a new fueling system and terminal building as support facilities. The hydrant fueling system work was complicated by the presence of asbestos-wrapped underground fueling system pipe.

**Liberty Industrial Finishing, Farmingdale, NY** Project Scientist responsible for developing site remedial plans to support Town acquisition of a former industrial site and redevelopment of the site for public park use. The site was listed on the National Priorities list and has undergone remediation by the Responsible Party (RP) under United States Environmental Protection Agency (USEPA) supervision. LiRo developed excavation and disposal plans, health and safety plans and the Community Air Monitoring Plan (CAMP) that were implemented for the remedial work. In addition, LiRo prepared a Site Management Plan to ensure that future Park construction and maintenance work is conducted in a manner that is protective of workers, the environment and the surrounding community. LiRo also has developed a final engineering report to summarize all of the work completed by Town of Oyster Bay.

**ExxonMobil Account Project Manager:** As the ExxonMobil Environmental Services (EMES) Project Manager for Groundwater and Environmental Services, Inc., Ms. Hewson oversaw, managed, and reviewed all aspects of the EMES retail petroleum remediation account ranging between 21 and 54 projects at various times. She personally managed all aspects of a \$3.4 million dollar remedial excavation, including the coordination with various subcontractors, numerous staff members, the NYSDEC, the NYSTA, and a separate lessee of the facility. The Project Managers role also included developing and tracking annual proposals, change orders, and budgets for all projects within the EMES account totaling over \$5.4 million one year. Ms. Hewson assisted in the development and tracking of an Excel spreadsheet to track monthly spends on each individual project based upon specific categories and forecasted spends on all projects within the account for the next five years. In this role, she had routine communications with the NYSDEC on each project along with other regulators, as needed.

**Vice President, Due Diligence Services:** As the VP of Due Diligence Services: As the VP of Due Diligence Services for Lender Consulting Services, Inc., Ms. Hewson oversaw, managed, and reviewed Phase I, Transaction Screen, and EAQuick ESAs throughout the Northeastern United States for various lending agencies and private organizations. She has personally performed over 5,000 ESAs throughout the Northeastern United States including the collection and evaluation of topographic maps, computer database searches, soil/geologic information, historical records, municipal records, aerial photographs, site reconnaissance, and review of all previous site investigation reports, if available. In this role, Ms. Hewson developed the Policy and Procedures for the Due Diligence Department (DDD) relative to Phase I, Transaction Screen, and EAQuick ESAs. She also created various report templates dependant on client requirements. As a result of this position, Ms. Hewson has extensive experience with ASTM E1527-00 and E1528-00 Standard Practices for ESAs.

## Mitchell Smith

### Project Manager

#### Education

A.A.S., Civil Engineering Technology,  
Monroe Community College

Mechanical Drafting/Architectural  
Design Coursework, Alfred State  
College

#### Certifications

NYS DOL Asbestos Project Designer

NYS DOL Asbestos Project Inspector

NYS DOL Asbestos Air Sample  
Technician

NYS DOL Asbestos Project Monitor

OSHA 40 HAZWOPER Certified

OSHA 10 Certified

#### PROFESSIONAL PROFILE

Mr. Smith has over 25 years of experience in the engineering and environmental disciplines. He has extensive experience performing building assessments, bulk sampling, design, and project monitoring for asbestos abatement projects. His experience in performing environmental audits and site assessments includes site inspections, interviews, research and report writing. In addition, he has also performed construction inspection, OGS conditions surveys, supervised tank excavations, environmental permitting, surveying and CADD drafting.

#### EXPERIENCE

##### St. Michael's School, Village of Newark, NY:

Mr. Smith was responsible for updating an existing asbestos survey for the former St. Michael School which included bulk sampling of materials expected to be impacted by potential renovations/demolition of the existing two story parochial school building. The survey was performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations.

##### Wayne County ECSO Project, Office Building and Court House, NY

Mr. Smith was responsible for updating the existing asbestos surveys on the Wayne County Office Building and Court House which included bulk sampling of materials expected to be impacted by improvements to the heating/cooling system. The surveys were performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations. Mr. Smith also prepared design documents, including drawings and specifications, for the asbestos abatement projects and provided project management to project monitors during abatement.

##### NYS DOT Asbestos Term Contract; Regions 3, 4, 5 & 6:

Mr. Smith is an Environmental Specialist responsible for providing asbestos services for the NYS DOT Asbestos Term Contract; Regions 3, 4, 5 & 6. The contract includes on-demand asbestos surveys, abatement design, item number selection, special notes for the abatement work, site specific variances, and air/project monitoring for NYS DOT transportation projects. Typical projects include asbestos surveys and design services on bridges, culverts and buildings.

##### NYSED Capital Improvement Projects; Bloomfield, Honeoye, Canaseraga, York and Kendall Central School Districts, NY:

Mr. Smith conducted bulk asbestos sampling surveys at several public school districts as part of their pending Capital Improvement Project (CIP). The surveys were performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations. Mr. Smith also prepared design documents, including specifications and drawings, for the asbestos abatement projects.

##### City of Rochester Environmental Term Contract, Rochester, NY:

Mr. Smith performed asbestos sampling and testing, air/project monitoring and mold inspections for a wide variety of City owned buildings ranging from Fire Houses to City Hall. The inspections also included hazardous materials such as PCBs, fluorescent light ballasts, lead based paint, and mercury containing bulbs and switches.

##### Cornell University, Bruckner/Bradfield Utilization Study, Ithaca, NY

Mr. Smith performed a site investigation and hazardous materials assessment for three buildings at Cornell University (Rice Hall, Fernow Hall and Bruckner Lab) for their Bruckner/Bradfield Utilization Study. Asbestos, lead-based paint, PCBs, florescent light ballasts, and oils were sampled and inventoried. He also prepared an Asbestos/ Hazardous Materials Technical Memorandum.

## Mitchell Smith

Project Manager

### **Asbestos Survey, McMahon Hall, Alfred University, Alfred, NY:**

Mr. Smith conducted a limited asbestos survey of portions of this technical building scheduled for major renovations. The survey was performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations. Mr. Smith also designed the asbestos abatement project and coordinated monitoring activities during abatement.

### **Monroe County Public Safety Building, Rochester, NY:**

Mr. Smith provided abatement design for this multi-phase project. Construction cost estimating was provided along with design development with drawings and specifications, bid documents and final construction cost estimates. Administration during construction and construction inspection was also performed. Air monitoring services were conducted and updates to the Asbestos Survey Report were completed.

### **Building Material Surveys, Geneva General Hospital, Geneva, NY:**

Mr. Smith conducted asbestos and lead-based paint surveys at the multiple Geneva General Hospital facilities. The client was planning various levels of renovations to the above buildings. The surveys were performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations. Mr. Smith also designed the asbestos abatement project and coordinated monitoring activities during abatement for the facilities

### **Regulated Building Material Survey, Former St. Jerome Hospital, Bank Street, Batavia, NY**

Mr. Smith conducted an asbestos and regulated building material survey of portions of the six-story former hospital building located in Batavia, New York. The planned renovations included converting the hospital into senior housing. The survey was performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations. Mr. Smith also designed the asbestos abatement project and coordinated monitoring activities during abatement.

### **Regulated Building Material Surveys, 4 High Rise Apartment Buildings, Syracuse, NY**

Mr. Smith conducted an asbestos and regulated building materials survey of four vacant high rise apartment buildings in the City of Syracuse. The client planned to renovate the buildings into new living spaces in these turn-of-the-century buildings. The surveys were performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations.

### **Regulated Building Material Survey, Peet Hall, SUNY Alfred, Alfred, NY**

Mr. Smith conducted an asbestos and regulated building materials survey of eight bathrooms in Peet Hall on the SUNY Alfred campus in Alfred, NY. The clients planned to enlarge and renovate the bathrooms to be ADA compliant. The surveys were performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations.

### **Regulated Building Material Surveys, Nine Buildings Railroad Street, Webster, NY**

Mr. Smith conducted regulated building material surveys on nine separate buildings as part of the large redevelopment project in Webster NY. The building usage varied from residential to light industrial. The surveys were performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations.

### **Regulated Building Material Survey, Fernwood Avenue Facility, Rochester, NY**

Mr. Smith conducted an asbestos and lead survey of a one-story former manufacturing facility building located at 100 Fernwood Avenue in Rochester, New York. The building was scheduled to be demolished as part of a major redevelopment project for the property. The survey was performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations. Mr. Smith also designed the asbestos abatement project and coordinated monitoring activities during abatement.

## **Mitchell Smith**

Project Manager

### **Regulated Building Material Survey, Former Wegman's Meat Processing Center, Rochester, NY**

Mr. Smith conducted an asbestos and regulated building materials survey of the Wegman's Food Market's meat processing facility located in Rochester, New York. The client was planning to demolish the building to provide additional parking at their corporate facility. The survey was performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations. Mr. Smith also designed the asbestos abatement project and coordinated monitoring activities during abatement.

### **Asbestos Survey, Newton Hall, SUNY Geneseo, Geneseo, NY**

Mr. Smith conducted a limited asbestos survey of portions of this lecture hall scheduled for major renovations. The project included interior and exterior portions of the building. The survey was performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations. Mr. Smith also designed the asbestos abatement project and coordinated monitoring activities during abatement.

### **Regulated Building Material Surveys, 368-392 State Street, Rochester, NY**

Mr. Smith conducted asbestos and regulated building material surveys of several buildings scheduled for major renovations along State Street in Rochester, New York. The project included buildings that were 100+ years old and were scheduled for renovation into affordable living apartments. The surveys were performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations. Mr. Smith also designed the asbestos abatement project and coordinated monitoring activities during abatement.

### **Regulated Building Material Surveys, East Avenue Business Corridor, Rochester, NY**

Mr. Smith conducted asbestos and regulated building material surveys of several buildings scheduled for demolition along East Avenue in Rochester, New York. The demolition of the existing buildings was part of Wegman's plan to construct a new store on the properties. The surveys were performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations.

### **Regulated Building Material Survey, St. Ann's Tower, Rochester, NY**

Mr. Smith conducted an asbestos and regulated building materials survey of the 19-story senior assisted living facility located in Rochester, New York. The client was planning to demolish the outdated building to provide additional parking for their newly constructed facility. The survey was performed in accordance with NYS Industrial Code Rule 56 and other applicable regulations.

### **Asbestos Survey, Warehouse Building at 7321 Seneca Road, Hornell, NY**

Mr. Smith conducted an asbestos survey and mold sampling for an interior one-story 11400 square foot warehouse located in the JMart Plaza in Hornell, New York. The survey was performed in accordance with NYS Industrial Code Rule 56. We also included collecting air and bulk samples for mold analysis.

### **Wegmans, Bakery Oven, Rochester, NY**

Mr. Smith performed Asbestos Air-Project Monitoring Services for an insulation project on an oven at a large bakery in Rochester, NY.

### **Roberts Street Complex Middle School, Canastota School District, Canastota, NY**

Performed asbestos sampling, design, and construction administration services for this roof replacement project.

### **Capital Improvement Plan, Pal-Mac Schools**

Opinion of probable cost for asbestos was provided.

## **Mitchell Smith**

### **Project Manager**

#### **Roberts Street Complex – Middle School & High School – Syracuse, NY**

Provided asbestos, design and construction documents for a window replacement project at the Canastota Middle School and minor renovations to the High School in the Canastota Central District. Mr. Smith collected asbestos sampling for the project.

#### **Vinette Tower Phase I Renovation, Syracuse, NY**

Provided asbestos services for the Phase I renovation of the George H. Vinette Tower in Syracuse, NY. The Vinette Tower is an 119,000 square foot, 12-story apartment building. Mr. Smith obtained the asbestos samplings.

#### **Orchard-Whitney Brownfield Investigation, City of Rochester, NY**

Provided environmental services for the Orchard-Whitney Brownfield site for the City of Rochester under the NYSDEC Environmental Restoration Program. Mr. Smith has been responsible for performing hazardous material sampling at the site, including asbestos. Mr. Smith also assisted in preparing project design documents for the asbestos abatement and building demolition portion of the project. Design documents included, drawings, specifications and bid documents.

#### **City of Rochester, Rochester, NY**

Provided asbestos sampling on an as needed basis in miscellaneous buildings for the City of Rochester under a two year environmental assessment term contract.

#### **ADA Renovations at UB North and South Campuses, Buffalo, NY**

Mr. Smith has performed sampling for the on-going services for ADA renovations at the University of Buffalo North and South Campuses. Asbestos design and construction documents are being prepared. A PCB assessment is being conducted. We are also providing site design services for sidewalks and ramps. Construction administration services will also be provided.

#### **SUNY Cortland, Shea Residence Hall, Cortland, NY**

Mr. Smith is performing asbestos abatement design services for the Shea Residence Hall at SUNY Cortland under a DASNY term contract. He has prepared abatement plans using Cadd and reviewed drawings.

#### **Hall of Justice, Street Level Test Lab & 2nd Floor, Rochester, NY**

Mr. Smith is conducting a room-by-room visual survey and collecting asbestos bulk samples for the Phase 2 of the Hall of Justice Building - Street Level Test Lab Building and the second floor of the Hall of Justice. Technical Memorandums will be developed as well as asbestos removal plans, construction cost estimates.

#### **Empire State Plaza Performing Arts Center, Albany, NY**

Mr. Smith performed an asbestos assessment at the Empire State Plaza Performing Arts Center in Albany, NY. The assessment included a site inspection and an Asbestos Assessment Report with design recommendations. He will also develop abatement design and provide construction administration services for the project.

#### **Piez and Snygg Halls, Oswego, NY**

Prepared a Hazardous Materials Assessment at Piez and Snygg Halls at the SUNY Oswego campus. The State University Construction Fund is conducting a Program Study for Science and Technology, Phase 1. A room-by-room visual inspection was conducted of the interiors to identify suspect materials not previously identified. Bulk sampling locations were recommended for suspect asbestos, hazardous, PCB and lead based materials. A visual inspection of the exterior of the buildings was conducted.. A technical memorandum reporting the findings will be prepared, he will discuss potential hazardous-related construction impacts, and make appropriate recommendations for construction alternatives to minimize the amount of abatement necessary.

## **Mitchell Smith**

### **Project Manager**

Mr. Smith will evaluate four alternatives: renovation of Snygg and Piez Halls, selected demolition and replacement with new construction, complete demolition and replacement with new construction, and the "do nothing." Asbestos location plans for both buildings will be developed. Overall quantities of removal shall be developed for each alternative. During the Architectural Concept Phase, Mr. Smith will provide broad based asbestos impact plans for the preferred alternative, with drawings and a cost estimate.

#### **Maplewood Library, City of Rochester, NY**

Mr. Smith updated the asbestos survey at the City of Rochester Maplewood Library. The library will be undergoing renovations and suspect materials were present in the building that required sampling and testing. The Asbestos Management Plan was updated and submitted to the City of Rochester.

#### **Former Hess Station, Fairport, NY**

Mr. Smith performed an Asbestos Pre-demolition Survey at a former gasoline service station located in Fairport, NY. The survey included a site inspection and sampling of suspect asbestos containing material. Developed a report which included a summary of the laboratory analytical results and an asbestos abatement cost estimate.

#### **Rochester School for the Deaf, Vacant House, Rochester, NY**

Mr. Smith conducted the project monitoring for the Rochester School for the Deaf asbestos pre-demolition survey, survey services, and site design for a 2-story vacant house located north of the campus. Asbestos inspection, sampling and analysis was performed, and a topographic survey was completed. The survey was for the complete lot, with major emphasis was placed on the large drainage swale west of the lot.

#### **Finger Lakes DDSO, Newark, NY**

Provided oversight for the removal of approximately 37,750 gallons of #6 fuel oil from two underground storage tanks (USTs) at the Finger Lakes Developmental Disabilities Service Office (DDSO) complex located on East Maple Avenue in Newark, NY. Mr. Smith assisted with the preparation of the cost estimate for asbestos removal with the UST holding area.

#### **Auburn Correctional Facility, Auburn, NY**

Mr. Smith performed a hazardous materials survey and sampling for NYS Office of General Services at the Auburn Correctional Facility in Auburn, NY. The OGS was planning to replace heating, plumbing and electrical systems in Building 7. Mr. Smith conducted a visual survey and collected bulk samples for asbestos and lead based paint. He also conducted an inspection for PCBs, fluorescent light ballasts, mercury containing bulbs, lubricating oils/motor oils, and ink/solvent storage areas in areas that are to be impacted by future work. He developed design abatement documents and a cost estimate.

#### **Town of Greece Dept. of Public Works/Court Justice Facility, Greece, NY**

Mr. Smith performed an asbestos survey at the Town of Greece Department of Public Works building on Long Pond Road. The building was being renovated and an addition for the Court Justice Facility was being planned. Suspect asbestos materials were identified collected. Mr. Smith also prepared the Asbestos Technical Memorandum.

#### **Huntington Administration Bldg. 64, SUNY Alfred, NY**

Mr. Smith provided asbestos services for asbestos identification in accordance with the guidelines in State University Construction Fund (SUCF) Program Directives. The SUCF needed to conduct a Program Study for potential rehabilitation of Huntington Administration Building No. 64 at SUNY College of Technology at Alfred. Mr. Smith reviewed existing information, conducted a room-by-room site inspection, collected bulk samples, developed construction cost estimates and technical

## **Mitchell Smith**

### **Project Manager**

memorandum with construction alternatives designed to minimize the amount of abatement needed.

#### **15 & 17 Seabrook Street, City of Rochester, NY**

Mr. Smith provided asbestos engineering services on an emergency basis at 15 & 17 Seabrook Street for the City of Rochester. Suspect asbestos containing materials were discovered on this vacant property. He collected samples, developed abatement design, developed and submitted a NYSDOL Site Specific Variance application, provided construction administration services, and construction inspection services with project/air monitoring services.

#### **Convenient Store, Weedsport, NY**

Mr. Smith performed asbestos pre-demolition survey for a house and convenient store structures for the site of a new Pit Stop Convenient Store in Weedsport, NY. He also developed the pre-demolition report.

#### **Alstom, Hornell, NY**

Mr. Smith performed an Asbestos Pre-Demolition Survey of a one-story warehouse building at Plant 1 (Car Shop) at Alstom Transport in Hornell, NY. A site inspection and sampling was conducted and a written report was prepared.

#### **Colgate Divinity School, Rochester, NY**

Mr. Smith provided construction administration services, including attending design and pre-bid meetings. He also provided construction inspection services with project and air monitoring during the asbestos abatement project at the Colgate Rochester Crozer Divinity School in Rochester, NY.

#### **83 Seneca Street, Geneva, NY**

Mr. Smith provided asbestos air/project monitoring services at 83 Seneca Street in Geneva, NY for Ontario County.

#### **2835 Ridge Road West, Greece, NY**

Project Monitor for asbestos air/project monitoring services at 2835 Ridge Road in Greece, NY, a former nail salon in Wegman's Plaza.

#### **East Bloomfield School District, 2006 Capital Improvements, Bloomfield, NY**

Mr. Smith performed construction administration services for the East Bloomfield Central School District 2006 Capital Improvement Project. The asbestos project was at the elementary school.

#### **Syracuse School District, 7 Schools, Syracuse, NY**

Provided asbestos assessment, design and construction administration services at seven schools in the Syracuse City School District. Five schools are replacing the boilers and two schools are replacing the chillers. Mr. Smith reviewed submittals from asbestos abatement contractor as part of the project closeout.

#### **University of Buffalo, Renovation of Goodyear Hall, Buffalo, NY**

Mr. Smith served as the Senior Environmental Technician to assist the Design Engineer during renovation of Goodyear Hall at the University of Buffalo. Mr. Smith completed an Asbestos Containing Material (ACM) investigation that was to identify, locate and quantify potential ACMs in the Mezzanine Mechanical Room, Dining Hall and Kitchen prior to proposed renovations. He reviewed the available as-constructed drawings, conducted sampling, arranged for and reviewed analytical testing, and prepared an ACM summary report. In addition, Mr. Smith also prepared bid documents that included construction drawings and cost estimates for asbestos containing materials.

## **Mitchell Smith**

Project Manager

### **SUNY Brockport Allen Hall/Faculty Office Building and Morgan Hall, Brockport, Monroe County, NY**

This project involved conducting Asbestos Containing Material investigations for Allen/Faculty Office Building and Morgan Hall projects at SUNY Brockport. The investigations identified and located potential ACMs on the building exterior (Allen/FOB) and on the roof (Morgan Hall) prior to reconstruction. Mr. Smith reviewed available as-constructed drawings, developed a sampling plan, conducted site reconnaissance and sampling, directed analytical testing, and prepared an ACM summary report. The summary report also provided recommendations for ACM abatement and cost estimates.

### **English Village Apartments, Town of Greece, Monroe County, NY**

An Asbestos Containing Material (ACM) evaluation was required in conjunction with a major building and facility upgrade and rehabilitation at this 200+ apartment complex. Mr. Smith supported the design team in conducting sampling activities for suspect asbestos containing joint compound in both occupied and unoccupied apartments within the complex.

### **Term Agreement for Asbestos Abatement and Remediation Design, NYSDOT Regions 3, 4, 5, & 6**

Performed preliminary screening, site investigation, and project monitoring to identify the presence of asbestos on transportation project sites. Preliminary screening involved the review of as-built drawings, interviewing appropriate personnel, and conducting visual inspections to determine the existence of suspected asbestos containing materials. If a site investigation was required, bulk samples were collected and tested and an investigation report prepared. For this agreement, the prime consultant performed abatement design. Mr. Smith also conducted compliance air monitoring and prepared reports during the abatement work, as part of project monitoring tasks required to ensure that the abatement contractor complied with applicable regulations and specifications. Project sites include:

- Bridge over Salmon Creek, Lake Ontario State Parkway, Rochester
- Bridge over Conrail, Route 104, Oswego
- Bridge over New York State Canal, Clinton Street, Newark
- Veterans Memorial Bridge, Keeler Street Expressway, Rochester
- Bridge over Frews Run, Frewsburg
- Demolition of Two Buildings, Route 19, Belfast
- Bridges on NYS Route 81, Syracuse
- Moyers Corners, Baldwinsville
- Interstate 81 over Route 11, Mattydale

### **Hertel Avenue Reconstruction, City of Buffalo, Erie County, Pass Through Project, NYSDOT Region 5**

This locally administered street rehabilitation project was funded through NYSDOT. Environmental project activities include field identification and delineation of wetlands, general ecology and endangered species field investigations and evaluations, noise and air quality evaluations, 4(f) and 6(f) sites, historic structures and cultural resources, and social and economic issues evaluations. Mr. Smith performed an Asbestos Containing Materials Assessment that included on-site observation and an evaluation and assessment of basement areaways. The field investigations and evaluations were summarized in the project Design Report.

### **DASNY property located in Scottsville, NY**

Mr. Smith acted as the NYSDOL certified Asbestos Project Monitor and Air Monitor at this DASNY controlled residential property (DDSO). Mr. Smith was responsible for conducting compliance air monitoring and prepared reports during the abatement work. As part of project monitoring tasks, Mr. Smith was required to ensure that the abatement contractor complied with applicable regulations and specifications.

## **Mitchell Smith**

Project Manager

### **Newark DDSO, Asbestos and Contaminated Material Investigation, Newark, NY**

Mr. Smith was part of an ACM and contaminated material investigation for the pre-demolition study at the former Newark DDSO facility. The study was conducted to evaluate the environmental condition at 12 buildings scheduled for demolition. Tasks included planning and implementing the field investigations, arranging for summarizing analytical laboratory data, development of the abatement/removal quantity and cost estimates, and preparation of technical specifications for ACMs, PCBs, herbicides and pesticides, and lead. In addition, Mr. Smith completed a subsurface investigation for VOCs and petroleum products in the area of prior use at the site, and prepared a summary report. Contract documents were prepared, including technical specifications and drawings, for ACM and lead abatement and soil remediation and assistance during construction activities was provided.

### **Erie and Champlain Canal Lock Evaluations, New York State Thruway Authority**

Mr. Smith served as the Environmental Technician for the environmental evaluations for the remediation of lock C5 and E6 on the Champlain and Erie Canals, respectively. He performed the field investigations to determine the possible presence of potential lead paint and asbestos containing materials at the existing lock sites. Mr. Smith analyzed lab results and the prepared an Asbestos and Lead Survey report for the Thruway Authority.

### **Ridgeway Avenue, Kodak Bridge to Rochester City Line, City of Rochester, NY**

This project involved the reconstruction of 0.5 miles of Ridgeway Avenue and associated investigations to determine the potential for encountering asbestos containing materials in areas affected by the proposed construction. A preliminary screening, visual site investigation, and preparation of a summary report were performed.

### **Ireland Road Bridge over Salmon Creek; Conrail Bridge over Route 104, Oswego; and Lake Ontario State Parkway Over Salmon Creek, NYSDOT Regions 3 and 4**

These projects involved bridge inspections and review of record plans to determine the presence of asbestos containing materials on projects requiring bridge rehabilitation. A summary report was also prepared.

## **GROUNDWATER**

### **AAA Rochester Facility, Rochester, NY**

This project involved overseeing quarterly groundwater monitoring on five monitoring wells at the former AAA of Rochester facility. Mr. Smith was responsible for reviewing past quarterly reports, coordinating sampling equipment, and sampling five monitoring wells. After collection, Mr. Smith reviewed and compiled the analytical data and prepared a quarterly groundwater monitoring report that was submitted to NYSDEC Region 8.

## **ENVIRONMENTAL**

### **JOSANA Phase I ESA, Rochester Housing Authority, Rochester, NY**

Mr. Smith performed Phase I ESAs on 18 former residential lots in the Jay/Orange Street area of Rochester, NY as part of a downtown housing revitalization project for the Rochester Housing Authority.

### **Three Phase I ESA's, City of Rochester, NY**

Mr. Smith performed a Phase I Environmental Site Assessment at three sites in the City of Rochester: 175 Alphonse Street is a one-story small brick building - may have been an auto repair shop and dry cleaning facility; 49 Daus Alley, a 2400 square foot building - formerly an auto repair shop, and 10-12 Ontario Street - may have been a dry cleaning facility.

## **Mitchell Smith**

### **Project Manager**

#### **Phase I ESA – 20 Lamont Place, Rochester, NY**

Mr. Smith conducted and prepared a Phase I ESA Report on site located at 20 Lamont Place, Rochester, NY. The site is a 2-story wood frame residential structure located at the end of a dead-end street.

#### **Verona Test Site, Oneida County, NY**

Mr. Smith performed a monitored natural attenuation study at the Verona Test Site of the Rome Research Site for the U.S. Air Force. This project is a continuation of previous quarterly groundwater monitoring at Buildings 1231 and 1253. Mr. Smith is also providing a site-specific geographic information system (GIS) to facilitate access to past, current and future data, trend analyses and related information regarding the Verona Solid Waste Management Unit. All geospatial information was compiled and evaluated to create an interactive map and/or aerial photograph-based interface to allow past, present and future analytical information to be queried and accessed. Quarterly monitoring reports following the guidelines set in Rome Research Site's Operations Monitoring and Maintenance Plan will be prepared. In 2007 NYSDER Approved the Interim Remediation Measures (IRM) plan. As part of the team, Mr. Smith utilized Spatial Analyst to calculate contamination plumes and volumes for removal.

#### **Rush Landfill Monitoring, Rush, NY**

Conducted leachate monitoring at the Rush Landfill site three times per week since the project began in late 1997. Scope of work includes weekly monitoring of landfill leachate and oversee hauling and disposal of leachate to onsite discharge point (sanitary sewer). Leachate interceptors are monitored for depth on each visit. If pumping is necessary, the on-site vac truck pumps the interceptor and discharges into the sanitary sewer. Mr. Smith is one of the team members that provides this monitoring.

#### **Cayuga Waterfront Trail Phase 2, City of Ithaca, Tompkins County, NY**

Mr. Smith was Senior Technician responsible for the environmental tasks for this trail extending from the First Phase of the Cayuga Waterfront Trail in Cass Park to the intersection of Third Street and NYS Route 13, with a spur reaching from the Farmers Market on the eastern bank of the Cayuga Inlet to NYS Route 13. The approximately 1-mile trail alignment crosses the Flood Control Channel and Cascadilla Creek. Mr. Smith was is responsible for preparation of SEQRA documentation and environmental screening, including threatened and endangered species, federal and state jurisdictional wetlands, and Hazardous Waste/Contaminated Materials and Asbestos Containing Materials, and providing assistance with preparation of the Design Approval Documents.

#### **Term Agreement for Trails, NYS Thruway Authority**

Under this term agreement responsibilities included environmental screening and permitting for multiple trails including the Minden to Finks Basis, Fort Edward to Ilion, and Canastota to Rome segments. As Project Manager, Mr. Smith conducted project activities including identification and delineation of federal and state jurisdictional wetlands along the trails and preparation of permit applications to the NYSDEC and USACE for wetland activities, as necessary. He also completed the environmental screening for potential Hazardous Waste/Contaminated Materials at proposed trail camping and parking improvement areas, and provided assistance with preparation of the Design Approval Documents. Additionally, Mr. Smith prepared SEQRA documentation and NYSDEC SPDES permit applications.

#### **Local Design Service Agreements; Various Sites, NYSDOT Regions 4, 5 and 6**

Mr. Smith has conducted environmental screening and review for numerous Local Design Service Agreement (LDSA) highway and bridge assignments. In this role, he has been responsible for the completion of the NEPA/SEQR studies, environmental screening, detailed environmental studies, and permitting for over 25 bridge and highway projects throughout NYSDOT Regions 4, 5, and 6.

## Mitchell Smith

### Project Manager

Through these assignments he is familiar with the Local Pass-Through project processes, procedures and requirements.

#### **Phase I Environmental Site Assessments, Various Locations and Clients in New York State**

Mr. Smith has conducted Phase I Environmental Site Assessments (ESAs) for private industry, school districts, lending institutions, and legal counsel. ESAs have been completed for retail and commercial facilities. During the ESAs, he has arranged for, reviewed, compiled environmental database information, conducted site reconnaissance, conducted interviews, and prepared the ESA reports. Notable project assignments included the Clyde Southside Waterfront Park in the Village of Clyde, the Proposed Bona-Dent, Inc. Facility in Seneca Falls, and three parcels for the Canastota Central School District in Canastota, NY.

#### **REMEDIATION**

##### **Former Gas Station Remediation, City of Rochester, Monroe County, NY**

Mr. Smith conducted the field investigations as part of site remediation at two former gasoline dispensing station facilities in the City of Rochester. The project funded by the NYSDEC Title 5 Clean Water/Clean Air Act, included site investigations and remediation activities. The project is a brownfield type project that resulted in the remediation of the two former gasoline station sites. Mr. Smith conducted the field investigations (geoprobe investigation and soil vapor survey) as well as onsite construction monitoring during tank and contaminated soil excavation and removal.

##### **Term Agreement for Miscellaneous Hazardous Materials Assessment and Remediation, Design Services, NYSDOT Regions 3, 4, 5, and 6**

Mr. Smith performed project site layout, GPR and SVS monitoring, and soil sampling for laboratory analysis to identify the presence of hazardous materials on transportation project sites. Project site layout involved an initial site visit to stakeout sampling locations and to coordinate utility clearances prior to drilling. GPR (Ground Penetrating Radar) operations were conducted to identify below grade utilities and underground storage tanks (USTs) that existing utility as-builts did not indicate. The SVS (Soil Vapor Study) included geoprobe drill holes and field screening using a photoionizer detector (PID). Soil sampling was performed in areas of the project site when SVS monitoring indicated the possible presence of volatile organic compounds. Representative soil samples were collected and delivered to a laboratory for analysis. Compiled and reviewed analytical laboratory test data for comparison to appropriate regulatory guidelines. In addition, Mr. Smith assisted with development of remedial action plans, if required, and site summary reports. Project sites include:

- Routes 31/98, Albion
- Routes 20A and 15, Livonia
- Route 15, Henrietta
- Routes 441 and 250, Penfield
- South Main Street, Geneva
- Rochester – East Residency, East Rochester
- Main Street, Caledonia
- Genesee Street, Cheektowaga
- Millersport Highway and Bailey Avenue, Amherst
- Millersport Highway and North Forest Road, Amherst
- Route 5 and 179, Hamburg
- Route 173 over Butternut Creek, Jamesville
- Union Road, Cheektowaga
- Latta Road Construction Phase, Rochester

## Mitchell Smith

Project Manager

### HAZARDOUS WASTE

#### **Hazardous Waste and Contaminated Material Assessments, Various Locations, NYSDOT**

Mr. Smith has conducted Hazardous Waste and Contaminated Material Assessments for NYSDOT, County, and City projects at various locations throughout western New York. Project responsibilities included data and file research pertaining to site ownership and previous use history, collection and compilation of appropriate database information, site reconnaissance, areaway inspection, development of multi-media sampling plans, and preparation of appropriate DR/EA report text. Notable projects included:

- Reconstruction of Hertel Avenue in Buffalo
- Ford Street Bridge in Rochester
- Route 30 over Schoharie Creek in North Blenheim
- Smith Road bridge over Black Creek in Amherst
- Cheese Factory Road Bridge in Honeoye Falls

#### **Waterwheel at Brown's Race, Historic Browns' Race District, Rochester, NY**

Mr. Smith performed a Hazardous Materials investigation of the Waterwheel, and associated housing pit, located in the Historic Brown's Race District in Rochester, NY. The investigation included inspection of the Waterwheel and identification of potential hazardous materials concerns. Information collected during the investigation was included in a Trip Report, which included recommended sampling.

### WATER / WASTE WATER

#### **OGS-MRB, Ogdensburg Correctional Facility, Ogdensburg, NY**

Performed sanitary sewer smoke testing and manhole inspections at the Ogdensburg Correctional Facility, providing video of positive pressure smoke testing. Digital photographs of each manhole inspected was provided along with a completed check list.

### TRANSPORTATION

#### **Buffalo Traffic Signal Coordination Study, Erie and Niagara Counties, NYSDOT Region 5**

This project involved the analyses of the traffic signal systems in and around downtown Buffalo as well as the urban area of Niagara County. As a Traffic Technician, Mr. Smith performed the initial site visit to begin the analysis process. Responsibilities included verifying intersection geometry, data collection, and video taping for before/after evaluations of speed/delay runs. Other tasks included drafting intersection flow diagrams and reducing data to be incorporated into diagrams.

#### **Route 3 over Salmon River, Town of Pulaski, Oswego County, NYSDOT Region 3**

Project involved survey, mapping, and environmental studies along a one-kilometer section of Route 3 and two bridges over the Salmon River. Mr. Smith drafted intersection flow diagrams from information provided to the engineers. Other tasks included traffic count monitoring using a hand-held JAMAR counter, traffic data collection, downloading information for further analysis, and organizing personnel.

#### **Main Street over Ausable River, Town of Keeseville, Clinton and Essex Counties, NYSDOT Region 7**

As a historically-significant structure, this bridge is a single span, masonry arch built in 1842 with no major work being done since. Main Street is a village street, with the bridge being jointly owned by Clinton County and Essex County. Clinton County maintains the bridge. This bridge is being considered for rehabilitation and preservation based on its physical condition. The project objective is to extend the structure's useful life and preserve the bridge's historical integrity. For this project, Mr. Smith performed CADD drafting in Microstation and prepared a Hazardous Waste Assessment report, involving research of town, county, and state records.

## **Mitchell Smith**

Project Manager

### **NYS Route 17C Bridge over Conrail, City of Owego, Tioga County, RDSA, NYSDOT Region 6**

This project replaced a deteriorating thru-plate girder bridge carrying Route 17C over a mainline Conrail railroad line along the Susquehanna River in Owego. The project involved final design tasks associated with traffic improvements on the new bridge approach highway. Project involved Phase V-VI highway design, with bridge plans being prepared by the NYSDOT. Mr. Smith revised CADD drawings using Microstation.

### **Rochester Light Rail Economic Feasibility Study, City of Rochester, NY**

This project involved the identification and evaluation of the social and economic aspects of this corridor feasibility study. Tasks included evaluation of the existing corridor attributes such as neighborhood profiles, locating civic centers, projecting economic development trends in the context of existing land use, identifying recreational uses along the corridor and evaluating other social impacts and factors associated with the proposed corridor. Mr. Smith researched city and county records in preparing the Feasibility Study Report. He also assisted with CADD drafting in Microstation.

### **Stutson Street Bridge Replacement over the Genesee River, City of Rochester, Monroe County, NYSDOT Region 4**

This project involved the replacement of a deteriorating lift bridge with a new elevated bascule bridge over the Genesee River. Primary involvement in the survey, mapping, profile design, 3-D modeling in InExpress, design of multiple drainage systems, maintenance jurisdiction plans, maintenance of traffic plans, all traffic features including traffic signals and an extensive storm water pollution prevention plan. The approach highways and associated streets consisted of City streets, Town streets, County highways, State highways, and a State Parkway. All highways and design features were adapted to the maintaining agency standards. Mr. Smith was responsible for erosion control design and CADD drafting.

### **Joseph Avenue, City of Rochester, NY**

This project involved planning and preliminary and final engineering for the rehabilitation of Joseph Avenue in the City of Rochester. Mr. Smith assisted with design and preparation of maintenance and protection of traffic plans using Microstation.

### **St. Paul Street at the Inner Loop, City of Rochester, Monroe County, Pass Through Project, NYSDOT Region 4**

The project consisted of the rehabilitation and widening of an existing Inner Loop off ramp at St. Paul Street on the north side of the City of Rochester Central Business District. The work included the replacement of traffic signs, markings, and traffic signal equipment in addition to new sidewalks curbs and guiderail. Mr. Smith prepared a Condition Survey of signs, curbs and sidewalks.

## **SITE ENGINEERING**

### **Deer Run Industrial Park, Seneca County Industrial Development Agency, NY**

This project involved the development of a 15-acre industrial park. Mr. Smith was responsible for tabulating, calculating, and preparing an engineer's estimate spreadsheet for utility placement and construction costs for the site. Other tasks included CADD design for site development.

### **SUNY Brockport, AB1 Parking Lot, Brockport, NY**

Responsibilities on this project included CADD Drafting in Microstation, designing the layout of spaces, and grading.

## **Mitchell Smith**

### **Project Manager**

#### **Scepter Industries, Village of Seneca Falls, NY**

This project involved site plan design for a \$7M aluminum smelting and recycling facility. Mr. Smith's tasks for this project included grading design, erosion control design, and CADD Drafting in Microstation.

#### **CONSTRUCTION INSPECTION**

#### **Victor Road Project, Town of Victor, Monroe County DOT**

This project involved the reconstruction of approximately 5 miles of Victor Road. Mr. Smith's responsibilities included on-site construction inspection of utilities and pavement reconstruction. He completed inspection logbooks and forms daily.

#### **Shannon Glen Subdivision, Town of Perinton, Monroe County, NY**

Project consisted of overseeing the installation of a 3-acre detention/retention pond to handle storm runoff from a 50-lot subdivision. Inspection included earthwork quantities, installation of a concrete drainage gutter and 60-inch c.m.p., final grading, and seeding to enhance the pond for the subdivision common area.

#### **Canandaigua Classics Subdivision, Village of Canandaigua, Ontario County, NY**

Inspector for the installation of approximately 1000 feet of road with drainage weeps, multiple lifts and granite curbing, including handicapped accessibility at street crossings in accordance with ADA requirements. Mr. Smith oversaw construction crews, maintained quality and consistency, and monitored pay items and receipts.

#### **Rochester Block Corporation, Town of Victor, Monroe County, NY**

This project involved the construction of a 5-acre retention pond. Mr. Smith's duties included inspection of earthwork, tree clearing in a densely wooded area, and compliance with town and state standards involving a tributary running near the project. Also provided soil testing which included sieve analysis and compaction tests.

#### **Erie Canal Industrial Park, City of Rochester, Monroe County, NY**

This project involved the development of a 2-acre industrial site in the City of Rochester. Project tasks involved total site design of the parcel including utility, drainage, earthwork, and building layout. Mr. Smith provided construction inspection services.

#### **Avian Landing Subdivision, Town of Perinton, Monroe County, NY**

Inspector for this 31-lot subdivision project involving the installation of approximately 1,400 feet of road with drainage weeps, multiple lifts, and concrete gutter curbing. Mr. Smith also oversaw the installation of utilities (sanitary, storm, and water mains) and monitored pay items and receipts.

#### **Private Sanitary Septic System Inspection, Counties of Monroe, Ontario, Wayne, NY**

Mr. Smith provided inspection for the placement of new private sanitary septic systems, including laterals, tanks, and drop/distribution boxes.

#### **SURVEYING**

Mr. Smith's surveying background includes utility stakeouts, boundary surveys, and instrument locations while being a survey crew instrument man. His computer aided design and drafting experience includes software such as COGO, AutoCAD, Eagle Point, and Microstation. Familiarity with various town, county, and state applications include preparing letters to clients, engineering estimates, and contractor bid sheets.

## **Mitchell Smith**

Project Manager

### **INDOOR AIR QUALITY**

#### **SUNY Geneseo – Wyoming Air/Project Monitoring – Geneseo, NY**

Mr. Smith provided air and project monitoring regarding asbestos at SUNY Geneseo-Wyoming for the Dormitory Authority; DASNY at Holcomb Building, Geneseo, NY.

#### **East Rochester Elementary & Middle School, East Rochester, NY**

Mr. Smith performed an Indoor Air Quality Study at the East Rochester Elementary and Middle School located in East Rochester NY. The study included a qualitative and quantitative investigation of designated areas recommended by a school district representative. The results of both investigations were summarized in a report, which included corrective measures and recommendations to manage the school's indoor air quality issues.

### **CADD DRAFTING**

#### **Niagara Falls Boulevard, Erie County, NYSDOT Region 5**

This project involved the reconstruction of a 1.3-mile section of Niagara Falls Boulevard. Tasks included new sign design and layout, and redesign/relocation of sanitary sewer and water main in the Town of Amherst. Mr. Smith provided CADD drafting using Microstation.

#### **Norwich CIT, Site Feasibility Study, Highway and Sanitary Sewer Design, Chenango County, NYS Dormitory Authority**

The Dormitory Authority of the State of New York contracted with a team of consultants to evaluate a remote, wooded site in the hill country west of Norwich, New York. Mr. Smith's tasks included CADD drafting.

#### **Latta Road, Town of Greece, Monroe County, NYSDOT Region 4**

This project involved the reconstruction of a 5-mile section of Latta Road. Tasks include new sign design and layout for the project and CADD drafting using Microstation.

#### **NYS Route 104 / Keeler Street Expressway, City of Rochester, RDSA, NYSDOT Region 4**

This project involved the planning and design of an intersection for a new spur ramp and traffic signal at St. Paul Street. Mr. Smith responsibilities included CADD drafting using Microstation.

#### **Improvements to Route 5 & 249, Village of Farnham, Erie County, NYSDOT Region 5**

This project involved the reconstruction and overlay of 1.7 miles of Route 249 and widening along 4.1 miles of Route 5. Mr. Smith responsibilities included CADD drafting using Microstation.

#### **Route 48, Village of Baldwinsville, Onondaga County, NYSDOT Region 3**

This project involved design Phases I VI for three bridges and adjacent sections of Route 48. Mr. Smith responsibilities included CADD drafting using Microstation.

## Mitchell Smith

### Project Manager

#### Education

A.A.S., Civil Engineering Technology,  
Monroe Community College

Mechanical Drafting/Architectural  
Design Coursework, Alfred State  
College

#### Certifications

NYS DOL Asbestos Project Designer

NYS DOL Asbestos Project Inspector

NYS DOL Asbestos Air Sample  
Technician

NYS DOL Asbestos Project Monitor

OSHA 40 HAZWOPER Certified

OSHA 10 Certified

#### PROFESSIONAL PROFILE

Mr. Smith has over 25 years of experience in the engineering and environmental disciplines. He has extensive experience performing building assessments, bulk sampling, design, and project monitoring for asbestos abatement projects. His experience in performing environmental audits and site assessments includes site inspections, interviews, research and report writing. In addition, he has also performed construction inspection, OGS conditions surveys, supervised tank excavations, environmental permitting, surveying and CADD drafting.

#### EXPERIENCE

##### JOSANA Phase I ESA, Rochester Housing Authority, Rochester, NY

Mr. Smith performed Phase I ESAs on 18 former residential lots in the Jay/Orange Street area of Rochester, NY as part of a downtown housing revitalization project for the Rochester Housing Authority.

##### Three Phase I ESA's, City of Rochester, NY

Mr. Smith performed a Phase I Environmental Site Assessment at three sites in the City of Rochester: 175 Alphonse Street is a one-story small brick building - may have been an auto repair shop and dry cleaning facility; 49 Daus Alley, a 2400 square foot building - formerly an auto repair shop, and 10-12 Ontario Street - may have been a dry cleaning facility.

##### Phase I ESA - 20 Lamont Place, Rochester, NY

Mr. Smith conducted and prepared a Phase I ESA Report on site located at 20 Lamont Place, Rochester, NY. The site is a 2-story wood frame residential structure located at the end of a dead-end street.

##### Verona Test Site, Oneida County, NY

Mr. Smith performed a monitored natural attenuation study at the Verona Test Site of the Rome Research Site for the U.S. Air Force. This project is a continuation of previous quarterly groundwater monitoring at Buildings 1231 and 1253. Mr. Smith is also providing a site-specific geographic information system (GIS) to facilitate access to past, current and future data, trend analyses and related information regarding the Verona Solid Waste Management Unit. All geospatial information was compiled and evaluated to create an interactive map and/or aerial photograph-based interface to allow past, present and future analytical information to be queried and accessed. Quarterly monitoring reports following the guidelines set in Rome Research Site's Operations Monitoring and Maintenance Plan will be prepared. In 2007 NYSDDED Approved the Interim Remediation Measures (IRM) plan. As part of the team, Mr. Smith utilized Spatial Analyst to calculate contamination plumes and volumes for removal.

##### Rush Landfill Monitoring, Rush, NY

Conducted leachate monitoring at the Rush Landfill site three times per week since the project began in late 1997. Scope of work includes weekly monitoring of landfill leachate and oversee hauling and disposal of leachate to onsite discharge point (sanitary sewer). Leachate interceptors are monitored for depth on each visit. If pumping is necessary, the on-site vac truck pumps the interceptor and discharges into the sanitary sewer. Mr. Smith is one of the team members that provides this monitoring.

##### Cayuga Waterfront Trail Phase 2, City of Ithaca, Tompkins County, NY

Mr. Smith was Senior Technician responsible for the environmental tasks for this trail extending from the First Phase of the Cayuga Waterfront Trail in Cass Park to the intersection of Third Street and NYS Route 13, with a spur reaching from the Farmers Market on the eastern bank of the Cayuga Inlet to NYS Route 13. The approximately 1-mile trail alignment crosses the Flood Control

## Mitchell Smith

### Project Manager

Channel and Cascadilla Creek. Mr. Smith was is responsible for preparation of SEQRA documentation and environmental screening, including threatened and endangered species, federal and state jurisdictional wetlands, and Hazardous Waste/Contaminated Materials and Asbestos Containing Materials, and providing assistance with preparation of the Design Approval Documents.

#### **Term Agreement for Trails, NYS Thruway Authority**

Under this term agreement responsibilities included environmental screening and permitting for multiple trails including the Minden to Finks Basis, Fort Edward to Ilion, and Canastota to Rome segments. As Project Manager, Mr. Smith conducted project activities including identification and delineation of federal and state jurisdictional wetlands along the trails and preparation of permit applications to the NYSDEC and USACE for wetland activities, as necessary. He also completed the environmental screening for potential Hazardous Waste/Contaminated Materials at proposed trail camping and parking improvement areas, and provided assistance with preparation of the Design Approval Documents. Additionally, Mr. Smith prepared SEQRA documentation and NYSDEC SPDES permit applications.

#### **Local Design Service Agreements; Various Sites, NYSDOT Regions 4, 5 and 6**

Mr. Smith has conducted environmental screening and review for numerous Local Design Service Agreement (LDSA) highway and bridge assignments. In this role, he has been responsible for the completion of the NEPA/SEQR studies, environmental screening, detailed environmental studies, and permitting for over 25 bridge and highway projects throughout NYSDOT Regions 4, 5, and 6. Through these assignments he is familiar with the Local Pass-Through project processes, procedures and requirements.

#### **Phase I Environmental Site Assessments, Various Locations and Clients in New York State**

Mr. Smith has conducted Phase I Environmental Site Assessments (ESAs) for private industry, school districts, lending institutions, and legal counsel. ESAs have been completed for retail and commercial facilities. During the ESAs, he has arranged for, reviewed, compiled environmental database information, conducted site reconnaissance, conducted interviews, and prepared the ESA reports. Notable project assignments included the Clyde Southside Waterfront Park in the Village of Clyde, the Proposed Bona-Dent, Inc. Facility in Seneca Falls, and three parcels for the Canastota Central School District in Canastota, NY.

## **1.0 INTRODUCTION**

LiRo Engineers, Inc. (LiRo) completed a Phase I Environmental Site Assessment (ESA) dated September 29, 2016 for the City of Rochester Department of Environmental Services Environmental Quality Division for the properties at 6-8 Hoeltzer Street, 7-11 Sullivan Street, and 810-844 North Clinton Avenue, in Rochester, New York (Figure 1). The report recommended that a Phase II Environmental Subsurface Investigation (ESI) be completed based on the Phase I ESA findings (i.e., recognized environmental conditions (RECs)). The City of Rochester subsequently contracted LiRo to perform the Phase II ESI in accordance with the scope of work and sampling identified in the Proposal to Provide Phase II Environmental Site Assessment Services submitted to the City of Rochester by LiRo on November 28, 2016.

### ***1.1 Site Description and Background***

The subject Site is located within the La Marketa neighborhood within the City of Rochester, Monroe County, New York, Tax Section No. 106.39, Block No. 1, and Lot Nos. 1, 2, 3.1, 75.2, 78.1, 80.1, 82.1, and 84.1 (Figure 1). The Site is generally an irregularly-shaped block of parcels with frontage along North Clinton Avenue to the west, Sullivan Street to the north, and Hoeltzer Street to the south.

The Site is located in an urban area and is currently not developed with any structures. The Site is primarily grass covered with a few mature trees. The surrounding area is commercial and residential in nature including an AutoZone auto parts store, a Valero Gas Station, small grocery store, and other commercial businesses nearby.

### ***1.2 Previous Site Investigations***

As indicated above, LiRo completed a Phase I ESA for the Site and issued the Phase I ESA report which was dated September 29, 2016. The Phase I ESA included the following tasks:

- Site reconnaissance;
- investigation of historical Site conditions;
- interviews with individuals having knowledge of the Site;
- review of regulatory records;
- review of an environmental database;
- observations of neighboring properties to assess potential adjacent environmental concerns; and,
- preparation of a report in accordance with American Society for Testing Materials (ASTM) Practice E1527-13 guidance and the United States Environmental Protection Agency (USEPA) All Appropriate Inquiries (AAI) Final Rule.

### **Recognized Environmental Conditions**

Based on information gathered during the Phase I ESA, the following known or suspect recognized environmental conditions (RECs) were identified for the Site.

- The southwest adjacent property, addressed at 799 North Clinton Avenue, has historically been utilized as a gasoline station and for automotive repair since at least 1970. Based on the regulatory records, one in-service 15,000-gallon gasoline underground storage tank (UST) is registered for this site under F&D of Rochester, Inc. The Site is also identified through the regulatory records as an open NY Spill site under Colon Auto Repair. Spill No. 02000094 occurred on April 3, 2002 and involved the discovery of impacted soil during a subsurface investigation. This spill remains open by the New York State Department of Environmental

Conservation (NYSDEC). In addition, this property may be associated with a closed Leaking Tank (LTANK) spill listed for Ron's Arco located at Clinton and Scrantom Streets (which is suspected to be 799 North Clinton Avenue. This LTANK, Spill No. 8201833, occurred on February 1, 1983 and involved the removal of a few USTs. One tank was found to have several small holes. This spill was subsequently closed on October 20, 1999.

- A few dry cleaning facilities were also historically identified west adjacent to the Site. Based on the adjacent location of these dry cleaning facilities and the lack of information relative to the environmental condition of those sites, impact to the Site is possible.

### **Historical REC, Controlled REC, and/or De Minimis Conditions**

Based on information gathered during this Phase I ESA, no historical RECS (HRECs), Conditional RECs (CRECs), and/or de minimis conditions were identified for the Site.

### **Environmental Conditions/Issues**

Based on information gathered during the Phase I ESA, the following environmental conditions/issues were identified for the Site.

- While suspect asbestos-containing materials (ACMs) and/or suspect lead-based paint covered surfaces were not present at the time of the Site reconnaissance, LiRo was informed that the Site formerly included residences which were razed. Therefore, the potential exists for the presence of buried suspect ACMs and/or lead-based paint covered materials.
- Although a Site investigation was previously conducted at the Site, the previous work did not reach bedrock/groundwater (the most likely pathway by which off-site contamination would migrate).

Based on the findings summarized above, LiRo concluded that a Phase II ESI was warranted to determine if the Site has been impacted by these RECs.

### ***1.3 Investigation Scope and Objective***

On November 28, 2016, LiRo submitted a Proposal to Provide Phase II Environmental Site Assessment Services to the City of Rochester to assist in project planning. The objectives of the Phase II ESI were to identify the environmental characteristics (i.e., type of contaminants and concentrations) and physical characteristics (i.e., thickness and composition) of the fill material at the Site. The LiRo Phase II ESI was also designed to supplement and address data gaps identified in the previous Larson Engineers investigation.

LiRo recommended test pits be advanced within the footprints of the former on-site structures as well as three monitoring wells across the Site.

In all, 17 test pits were installed during the Phase II ESI. Soils from each of the test pits were field screened for the presence of organic vapors using a photo-ionization detector (PID). Due to the uncertainty of what type of fill and environmental impacts were at the Site, all surface (0-1 foot) test pit soil samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs), TCL semi-volatile organic compounds (SVOCs), TCL pesticides, polychlorinated biphenyl (PCBs), and Resource Conservation and Recovery Act (RCRA) metals. All sub-surface test pit soil samples (1 foot to the bottom of the fill soils) were analyzed for TCL VOCs, TCL SVOCs, and RCRA metals.

Soils from each of the three monitoring wells were also field screened for the presence of organic vapors using a PID. The soil interval exhibiting the highest PID reading was sampled and analyzed for TCL VOCs.

Five suspect ACM samples were collected for laboratory analysis from construction and demolition debris identified in the test pit excavations. Samples of various building materials that were suspected to contain asbestos were collected from test pits TP-02, TP-06, TP-07, and TP-17. None of the test pits excavated exhibited significant amounts of suspect ACMs. All samples were collected according to New York State Department of Labor (NYSDOL) sampling protocols and by a licensed professional.

In addition to the environmental investigation work, LiRo retained Foundation Design, P.C. (“Foundation Design”) to prepare a preliminary evaluation of the geotechnical aspects of the subsurface and to prepare a report that addresses site preparation requirements; foundation systems; pavement design and seismic design criteria. Foundation Design’s report is included as Appendix D.

## 2.0 SITE FIELD INVESTIGATION ACTIVITIES

The three monitoring wells and 17 test pits were installed by Nothnagle Drilling, Inc. (Nothnagle), under the supervision of a LiRo geologist. The monitoring well installation work was performed from January 10-12, 2017. The test pit excavation field investigation work was performed on January 13 and 16, 2017. The monitoring well and test pit locations are shown on Figure 2.

### 2.1 *Monitoring Well Installations and Sampling*

Three monitoring wells were installed to an approximate depth of 30 feet below ground surface (ft bgs). Bedrock was encountered between 8.5 and 15 ft bgs. The monitoring well soils were screened every 2 feet and the soil segregated based on PID readings for sample collection. At each monitoring well location, the soil was described for physical properties and blow counts were recorded. Monitoring well borings were advanced to bedrock using hollow stem augers and upon bedrock refusal, a 4-inch steel casing was grouted into place at the bedrock surface. The wells were completed as open rock holes using a 3-7/8 inch roller bit. After the monitoring wells were installed and developed by Nothnagle, they were purged of the required well volumes and sampled by LiRo. Boring logs are included within Appendix A.

All laboratory analyses were performed by Paradigm Environmental Services, Inc. (Paradigm), a laboratory certified in the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) and in accordance with the Phase II ESI proposal document. Soil samples obtained from the monitoring well borings were sampled from the highest PID interval and analyzed for TCL VOCs. Groundwater samples obtained from the monitoring wells were analyzed for TCL VOCs and SVOCs.

The soil and groundwater samples were collected in appropriate sample containers provided by Paradigm. Samples were labeled with a unique identification code, the analysis to be performed, the date/time of collection, and the sampler identity. The samples were sealed, preserved on ice in coolers, and were delivered to Paradigm under chain-of-custody control for analysis. Analytical results are discussed in Section 3 of this report. All samples were collected using dedicated sampling equipment.

During the monitoring well installations, soil was screened for organic vapors using a PID. PID readings ranged from 0.0 parts per million (ppm) to 82.5 ppm within MW-03.

### 2.2 *Test Pit Excavations and Sampling*

A total of 17 test pits were advanced to depths ranging from approximately 2.5 to 7 ft bgs. The test pits were excavated until native material was encountered or until refusal. The test pits were excavated in approximately two-foot lifts and the soil segregated based on PID readings for sample collection. After sampling, the excavated soil was backfilled to reflect pre-excavation conditions (as closely as possible). At each test pit location, the soil was described for physical properties, depth of fill materials observed, and screened for organic vapors. Photographs of the test pit activity are included within the test pit logs within Appendix B.

<b>Test Pit Location</b>	<b>Depth of Fill Materials</b>	<b>Total Test Pit Depth</b>	<b>Observations</b>
TP-01	8''-6'	7'	Native soils began at approximately 6'.
TP-02	6''-4'	4'	Native soils not encountered, refusal on competent concrete slab at 4'.
TP-03	6''-6.5'	7'	Native soils began at approximately 6.5'.

Test Pit Location	Depth of Fill Materials	Total Test Pit Depth	Observations
TP-04	6"-6.5'	7'	Native soils began at approximately 6.5'.
TP-05	6"-4.5'	4.5'	Native soils not encountered, refusal on competent concrete slab at 4.5'.
TP-06	6"-5'	6'	Native soils began at approximately 5'.
TP-07	3"-5.5'	6'	Native soils began at approximately 5.5'.
TP-08	6"-6'	7'	Native soils began at approximately 6'.
TP-09	1"-2'	5'	Native soils began at approximately 2'.
TP-10	4"-2'	2.5'	Native soils began at approximately 2'.
TP-11	4"-2'	6'	Native soils began at approximately 2'.
TP-12	6"-6'	7'	Native soils began at approximately 6'.
TP-13	3"-5'	5'	Native soils not encountered, refusal on competent concrete slab at 5'.
TP-14	3"-5'	5.5'	Native soils began at approximately 5'.
TP-15	4"-5'	5.5'	Native soils began at approximately 5'.
TP-16	4"-2'	3'	Native soils began at approximately 2'.
TP-17	6"-5'	5.5'	Native soils began at approximately 5'.

As indicated in Section 2.1 above, all laboratory analyses were performed by Paradigm in accordance with the Phase II ESI proposal document. Test pit surface soil samples (0-1') were analyzed for TCL VOCs, SVOCs, pesticides, PCBs, and RCRA metals while the test pit subsurface soil samples were analyzed for TCL VOCs, SVOCs, and RCRA metals.

A total of eight test pit surface soil samples and six test pit subsurface soil samples were collected for laboratory analysis. The selection of sample aliquots was generally biased to soil that exhibited the highest PID readings or contained other visual or olfactory evidence of potential contamination. All samples were collected using dedicated, disposable scoops. For subsurface soil, samples for SVOC and metals analysis were composited from a depth of 1 ft bgs to the bottom of the fill interval identified within the test pit.

Soil was screened for organic vapors using a PID. PID readings ranged from 0.0 ppm (numerous samples) to 34.7 ppm within TP-07. A summary of the soil samples collected and analyzed from test pits is provided below.

Sample ID	Location	Sample Depth (feet)	Analysis
TP-01 (1-6')	Test Pit 01 - footprint of the former 810 North Clinton Avenue structure	Subsurface sample (1-6 ft bgs) within observed fill material	VOCs, SVOCs, & RCRA Metals
TP-03 (0-1')	Test Pit 03 - footprint of the former 818 North Clinton Avenue structure	Surface sample (0-1 ft bgs)	VOCs, SVOCs, RCRA Metals, Pesticides, & PCBs
TP-04 (0-1')	Test Pit 04 - footprint of the former 822 North Clinton Avenue structure	Surface sample (0-1 ft bgs)	VOCs, SVOCs, RCRA Metals, Pesticides, & PCBs
TP-05(1-4.5')	Test Pit 05 - footprint of the former 826 North Clinton Avenue structure	Subsurface sample (1-4.5 ft bgs) within observed fill material	VOCs, SVOCs, & RCRA Metals
TP-07 (0-1')	Test Pit 07 - footprint of the former 840 North Clinton Avenue structure	Surface sample (0-1 ft bgs)	VOCs, SVOCs, RCRA Metals, Pesticides, & PCBs
TP-08 (0-1')	Test Pit 08 - footprint of the former 840 North Clinton Avenue structure	Surface sample (0-1 ft bgs)	VOCs, SVOCs, RCRA Metals, Pesticides, & PCBs
TP-09 (0-1')	Test Pit 09 - footprint of the former 814 North Clinton Avenue rear structure	Surface sample (0-1 ft bgs)	VOCs, SVOCs, RCRA Metals, Pesticides, & PCBs

<b>Sample ID</b>	<b>Location</b>	<b>Sample Depth (feet)</b>	<b>Analysis</b>
TP-10 (1-2')	Test Pit 10 - footprint of the former 830 North Clinton Avenue rear structure	Subsurface sample (1-2 ft bgs) within observed fill material	VOCs, SVOCs, & RCRA Metals
TP-11(1-6')	Test Pit 11 - footprint of the former 7 Sullivan Street side structure	Subsurface sample (1-6 ft bgs) within observed fill material	VOCs, SVOCs, & RCRA Metals
TP-12 (0-1')	Test Pit 12 - footprint of the former 7 Sullivan Street structure	Surface sample (0-1 ft bgs)	VOCs, SVOCs, RCRA Metals, Pesticides, & PCBs
TP-14 (0-1')	Test Pit 14 - footprint of the former 11 Sullivan Street structure	Surface sample (0-1 ft bgs)	VOCs, SVOCs, RCRA Metals, Pesticides, & PCBs
TP-15(1-5')	Test Pit 15 - footprint of a former Sullivan Street unaddressed structure	Subsurface sample (1-5 ft bgs) within observed fill material	VOCs, SVOCs, & RCRA Metals
TP-16 (0-1')	Test Pit 16 - footprint of the former 11 Sullivan Street rear structure	Surface sample (0-1 ft bgs)	VOCs, SVOCs, RCRA Metals, Pesticides, & PCBs
TP-17(1-5')	Test Pit 17 - footprint of a former 8 Hoeltzer Street structure	Subsurface sample (1-5 ft bgs) within observed fill material	VOCs, SVOCs, & RCRA Metals

### ***2.3 Test Pit ACM Sampling***

A total of five suspect ACM samples were collected for laboratory analysis from construction and demolition debris identified within the test pits. Suspect materials included asphalt roofing, transite siding, vinyl flooring. Samples of building materials that were suspected to contain asbestos were collected from test pits TP-02, TP-06, TP-07, and TP-17. None of the test pits excavated exhibited significant amounts of suspect ACMs.

### **3.0 INVESTIGATION RESULTS**

#### **3.1 Physical Setting**

According to the United States Geologic Survey (USGS), Rochester East, New York 7.5' Quadrangle (1979) map, the elevation at the Site is approximately 495 feet above mean sea level (amsl). The Site has a general slope toward the east. Based on the observations made during the installation of the three monitoring wells, the groundwater elevations suggest that the overburden groundwater flow direction is toward the east. Regional groundwater flow is anticipated to be west toward the Genesee River, which is located approximately 2,000 feet west. Estimated groundwater levels and/or flow direction(s) may vary due to seasonal fluctuations in precipitation, local water usage demands, geology, underground structures, and utilities (e.g., sewers), or dewatering operations.

##### **3.1.1 Regional Bedrock Geology and Stratigraphy**

According to the Surficial Geologic Map of New York – Finger Lakes Sheet, dated 1986, the surficial geology at the Site consists of lacustrine silt and clay. Lacustrine silt and clay is generally laminated clay and silt deposited in proglacial lakes which is generally calcareous and potential cause of instability in the land.

According to the Geologic Map of New York – Finger Lakes Sheet, dated 1970, the geology at the Site consists of the Lockport Group, specifically the Oak Orchard and Penfield Dolostones which are both replaced eastwardly by the Sconodoa Formation (limestone and dolostone).

##### **3.1.2 Site Hydrogeology**

Monitoring well boring and test pit observations indicate that the site surface consists of approximately six inches of sandy loam topsoil. The topsoil is underlain by fill materials to depths ranging from as little as 2 ft bgs (at TP-10) to 11 ft bgs (at MW-03). The fill material observed consisted primarily of silty soil with varying admixtures of poorly compacted building demolition debris. The relative amount of the building demolition debris varied from test pit to test pit. The demolition debris included bricks, cinder blocks, concrete slabs, large concrete chunks, stone block foundation walls, large stone blocks, gravel and crushed concrete, asphalt, roofing materials, transite siding, floor tile, wood, glass, ash, sand, clay drainage pipes, fiberglass insulation, metal pipe, and metal scraps.

Native soil beneath the fill materials consists predominantly of brown/tan clayey silt with some gravel or weathered bedrock which becomes more prevalent closer to bedrock. Bedrock was encountered at depths ranging from 8.5 ft bgs to 15 ft bgs. Drill cuttings from borings advanced into bedrock were consistent with geologic mapping which indicates dolomitic bedrock in the area.

Groundwater was not encountered in overburden soils. Borings were advanced into bedrock to depths of approximately 30 ft bgs and monitoring wells were installed to a depth of approximately 25 ft bgs. Groundwater was measured within bedrock in the monitoring wells at depths ranging from 10.37 to 17.39 ft bgs.

### 3.2 *Soil and Groundwater Analytical Results*

#### 3.2.1 **Guidance Values**

Soil sampling results were compared to NYSDEC Part 375 Restricted Use - Residential Soil Cleanup Objectives (SCOs). Typical future land use appropriate under Restricted-Residential SCOs includes mixed use, apartments, and commercial uses. Restrictions would include: 1) any vegetable gardens on a site, although community vegetable gardens may be considered with Department approval; 2) single family housing; and, 3) active recreational uses, which are public uses with a reasonable potential for soil contact. Groundwater sampling results were compared to NYSDEC Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards and Guidance Values (AWQSGVs) – Groundwater (GA) standards.

#### 3.2.2 **Soil Sample Results**

Results of analyses performed on soil samples collected from the test pits and overburden soils from the monitoring well installations are presented in Tables 1 through 5. Comparison of the data to SCOs indicate the following.

- Exceedances of SCOs for Benzo(a)anthracene, Benzo(a)pyrene, and Benzo(b)fluoranthene, were reported in samples TP-05 (1-4.5'), TP-09 (0-1'), TP-11 (1-6'), TP-12 (0-1'), and TP-16 (0-1').
- Exceedances of the SCO for Indeno(1,2,3-cd)pyrene were reported in samples TP-05 (1-4.5'), TP-12 (0-1'), and TP-16 (0-1').
- Exceedances of the SCO for Chrysene were reported in samples TP-11 (1-6') and TP-12 (0-1').
- Exceedances of the SCO for Dibenz[a,h]anthracene were reported in samples TP-11 (1-6') and TP-16 (0-1').
- An exceedance of the SCO for chromium was reported in sample TP-05 (1-4.5').
- An exceedance of the SCO for lead was reported in sample TP-10 (1-2').
- Exceedances of the SCO for mercury were reported in samples TP-05 (1-4.5'), TP-08 (0-1'), TP-09 (0-1'), and TP-11 (1-6').
- Remaining VOCs, SVOCs, PCBs, pesticides, and metals were either non-detect or were detected at relatively low concentrations below the corresponding SCOs.

#### 3.2.3 **Groundwater Sample Results**

Results of analyses performed on groundwater samples are presented in Tables 6 through 7. Although minor detections of VOCs were observed in MW-01 and MW-03, there were no exceedances of AWQSGVs. No SVOCs were detected in any of the three monitoring wells.

#### 3.2.4 **Asbestos Containing Material Sample Results**

Results of suspect ACMs found in the test pits are provided in the table below.

<b>Sample ID</b>	<b>Sampling Location</b>	<b>Description</b>	<b>Results – PLM Total Asbestos</b>
ACM-1	Test Pit-02	Tan construction debris in Fill	Chrysotile 8.5%
ACM-2	Test Pit-06	Tan construction debris in Fill	Inconclusive, No Asbestos Detected
ACM-3	Test Pit-06	Tan construction debris in Fill	Inconclusive, No Asbestos Detected
ACM-4	Test Pit-07	Black construction debris in Fill	Chrysotile 2.3%
ACM-5	Test Pit-17	Multi-colored fibrous construction debris in Fill	Inconclusive, Trace Chrysotile Detected

### ***3.3 Summary of Preliminary Geotechnical Findings***

Foundation Design based their preliminary evaluation on review of historical mapping; previous site boring data; LiRo Engineers boring/test pit logs; experience in the general area, and consultation with the design team. The complete Foundation Design report is provided in Appendix D.

Foundation Design included the following comments in their report:

- Two soil profiles are located across the site. Where old building were present expect mixed earth with construction rubble to depths of about six feet below grade. In most cases the foundation walls and floor slabs are left in place. Underlying this is firm to compact silt and sand over bedrock. In the former lawn and driveway areas expect shallow earth fills. Some ash and cinder may be located within this fill. GeoProbe data from the 2002 Phase II Environmental Assessment suggest that deeper fill material may be in some of the former green areas.
- The in-place fill material appears to have been placed in an uncontrolled manner. Foundation Design recommends that this material be removed from proposed building footprints and replaced with structural fill. Basement depths were about six feet below existing grade. We would expect that fill depth would be less in former green areas. Actual removal quantities will be dependent on the proposed building location relative to the former structures. Pavements in fill areas will likely require two to three feet of removal and replacement. Basements walls should be cut off a minimum of two feet below foundations and floor slabs/finished pavement grade. In-place basement floor slabs can be broken-up and left in-place.
- Structures for typical housing and office operations can likely be supported on traditional spread footing foundations. Allowable bearing pressure will be a function of design loads and soil profiles at each location.

#### 4.0 SUMMARY AND CONCLUSIONS

Based on observations during the Phase II ESI, fill material appears to be present over the majority of the Site. The fill material observed consisted primarily of silty soil with varying admixtures of poorly compacted building demolition debris. The demolition debris included bricks, cinder blocks, concrete slabs, large concrete chunks, stone block foundation walls, large stone blocks, gravel and crushed concrete, asphalt, roofing materials, transite siding, floor tile, wood, glass, ash, sand, clay drainage pipes, fiberglass insulation, metal pipe, and metal scraps. Some of this debris would be considered a regulated solid waste if disturbed during Site development.

Based on the analytical results, SVOC compounds were detected at concentrations above SCOs in several test pits across the Site. SVOCs were reported in five of the 17 test pits including test pits TP-05, TP-09, TP-11, TP-12, and TP-16. Five soil samples from test pits TP-05, TP-08, TP-09, TP-10, and TP-11 contained one or more metals that exceeded Part 375 SCOs. Four samples contained mercury above Part 375 SCO, and one sample contained lead and one sample contained chromium at concentrations exceeding Part 375 SCOs. The compounds reported in exceedance of SCOs include Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Indeno(1,2,3-cd)pyrene, Chrysene, and Dibenz[a,h]anthracene which are poly-aromatic hydrocarbons (PAHs). PAHs are typically found in fill materials within urban settings. Chromium, lead, and mercury were also detected at concentrations above SCOs in several test pits across the Site. These metals are also typically found in urban fill materials.

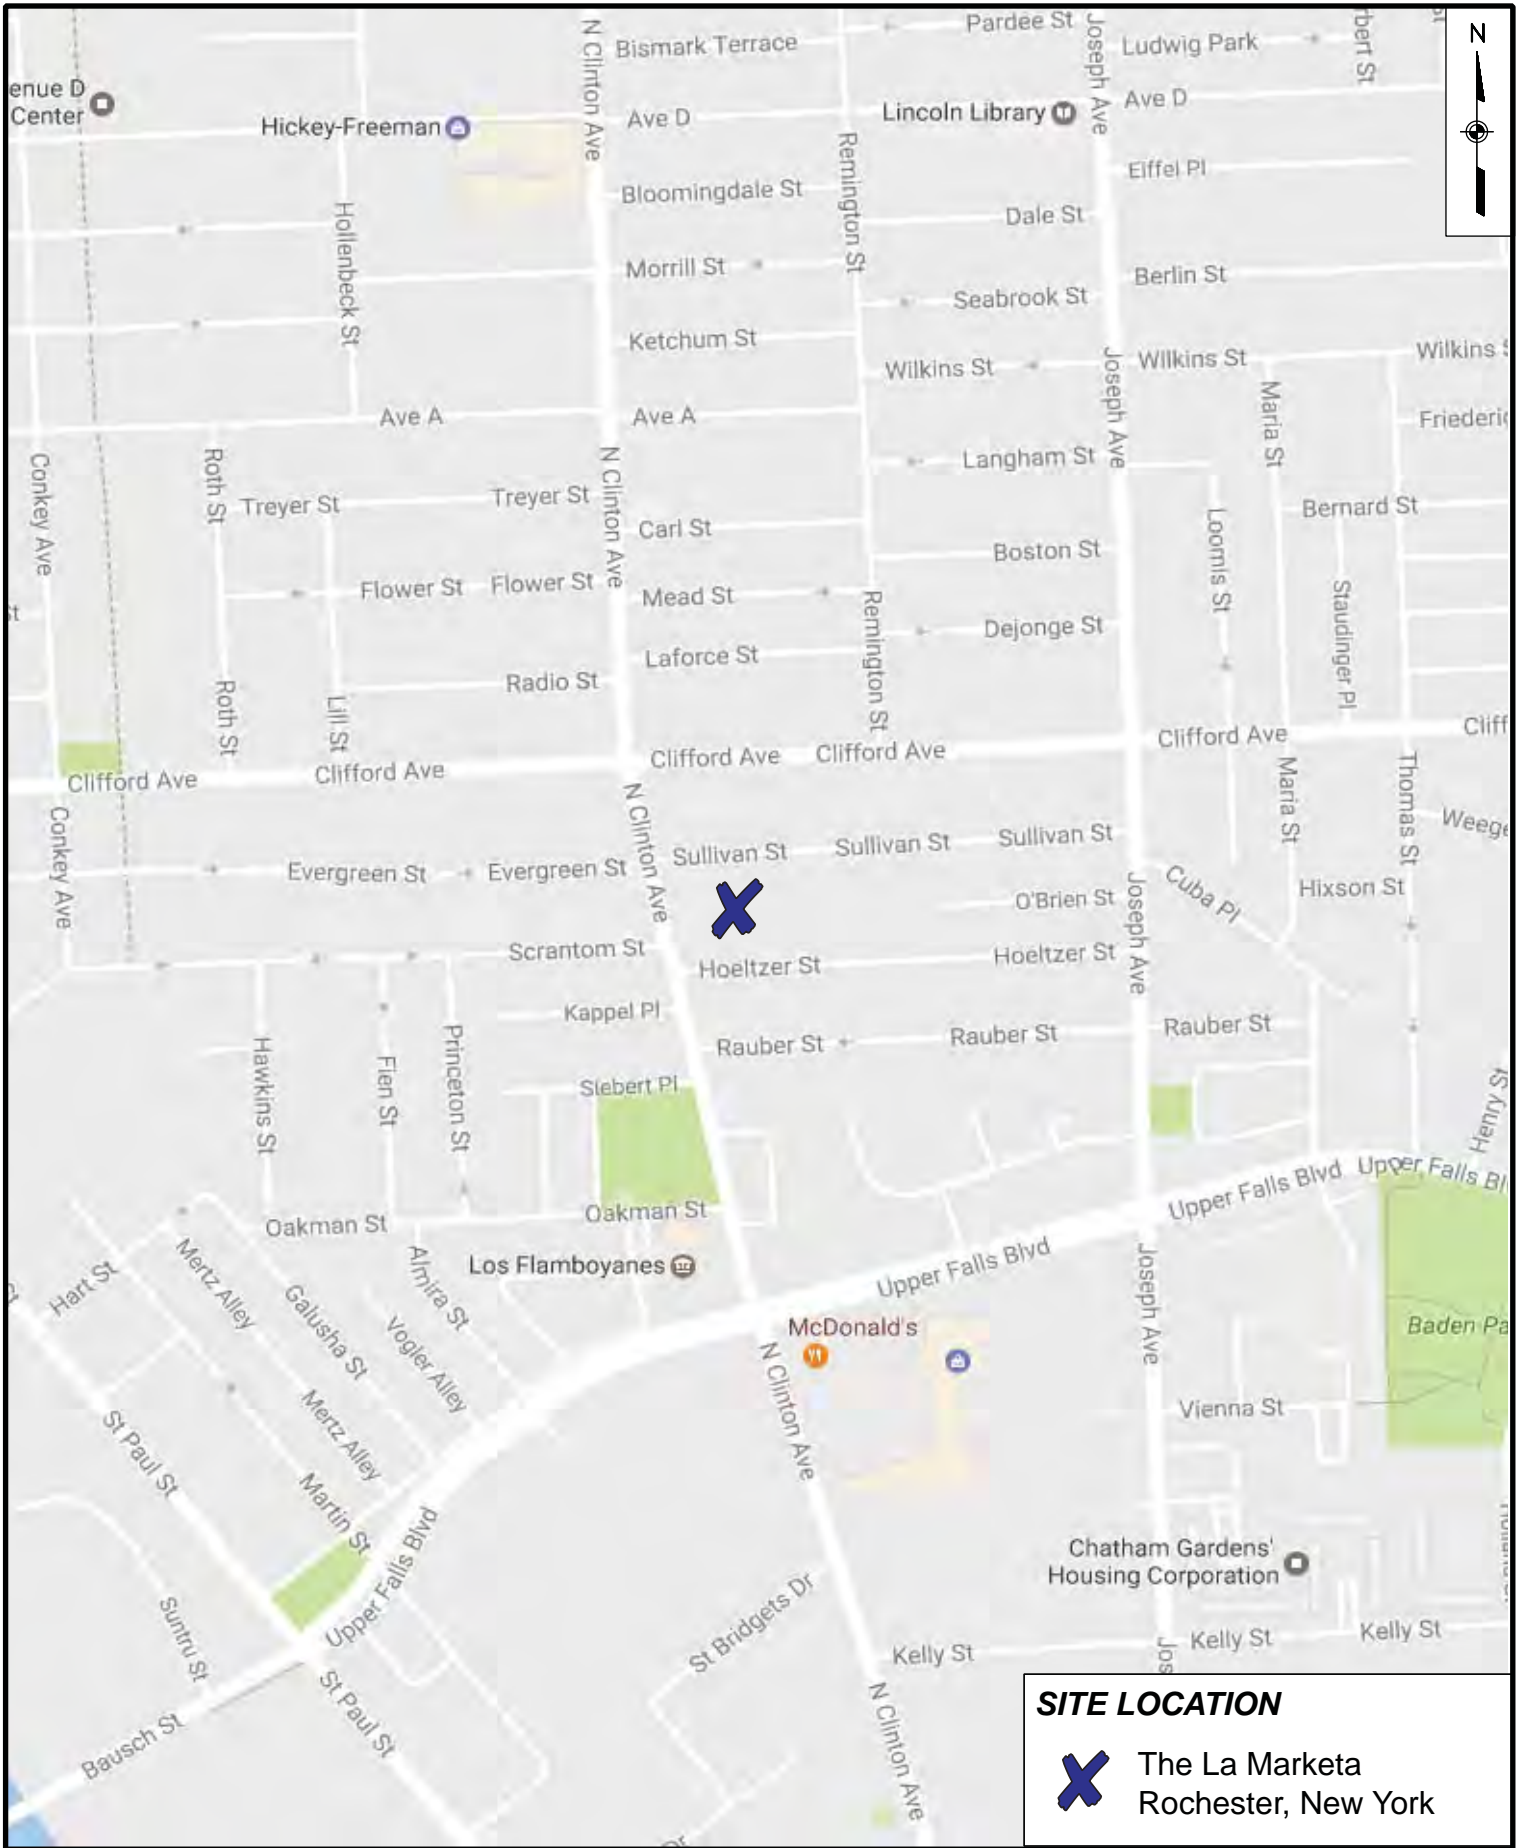

Based on the limited asbestos sampling that was conducted, ACMs are present within some of the building demolition debris in fill at the site. The materials that tested positive as ACMs were not prevalent or in large quantities within the test pits.

Although the site does not fall into any regulatory programs (i.e., spills), contaminated materials are present in the shallow subsurface and any materials excavated will require handling in accordance with NYSDEC solid waste regulations. In addition, NYSDOL regulations would apply for any demolition waste containing suspect ACM that is disturbed or disposed of. For the Site to be prepared for redevelopment, the following measures are recommended:

- Development plans should include a site management plan which will detail soil and fill material handling provisions and procedures that will be implemented to ensure compliance with NYSDEC/NYSDOL regulations and to prevent exposure of future site workers and future site users to contaminated soil and fill materials.
- To prevent exposure for future site users, those plans could include a cover or barrier system that would effectively mitigate potential exposure to the contaminated soil.
- Due to the presence of SVOCs and metals above Part 375 SCOs, dust control procedures are recommended during excavation or regrading activities to minimize the creation and dispersion of fugitive airborne dust. A Community Air Monitoring Plan (CAMP) should be developed following guidance in the NYSDEC Division of Environmental Remediation (DER)-10 procedures.
- Before beginning any excavation activity, the site Contractor should prepare a site-specific health and safety plan (HASP) that will meet the requirements set forth by the Occupational, Safety and Health Administration (OSHA), the NYSDOH and any other applicable regulations. The HASP should identify the possible locations and risks associated with the potential contaminants that may be encountered, and the administrative and engineering controls that will be utilized to mitigate concerns.

DRILLING SUMMARY		MONITORING WELL CONSTRUCTION LOG	
Geologist: Kris Charney		<p>The diagram shows a vertical well structure. At the top, an arrow points to the 'Top of well'. Below this, a section of the well is labeled 'Steel Casing: 4" Diameter, 12' Length'. This section is surrounded by 'Cement/Bentonite Grout'. Below the casing, a '6-1/4-inch Borehole' is shown. A horizontal line indicates the 'Overburden' and 'Bedrock @ 12 ft bgs'. Below the bedrock, a '3-7/8-inch Open Rock Hole' is shown. At the bottom, an arrow points to the 'Bottom of Well @ 30.5 ft bgs'. A note at the bottom of the diagram states 'NOT TO SCALE'.</p>

DRILLING SUMMARY		MONITORING WELL CONSTRUCTION LOG	
Geologist: Kris Charney		<p>The diagram shows a vertical well shaft. At the top, an arrow points to the 'Top of well'. The shaft is composed of a central 'Steel Casing' with a '4" Diameter' and '8.5' Length'. This casing is surrounded by 'Cement/Bentonite Grout'. Below the casing, a '6-1/4-inch Borehole' is shown. The ground surface is marked as 'Overburden'. Below the overburden is 'Bedrock @ 8.5 ft bgs'. The well continues down to a '3-7/8-inch Open Rock Hole' and ends at the 'Bottom of Well @ 30 ft bgs'. A legend at the bottom right identifies the materials: PVC Casing (white), Bedrock Corehole (light gray), Cement/Bentonite Grout (dotted), and Concrete (cross-hatched).</p>

## **APPENDIX B**

### **Test Pit Logs**

## TEST PIT LOG

<b>Project:</b> La Marketa Phase II	<b>Project #:</b> 16-089-0738
<b>Client:</b> City of Rochester	<b>Contractor:</b> Nothnagle
<b>Date Started:</b> 1/13/17	<b>Elevation:</b> N/A
<b>Date Completed:</b> 1/13/17	<b>Pit max. depth:</b> 7'

**Geologist:** Kris Charney **Operator:** N/A

**Pit Number:** TP-01 **Approx. water table depth:** Not encountered

DEPTH	DESCRIPTION
-0-	0-8" tan-brown sandy LOAM with silt.
-	
-2-	8"-6' brown sandy SILT with large stone blocks, gravel, red and yellow bricks, asphalt chunks, rebar, crushed concrete, pink fiberglass insulation. Layer of crushed concrete approximately 1ft bgs.
-	
-4-	
-	
-6-	6-7' tan clayey SILT with weathered rock.
-	
-8-	
-	
-10-	
-	
-12-	
-	
-14-	
-	
-16-	

**General:** Test pit within footprint of the former residential structure at 810 N. Clinton Ave.

**Observed Wastes:** Construction debris in fill ~ stone block from foundation walls, metal, rebar and concrete, bricks, and asphalt.

**Analytical Samples:** Deep composite soil sample taken 1/13/17 at 9:40 AM [(TP-01 (1-6'))] for TCL VOCs, TCL SVOCs, and RCRA Metals.

**Comments:** First attempt at TP-01 hit a foundation wall around 1ft bgs. Moved north approximately 5'. Excavation stopped once "native" soil was encountered. 3.2 ppm 0-1' / 4.8 ppm 1-6'.

## TEST PIT LOG

**Project:** La Marketa Phase II

**Project #:** 16-089-0738

**Client:** City of Rochester

**Contractor:** Nothnagle

**Date Started:** 1/13/17

**Elevation:** N/A

**Date Completed:** 1/13/17

**Pit max. depth:** 4'

**Geologist:** Kris Charney

**Operator:** N/A

**Pit Number:** TP-02

**Approx. water table depth:** Not encountered

DEPTH	DESCRIPTION
-0-	0-6" brown sandy LOAM with silt.
-2-	6"-4' tan-brown sandy SILT with large stone foundation blocks, plastic, metal gutter, bricks, and suspect ACM siding pieces. At 4 ft bgs a very competent concrete slab was encountered. Excavator unable to break through.
-4-	
-6-	
-8-	
-10-	
-12-	
-14-	
-16-	

**General:** Test pit within footprint of the former residential structure at 814 N. Clinton Ave.

**Observed Wastes:** Construction debris in fill ~ stone blocks from foundation walls, plastic, concrete, bricks, suspect ACM siding.

**Analytical Samples:** ACM-1 (TP-02) 1/13/17 at 10:15 AM.

**Comments:** Couple small pieces of suspect ACM exterior siding found in excavated soils, not wide spread throughout. 3.0 ppm 0-1' / 2.7 ppm 1-4'.

### TEST PIT LOG

<b>Project:</b> La Marketa Phase II	<b>Project #:</b> 16-089-0738
<b>Client:</b> City of Rochester	<b>Contractor:</b> Nothnagle
<b>Date Started:</b> 1/13/17	<b>Elevation:</b> N/A
<b>Date Completed:</b> 1/13/17	<b>Pit max. depth:</b> 7'

**Geologist:** Kris Charney      **Operator:** N/A

**Pit Number:** TP-03      **Approx. water table depth:** Not encountered

DEPTH	DESCRIPTION
-0-	0-6" brown sandy LOAM with silt.
-2-	6"-6.5' tan-brown sandy SILT with large concrete pieces, clay pipe, plastic, bricks, and stone foundation blocks.
-4-	
-6-	6.5-7' tan clayey SILT with gravel/weathered bedrock.
-8-	
-10-	
-12-	
-14-	
-16-	

**General:** Test pit within footprint of the former residential structure at 818 N. Clinton Ave.

**Observed Wastes:** Construction debris in fill ~ large concrete pieces, clay pipe, plastic, bricks, and stone foundation blocks.

**Analytical Samples:** Shallow composite soil sample taken 1/13/17 at 11:15 AM [(TP-03 (0-1'))] for TCL VOCs, TCL SVOCs, RCRA Metals, TCL Pesticides, and PCBs.

**Comments:** 17.1 ppm 0-1' / 0.0 ppm 1-6.5'.

### TEST PIT LOG

<b>Project:</b> La Marketa Phase II	<b>Project #:</b> 16-089-0738
<b>Client:</b> City of Rochester	<b>Contractor:</b> Nothnagle
<b>Date Started:</b> 1/13/17	<b>Elevation:</b> N/A

**Observed Wastes:** Construction debris in fill ~ minor amounts of bricks, brick pieces, coal fragments, ash or fine sand, plastic, and asphalt.

**Analytical Samples:** Shallow composite soil sample taken 1/16/17 at 10:15 AM [(TP-09 (0-1'))] for TCL VOCs, TCL SVOCs, RCRA Metals, TCL Pesticides, and PCBs.

**Comments:** 7.3 ppm 0-1' / 5.1 ppm 1-2'.

## TEST PIT LOG

<b>Project:</b> La Marketa Phase II	<b>Project #:</b> 16-089-0738
<b>Client:</b> City of Rochester	<b>Contractor:</b> Nothnagle
<b>Date Started:</b> 1/13/17	<b>Elevation:</b> N/A
<b>Date Completed:</b> 1/13/17	<b>Pit max. depth:</b> 2.5'

**Geologist:** Kris Charney      **Operator:** N/A

**Pit Number:** TP-10      **Approx. water table depth:** Not encountered

DEPTH	DESCRIPTION
-0-	0-4" brown sandy LOAM with silt, competent slab at 4".
-	4"-2' (moved west 2', to be off slab) tan-brown sandy SILT with ash or fine sand, asphalt, and concrete chunks.
-2-	2-2.5' tan clayey SILT with gravel.
-	
-4-	
-	
-6-

-16-	

**General:** Test pit within footprint of the former garage structure at 830 N. Clinton Ave.

**Observed Wastes:** Construction debris in fill ~ very large chunks of concrete, stone and cinder blocks, brick pieces, asphalt chunks, and suspect ACM tile pieces.

**Analytical Samples:** Deep composite soil sample taken 1/13/17 at 1:45 PM [(TP-10 (1-2'))] for TCL VOCs, TCL SVOCs, and RCRA Metals.

**Comments:** Once slab was encountered at 4 in bgs, moved west 2 ft and found edge of slab thus allowing to dig to native soil beneath. 3.8 ppm 0-1' / 3.4 ppm 1-2'.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

## Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

*"<" = Analyzed for but not detected at or above the quantitation limit.*

*"E" = Result has been estimated, calibration limit exceeded.*

*"Z" = See case narrative.*

*"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.*

*"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.*

*"B" = Method blank contained trace levels of analyte. Refer to included method blank report.*

*"J" = Result estimated between the quantitation limit and half the quantitation limit.*

*"L" = Laboratory Control Sample recovery outside accepted QC limits.*

*"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.*

*"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.*

*"\*" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

*"(1)" = Indicates data from primary column used for QC calculation.*

*"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.*

*"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.*

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

# GENERAL TERMS AND CONDITIONS

## LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

### **Warranty.**

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

### **Scope and Compensation.**

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

### **Prices.**

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

### **Limitations of Liability.**

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

### **Hazard Disclosure.**

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

### **Sample Handling.**

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

### **Legal Responsibility.**

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

### **Assignment.**

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

### **Force Majeure.**

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

### **Law.**

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

 Data File: x38692.D  
 QC Number: 1  
 QC Batch ID: voalr0012517

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

## Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

*"<" = Analyzed for but not detected at or above the quantitation limit.*

*"E" = Result has been estimated, calibration limit exceeded.*

*"Z" = See case narrative.*

*"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.*

*"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.*

*"B" = Method blank contained trace levels of analyte. Refer to included method blank report.*

*"J" = Result estimated between the quantitation limit and half the quantitation limit.*

*"L" = Laboratory Control Sample recovery outside accepted QC limits.*

*"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.*

*"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.*

*"\*" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

*"(1)" = Indicates data from primary column used for QC calculation.*

*"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.*

*"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.*

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

# GENERAL TERMS AND CONDITIONS

## LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

### **Warranty.**

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

### **Scope and Compensation.**

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

### **Prices.**

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

### **Limitations of Liability.**

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

### **Hazard Disclosure.**

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

### **Sample Handling.**

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

### **Legal Responsibility.**

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

### **Assignment.**

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

### **Force Majeure.**

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

### **Law.**

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

QC Batch ID: voas011717

Any estimated values are displayed, and derived values calculated, based on numeric result only. See primary analytical report for data flags.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

## Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

*"<" = Analyzed for but not detected at or above the quantitation limit.*

*"E" = Result has been estimated, calibration limit exceeded.*

*"Z" = See case narrative.*

*"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.*

*"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.*

*"B" = Method blank contained trace levels of analyte. Refer to included method blank report.*

*"J" = Result estimated between the quantitation limit and half the quantitation limit.*

*"L" = Laboratory Control Sample recovery outside accepted QC limits.*

*"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.*

*"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.*

*"\*" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

*"(1)" = Indicates data from primary column used for QC calculation.*

*"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.*

*"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.*

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

# GENERAL TERMS AND CONDITIONS

## LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

### **Warranty.**

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

### **Scope and Compensation.**

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

### **Prices.**

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

### **Limitations of Liability.**

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

### **Hazard Disclosure.**

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

### **Sample Handling.**

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

### **Legal Responsibility.**

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

### **Assignment.**

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

### **Force Majeure.**

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

### **Law.**

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

**KEY TO NOB COLUMN SYMBOLS**  
 No Symbol in the NOB column denotes sample analyzed by ELAP Method 198.1 (PLM).  
 √ NOB (non-friable organically bound) denotes material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.  
 √ denotes material analyzed by ELAP Method 198.6 (PLM) per NYSDOH. This Method does not remove vermiculite and may underestimate the level of asbestos present in a sample containing greater than 10% vermiculite.  
 # denotes friable material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.  
 X denotes sample prepped only by ELAP Method 198.6.  
 \*\* Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials.  
 Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.

PLM Bulk Asbestos Analysis by New York State Department of Health, ELAP Method 198.1, 198.4 and 198.6 ("Polarized Light Microscopy and Transmission Electron Identifying and Quantitating Asbestos in Bulk Samples and in Non-Friable Organically Bound Bulk Samples.") or EPA 600/M4-82-020 per 40 CFR 763 and/or EPA 600/R-93/116.

## **APPENDIX D**

### **Preliminary Geotechnical Evaluation by Foundation Design, PC**

# Foundation Design, P.C.

SOIL • BEDROCK • GROUNDWATER

February 17, 2017

The LiRo Group  
250 Mill Street  
Rochester, New York 14614

Attention: Jeff Perkins, P.E.

Reference: La Marketa Neighborhood  
North Clinton Avenue, Rochester, New York  
Preliminary Geotechnical Consultation, E4220.0

Dear Mr. Perkins:

This report summarizes our Preliminary Geotechnical Evaluation for the referenced project. The LiRo Group contracted Foundation Design, P.C. to provide the services outlined in our November 10, 2016 *Geotechnical Services Proposal, P3767.0*. We base this evaluation on our review of historical mapping; Larsen Engineers Boring data; LiRo Engineers test pit logs; our experience in the general area, and consultation with the design team. We agreed to prepare a report that addresses site preparation requirements; foundation systems; pavement design and seismic design criteria. We intend the conclusions and recommendations outlined in this report exclusively for the design and construction of this project. Additional detailed analysis will be necessary as the project advances to aid in conceptual design and planning.

The project site consists of 13 parcels located along Hoeltzer Street, Sullivan Street and North Clinton Avenue. Commercial and residential structures were formerly located on each of the parcels. Most of the former buildings were one to two-story wood framed or brick structures with shallow basements. Detached garages were typically slab-on-grade. Typical demolition practices for these structures include filling in-place basements with soil and hard particle construction debris. Basement walls and floor slabs are generally left intact.

La Marketa Neighborhood  
February 17, 2017  
Page 2

The recent exploration program consisted of three monitoring wells and thirteen test pits performed by Nothnagle Drilling. LiRo Engineers logged the monitoring well boring and test pits. We spot checked both the boring and test pit exploration and reviewed the logs.

The following interpretations of the soil, bedrock, and groundwater conditions are based on the widely spaced borings and test pits logged by others. Both the boring and test pits logs were generated with a focus on the environmental aspects of the project. Variations from the inferred profile are possible.

Two soil profiles are located across the site. Where old building were present expect mixed earth with construction rubble to depths of about six feet below grade. In most cases the foundation walls and floor slabs are left in place. Underlying this is firm to compact silt and sand over bedrock. In the former lawn and driveway areas expect shallow earth fills. Some ash and cinder may be located within this fill. Geoprobe data from the 2002 Phase II Environmental Assessment suggest that deeper fill material may be in some of the former green areas.

Weathered bedrock was observed at a number of the test locations. When encountered, bedrock was typically 5 feet to 10 feet below the ground surface. Geologic mapping identifies the bedrock as the Lockport Dolomite or the Rochester Shale. This formations consist of horizontally bedded shale and dolostone.

Based on this background, we make the following comments:

1. Surface topsoil thicknesses were typically around 6 inches within the old building footprints. We expect a thicker topsoil layer in the former lawn areas. Expect erratic thicknesses across this redeveloped site.
2. The in-place fill material appears to have been placed in an uncontrolled manner. We recommend that this material be removed from proposed building footprints and replaced

with structural fill. Again, basement depths were about six feet below existing grade. We would expect that fill depth would be less in former green areas. Actual removal quantities will be dependent on the proposed building location relative to the former structures. Pavements in fill areas will likely require two to three feet of removal and replacement. Basements walls should be cut off a minimum of two feet below foundations and floor slabs/finished pavement grade. In-place basement floor slabs can be broken-up and left in-place.

3. We understand that there may be some environmental concerns regarding removal of the in place fill material. To help mitigate disposal cost associated with fill removal the owner may want to consider limiting fill removal beneath the floor slab. To help limit slab settlement we would recommend a thicker slab subbase section coupled with geogrid. This system will help mitigate differential settlement but the owner will need to be willing to accept some floor performance issues long term.
4. Native on-site soils should prove modestly useful as structural fills during summer months as long as appropriate effort is made to dry them. There is variation in material so an appropriate quality control/testing program will be necessary. This use will be significantly limited during wet/cold times of year.
5. Structures for typical housing and office operations can likely be supported on traditional spread footing foundations. Allowable bearing pressure will be a function of design loads and soil profiles at each location.
6. The Building Code identifies various soils-related seismic design criteria for this project. We identify the site as having a Site Classification of C (Dense Soil Profile). Based on the 2015 Building Code guidelines, we recommend using the following seismic design parameters.

<b>Table No. 1 – Seismic Design Parameters</b>					
<b>Spectral Response Acceleration</b>		<b>Soil Factors</b>		<b>Design Spectral Response Acceleration</b>	
<b>S<sub>s</sub></b>	<b>S<sub>1</sub></b>	<b>S<sub>MS</sub></b>	<b>S<sub>M1</sub></b>	<b>SD<sub>s</sub></b>	<b>SD<sub>1</sub></b>
0.162g	0.060g	0.195g	0.101g	0.130g	0.068g

7. These judgments are preliminary. They are intended to guide the conceptual design and provide general budgetary information. Additional exploration and analysis will be needed as the design develops. Please transmit design plans and concepts to us as they become available.

La Marketa Neighborhood

February 17, 2017

Page 4

This concludes our preliminary assessment. We remain available for consultation as the design develops. Some issues may require a simple review, others may require more in-depth consultation. We will work with you as they arise.

Very truly yours,

**FOUNDATION DESIGN, P.C.**

James M. Baker, P.E.  
President

# Important Information about This

# Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

## Geotechnical Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a civil engineer may not fulfill the needs of a constructor — a construction contractor — or even another civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. No one except you should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one — not even you — should apply this report for any purpose or project except the one originally contemplated.*

## Read the Full Report

Serious problems have occurred because those relying on a geotechnical-engineering report did not read it all. Do not rely on an executive summary. Do not read selected elements only.

## Geotechnical Engineers Base Each Report on a Unique Set of Project-Specific Factors

Geotechnical engineers consider many unique, project-specific factors when establishing the scope of a study. Typical factors include: the client's goals, objectives, and risk-management preferences; the general nature of the structure involved, its size, and configuration; the location of the structure on the site; and other planned or existing site improvements, such as access roads, parking lots, and underground utilities. Unless the geotechnical engineer who conducted the study specifically indicates otherwise, do not rely on a geotechnical-engineering report that was:

- not prepared for you;
- not prepared for your project;
- not prepared for the specific site explored; or
- completed before important project changes were made.

Typical changes that can erode the reliability of an existing geotechnical-engineering report include those that affect:

- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes—even minor ones—and request an

assessment of their impact. *Geotechnical engineers cannot accept responsibility or liability for problems that occur because their reports do not consider developments of which they were not informed.*

## Subsurface Conditions Can Change

A geotechnical-engineering report is based on conditions that existed at the time the geotechnical engineer performed the study. *Do not rely on a geotechnical-engineering report whose adequacy may have been affected by:* the passage of time; man-made events, such as construction on or adjacent to the site; or natural events, such as floods, droughts, earthquakes, or groundwater fluctuations. *Contact the geotechnical engineer before applying this report to determine if it is still reliable.* A minor amount of additional testing or analysis could prevent major problems.

## Most Geotechnical Findings Are Professional Opinions

Site exploration identifies subsurface conditions only at those points where subsurface tests are conducted or samples are taken. Geotechnical engineers review field and laboratory data and then apply their professional judgment to render an opinion about subsurface conditions throughout the site. Actual subsurface conditions may differ — sometimes significantly — from those indicated in your report. Retaining the geotechnical engineer who developed your report to provide geotechnical-construction observation is the most effective method of managing the risks associated with unanticipated conditions.

## A Report's Recommendations Are Not Final

Do not overrely on the confirmation-dependent recommendations included in your report. *Confirmation-dependent recommendations are not final*, because geotechnical engineers develop them principally from judgment and opinion. Geotechnical engineers can finalize their recommendations *only* by observing actual subsurface conditions revealed during construction. *The geotechnical engineer who developed your report cannot assume responsibility or liability for the report's confirmation-dependent recommendations if that engineer does not perform the geotechnical-construction observation required to confirm the recommendations' applicability.*

## A Geotechnical-Engineering Report Is Subject to Misinterpretation

Other design-team members' misinterpretation of geotechnical-engineering reports has resulted in costly

problems. Confront that risk by having your geotechnical engineer confer with appropriate members of the design team after submitting the report. Also retain your geotechnical engineer to review pertinent elements of the design team's plans and specifications. Constructors can also misinterpret a geotechnical-engineering report. Confront that risk by having your geotechnical engineer participate in prebid and preconstruction conferences, and by providing geotechnical construction observation.

### **Do Not Redraw the Engineer's Logs**

Geotechnical engineers prepare final boring and testing logs based upon their interpretation of field logs and laboratory data. To prevent errors or omissions, the logs included in a geotechnical-engineering report should *never* be redrawn for inclusion in architectural or other design drawings. Only photographic or electronic reproduction is acceptable, *but recognize that separating logs from the report can elevate risk.*

### **Give Constructors a Complete Report and Guidance**

Some owners and design professionals mistakenly believe they can make constructors liable for unanticipated subsurface conditions by limiting what they provide for bid preparation. To help prevent costly problems, give constructors the complete geotechnical-engineering report, *but* preface it with a clearly written letter of transmittal. In that letter, advise constructors that the report was not prepared for purposes of bid development and that the report's accuracy is limited; encourage them to confer with the geotechnical engineer who prepared the report (a modest fee may be required) and/or to conduct additional study to obtain the specific types of information they need or prefer. A prebid conference can also be valuable. *Be sure constructors have sufficient time* to perform additional study. Only then might you be in a position to give constructors the best information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions.

### **Read Responsibility Provisions Closely**

Some clients, design professionals, and constructors fail to recognize that geotechnical engineering is far less exact than other engineering disciplines. This lack of understanding has created unrealistic expectations that have led to disappointments, claims, and disputes. To help reduce the risk of such outcomes, geotechnical engineers commonly include a variety of explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help

others recognize their own responsibilities and risks. *Read these provisions closely.* Ask questions. Your geotechnical engineer should respond fully and frankly.

### **Environmental Concerns Are Not Covered**

The equipment, techniques, and personnel used to perform an *environmental* study differ significantly from those used to perform a *geotechnical* study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated environmental problems have led to numerous project failures.* If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. *Do not rely on an environmental report prepared for someone else.*

### **Obtain Professional Assistance To Deal with Mold**

Diverse strategies can be applied during building design, construction, operation, and maintenance to prevent significant amounts of mold from growing on indoor surfaces. To be effective, all such strategies should be devised for the *express purpose* of mold prevention, integrated into a comprehensive plan, and executed with diligent oversight by a professional mold-prevention consultant. Because just a small amount of water or moisture can lead to the development of severe mold infestations, many mold-prevention strategies focus on keeping building surfaces dry. While groundwater, water infiltration, and similar issues may have been addressed as part of the geotechnical-engineering study whose findings are conveyed in this report, the geotechnical engineer in charge of this project is not a mold prevention consultant; *none of the services performed in connection with the geotechnical engineer's study were designed or conducted for the purpose of mold prevention. Proper implementation of the recommendations conveyed in this report will not of itself be sufficient to prevent mold from growing in or on the structure involved.*

### **Rely, on Your GBC-Member Geotechnical Engineer for Additional Assistance**

Membership in the Geotechnical Business Council of the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project. Confer with your GBC-Member geotechnical engineer for more information.

# APPENDIX 2

Community Air Monitoring Plan

**Appendix 1A**  
**New York State Department of Health**  
**Generic Community Air Monitoring Plan**

Overview

A Community Air Monitoring Plan (CAMP) requires real-time monitoring for volatile organic compounds (VOCs) and particulates (i.e., dust) at the downwind perimeter of each designated work area when certain activities are in progress at contaminated sites. The CAMP is not intended for use in establishing action levels for worker respiratory protection. Rather, its intent is to provide a measure of protection for the downwind community (i.e., off-site receptors including residences and businesses and on-site workers not directly involved with the subject work activities) from potential airborne contaminant releases as a direct result of investigative and remedial work activities. The action levels specified herein require increased monitoring, corrective actions to abate emissions, and/or work shutdown. Additionally, the CAMP helps to confirm that work activities did not spread contamination off-site through the air.

The generic CAMP presented below will be sufficient to cover many, if not most, sites. Specific requirements should be reviewed for each situation in consultation with NYSDOH to ensure proper applicability. In some cases, a separate site-specific CAMP or supplement may be required. Depending upon the nature of contamination, chemical-specific monitoring with appropriately-sensitive methods may be required. Depending upon the proximity of potentially exposed individuals, more stringent monitoring or response levels than those presented below may be required. Special requirements will be necessary for work within 20 feet of potentially exposed individuals or structures and for indoor work with co-located residences or facilities. These requirements should be determined in consultation with NYSDOH.

Reliance on the CAMP should not preclude simple, common-sense measures to keep VOCs, dust, and odors at a minimum around the work areas.

Community Air Monitoring Plan

Depending upon the nature of known or potential contaminants at each site, real-time air monitoring for VOCs and/or particulate levels at the perimeter of the exclusion zone or work area will be necessary. Most sites will involve VOC and particulate monitoring; sites known to be contaminated with heavy metals alone may only require particulate monitoring. If radiological contamination is a concern, additional monitoring requirements may be necessary per consultation with appropriate DEC/NYSDOH staff.

**Continuous monitoring** will be required for all ground intrusive activities and during the demolition of contaminated or potentially contaminated structures. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pitting or trenching, and the installation of soil borings or monitoring wells.

**Periodic monitoring** for VOCs will be required during non-intrusive activities such as the collection of soil and sediment samples or the collection of groundwater samples from existing monitoring wells. "Periodic" monitoring during sample collection might reasonably consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or

overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. In some instances, depending upon the proximity of potentially exposed individuals, continuous monitoring may be required during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence.

### VOC Monitoring, Response Levels, and Actions

Volatile organic compounds (VOCs) must be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) on a continuous basis or as otherwise specified. Upwind concentrations should be measured at the start of each workday and periodically thereafter to establish background conditions, particularly if wind direction changes. The monitoring work should be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment should be calibrated at least daily for the contaminant(s) of concern or for an appropriate surrogate. The equipment should be capable of calculating 15-minute running average concentrations, which will be compared to the levels specified below.

1. If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities must be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities can resume with continued monitoring.

2. If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities must be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities can resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.

3. If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown.

4. All 15-minute readings must be recorded and be available for State (DEC and NYSDOH) personnel to review. Instantaneous readings, if any, used for decision purposes should also be recorded.

### Particulate Monitoring, Response Levels, and Actions

Particulate concentrations should be monitored continuously at the upwind and downwind perimeters of the exclusion zone at temporary particulate monitoring stations. The particulate monitoring should be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment must be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

1. If the downwind PM-10 particulate level is 100 micrograms per cubic meter ( $\text{mcg}/\text{m}^3$ ) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques must be employed. Work may continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed  $150 \text{ mcg}/\text{m}^3$  above the upwind level and provided that no visible dust is migrating from the work area.

2. If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than  $150 \text{ mcg}/\text{m}^3$  above the upwind level, work must be stopped and a re-evaluation of activities initiated. Work can resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within  $150 \text{ mcg}/\text{m}^3$  of the upwind level and in preventing visible dust migration.

3. All readings must be recorded and be available for State (DEC and NYSDOH) and County Health personnel to review.

## 1.0 INTRODUCTION

---

The purpose of this Health and Safety Plan (HASP) is to provide guidelines for responding to potential health and safety issues that may be encountered during the implementation of the Environmental Management Plan (EMP) at The La Marketa Outdoor Plaza located at 6-8 Hoeltzer Street, 7-11 Sullivan Street, and 810-844 North Clinton Avenue, in Rochester, New York, herein after referred to as the “Site.” This HASP only reflects the policies of LaBella Associates D.P.C. The requirements of this HASP are applicable to all approved LaBella personnel at the work site. This document’s project specifications and the Community Air Monitoring Plan (CAMP) are to be consulted for guidance in preventing and quickly abating any threat to human safety or the environment. The provisions of the HASP were developed in general accordance with 29 CFR 1910 and 29 CFR 1926 and do not replace or supersede any regulatory requirements of the USEPA, NYSDEC, OSHA or any other regulatory body.

## 2.0 RESPONSIBILITIES

---

This HASP presents guidelines to minimize the risk of injury to project personnel, and to provide rapid response in the event of injury. The HASP is applicable only to activities of approved LaBella personnel and their authorized visitors. The Project Manager shall implement the provisions of this HASP for the duration of the project. It is the responsibility of LaBella employees to follow the requirements of this HASP, and all applicable company safety procedures.

## 3.0 ACTIVITIES COVERED

---

The activities covered under this HASP are limited to the following:

- Environmental Monitoring
- Collection of samples
- Management of excavated soil and fill.

## 4.0 WORK AREA ACCESS AND SITE CONTROL

---

The contractor(s) will have primary responsibility for work area access and site control. However, a minimum requirement for work area designation and control will consist of:

- Drilling (Geoprobe/Rotary) – Orange cones to establish at least a 10-foot by 10-foot work area
- Test Pitting – Orange cones and orange temporary fencing to establish at least 10-feet of distance between test pit and fencing.
- Surface soil and soil gas sampling - Orange cones to establish at least a 10-foot by 10-foot work area

## 5.0 POTENTIAL HEALTH AND SAFETY HAZARDS

---

This section lists some potential health and safety hazards that project personnel may encounter at the project site and some actions to be implemented by approved personnel to control and reduce the associated risk to health and safety. This is not intended to be a complete listing of any and all potential health and safety hazards. New or different hazards may be encountered as site environmental and site work conditions change. The suggested actions to be taken under this plan are not to be substituted for good judgment on the part of project personnel. At all times, the Site Safety Officer has responsibility for site safety and his or her instructions must be followed.

### 5.1 *Hazards Due to Heavy Machinery*

**Potential Hazard:**

Heavy machinery including trucks, excavators, backhoes, etc. will be in operation at the site. The presence of such equipment presents the danger of being struck or crushed. Use caution when working near heavy machinery.

**Protective Action:**

Make sure that operators are aware of your activities, and heed operator's instructions and warnings. Wear bright colored clothing and walk safe distances from heavy equipment. A hard hat, safety glasses and steel toe shoes are required.

### 5.2 *Excavation Hazards*

**Potential Hazard:**

Excavations and trenches can collapse, causing injury or death. Edges of excavations can be unstable and collapse. Toxic and asphyxiant gases can accumulate in confined spaces and trenches. Excavations that require working within the excavation will require air monitoring in the breathing zone (refer to Section 9.0).

Excavations left open create a fall hazard which can cause injury or death.

**Protective Action:**

Personnel must receive approval from the Project Manager to enter an excavation for any reason. Subsequently, approved personnel are to receive authorization for entry from the Site Safety Officer. Approved personnel are not to enter excavations over 4 feet in depth unless excavations are adequately sloped. Additional personal protective equipment may be required based on the air monitoring.

Personnel should exercise caution near all excavations at the site as it is expected that excavation sidewalls will be unstable. All excavations will be backfilled by the end of each day. Additionally, no test pit will be left unattended during the day.

Fencing and/or barriers accompanied by "no trespassing" signs should be placed around all excavations when left open for any period of time when work is not being conducted.

### 5.3 *Cuts, Punctures and Other Injuries*

**Potential Hazard:**

In any excavation or construction, work site there is the potential for the presence of sharp or jagged edges on rock, metal materials, and other sharp objects. Serious cuts and punctures can result in loss of blood and infection.

**Protective Action:**

The Project Manager is responsible for making First Aid supplies available at the work site to treat minor injuries. The Site Safety Officer is responsible for arranging the transportation of authorized on-site personnel to medical facilities when First Aid treatment is not sufficient. Do not move seriously injured workers. All injuries requiring treatment are to be reported to the Project Manager. Serious injuries are to be reported immediately to the Site Safety Officer

### 5.4 *Injury Due to Exposure of Chemical Hazards*

**Potential Hazards:**

Volatile organic vapors from petroleum products, chlorinated solvents or other chemicals may be encountered during excavation activities at the project work site. Inhalation of high concentrations of organic vapors can cause headache, stupor, drowsiness, confusion and other health effects. Skin contact can cause irritation, chemical burn, or dermatitis.

**Protective Action:**

The presence of organic vapors may be detected by their odor and by monitoring instrumentation. Approved employees will not work in environments where hazardous concentrations of organic vapors are present. Air monitoring (refer to Section 9.0) of the work area will be performed at least every 60 minutes or more often using a Photoionization Detector (PID). Personnel are to leave the work area whenever PID measurements of ambient air exceed 25 ppm consistently for a 5 minute period. In the event that sustained total volatile organic compound (VOC) readings of 25 ppm is encountered personnel should upgrade personal protective equipment to Level C (refer to Section 8.0) and an Exclusion Zone should be established around the work area to limit and monitor access to this area (refer to Section 6.0).

### 5.5 *Injuries Due to Extreme Hot or Cold Weather Conditions*

**Potential Hazards:**

Extreme hot weather conditions can cause heat exhaustion, heat stress and heat stroke or extreme cold weather conditions can cause hypothermia.

**Protective Action:**

Precaution measures should be taken such as dress appropriately for the weather conditions and drink plenty of fluid. If personnel should suffer from any of the above conditions, proper techniques should be taken to cool down or heat up the body and taken to the nearest hospital if needed.

## 5.6 *Potential Exposure to Asbestos*

### **Potential Hazards:**

During ground intrusive activities (e.g., test pitting or drilling) soil containing asbestos may be encountered. Asbestos is friable when dry and can be inhaled when exposed to air.

### **Protective Action:**

The presence of asbestos can be identified through visual observation of a white magnesium silicate material. If encountered, work should be halted and a sample of the suspected asbestos should be collected and placed in a plastic sealable bag. This sample should be sent to the asbestos laboratory at LaBella Associates for analysis.

## 6.0 WORK ZONES

---

In the event that conditions warrant establishing various work zones (i.e., based on hazards - Section 5.4), the following work zones should be established:

### **Exclusion Zone (EZ):**

The EZ will be established in the immediate vicinity and adjacent downwind direction of site activities that elevate breathing zone VOC concentrations to unacceptable levels based on field screening. These site activities include contaminated soil excavation and soil sampling activities. If access to the site is required to accommodate non-project related personnel then an EZ will be established by constructing a barrier around the work area (yellow caution tape and/or construction fencing). The EZ barrier shall encompass the work area and any equipment staging/soil staging areas necessary to perform the associated work. The contractor(s) will be responsible for establishing the EZ and limiting access to approved personnel. Depending on the condition for establishing the EZ, access to the EZ may require adequate PPE (e.g., Level C).

### **Contaminant Reduction Zone (CRZ):**

The CRZ will be the area where personnel entering the EZ will don proper PPE prior to entering the EZ and the area where PPE may be removed. The CRZ will also be the area where decontamination of equipment and personnel will be conducted as necessary.

## 7.0 DECONTAMINATION PROCEDURES

---

Upon leaving the work area, approved personnel shall decontaminate footwear as needed. Under normal work conditions, detailed personal decontamination procedures will not be necessary. Work clothing may become contaminated in the event of an unexpected splash or spill or contact with a contaminated substance. Minor splashes on clothing and footwear can be rinsed with clean water. Heavily contaminated clothing should be removed if it cannot be rinsed with water. Personnel assigned to this project should be prepared with a change of clothing whenever on site.

Personnel will use the contractor's disposal container for disposal of PPE.

## 8.0 PERSONAL PROTECTIVE EQUIPMENT (PPE)

---

Generally, site conditions at this work site require level of protection of Level D or modified Level D. However, air monitoring will be conducted to determine if up-grading to Level C PPE is required (refer to Section 9.0). Descriptions of the typical safety equipment associated with Level D and Level C are provided below:

**Level D:**

Hard hat, safety glasses, rubber nitrile sampling gloves, steel toe construction grade boots, etc.

**Level C:**

Level D PPE and full or ½-face respirator and tyvek suit (if necessary). [Note: *Organic vapor cartridges are to be changed after each 8-hours of use or more frequently.*]

## 9.0 AIR MONITORING

---

According to 29 CFR 1910.120(h), air monitoring shall be used to identify and quantify airborne levels of hazardous substances and health hazards in order to determine the appropriate level of employee protection required for personnel working onsite. Air monitoring identified in this HASP is only intended to monitor air for workers involved with the RI. Please refer to the Site Specific CAMP for further details on air monitoring at the Site required for protection of the Site occupants and neighboring properties.

The Air Monitor will utilize a photoionization Detector (PID) to screen the ambient air in the work areas for total Volatile Organic Compounds (VOCs), a DustTrak™ Model 8520 aerosol monitor or equivalent for measuring particulates. [Note: *Radiation monitoring requirements are identified in 5.7 above.*] Air monitoring of the work areas will be performed at least every 15 minutes or more often using a PID, and the DustTrak meter.

If sustained PID readings of greater than 10 ppm are recorded in the breathing zone, then either personnel are to leave the work area until satisfactory readings are obtained or approved personnel may re-enter the work areas wearing at a minimum a ½ face respirator with organic vapor cartridges for an 8-hour duration (i.e., upgrade to Level C PPE). Organic vapor cartridges are to be changed after each 8-hours of use or more frequently, if necessary. If PID readings are sustained, in the work area, at levels above 10 ppm for a 5 minute average, work will be stopped immediately until safe levels of VOCs are encountered or additional PPE will be required (i.e., Level B).

If dust concentrations exceed the upwind concentration by 150 µg/m<sup>3</sup> (0.15 mg/m<sup>3</sup>) consistently for a 10 minute period within the work area or at the downwind location, then LaBella personnel may not re-enter the work area until dust concentrations in the work area decrease below 150 µg/m<sup>3</sup> (0.15 mg/m<sup>3</sup>), which may be accomplished by the construction manager implementing dust control or suppression measures.

## 10.0 EMERGENCY ACTION PLAN

---

In the event of an emergency, employees are to turn off and shut down all powered equipment and leave the work areas immediately. Employees are to walk or drive out of the Site as quickly as possible and wait at the assigned 'safe area'. Follow the instructions of the Site Safety Officer.

Employees are not authorized or trained to provide rescue and medical efforts. Rescue and medical efforts will be provided by local authorities.

## 11.0 MEDICAL SURVEILLANCE

---

Medical surveillance will be provided to all employees who are injured due to overexposure from an emergency incident involving hazardous substances at this site.

## 12.0 EMPLOYEE TRAINING

---

Personnel who are not familiar with this site plan will receive training on its entire content and organization before working at the Site.

Individuals involved with the remedial investigation must be 40-hour OSHA HAZWOPER trained with current 8-hour refresher certification.
