Case Narrative

ALS Environmental

R1903955

Work Order Number: 1905362

1. This report consists of 1 TCLP sample.
2. The sample was received cool and intact by ALS on 05/17/19.
3. The sample was prepared and analyzed based on SW-846, 3rd Edition procedures.

The sample for TCLP analysis was processed through the TCLP leaching procedure based on method 1311. The leachate was then digested at a ten-fold dilution.

For analysis by Cold Vapor AA (CVAA), the sample was digested following method 7470A and the current revision of SOP 812.

4. Analysis by CVAA followed method 7470A and the current revision of SOP 812.
5. All standards and solutions are NIST traceable and were used within their recommended shelf life.
6. The sample was prepared and analyzed within the established hold time.

All in house quality control procedures were followed, as described below.

7. General quality control procedures.
 - A preparation (method) blank and laboratory control sample were digested and analyzed with the samples in this digestion batch.
 - The preparation (method) blank associated with this digestion batch was below the reporting limit for the requested analyte.
 - All laboratory control sample criteria were met.

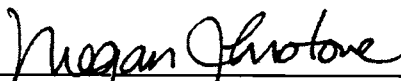

- All initial and continuing calibration blanks were below the reporting limit for the requested analyte.
- All initial and continuing calibration verifications were within the acceptance criteria for the requested analyte.

8. Matrix specific quality control procedures.

Per method requirements, matrix QC was performed for this analysis. Since a sample from this order number was not the selected quality control (QC) sample, matrix specific QC results are not included in this report.

9. Sample dilutions were not required for the requested analysis.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, ALS certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Inorganic Data Reporting Qualifiers

The following qualifiers are used by the laboratory when reporting results of inorganic analyses:

- Result qualifier -- A “J” is entered if the reported value was obtained from a reading that was less than the Reporting Limit but greater than or equal to the Method Detection Limit (MDL). If the analyte was analyzed for but not detected a “U” is entered. For samples, negative values are reported as non-detects (“U” flagged). For blanks, if the absolute value of the negative value is above the MDL and below the reporting limit, then the result is “J” flagged.
- QC qualifier -- Specified entries and their meanings are as follows:
 - E - The reported value is estimated because of the presence of interference. An explanatory note may be included in the narrative.
 - M - Duplicate injection precision was not met.
 - N - Spiked sample recovery not within control limits. A post spike is analyzed for all ICP analyses when the matrix spike and or spike duplicate fail and the native sample concentration is less than four times the spike added concentration.
 - Z - Spiked recovery not within control limits. An explanatory note may be included in the narrative.
 - * - Duplicate analysis (relative percent difference) not within control limits.
 - S - SAR value is estimated as one or more analytes used in the calculation were not detected above the detection limit.

SAMPLE SUMMARY

Workorder: 3032275 AER329|R1903955

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Sample Management

This report contains the results of the analysis of one (1) solid sample collected on April 30, 2019. Analytical results and quality control information are summarized in this data package.

Sample Receipt

The sample arrived at ALS - Middletown via courier on May 8, 2019. Upon receipt, the sample was inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. The sample was received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Reactive Sulfide by SW 846 Method 7.3

Sample handling. One (1) solid sample was analyzed for reactive sulfide by SW 846 Method 7.3. The sample was not digested and analyzed within the 7-day holding time established for the method.

Calibration. Initial and continuing calibration standards were analyzed and recovered within the acceptable limits of 90-110%.

Blanks. A preparation blank identified as 2945817 was digested and analyzed with the sample. Reactive sulfide was not detected above the reporting limit in the preparation blank. Initial and continuing blanks were analyzed in the run. Sulfide was not detected above the reporting limit in the blanks.

Laboratory Control Sample. A laboratory control sample identified as 2945818 was digested and analyzed with the samples. The recovery was within the QC limits of 49-148%.

Duplicate. A duplicate analysis was not performed on any samples from this data deliverable.

Ignitability by SW-846 1030

Sample handling. One (1) solid sample was analyzed for ignitability by SW-846 Method 1030. The sample was analyzed within the 14-day hold time established for the method.

Duplicate. A duplicate analysis was not performed on any samples from this data deliverable.

Reactive Cyanide by SW-846 Method 7.3CN

Sample handling. One (1) solid sample was analyzed for reactive cyanide by SW-846 Method 7.3CN. The sample was not distilled and analyzed within the 14-day holding time established for the method.

Calibration. An initial six-point calibration was properly established, and continuing calibration standards were analyzed to verify the calibration. The recoveries were within the QC limits of 90-110%.

Blanks. A preparation blank identified as 2945814 was distilled and analyzed with the sample. Reactive cyanide was not detected above the reporting limit of 10 ppm in the blank. Initial and continuing calibration blanks were analyzed within the analysis. Total cyanide was not detected above the reporting limit of 0.005 mg/L in the calibration blanks.

Laboratory Control Sample. A laboratory control sample identified as 2945815 was distilled and analyzed with the sample. The recovery was within the QC limits of 0-90%.

Duplicate. A duplicate analysis was not performed on any samples from this data deliverable.

Laboratory Results for: 24 York St

Dear Mr.Danzinger,

Enclosed are the results of the sample(s) submitted to our laboratory May 02, 2019
For your reference, these analyses have been assigned our service request number **R1903956**.

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.

Sample Receipt:

One water sample was received for analysis at ALS Environmental on 05/02/2019. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivolatiles by GC/MS:

Method 625, 05/13/19, 05/15/19: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Method 625, 05/13/19: The Method Blank contained a low level of one or more analytes at concentrations above the Method Detection Limit (MDL), but less than ten times the concentration in the associated samples. Contamination is deemed insignificant relative to the reported samples and the data is reported with no further corrective action required.

Method 625, R1903956-001: The control limits for one or more surrogates in the sample are not applicable. The analysis of the sample required a dilution, which resulted in a surrogate concentration below the Method Reporting Limit (MRL). No further corrective action was appropriate.

Volatiles by GC/MS:

No significant anomalies were noted with this analysis.

REPORT QUALIFIERS AND DEFINITIONS

- | | |
|---|--|
| <p>U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.</p> <p>J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).</p> <p>B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.</p> <p>E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.</p> <p>E Organics- Concentration has exceeded the calibration range for that specific analysis.</p> <p>D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.</p> <p>* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.</p> <p>H Analysis was performed out of hold time for tests that have an immediate hold time criteria.</p> <p># Spike was diluted out.</p> | <p>+ Correlation coefficient for MSA is <0.995.</p> <p>N Inorganics- Matrix spike recovery was outside laboratory limits.</p> <p>N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.</p> <p>S Concentration has been determined using Method of Standard Additions (MSA).</p> <p>W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.</p> <p>P Concentration >40% difference between the two GC columns.</p> <p>C Confirmed by GC/MS</p> <p>Q DoD reports: indicates a pesticide/Aroclor is not confirmed ($\times 100\%$ Difference between two GC columns).</p> <p>X See Case Narrative for discussion.</p> <p>MRL Method Reporting Limit. Also known as:</p> <p>LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.</p> <p>MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).</p> <p>LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.</p> <p>ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.</p> |
