1:4 Ammonium Hydroxide	4461272	Exp. 07/19/2018

Quality Control Limits

LCS/CCV = 1.5mg/L
Control Limits = 90-110%
(1.35 mg/L -1.65 mg/L)

MB/CCB = 0.0mg/L
Control Limits <0.05mg/ >-0.05mg/L

MS/MSD = 1.0mg/L
Control Limits = 90-110%
RPD Control Limits <20%

Nitrate/Nitrite Calibration curve:

3.0ppm – 150ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
2.0ppm – 100ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
1.0 ppm – 50ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
.5ppm – 5ml of 1.0ppm up to 10ml with DI water
.2 ppm – 5ml of 2.0ppm up too 50ml with DI water
.05 ppm – 5ml of .2ppm up 20ml With DI water
ICV- 150ul of second source 1000ppm Nitrate/Nitrite standard up too 100 ml with DI
CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

Nitrite Calibration curve:

3.0ppm – 150ul of 1000ppm Nitrite up to 50ml with DI water
2.0ppm – 100ul of 1000ppm Nitrite up to 50ml with DI water
1.0 ppm – 50ul of 1000ppm Nitrite up to 50ml with DI water
.5ppm – 5ml of 1.0ppm up to 10ml with DI water
.2 ppm – 5ml of 2.0ppm up too 50ml with DI water
.05 ppm – 5ml of .2ppm up 20ml With DI water
ICV- 150ul of second source 1000ppm Nitrite standard up too 100 ml with DI
CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

Sulfide Stock Solution Standardization for Reactive Sulfide

Add 5.0 mL of 0.025N iodine solution to a 250 mL flask
Add 1.0 mL of 6N HCl
Add 1.0 mL of 1000 ppm pre-certified Sodium Sulfide below the surface of the Iodine solution
Dilute to 100 mL with reagent water
Add 1 dropper of starch indicator
Titrate with 0.025N Sodium Thiosulfate until the endpoint is reached (blue color disappears)

Repeat twice and average the results

The standardized sodium sulfide concentration is calculated as follows:

$$S = [(A \times B) - (C \times D)] \times 16,000 / E$$

Where:

- A = Volume of iodine solution (5.0 mL)
- B = Normality of iodine solution (0.025N)
- C = Volume of Na₂S₂O₃ solution (Determined by standardization)
- D = Normality of Na₂S₂O₃ solution (0.025N)
- E = Volume of sulfide stock (1.0 mL)
- S = Concentration of sulfide stock

The standardization procedure must be completed for both the primary source standard used for the CCV/MS and the secondary source standard for the LCS

Analyte Properties Table for : OM_2-23-2018_01-13-02PM.OMN

Property	Channel 2
	Nitrate/Nitrite
Concentration Units	mg/L
Calibration Fit Type	First Order
Clear Calibration	Yes
Force through Zero	No
Calibration Weighting	None
Auto Dilution Trigger	No
% of High Standard	110
Quik Chem Method	10-107-04-1-J
Chemistry	Direct/Bipolar
Calibration by Height	No
Inject to Peak Start	21
Peak Base Width	41

Table : 1 (Nitrate/Nitrite)

Ion Chromatography Data Review Checklist

LIMS Batch Number: 401726	Worklist: 69537	Instrument ID (circle one): IC1 <u>IC2</u> IC3
Analyst/1 st Reviewer: JS	Method (circle): 300.0, 314.0, 9056, 7199, SM4110, VFA	QC Type (circle): Standard <u>QAPP</u> Other
Matrix (circle): Drinking Water Non-potable Water <u>Solid</u> Leachate		

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds .if curve ≥ 2 orders of magnitude (314.0)		✓			
2. Elution order of analytes in ICAL confirmed to be correct		✓			
3. Linearity and intercept: r ≥ 0.99 (SM4110) r ≥ 0.995 r ≥ 0.999 (7199) x-intercept < RL or < 1/2 RL (314.0 or special projects)		✓			
4. ICV, second source: run before samples 90-110% recovery		✓			If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		✓			If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result < RL (9056 & 7199) Result <MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project)		✓			If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X				If no, list details:
8. Pk Area:Height Difference (314.0 PD _{AM}): Before samples <25%	X				If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results > linear range diluted and reanalyzed?		✓			Comments:
10. 10 Manual integrations done & documented appropriately? (before & after choms, date, initial, & reason)		✓			Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result < RL (9056 & 7199) Result <MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:		✓			<input type="checkbox"/> No analyte > RL in associated samples <input type="checkbox"/> Sample results >10x blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:		✓			<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R > QC limits & samples < RL

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) <i>If no, list QC ID & explain:</i>		✓			<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		✓			

Review Items	Yes	No	2 nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	✓			
b. All crossed out data is initialed and dated	✓			
c. Out of control QC is clearly identified	✓			
d. Any data that has a qualifier tick is commented on with appropriate action taken	✓			
e. The first page of the run includes the filename, instrument, and analyst initials/signature	✓			
16. Run Log	✓			
a. Unused data is clearly identified	✓			
b. All crossed out data is initialed and dated	✓			
c. Analyst initials/signature provided	✓			
17. TALS Samples Tab	✓			
a. LIMS Sample IDs / Containers are correct	✓			
b. Method and matrix are correct	✓			
c. Date and time match raw data	✓			
d. Dilutions are correct	✓			
e. Correct suffix designated (where applicable)	✓			
18. TALS Worksheet Tab is complete and correct	✓			
19. TALS Reagent Tab is complete and correct	✓			
20. TALS QC Links Tab is correct	✓			
21. TALS Sample Results Tab	✓			
a. All unused data are marked Rejected or Accepted	✓			
b. All reported analytes are marked Primary or Secondary	✓			
22. TALS Batch Information Screen documentation is complete	✓			
23. TALS Status set to appropriate review level	✓			
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?				
25. Results for samples and QC correct on final report?				
26. Are all necessary scanned documents in TALS?				
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?

Ion Chromatography Data Review Checklist

LIMS Batch Number: <u>401728</u>		Worklist: <u>69537</u>		Instrument ID (circle one): IC1 <u>IC2</u> IC3	
Analyst/1 st Reviewer: <u>BS</u>		Method (circle): 300.0, 314.0, <u>9056</u> , 7199, SM4110, VFA		QC Type (circle): <u>Standard</u> QAPP Other	
Matrix (circle): Drinking Water Non-potable <u>Water</u> Solid Leachate					
Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds. if curve ≥ 2 orders of magnitude (314.0)		✓		✓	
2. Elution order of analytes in ICAL confirmed to be correct		✓		✓	
3. Linearity and intercept: $r \geq 0.99$ (SM4110) $r \geq 0.995$ $r \geq 0.999$ (7199) $ x\text{-intercept} < RL$ or $< \frac{1}{2} RL$ (314.0 or special projects)		✓		✓	
4. ICV, second source: run before samples 90-110% recovery		✓		✓	If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		✓		✓	If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project)		✓		✓	If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X			✓	If no, list details:
8. Pk Area:Height Difference (314.0 PD _{AM}): Before samples $< 25\%$	X			✓	If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results $>$ linear range diluted and reanalyzed?		✓		✓	Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chroms, date, initial, & reason)		✓		✓	Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:		✓		✓	<input type="checkbox"/> No analyte $> RL$ in associated samples <input type="checkbox"/> Sample results $> 10x$ blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:		✓		✓	<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R $>$ QC limits & samples $< RL$

Method C. 03/07/18

TestAmerica [Buffalo]

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) <i>If no, list QC ID & explain:</i>		✓		✓	<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		✓		✓	

Review Items	Yes	No	2nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	✓		✓	
b. All crossed out data is initialed and dated	✓		✓	
c. Out of control QC is clearly identified	✓		✓	
d. Any data that has a qualifier tick is commented on with appropriate action taken	✓		✓	
e. The first page of the run includes the filename, instrument, and analyst initials/signature	✓		✓	
16. Run Log	✓		✓	
a. Unused data is clearly identified	✓		✓	
b. All crossed out data is initialed and dated	✓		✓	
c. Analyst initials/signature provided	✓		✓	
17. TALS Samples Tab	✓		✓	
a. LIMS Sample IDs / Containers are correct	✓		✓	
b. Method and matrix are correct	✓		✓	
c. Date and time match raw data	✓		✓	
d. Dilutions are correct	✓		✓	
e. Correct suffix designated (where applicable)	✓		✓	
18. TALS Worksheet Tab is complete and correct	✓		✓	
19. TALS Reagent Tab is complete and correct	✓		✓	
20. TALS QC Links Tab is correct	✓		✓	
21. TALS Sample Results Tab	✓		✓	
a. All unused data are marked Rejected or Accepted	✓		✓	
b. All reported analytes are marked Primary or Secondary	✓		✓	
22. TALS Batch Information Screen documentation is complete	✓		✓	
23. TALS Status set to appropriate review level	✓		✓	
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?			✓	
25. Results for samples and QC correct on final report?			✓	
26. Are all necessary scanned documents in TALS?			✓	
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?			✓

Ion Chromatography Data Review Checklist

LIMS Batch Number: 401747	Worklist: 69540	Instrument ID (circle one): IC1 <u>IC2</u> IC3
Analyst/1 st Reviewer: BS	Method (circle): 300.0, 314.0, 9056, 7199, SM4110, VFA	QC Type (circle): <u>Standard</u> QAPP Other
Matrix (circle): Drinking Water Non-potable Water <u>Solid</u> Leachate		

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds. if curve ≥ 2 orders of magnitude (314.0)		✓			
2. Elution order of analytes in ICAL confirmed to be correct		✓			
3. Linearity and intercept: $r \geq 0.99$ (SM4110) $r \geq 0.995$ $r \geq 0.999$ (7199) $ x\text{-intercept} < RL$ or $< \frac{1}{2} RL$ (314.0 or special projects)		✓			
4. ICV, second source: run before samples 90-110% recovery		✓			If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		✓			If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project)		✓			If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X				If no, list details:
8. Pk Area: Height Difference (314.0 $PD_{A/H}$): Before samples $< 25\%$	X				If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results $>$ linear range diluted and reanalyzed?		✓			Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chrams, date, initial, & reason)		✓			Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:		✓			<input type="checkbox"/> No analyte $> RL$ in associated samples <input type="checkbox"/> Sample results $> 10x$ blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:		✓			<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R $>$ QC limits & samples $< RL$

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) <i>If no, list QC ID & explain:</i>		✓			<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		✓			

Review Items	Yes	No	2 nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	✓			
b. All crossed out data is Initialed and dated	✓			
c. Out of control QC is clearly identified	✓			
d. Any data that has a qualifier tick is commented on with appropriate action taken	✓			
e. The first page of the run includes the filename, instrument, and analyst initials/signature	✓			
16. Run Log				
a. Unused data is clearly identified	✓			
b. All crossed out data is initialed and dated	✓			
c. Analyst initials/signature provided	✓			
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	✓			
b. Method and matrix are correct	✓			
c. Date and time match raw data	✓			
d. Dilutions are correct	✓			
e. Correct suffix designated (where applicable)	✓			
18. TALS Worksheet Tab is complete and correct	✓			
19. TALS Reagent Tab is complete and correct	✓			
20. TALS QC Links Tab is correct	✓			
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	✓			
b. All reported analytes are marked Primary or Secondary	✓			
22. TALS Batch Information Screen documentation is complete	✓			
23. TALS Status set to appropriate review level	✓			
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?				
25. Results for samples and QC correct on final report?				
26. Are all necessary scanned documents in TALS?				
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?

Ion Chromatography Data Review Checklist

LIMS Batch Number: <u>461749</u>	Worklist: <u>69540</u>	Instrument ID (circle one): IC1 <u>IC2</u> IC3
Analyst/1 st Reviewer: <u>BS</u>	Method (circle): 300.0, 314.0, <u>9056</u> , 7199, SM4110, VFA	QC Type (circle): <u>Standard</u> DAPP Other
Matrix (circle): Drinking Water Non-potable <u>Water</u> Solid Leachate		

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds .if curve ≥ 2 orders of magnitude (314.0)		✓		✓	
2. Elution order of analytes in ICAL confirmed to be correct		✓		✓	
3. Linearity and intercept: $r \geq 0.99$ (SM4110) $r \geq 0.995$ $r \geq 0.999$ (7199) $ x\text{-intercept} < RL$ or $< \frac{1}{2} RL$ (314.0 or special projects)		✓		✓	
4. ICV, second source: run before samples 90-110% recovery		✓		✓	If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		✓		✓	If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project)		✓		✓	If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X			✓	If no, list details:
8. Pk Area:Height Difference (314.0 PD _{AM}): Before samples $< 25\%$	X			✓	If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results $>$ linear range diluted and reanalyzed?		✓		✓	Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chruns, date, initial, & reason)		✓		✓	Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:		✓		✓	<input type="checkbox"/> No analyte $> RL$ in associated samples <input type="checkbox"/> Sample results $> 10x$ blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:		✓		✓	<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R $>$ QC limits & samples $< RL$

Naphat C. 03/02/18

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) If no, list QC ID & explain:		✓		✓	<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		✓		✓	

Review Items	Yes	No	2 nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	✓		✓	
b. All crossed out data is initialed and dated	✓		✓	
c. Out of control QC is clearly identified	✓		✓	
d. Any data that has a qualifier tick is commented on with appropriate action taken	✓		✓	
e. The first page of the run includes the filename, instrument, and analyst initials/signature	✓		✓	
16. Run Log				
a. Unused data is clearly identified	✓		✓	
b. All crossed out data is initialed and dated	✓		✓	
c. Analyst initials/signature provided	✓		✓	
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	✓		✓	
b. Method and matrix are correct	✓		✓	
c. Date and time match raw data	✓		✓	
d. Dilutions are correct	✓		✓	
e. Correct suffix designated (where applicable)	✓		✓	
18. TALS Worksheet Tab is complete and correct	✓		✓	
19. TALS Reagent Tab is complete and correct	✓		✓	
20. TALS QC Links Tab is correct	✓		✓	
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	✓		✓	
b. All reported analytes are marked Primary or Secondary	✓		✓	
22. TALS Batch Information Screen documentation is complete	✓		✓	
23. TALS Status set to appropriate review level	✓		✓	
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?			✓	
25. Results for samples and QC correct on final report?			✓	
26. Are all necessary scanned documents in TALS?			✓	
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?			✓

Client: LaBella Associates DPC

Job Number: 480-131737-1

Login Number: 131737
List Number: 1
Creator: Wallace, Cameron

List Source: TestAmerica Buffalo

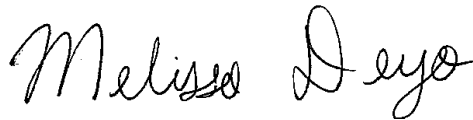

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	LABELLA
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A	

ANALYTICAL REPORT

Job Number: 480-137434-1

Job Description: Former Emerson Street Landfill Project

For:
LaBella Associates DPC
300 State Street
Suite 201
Rochester, NY 14614
Attention: Ann Aquilina

Approved for release.
Melissa L Deyo
Project Manager I

Job Narrative
480-137434-1

Receipt

The samples were received on 6/14/2018 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.2° C.

GC/MS VOA

Method(s) 8260C: The following samples were diluted to bring the concentration of target analytes within the calibration range: LAB-SBW15 (480-137434-1), LAB-SBW16 (480-137434-2), LAB-SBW16 (480-137434-2[MS]), LAB-SBW16 (480-137434-2[MSD]) and DUPE (480-137434-3). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following samples were analyzed after 7 days from sampling: LAB-SBW16 (480-137434-2), LAB-SBW16 (480-137434-2[MS]), LAB-SBW16 (480-137434-2[MSD]) and DUPE (480-137434-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC

Method(s) 9056A: The following samples were diluted to bring the concentration of target analytes within the calibration range: LAB-SBW15 (480-137434-1) and LAB-SBW16 (480-137434-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Method(s) RSK-175: The following sample was diluted due to the nature of the sample matrix: LAB-SBW15 (480-137434-1). Elevated reporting limits (RLs) are provided.

Method(s) RSK-175: The following sample was diluted due to the abundance of non-target analytes: LAB-SBW16 (480-137434-2). Elevated reporting limits (RLs) are provided.

Method(s) RSK-175: The following sample(s) were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, due to the sample matrix the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: LAB-SBW16 (480-137434-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method(s) SM 3500 FE D: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: LAB-SBW15 (480-137434-1) and LAB-SBW16 (480-137434-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Project/Site: Former Emerson Street Landfill Project

TestAmerica Job ID: 480-137434-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: LaBella Associates DPC
Project/Site: Former Emerson Street Landfill Project

TestAmerica Job ID: 480-137434-1

Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	10026	03-31-18 *

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
9056A		Water	Chloride
9056A		Water	Sulfate
SM 3500 FE D		Water	Ferrous Iron

* Accreditation/Certification renewal pending - accreditation/certification considered valid.

Method 8260C

Volatile Organic Compounds (GC/MS)
by Method 8260C

Sulfide Stock Solution Standardization
for method SM 4500 S2F

Add 5.0 mL of 0.025N iodine solution to a 250 mL flask
 Add 1.0 mL of 6N HCl
 Add 1.0 mL of 1000 ppm pre-certified Sodium Sulfide below the surface of the Iodine solution
 Dilute to 100 mL with reagent water
 Add 1 dropper of starch indicator
 Titrate with 0.025N Sodium Thiosulfate until the endpoint is reached (blue color disappears)

Repeat twice and average the results

The standardized sodium sulfide concentration is calculated as follows:

$$S = [(A \times B) - (C \times D)] \times 16,000 / E$$

Where:

- A = Volume of iodine solution (5.0 mL)
- B = Normality of iodine solution (0.025N)
- C = Volume of Na₂S₂O₃ solution (Determined by standardization)
- D = Normality of Na₂S₂O₃ solution (0.025N)
- E = Volume of sulfide stock (1.0 mL)
- S = Concentration of sulfide stock

The standardization procedure must be completed for both the primary source standard used for the CCV/MS and the secondary source standard for the LCS

Nitrate, Nitrite, Nitrate/Nitrite (Method 353.2)

Solutions

Nitrate, NO3/NO2 1000mg/L STD: (CAL)	3877011	Exp. 06/30/2018
Nitrate 1000mg/L STD (CCV/LCS/ICV)	4253342	Exp. 01/31/2019
Nitrite 1000mg/L STD (CAL)	3852394	Exp. 06/30/2018
Nitrite 1000mg/L STD (CCV/LCS/ICV)	4468957	Exp. 07/31/2018
Nitrate, Nitrate/Nitrite Int STD (MS)	4713314	Exp. 06/22/2018
Nitrite Int STD(MS)	4713313	Exp. 06/22/2018
Nitrate 1.5ppm CCV/ICV/LCS	4713322	Exp. 06/16/2018
Nitrite 1.5ppm CCV/ICV/LCS	4713323	Exp. 06/16/2018
Ammonium Chloride Buffer	4627622	Exp. 07/06/2018
Color Reagent	4627623	Exp. 06/24/2018
1:4 Ammonium Hydroxide	4681200	Exp. 11/29/2018

Quality Control Limits

LCS/CCV = 1.5mg/L
Control Limits = 90-110%
(1.35 mg/L -1.65 mg/L)

MB/CCB = 0.0mg/L
Control Limits <0.05mg/ >-0.05mg/L

MS/MSD = 1.0mg/L
Control Limits = 90-110%
RPD Control Limits <20%

Nitrate/Nitrite Calibration curve:

3.0ppm – 150ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
2.0ppm – 100ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
1.0 ppm – 50ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
.5ppm – 5ml of 1.0ppm up to 10ml with DI water
.2 ppm – 5ml of 2.0ppm up to 50ml with DI water
.05 ppm – 5ml of .2ppm up 20ml With DI water
ICV- 150ul of second source 1000ppm Nitrate/Nitrite standard up too 100 ml with DI
CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

Nitrite Calibration curve:

3.0ppm – 150ul of 1000ppm Nitrite up to 50ml with DI water
2.0ppm – 100ul of 1000ppm Nitrite up to 50ml with DI water
1.0 ppm – 50ul of 1000ppm Nitrite up to 50ml with DI water
.5ppm – 5ml of 1.0ppm up to 10ml with DI water
.2 ppm – 5ml of 2.0ppm up too 50ml with DI water
.05 ppm – 5ml of .2ppm up 20ml With DI water
ICV- 150ul of second source 1000ppm Nitrite standard up too 100 ml with DI
CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

Ion Chromatography Data Review Checklist

LIMS Batch Number: 420472	Worklist: 72458	Instrument ID (circle one): IC1 IC2 IC3 IC4
Analyst/1 st Reviewer: DR	Method (circle): 300.0 314.0, 9056, 7199, SM4110 VFA	QC Type (circle): Standard QAPP Other
Matrix (circle): Drinking Water Non-potable Water Solid Leachate		

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds .if curve ≥ 2 orders of magnitude (314.0)		Y			
2. Elution order of analytes in ICAL confirmed to be correct		Y			
3. Linearity and intercept: $r \geq 0.99$ (SM4110) $r \geq 0.995$ $r \geq 0.999$ (7199) $ x\text{-intercept} < RL$ or $< \frac{1}{2} RL$ (314.0 or special projects)		Y			
4. ICV, second source: run before samples 90-110% recovery		Y			If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		Y			If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project)		Y			If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X				If no, list details:
8. Pk Area:Height Difference (314.0 PD _{A/H}): Before samples $< 25\%$	X				If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results $>$ linear range diluted and reanalyzed?		Y			Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chrams, date, initial, & reason)		Y			Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:		Y			<input type="checkbox"/> No analyte $> RL$ in associated samples <input type="checkbox"/> Sample results $> 10x$ blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:		Y			<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R $>$ QC limits & samples $< RL$

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) If no, list QC ID & explain:		Y			<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		Y			

Review Items	Yes	No	2nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	Y			
b. All crossed out data is initialed and dated	Y			
c. Out of control QC is clearly identified	Y			
d. Any data that has a qualifier tick is commented on with appropriate action taken	Y			
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y			
16. Run Log				
a. Unused data is clearly identified	Y			
b. All crossed out data is initialed and dated	Y			
c. Analyst initials/signature provided	Y			
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	Y			
b. Method and matrix are correct	Y			
c. Date and time match raw data	Y			
d. Dilutions are correct	Y			
e. Correct suffix designated (where applicable)	Y			
18. TALS Worksheet Tab is complete and correct	Y			
19. TALS Reagent Tab is complete and correct	Y			
20. TALS QC Links Tab is correct	Y			
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	Y			
b. All reported analytes are marked Primary or Secondary	Y			
22. TALS Batch Information Screen documentation is complete	Y			
23. TALS Status set to appropriate review level	Y			
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?				
25. Results for samples and QC correct on final report?				
26. Are all necessary scanned documents in TALS?				
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?

Ion Chromatography Data Review Checklist

LIMS Batch Number: 420474	Worklist: 77458	Instrument ID (circle one): IC1 IC2 IC3 IC4
Analyst/1 st Reviewer: DR	Method (circle): 300.0, 314.0, 9056, 7199, SM4110 VFA	QC Type (circle): Standard QAPP Other
Matrix (circle): Drinking Water Non-potable Water Solid Leachate		

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds .if curve ≥ 2 orders of magnitude (314.0)		Y			
2. Elution order of analytes in ICAL confirmed to be correct		Y			
3. Linearity and intercept: $r \geq 0.99$ (SM4110) $r \geq 0.995$ $r \geq 0.999$ (7199) $ x\text{-intercept} < RL$ or $< \frac{1}{2} RL$ (314.0 or special projects)		Y			
4. ICV, second source: run before samples 90-110% recovery		Y			If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		Y			If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project)		Y			If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X				If no, list details:
8. PK Area:Height Difference (314.0 PD _{A/N}): Before samples $< 25\%$	X				If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results $>$ linear range diluted and reanalyzed?		Y			Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chruns, date, initial, & reason)		Y			Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:		Y			<input type="checkbox"/> No analyte $> RL$ in associated samples <input type="checkbox"/> Sample results $> 10x$ blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:		Y			<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R $>$ QC limits & samples $< RL$

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) <i>If no, list QC ID & explain:</i>		Y			<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		Y			

Review Items	Yes	No	2 nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	Y			
b. All crossed out data is Initialed and dated	Y			
c. Out of control QC is clearly identified	Y			
d. Any data that has a qualifier tick is commented on with appropriate action taken	Y			
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y			
16. Run Log				
a. Unused data is clearly identified	Y			
b. All crossed out data is initialed and dated	Y			
c. Analyst initials/signature provided	Y			
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	Y			
b. Method and matrix are correct	Y			
c. Date and time match raw data	Y			
d. Dilutions are correct	Y			
e. Correct suffix designated (where applicable)	Y			
18. TALS Worksheet Tab is complete and correct	Y			
19. TALS Reagent Tab is complete and correct	Y			
20. TALS QC Links Tab is correct	Y			
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	Y			
b. All reported analytes are marked Primary or Secondary	Y			
22. TALS Batch Information Screen documentation is complete	Y			
23. TALS Status set to appropriate review level	Y			
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?				
25. Results for samples and QC correct on final report?				
26. Are all necessary scanned documents in TALS?				
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?

Ion Chromatography Data Review Checklist

LIMS Batch Number: 420474	Worklist: 72458	Instrument ID (circle one): IC1 IC2 IC3 IC4
Analyst/1 st Reviewer: DR	Method (circle): 300.0, 314.0, 9056, 7199, SM4110 VFA	QC Type (circle): Standard QAPP Other
Matrix (circle): Drinking Water Non-potable Water Solid Leachate		

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds .if curve ≥ 2 orders of magnitude (314.0)		Y		/	
2. Elution order of analytes in ICAL confirmed to be correct		Y		/	
3. Linearity and Intercept: r ≥ 0.99 (SM4110) r ≥ 0.995 r ≥ 0.999 (7199) x-intercept < RL or < 1/2 RL (314.0 or special projects)		Y		/	
4. ICV, second source: run before samples 90-110% recovery		Y		/	If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		Y		/	If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project)		Y		/	If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X			/	If no, list details:
8. Pk Area:Height Difference (314.0 PD _{AM}): Before samples <25%	X			/	If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results > linear range diluted and reanalyzed?		Y		/	Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chrams, date, initial, & reason)		Y		/	Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:		Y		/	<input type="checkbox"/> No analyte > RL in associated samples <input type="checkbox"/> Sample results >10x blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:		Y		/	<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R > QC limits & samples < RL

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) If no, list QC ID & explain:		Y		/	<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		Y		/	

Review Items	Yes	No	2nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	Y		/	
b. All crossed out data is initialed and dated	Y		/	
c. Out of control QC is clearly identified	Y		/	
d. Any data that has a qualifier tick is commented on with appropriate action taken	Y		/	
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y		/	
16. Run Log				
a. Unused data is clearly identified	Y		/	
b. All crossed out data is initialed and dated	Y		/	
c. Analyst initials/signature provided	Y		/	
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	Y		/	
b. Method and matrix are correct	Y		/	
c. Date and time match raw data	Y		/	
d. Dilutions are correct	Y		/	
e. Correct suffix designated (where applicable)	Y		/	
18. TALS Worksheet Tab is complete and correct	Y		/	
19. TALS Reagent Tab is complete and correct	Y		/	
20. TALS QC Links Tab is correct	Y		/	
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	Y		/	
b. All reported analytes are marked Primary or Secondary	Y		/	
22. TALS Batch Information Screen documentation is complete	Y		/	
23. TALS Status set to appropriate review level	Y		/	
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?			/	
25. Results for samples and QC correct on final report?			/	
26. Are all necessary scanned documents in TALS?			/	
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?			/

Creator: Kolb, Chris M

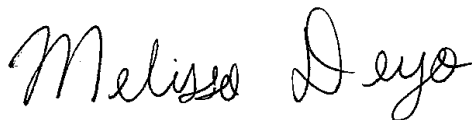

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	LABELLA
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A	

ANALYTICAL REPORT

Job Number: 480-137527-1

Job Description: Former Emerson Street Landfill Project

For:
LaBella Associates DPC
300 State Street
Suite 201
Rochester, NY 14614
Attention: Ann Aquilina

Approved for release.
Melissa L Deyo
Project Manager I

Job Narrative
480-137527-1

Receipt

The samples were received on 6/15/2018 10:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.3° C.

GC/MS VOA

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 480-421204 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported. The following samples are impacted: ML-7-I (480-137527-1), ML-7-D (480-137527-2) and DUPE (480-137527-3).

Method(s) 8260C: The following samples were diluted to bring the concentration of target analytes within the calibration range: ML-7-I (480-137527-1), ML-7-D (480-137527-2), ML-7-D (480-137527-2[MS]), ML-7-D (480-137527-2[MSD]) and DUPE (480-137527-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC

Method(s) 9056A: The following samples were diluted to bring the concentration of target analytes within the calibration range: ML-7-I (480-137527-1) and ML-7-D (480-137527-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Method(s) RSK-175: The following sample was diluted to bring the concentration of target analytes within the calibration range: ML-7-I (480-137527-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method(s) SM 3500 FE D: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: ML-7-I (480-137527-1) and ML-7-D (480-137527-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: LaBella Associates DPC
Project/Site: Former Emerson Street Landfill Project

TestAmerica Job ID: 480-137527-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

General Chemistry

Qualifier	Qualifier Description
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: LaBella Associates DPC
Project/Site: Former Emerson Street Landfill Project

TestAmerica Job ID: 480-137527-1

Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	10026	03-31-18 *

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
9056A		Water	Chloride
9056A		Water	Sulfate
SM 3500 FE D		Water	Ferrous Iron

* Accreditation/Certification renewal pending - accreditation/certification considered valid.

Method 8260C

Volatile Organic Compounds (GC/MS)

TestAmerica Buffalo

Data File: \\ChromNA\Buffalo\ChromData\HP5973S\20180623-72571.b\S2657.D

Injection Date: 23-Jun-2018 16:30:30

Instrument ID: HP5973S

Lims ID: 480-137527-B-3

Lab Sample ID: 480-137527-3

Client ID: DUPE

Operator ID: RB

ALS Bottle#: 18 Worklist Smp#: 25

Purge Vol: 5.000 mL

Dil. Factor: 5.0000

Method: S-8260

Limit Group: MV - 8260C ICAL

Column:

Detector: MS SCAN

1:4 Ammonium Hydroxide	4681200	Exp. 11/29/2018

Quality Control Limits

LCS/CCV = 1.5mg/L
Control Limits = 90-110%
(1.35 mg/L ~1.65 mg/L)

MB/CCB = 0.0mg/L
Control Limits <0.05mg/ >-0.05mg/L

MS/MSD = 1.0mg/L
Control Limits = 90-110%

RPD Control Limits <20%

Nitrate/Nitrite Calibration curve:

- 3.0ppm – 150ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
- 2.0ppm – 100ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
- 1.0 ppm – 50ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
- .5ppm – 5ml of 1.0ppm up to 10ml with DI water
- .2 ppm – 5ml of 2.0ppm up to 50ml with DI water
- .05 ppm – 5ml of .2ppm up 20ml With DI water
- ICV- 150ul of second source 1000ppm Nitrate/Nitrite standard up too 100 ml with DI
- CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

Nitrite Calibration curve:

- 3.0ppm – 150ul of 1000ppm Nitrite up to 50ml with DI water
- 2.0ppm – 100ul of 1000ppm Nitrite up to 50ml with DI water
- 1.0 ppm – 50ul of 1000ppm Nitrite up to 50ml with DI water
- .5ppm – 5ml of 1.0ppm up to 10ml with DI water
- .2 ppm – 5ml of 2.0ppm up too 50ml with DI water
- .05 ppm – 5ml of .2ppm up 20ml With DI water
- ICV- 150ul of second source 1000ppm Nitrite standard up too 100 ml with DI
- CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

Sulfide Stock Solution Standardization
for method SM 4500 S2F

Add 5.0 mL of 0.025N iodine solution to a 250 mL flask
 Add 1.0 mL of 6N HCl
 Add 1.0 mL of 1000 ppm pre-certified Sodium Sulfide below the surface of the Iodine solution
 Dilute to 100 mL with reagent water
 Add 1 dropper of starch indicator
 Titrate with 0.025N Sodium Thiosulfate until the endpoint is reached (blue color disappears)

Repeat twice and average the results

The standardized sodium sulfide concentration is calculated as follows:

$$S = [(A \times B) - (C \times D)] \times 16,000 / E$$

Where:

- A = Volume of iodine solution (5.0 mL)
- B = Normality of iodine solution (0.025N)
- C = Volume of Na₂S₂O₃ solution (Determined by standardization)
- D = Normality of Na₂S₂O₃ solution (0.025N)
- E = Volume of sulfide stock (1.0 mL)
- S = Concentration of sulfide stock

The standardization procedure must be completed for both the primary source standard used for the CCV/MS and the secondary source standard for the LCS

Date:	<input type="text" value="6/21/2018"/>	0.025N Iodine	<u>TALS ID:</u>
		0.025N Sodium Thiosulfate	4449717
			4487459

CCV/MS

mL Na₂S₂O₃ used for Titration 1: 2.50
 mL Na₂S₂O₃ used for Titration 1: 2.50
 Avg mL:

Sodium Sulfide Concentration (mg/L): ENTER in S2F spreadsheet under CCV "Stock Conc."
 STOCK Reagent ID 4675836 The actual concentration of the CCV will calculate automatically
 NEW Reagent ID (CCV/MS) 4723423

LCS

mL Na₂S₂O₃ used for Titration 1: 2.70
 mL Na₂S₂O₃ used for Titration 1: 2.70
 Avg mL:

Sodium Sulfide Concentration (mg/L): ENTER in S2F spreadsheet under LCS "Stock Conc."
 STOCK Reagent ID 4683225 The actual concentration of the LCS will calculate automatically
 NEW Reagent ID (LCS) 4723424

Quality Control Limits

LCS/CCV = 1.5mg/L
Control Limits = 90-110%
(1.35 mg/L –1.65 mg/L)

MB/CCB = 0.0mg/L
Control Limits <0.05mg/ >-0.05mg/L

MS/MSD = 1.0mg/L
Control Limits = 90-110%

RPD Control Limits <20%

Nitrate/Nitrite Calibration curve:

3.0ppm – 150ul of 1000ppm Nitrate/Nitrite up to 50ml with Di water
2.0ppm – 100ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
1.0 ppm – 50ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
.5ppm –5ml of 1.0ppm up to 10ml with DI water
.2 ppm – 5ml of 2.0ppm up to 50ml with DI water
.05 ppm – 5ml of .2ppm up 20ml With DI water
ICV- 150ul of second source 1000ppm Nitrate/Nitrite standard up too 100 ml with DI
CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

Nitrite Calibration curve:

3.0ppm – 150ul of 1000ppm Nitrite up to 50ml with Di water
2.0ppm – 100ul of 1000ppm Nitrite up to 50ml with DI water
1.0 ppm – 50ul of 1000ppm Nitrite up to 50ml with DI water
.5ppm –5ml of 1.0ppm up to 10ml with DI water
.2 ppm – 5ml of 2.0ppm up too 50ml with DI water
.05 ppm – 5ml of .2ppm up 20ml With DI water
ICV- 150ul of second source 1000ppm Nitrite standard up too 100 ml with DI
CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

Analyte Properties Table for : OM_6-15-2018_08-27-19PM.OMN

Property	Channel 2 Nitrite
Concentration Units	mg/L
Calibration Fit Type	First Order
Clear Calibration	Yes
Force through Zero	No
Calibration Weighting	None
Auto Dilution Trigger	No
% of High Standard	110
Quik Chem Method	10-107-04-1-J
Chemistry	Direct/Bipolar
Calibration by Height	Yes
Inject to Peak Start	3
Peak Base Width	41

Table : 1 (Nitrite)

Ion Chromatography Data Review Checklist

LIMS Batch Number: 418513-6	Work List Number: 72157	Instrument ID (circle one): IC1 IC2 IC3 IC4
Analyst/1 st Reviewer: CA	Method (circle): 300.0, 314.0, 9056, 7199, SM4110 VFA	QC Type (circle): Standard QAPP Other
Matrix (circle): Drinking Water Non-potable Water Solid Leachate ICAL		

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds. if curve ≥ 2 orders of magnitude (314.0)		Y		g	
2. Elution order of analytes in ICAL confirmed to be correct		Y		g	
3. Linearity and intercept: r ≥ 0.99 (SM4110) r ≥ 0.995 r ≥ 0.999 (7199) x-intercept < RL or < 1/2 RL (314.0 or special projects)		Y		g	
4. ICV, second source: run before samples 90-110% recovery	X	Y		g	If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)	NA				If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project)		Y		g	If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	NA				If no, list details:
8. PK Area:Height Difference (314.0 PD _{A/M}): Before samples <25%	NA				If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results > linear range diluted and reanalyzed?	NA				Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chrams, date, initial, & reason)		Y		g	Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:	NA				<input type="checkbox"/> No analyte > RL in associated samples <input type="checkbox"/> Sample results >10x blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:	NA				<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R > QC limits & samples < RL

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) If no, list QC ID & explain:	NA				<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%	A				

Review Items	Yes	No	2 nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	NA			
b. All crossed out data is initialed and dated	NA			
c. Out of control QC is clearly identified	NA			
d. Any data that has a qualifier tick is commented on with appropriate action taken	NA			
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y			
16. Run Log				
a. Unused data is clearly identified	NA			
b. All crossed out data is initialed and dated	NA			
c. Analyst initials/signature provided	Y			
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	NA			
b. Method and matrix are correct	A			
c. Date and time match raw data	Y			
d. Dilutions are correct	NA			
e. Correct suffix designated (where applicable)	NA			
18. TALS Worksheet Tab is complete and correct	Y			
19. TALS Reagent Tab is complete and correct	Y			
20. TALS QC Links Tab is correct	NA			
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	NA			
b. All reported analytes are marked Primary or Secondary	NA			
22. TALS Batch Information Screen documentation is complete	Y			
23. TALS Status set to appropriate review level	Y			
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?				
25. Results for samples and QC correct on final report?				
26. Are all necessary scanned documents in TALS?				
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?

LIMS Batch Number: 420960	Worklist: 72531	Instrument ID (circle one): IC1 IC2 IC3 IC4
Analyst/1 st Reviewer: DR	Method (circle): 300.0 314.0, 9056, 7199, SM4110 VFA	QC Type (circle): Standard QAPP Other
Matrix (circle): Drinking Water Non-potable Water Solid Leachate		

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds. if curve ≥ 2 orders of magnitude (314.0)		Y			
2. Elution order of analytes in ICAL confirmed to be correct		Y			
3. Linearity and intercept: r ≥ 0.99 (SM4110) r ≥ 0.995 r ≥ 0.999 (7199) x-intercept < RL or < 1/2 RL (314.0 or special projects)		Y			
4. ICV, second source: run before samples 90-110% recovery		Y			If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		Y			If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project)		Y			If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X				If no, list details:
8. PK Area: Height Difference (314.0 PD _{A/H}): Before samples <25%	X				If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results > linear range diluted and reanalyzed?		Y			Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chruns, date, initial, & reason)		Y			Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:		Y			<input type="checkbox"/> No analyte > RL in associated samples <input type="checkbox"/> Sample results >10x blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:		Y			<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R > QC limits & samples < RL

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) If no, list QC ID & explain:		Y			<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		Y			

Review Items	Yes	No	2nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	Y			
b. All crossed out data is initialed and dated	Y			
c. Out of control QC is clearly identified	Y			
d. Any data that has a qualifier tick is commented on with appropriate action taken	Y			
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y			
16. Run Log				
a. Unused data is clearly identified	Y			
b. All crossed out data is initialed and dated	Y			
c. Analyst Initials/signature provided	Y			
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	Y			
b. Method and matrix are correct	Y			
c. Date and time match raw data	Y			
d. Dilutions are correct	Y			
e. Correct suffix designated (where applicable)	N/A			
18. TALS Worksheet Tab is complete and correct	Y			
19. TALS Reagent Tab is complete and correct	Y			
20. TALS QC Links Tab is correct	Y			
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	Y			
b. All reported analytes are marked Primary or Secondary	Y			
22. TALS Batch Information Screen documentation is complete	Y			
23. TALS Status set to appropriate review level	Y			
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?				
25. Results for samples and QC correct on final report?				
26. Are all necessary scanned documents in TALS?				
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?

14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		Y			

Review Items	Yes	No	2nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	Y			
b. All crossed out data is initialed and dated	Y			
c. Out of control QC is clearly identified	Y			
d. Any data that has a qualifier tick is commented on with appropriate action taken	Y			
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y			
16. Run Log				
a. Unused data is clearly identified	Y			
b. All crossed out data is initialed and dated	Y			
c. Analyst initials/signature provided	Y			
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	Y			
b. Method and matrix are correct	Y			
c. Date and time match raw data	Y			
d. Dilutions are correct	Y			
e. Correct suffix designated (where applicable)	N/A			
18. TALS Worksheet Tab is complete and correct	Y			
19. TALS Reagent Tab is complete and correct	Y			
20. TALS QC Links Tab is correct	Y			
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	Y			
b. All reported analytes are marked Primary or Secondary	Y			
22. TALS Batch Information Screen documentation is complete	Y			
23. TALS Status set to appropriate review level	Y			
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?				
25. Results for samples and QC correct on final report?				
26. Are all necessary scanned documents in TALS?				
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?

LIMS Batch Number: <u>420962</u>	Worklist: <u>9283</u>	Instrument ID (circle one): IC1 <input type="radio"/> IC2 <input checked="" type="radio"/> IC3 <input type="radio"/> ICA <input type="radio"/>
Analyst/1 st Reviewer: <u>DR</u>	Method (circle): 300.0, 314.0, <u>9056</u> , 7199, SM4110 VFA	QC Type (circle) <u>Standard</u> QAPP Other
Matrix (circle): Drinking Water Non-potable <u>Water</u> Solid Leachate		<u>137527</u> , <u>137605</u>

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds. if curve ≥ 2 orders of magnitude (314.0)		Y		/	
2. Elution order of analytes in ICAL confirmed to be correct		Y		/	
3. Linearity and Intercept: $r \geq 0.99$ (SM4110) $r \geq 0.995$ $r \geq 0.999$ (7199) $ x\text{-intercept} < RL$ or $< \frac{1}{2} RL$ (314.0 or special projects)		Y		/	
4. ICV, second source: run before samples 90-110% recovery		Y		/	If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		Y		/	If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project)		Y		/	If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X			/	If no, list details:
8. Pk Area:Height Difference (314.0 PD _{WH}): Before samples $< 25\%$	X			/	If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results $>$ linear range diluted and reanalyzed?		Y		/	Comments:
10. 10 Manual integrations done & documented appropriately? (before & after choms, date, initial, & reason)		Y		/	Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project) if no, list blank ID & explain:		Y		/	<input type="checkbox"/> No analyte $>$ RL in associated samples <input type="checkbox"/> Sample results $> 10x$ blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) if no, list LCS ID & explain:		Y		/	<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R $>$ QC limits & samples $<$ RL

TestAmerica [lab name]

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) If no, list QC ID & explain:		Y		/	<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		Y		/	

Review Items	Yes	No	2nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	Y		/	
b. All crossed out data is initialed and dated	Y		/	
c. Out of control QC is clearly identified	Y		/	
d. Any data that has a qualifier tick is commented on with appropriate action taken	Y		/	
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y		/	
16. Run Log				
a. Unused data is clearly identified	Y		/	
b. All crossed out data is initialed and dated	Y		/	
c. Analyst initials/signature provided	Y		/	
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	Y		/	
b. Method and matrix are correct	Y		/	
c. Date and time match raw data	Y		/	
d. Dilutions are correct	Y		/	
e. Correct suffix designated (where applicable)	NA		NO	
18. TALS Worksheet Tab is complete and correct	Y		/	
19. TALS Reagent Tab is complete and correct	Y		/	
20. TALS QC Links Tab is correct	Y		/	
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	Y		/	
b. All reported analytes are marked Primary or Secondary	Y		/	
22. TALS Batch Information Screen documentation is complete	Y		/	
23. TALS Status set to appropriate review level	Y		/	
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?			/	
25. Results for samples and QC correct on final report?			/	
26. Are all necessary scanned documents in TALS?			/	
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?			/

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	LABELLA
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A	

ANALYTICAL REPORT

Job Number: 480-137605-1

Job Description: Former Emerson Street Landfill Project

For:
LaBella Associates DPC
300 State Street
Suite 201
Rochester, NY 14614
Attention: Ann Aquilina

Approved for release.
Melissa L Deyo
Project Manager I
6/25/2018 4:42 PM

Melissa L Deyo, Project Manager I
10 Hazelwood Drive, Amherst, NY, 14228-2298
(716)504-9874
melissa.deyo@testamericainc.com
06/25/2018

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report.

Receipt

The samples were received on 6/16/2018 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.8° C.

Receipt Exceptions

A trip blank was submitted for analysis with these samples; however, it was not listed on the Chain of Custody (COC).

GC/MS VOA

Method(s) 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: ML-2-D (480-137605-1), ML-2-D (480-137605-1[MS]) and ML-2-D (480-137605-1[MSD]). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following samples were analyzed after 7 days from sampling: ML-2-D (480-137605-1), ML-2-D (480-137605-1[MS]) and ML-2-D (480-137605-1[MSD]).

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 480-421204 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported. The following samples are impacted: DUPE (480-137605-2) and ML-2-I (480-137605-3).

Method(s) 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: DUPE (480-137605-2) and ML-2-I (480-137605-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC

Method(s) 9056A: The following samples were diluted to bring the concentration of target analytes within the calibration range: ML-2-D (480-137605-1) and ML-2-I (480-137605-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Method(s) RSK-175: The following samples were diluted to bring the concentration of target analytes within the calibration range: ML-2-D (480-137605-1) and ML-2-I (480-137605-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method(s) SM 3500 FE D: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: ML-2-D (480-137605-1) and ML-2-I (480-137605-3).

Method(s) 353.2: The following samples were analyzed outside of analytical holding time due to laboratory error: ML-2-D (480-137605-1) and ML-2-I (480-137605-3).

Method(s) 353.2: The following samples were analyzed outside of analytical holding time due to laboratory error: ML-2-D (480-137605-1) and ML-2-I (480-137605-3).

Method(s) Nitrate by calc: The following samples were analyzed outside of analytical holding time due to laboratory error: ML-2-D (480-137605-1) and ML-2-I (480-137605-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: LaBella Associates DPC
Project/Site: Former Emerson Street Landfill Project

TestAmerica Job ID: 480-137605-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

General Chemistry

Qualifier	Qualifier Description
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: LaBella Associates DPC
Project/Site: Former Emerson Street Landfill Project

TestAmerica Job ID: 480-137605-1

Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	10026	03-31-18 *

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
9056A		Water	Chloride
9056A		Water	Sulfate
SM 3500 FE D		Water	Ferrous Iron

* Accreditation/Certification renewal pending - accreditation/certification considered valid.

Method 8260C

Volatile Organic Compounds (GC/MS)
by Method 8260C

50 mg Sample

Analyte Properties Table for : OM_6-19-2018_05-02-21PM.OMN

Property	Channel 2
	Nitrate/Nitrite
Concentration Units	mg/L
Calibration Fit Type	First Order
Clear Calibration	Yes
Force through Zero	No
Calibration Weighting	None
Auto Dilution Trigger	No
% of High Standard	110
Quik Chem Method	10-107-04-1-J
Chemistry	Direct/Bipolar
Calibration by Height	No
Inject to Peak Start	21
Peak Base Width	41

Table : 1 (Nitrate/Nitrite)

Sulfide Stock Solution Standardization
for method SM 4500 S2F

Add 5.0 mL of 0.025N iodine solution to a 250 mL flask
 Add 1.0 mL of 6N HCl
 Add 1.0 mL of 1000 ppm pre-certified Sodium Sulfide below the surface of the Iodine solution
 Dilute to 100 mL with reagent water
 Add 1 dropper of starch indicator
 Titrate with 0.025N Sodium Thiosulfate until the endpoint is reached (blue color disappears)

Repeat twice and average the results

The standardized sodium sulfide concentration is calculated as follows:

$$S = [(A \times B) - (C \times D)] \times 16,000 / E$$

Where:

- A = Volume of iodine solution (5.0 mL)
- B = Normality of iodine solution (0.025N)
- C = Volume of Na₂S₂O₃ solution (Determined by standardization)
- D = Normality of Na₂S₂O₃ solution (0.025N)
- E = Volume of sulfide stock (1.0 mL)
- S = Concentration of sulfide stock

The standardization procedure must be completed for both the primary source standard used for the CCV/MS and the secondary source standard for the LCS

Date:	<input type="text" value="6/21/2018"/>	0.025N Iodine	<u>TALS ID:</u>
		0.025N Sodium Thiosulfate	4449717

Quality Control Limits

LCS/CCV = 1.5mg/L
 Control Limits = 90-110%
 (1.35 mg/L - 1.65 mg/L)

MB/CCB = 0.0mg/L
 Control Limits <0.05mg/ >-0.05mg/L

MS/MSD = 1.0mg/L
 Control Limits = 90-110%

RPD Control Limits <20%

Nitrate/Nitrite Calibration curve:

- 3.0ppm – 150ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
- 2.0ppm – 100ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
- 1.0 ppm – 50ul of 1000ppm Nitrate/Nitrite up to 50ml with DI water
- .5ppm – 5ml of 1.0ppm up to 10ml with DI water
- .2 ppm – 5ml of 2.0ppm up to 50ml with DI water
- .05 ppm – 5ml of .2ppm up 20ml With DI water
- ICV- 150ul of second source 1000ppm Nitrate/Nitrite standard up too 100 ml with DI
- CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

Nitrite Calibration curve:

- 3.0ppm – 150ul of 1000ppm Nitrite up to 50ml with DI water
- 2.0ppm – 100ul of 1000ppm Nitrite up to 50ml with DI water
- 1.0 ppm – 50ul of 1000ppm Nitrite up to 50ml with DI water
- .5ppm – 5ml of 1.0ppm up to 10ml with DI water
- .2 ppm – 5ml of 2.0ppm up too 50ml with DI water
- .05 ppm – 5ml of .2ppm up 20ml With DI water
- ICV- 150ul of second source 1000ppm Nitrite standard up too 100 ml with DI
- CCVL -- .05 ppm – 5ml of .2ppm up 20ml With DI water

50 mg Sample

Analyte Properties Table for : OM_6-19-2018_05-02-21PM.OMN

Property	Channel 2
	Nitrate/Nitrite
Concentration Units	mg/L
Calibration Fit Type	First Order
Clear Calibration	Yes
Force through Zero	No
Calibration Weighting	None
Auto Dilution Trigger	No
% of High Standard	110
Quik Chem Method	10-107-04-1-J
Chemistry	Direct/Bipolar
Calibration by Height	No
Inject to Peak Start	21
Peak Base Width	41

Table : 1 (Nitrate/Nitrite)

Ion Chromatography Data Review Checklist

LIMS Batch Number: 418513-6	Work List Number: 72157	Instrument ID (circle one): IC1 IC2 IC3 IC4
Analyst/1 st Reviewer: CA	Method (circle): 300.0, 314.0, 9056, 7199, SM4110 VFA	QC Type (circle): Standard QAPP Other
Matrix (circle): Drinking Water Non-potable Water Solid Leachate ICAL		

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds. if curve ≥ 2 orders of magnitude (314.0)		Y		g	
2. Elution order of analytes in ICAL confirmed to be correct		Y		g	
3. Linearity and intercept: r ≥ 0.99 (SM4110) r ≥ 0.995 r ≥ 0.999 (7199) x-intercept < RL or < 1/2 RL (314.0 or special projects)		Y		g	
4. ICV, second source: run before samples 90-110% recovery	X	Y		g	If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)	NA				If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project)		Y		g	If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	NA				If no, list details:
8. PK Area:Height Difference (314.0 PD _{A/M}): Before samples <25%	NA				If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results > linear range diluted and reanalyzed?	NA				Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chruns, date, initial, & reason)		Y		g	Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:	NA				<input type="checkbox"/> No analyte > RL in associated samples <input type="checkbox"/> Sample results >10x blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:	NA				<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R > QC limits & samples < RL

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) If no, list QC ID & explain:	NA				<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%	NA				

Review Items	Yes	No	2 nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	NA			
b. All crossed out data is initialed and dated	NA			
c. Out of control QC is clearly identified	NA			
d. Any data that has a qualifier tick is commented on with appropriate action taken	NA			
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y			
16. Run Log				
a. Unused data is clearly identified	NA			
b. All crossed out data is initialed and dated	NA			
c. Analyst initials/signature provided	Y			
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	NA			
b. Method and matrix are correct	NA			
c. Date and time match raw data	Y			
d. Dilutions are correct	NA			
e. Correct suffix designated (where applicable)	NA			
18. TALS Worksheet Tab is complete and correct	Y			
19. TALS Reagent Tab is complete and correct	Y			
20. TALS QC Links Tab is correct	NA			
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	NA			
b. All reported analytes are marked Primary or Secondary	NA			
22. TALS Batch Information Screen documentation is complete	Y			
23. TALS Status set to appropriate review level	Y			
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?				
25. Results for samples and QC correct on final report?				
26. Are all necessary scanned documents in TALS?				
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?				

2nd Reviewer: CR Review Date: 6/8/18

A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds. if curve ≥ 2 orders of magnitude (314.0)		Y			
2. Elution order of analytes in ICAL confirmed to be correct		Y			
3. Linearity and intercept: r ≥ 0.99 (SM4110) r ≥ 0.995 r ≥ 0.999 (7199) x-intercept < RL or < 1/2 RL (314.0 or special projects)		Y			
4. ICV, second source: run before samples 90-110% recovery		Y			If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		Y			If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project)		Y			If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X				If no, list details:
8. PK Area: Height Difference (314.0 PD _{A/H}): Before samples <25%	X				If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results > linear range diluted and reanalyzed?		Y			Comments:
10. 10 Manual integrations done & documented appropriately? (before & after chroms, date, initial, & reason)		Y			Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result < RL (9056 & 7199) Result < MDL (300.0) Result < 1/2 RL (SM4110, 314.0, DoD or special project) If no, list blank ID & explain:		Y			<input type="checkbox"/> No analyte > RL in associated samples <input type="checkbox"/> Sample results >10x blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) If no, list LCS ID & explain:		Y			<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R > QC limits & samples < RL

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) If no, list QC ID & explain:		Y			<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		Y			

Review Items	Yes	No	2 nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	Y			
b. All crossed out data is initialed and dated	Y			
c. Out of control QC is clearly identified	Y			
d. Any data that has a qualifier tick is commented on with appropriate action taken	Y			
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y			
16. Run Log				
a. Unused data is clearly identified	Y			
b. All crossed out data is initialed and dated	Y			
c. Analyst Initials/signature provided	Y			
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	Y			
b. Method and matrix are correct	Y			
c. Date and time match raw data	Y			
d. Dilutions are correct	Y			
e. Correct suffix designated (where applicable)	N/A			
18. TALS Worksheet Tab is complete and correct	Y			
19. TALS Reagent Tab is complete and correct	Y			
20. TALS QC Links Tab is correct	Y			
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	Y			
b. All reported analytes are marked Primary or Secondary	Y			
22. TALS Batch Information Screen documentation is complete	Y			
23. TALS Status set to appropriate review level	Y			
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?				
25. Results for samples and QC correct on final report?				
26. Are all necessary scanned documents in TALS?				
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?

Review Items	NA	Yes	No	2 nd Rev	If No, why is data reportable?
A. Calibration/Instrument Run QC					
1. Calibrated with at least 3 standards & a blank Min. 5 stds. if curve ≥ 2 orders of magnitude (314.0)		Y		/	
2. Elution order of analytes in ICAL confirmed to be correct		Y		/	
3. Linearity and Intercept: $r \geq 0.99$ (SM4110) $r \geq 0.995$ $r \geq 0.999$ (7199) $ x\text{-intercept} < RL$ or $< \frac{1}{2} RL$ (314.0 or special projects)		Y		/	
4. ICV, second source: run before samples 90-110% recovery		Y		/	If no, list details:
5. CCV: 10% frequency & closing 90-110% recovery 85-115% recovery (314.0)		Y		/	If no, list details:
6. ICB/CCB: run before samples, 10% freq. & closing Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project)		Y		/	If no, list details:
7. RL-level check standard: before samples 75-125% recovery (SM4110; 314.0 ICCS)	X			/	If no, list details:
8. Pk Area:Height Difference (314.0 PD _{WH}): Before samples $< 25\%$	X			/	If no, list details:
B. Client Sample and QC Sample Results					
9. Samples with results $>$ linear range diluted and reanalyzed?		Y		/	Comments:
10. 10 Manual integrations done & documented appropriately? (before & after choms, date, initial, & reason)		Y		/	Comments:
C. Preparation/Matrix QC					
11. Method Blank: one per preparation batch Result $< RL$ (9056 & 7199) Result $< MDL$ (300.0) Result $< \frac{1}{2} RL$ (SM4110, 314.0, DoD or special project) if no, list blank ID & explain:		Y		/	<input type="checkbox"/> No analyte $>$ RL in associated samples <input type="checkbox"/> Sample results $> 10x$ blank <input type="checkbox"/> Insufficient sample for reanalysis
12. LCS: one per preparation batch 90-110% recovery (routine) 85-115% recovery (SM4110) if no, list LCS ID & explain:		Y		/	<input type="checkbox"/> Insufficient sample for reanalysis <input type="checkbox"/> LCS %R $>$ QC limits & samples $<$ RL

TestAmerica [lab name]

Review Items	NA	Yes	No	2nd Rev	If No, why is data reportable?
13. MS/MSD or MS/Dup freq.: a pair per batch (routine) a pair per 10 samples (300.0) If no, list QC ID & explain:		Y		/	<input type="checkbox"/> Insufficient sample
14. MS/MSD acceptance criteria (SM4110): - Recovery = 70-130% - RPD <20%		Y		/	

Review Items	Yes	No	2nd Rev	If No, why is data reportable?
D. Raw Data & TALS Data Entry				
15. Raw Data				
a. Unused data is clearly identified	Y		/	
b. All crossed out data is initialed and dated	Y		/	
c. Out of control QC is clearly identified	Y		/	
d. Any data that has a qualifier tick is commented on with appropriate action taken	Y		/	
e. The first page of the run includes the filename, instrument, and analyst initials/signature	Y		/	
16. Run Log				
a. Unused data is clearly identified	Y		/	
b. All crossed out data is initialed and dated	Y		/	
c. Analyst initials/signature provided	Y		/	
17. TALS Samples Tab				
a. LIMS Sample IDs / Containers are correct	Y		/	
b. Method and matrix are correct	Y		/	
c. Date and time match raw data	Y		/	
d. Dilutions are correct	Y		/	
e. Correct suffix designated (where applicable)	NA		NO	
18. TALS Worksheet Tab is complete and correct	Y		/	
19. TALS Reagent Tab is complete and correct	Y		/	
20. TALS QC Links Tab is correct	Y		/	
21. TALS Sample Results Tab				
a. All unused data are marked Rejected or Accepted	Y		/	
b. All reported analytes are marked Primary or Secondary	Y		/	
22. TALS Batch Information Screen documentation is complete	Y		/	
23. TALS Status set to appropriate review level	Y		/	
E. Final Report and NCMs (2nd level review only)				
24. Were all job/project requirements met?			/	
25. Results for samples and QC correct on final report?			/	
26. Are all necessary scanned documents in TALS?			/	
27. NCMs reviewed for applicability, correct references to batches, grammar/typographical errors?			/

1.0 INTRODUCTION

LaBella Associates subcontracted Cascade Technical Services (CTS) to perform Hydraulic Injections at 2 points installed within a blast-enhanced bedrock trench at depths up to 15 ft below top of rock. Also to perform pneumatic enhanced injections at 3 locations at depths up to 15 ft below top of rock at their former Emmerson Street Landfill site in Rochester NY.

1.1 OBJECTIVE

To hydraulically inject the target treatment zones in each of the 2 designated pre drilled blast-enhanced injections points and pneumatically enhance the target treatment zone in each of the 3 designated pre drilled locations at the site and deliver the pre-determined dosage of Zero-Valent Iron (ZVI). Upon completion of injections, each injection point is capped and left open for possible re-injections at a later date.

2.0 TECHNOLOGY BACKGROUND

Pneumatic Enhancement (PE) can be described as a process by which a gas is injected into the subsurface at pressures exceeding the natural *insitu* pressures (i.e. overburden pressure, cohesive stresses, etc.) and at flow volumes exceeding the natural permeability of the formation. The result is the enhancement of existing fractures and planes of weakness (for example deposition planes) and the propagation of a fracture surrounding the injection borehole. In turn, this enhances the overall effective bulk permeability of the formation thus allowing the selected *insitu* treatment approach to work more effectively.

2.1 Pneumatic Enhancement

PE is applied using a skid mounted high pressure-high flow injection module which controls the pressure and flow of compressed nitrogen gas. The module consists of an injection control manifold, a digital data logger, pneumatic activated ball valve, hi-pressure/flow gas regulator and other safety components to monitor and control various operational parameters of the injection. Since the gas enhancement relies on sufficient pressures to overcome the natural *insitu* stresses in the formation and sufficient gas flow to overcome the natural permeability of the formation, precise control of injection pressures and flows is required. The duration of the gas injections typically ranges between 10 to 15 seconds.

Enhancement Initiation and Maintenance Pressures: During each PE event, pressures in the discrete interval are recorded by a pressure transducer located in-line within the pipe leading to the injection nozzle. These pressures are recorded by a data logging system located on the injection module and accessed using a laptop computer. By comparing the magnitude and shape of the pressure-history curve to previously collected curves in similar geology, an

assessment can be made on whether enhancement initiation and propagation occurred. This information allows the evaluation of two critical measurements: the initiation pressure and the maintenance pressure. A typical PE event can be subdivided into three distinct stages consisting of:

- Breakdown of Formation
- Initiation
- Maintenance

These independent stages are illustrated in **Figure 1**. It should be noted that the shape of the pressure-time history curve depends on a number of factors including *insitu* stress fields, geologic characteristics of the medium being enhanced and the man-made disturbances (boreholes, utilities, etc.) which can influence enhancement. Sample curves for some intervals where PE was applied can be found in **Appendix B**.

The following section describes each stage as it relates to the PE mechanism as illustrated in Figure 1.

During the first stage identified as “breakdown”, the pressure rapidly builds up as gas is injected into the discrete sealed interval of the borehole. This stage is identified as curve segment A-B. The formation of these initial elevated pressures result from the fact that the formation is not yet enhanced and still has low permeability. This stage is relatively short and typically lasts 1-2 seconds. Once the pressure exceeds the *insitu* stress conditions and media strength prevailing within the sealed pressurized interval, the formation yields and enhancement initiation instantaneously occurs. The pressure at this instant is identified as the initiation pressure identified as Stage B in Figure 1. Following the instantaneous initiation stage, the pressure decreases rapidly in the sealed interval and eventually stabilizes at a pressure plateau as the injection continues. During this time period, a high volume of gas rushes out of the pressurized interval and propagates radially into the formation. This accounts for the rapid decline in the borehole pressure as represented by curve segment B-C. The pressure plateau C-D represents a period of the enhancement maintenance and dilation, which is nearly constant for the remainder of the injection period. This pressure indicates that an equilibrium state has been attained for that particular injection flow rate. During this period, the flow rate into the formation exactly equals the leak-off into the formation from the enhancement surfaces and tips. As the injection pressure is terminated, the maintenance pressure declines rapidly from D-E. It is important to note that not every injection event or fracture propagation event has a distinct shape of curve. Many geologic anomalies (both natural and man-made) can affect the magnitude and shape of the pressure response curve.

Figure 1 – Example of a Pressure versus Time Curve

IP4-4F

Pressure Influence at Adjacent Monitoring Wells: During the PE events, pressure gauges were placed at selected monitoring wells and adjacent injection borings, where available, to monitor pressure influence. Each pressure gauge is fitted with a maximum drag-arm indicator, which enables the user to monitor the maximum pressure influence at that location during each event. This data also assists in determining which direction the enhancement may have propagated. In addition, the degree of pressure response can often help determine whether a monitoring point has been directly influenced (i.e. propagate outward and intersect wells or boreholes, or indirectly influenced through localized groundwater displacement and/or mounding).

Surface Heave: Ground surface heave is used as a method to detect initiation and propagation. Since soil is a deformable medium, the observed surface heave represents the lower limit of enhancement aperture and radius. Ground surface heave measurements are recorded using

surveying levels and heave rods. When using the visual heave monitoring method, a heave rod was placed at a predetermined radial distance from the well. During each event, the rod was observed for the maximum amount of upward motion (surface heave) and residual or permanent heave.

2.2 ZVI Injection

The current approach to *insitu* reduction of chlorinated hydrocarbons or heavy metals using ZVI employs the emplacement of ZVI to address both residual and dissolved phase contaminants. Through injection of ZVI throughout a contaminant plume, the ZVI powder comes in contact with contaminants and causes them to be converted into nontoxic end products such as chloride, ethane, and ethene.

The ZVI, called Ferox -Flow (-100/+325 mesh) chosen for the remediation sites was provided by Hepure Technologies. Ferox - Flow is a high quality granular iron powder that is produced from cast Iron. It is certifiable 95+% pure iron made from cast iron with over 90% of the particles in the 100-150 micron size range. 2205 lbs. of Ferox - Flow (ZVI) is packaged in the high strength super sacks.

3.0 IMPLEMENTATION SCOPE

This section summarizes the field operations and provides a discussion of the down-hole injection parameters collected during injection activities at the Emerson Street site. Field operations at the site were performed from November 6th through November 10th, 2017. A total of 3 injection points were surveyed and Installed and designated for PE and ZVI Injections. A total of 2 injection points were surveyed and installed within the blast trench and designated for Hydraulic ZVI injection.

Operational parameters collected during each injection event included; discrete injection interval, initiation and operational pressures recorded on the control module and injection pump, mass of amendments emplaced and visual field observations. Surface heave and pressure vs time curves were collected for all points to record the formations response to the injection events. This data is presented in a Summary Data Sheet (**Appendix A**) as well as a collection of pressure vs time curves (**Appendix B**).

The Injection boreholes were preinstalled into the bedrock. A 5 inch steel casing was grouted into bedrock and 4.75 rock hole was drilled and left open below the casing. The holes were drilled using Sonic drilling technology. The locations drilled within the blast frac trench were temporarily lined with 4 inch pvc to prevent the holes from collapse. The PVC was removed for

the Injections. The Injections at all locations were addressed in a “bottom up” injection approach.

A 3.4 inch O.D. packer string, with packers above and below the nozzle (called a “straddle-packer” configuration) was lowered into the borehole. The PE locations were not over drilled to allow for the bottom packer at the bottom Interval so the bottom packer was removed for the first interval. After the bottom Interval was completed the bottom packer was replaced for the remaining Intervals, thereby isolating a discrete fracture interval. The bottom packers were exposed to the formation to create a formation seal and one packer remained inside the casing to create a casing seal. This procedure was applied at all PE locations.

The Blast Frac location was hydraulically injected using the same packers and nozzle set up. Since there was sufficient distribution while hydraulically injecting, all of the material was injected into one location instead of 2 as requested by LaBella.

See **Appendix B** for details pertaining to individual injection locations and intervals. Below is a detailed discussion of significant events that transpired at the site, presented in order of occurrence.

3.1 Former Emerson Street Landfill

The target treatment depths and number of intervals are listed below for all 4 completed injection points.

23' – 38' bgs	IP-2	5 Intervals
25.5' – 38.5' bgs	IP-3,	4 Intervals
26' – 41' bgs	IP-4	5 Intervals
26' – 39 ' bgs	IP-5	5 Intervals

Upon completion of injection activities, each injection point addressed was capped with a well cover for possible future Injections and monitoring.

3.1.1 Pneumatic Enhancement Data – Former Emerson Street Landfill

Enhancement initiation pressures ranged from 200 to 325 PSI with maintenance pressures of 190 to 267 PSI. **Appendix B** displays the pressure vs time curves for Injection Points which were selected as representative of the areas response to the injection events.

Pressure influence during PE events was monitored at adjacent monitoring wells and injection points for all points as well as for other PE events where possible. **Appendix A** displays pressure influence data for all intervals addressed with PE.

Ground surface heave was measured utilizing two heave rods in different directions around each point as well as on any above ground utility or structure. Surface heave was detected during 2 of the PE events. **Appendix A** displays the surface heave data for all intervals where such data was collected within the Former Emerson Street Landfill ZVI area.

3.1.2 ZVI Injection Data – Former Emerson Street Landfill

The ZVI was injected using a Geoloop Piston Pump. ZVI injection pressures ranged from 15 to 60 PSI, with a flow rate of 20 - 60 gpm. Daylighting of ZVI did not occur.

The target mass of ZVI per interval was as follows; 5598 lbs. ZVI to 1225 gallons of water for all intervals at the blast frac location, and 1850 lbs ZVI to 312 gallons of water for all intervals in the PE locations. The ZVI was mixed with the water by weight on a per-interval basis immediately prior to injection.

A total of 55,456 lbs. of Zero-Valent Iron were injected at the Former Emmerson Street Landfill ZVI Site.

4.0 OBSERVATIONS AND CONCLUSIONS

One injection crew was utilized to complete the project.

Backpressure encountered during the application was minimal.

Nearly all Pressure vs Time curves collected at points indicate a higher pressure upon initiation of PE indicating that formation cohesion was overcome and enhancement was achieved

The monitoring well pressure influence data indicated, in some cases, the radius of influence was greater than 20 ft. For example data collected from ML-7S at the blast frac area while injecting on IP-3 in the PE area indicated Influence. Data collected from PRB-4 while injecting on IP-2 indicated influence between intervals 99 ft bgs and 83 ft bgs as well as connection to IP-1 which was completed prior and temporarily sealed with a packer.

Water samples taken from the monitoring locations had ZVI in them Indicating successful distribution.

TRIP BLANK	(480-149618-10)

DATA ASSESSMENT

An ASP Category B data package containing analytical results for nine aqueous samples and a trip blank was received from Labela Associates, P.C. on 13Mar19. The deliverables package included formal reports, raw data, the necessary QC, and supporting information. The samples, taken from the Emerson Street Landfill Site, were identified by Chain of Custody documents and traceable through the work of TestAmerica-Buffalo, the laboratory contracted for analysis. Analyses, performed according to SW-846 Method 8260C, addressed determinations of volatile organics. Laboratory data was evaluated according to the quality assurance / quality control requirements of the New York State Department of Environmental Conservation's Analytical Services Protocol (ASP), September 1989, Rev. 07/2005. When the required protocol was not followed, the current EPA Region II Functional Guidelines (SOP NO. HW-33, Rev. #3, March 2013, Low/Medium Volatile Data Validation) was used as a technical reference.

The positive acetone, methylene chloride and 2-butanone results from this group of samples have been qualified as estimations because they may represent laboratory artifacts.

The bromoform and dibromochloromethane results from ML-2D, ML-2S, ML-7I, LAB-SBW-16, LAB-SBW-15 and the DUPE have been qualified as estimations due to poor calibration performance.

The methyl acetate results from ML-2I, ML-7D, GMX-W3 and the DUPE; and the 2-butanone results from ML-7I and LAB-SBW-16 have been qualified as estimations due to low spiked blank (LCS) recoveries.

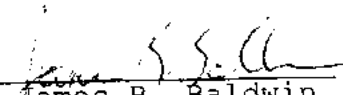

The presence of chloroethane in ML-2S and ML-2I; 1,1-dichloroethene in ML-7I, and benzene in LAB-SBW-15 could not be verified, based on the mass spectra references included in the raw data. Chloroethane, 1,1-dichloroethene and benzene should be interpreted as undetected in the affected samples.

CORRECTNESS AND USABILITY

Reported data should be considered technically defensible and completely usable in its present form. Results presenting a usable estimation of the conditions at the time of sampling have been flagged "J", "U" or "UJ". Estimated data should be used with caution. A detailed discussion of the review process follows.

Two facts should be considered by all data users. No compound concentration, even if it has passed strict QC testing, can be guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error. Secondly.

DATAVAL, Inc. guarantees the quality of this data assessment. However, DATAVAL, Inc. does not warrant any interpretation or utilization of this data by a third party.

Reviewer's signature:  Date: 26 Nov 19

DATAVAL Inc.

SAMPLE HISTORY

Analyte concentrations can deteriorate with time due to chemical instability, bacterial degradation or volatility. Samples that are not properly preserved or are not analyzed within established holding times may no longer be considered representative. Holding times are calculated from the time of sample collection. Samples must remain chilled to 4°C between the time of collection and the time of analysis. Acid preserved VOC samples must be analyzed within 14 days, unpreserved VOC samples within 7 days. The holding time for soils is 14 days. Aqueous semivolatiles organics, pesticides and PCB samples must be extracted within seven days of collection. Soils must be extracted within 14 days. The extracts must then be analyzed within forty days of extraction. The holding times for cyanide and mercury samples are 14 and 28 days, respectively. Metals samples must be analyzed within six months.

This delivery group contained nine aqueous samples that were collected from the Emerson Street Landfill Site on 26Feb19 and 27Feb19. The entire group of samples was packaged with a trip blank and shipped to the laboratory, via FedEx, on 28Feb19. The shipment was received the following morning. At the time of receipt the sample cooler was found to be intact and packed with ice, with custody seals in place. A cooler temperature of 2.7°C was recorded at the time of receipt. Although proper sample preservation was documented in the field custody record, checks made at the time of analysis indicated that only the trip blank was properly acidified. This issue had no impact on reported data, however, because each sample was analyzed within the holding time limit for an unpreserved sample.

VOLATILE ORGANICS

This group of samples was analyzed for volatile organics on 01Mar19 and 02Mar19. The SW-846 holding time requirements were satisfied.

Blanks

Blanks are analyzed to evaluate various sources of sample contamination. Field blanks monitor sampling activities. Trip blanks monitor sample transport and storage activities, and method blanks are analyzed to verify instrument integrity. Samples are considered compromised by conditions causing contamination in any blank.

Three method blanks and a trip blank were analyzed with this group of samples. Although each of these blanks demonstrated acceptable chromatography and was free of targeted analyte contamination, the method blanks contained traces of hexachlorobutadiene and an "unknown" Tentatively Identified Compound (TIC) eluting at 7.25 minutes. The presence of this contamination, however, had no impact on reported data because similar artifacts were not detected in this group of samples.

Although not detected in the associated blanks, acetone, methylene chloride and 2-butanone were found throughout this group of samples. When present, these concentrations have been qualified as estimations because low levels of acetone, methylene chloride, and 2-butanone frequently represent laboratory artifacts. Acetone, methylene chloride (METH CL) and 2-butanone (MEK) could not be removed from the affected sample reports because they were not found in the associated blanks.

MS Tuning

Mass spectrometer tuning and performance criteria are established to ensure sufficient mass resolution and sensitivity to accurately detect and identify targeted analytes. Verification is accomplished using a certified standard.

An Instrument Performance Check Standard of BFB was analyzed prior to each analytical sequence that included samples from this program. An Instrument Performance Check Form is present for each BFB evaluation. The BFB tunes associated with this group of samples satisfied the program acceptance criteria.

Calibrations

Requirements for instrument calibration are established to ensure that laboratory equipment is capable of producing accurate, quantitative data. Initial calibrations demonstrate a range through which measurements may be made. Continuing calibration check standards verify instrument stability.

The initial instrument calibration for VOC was performed on 09Jan19. Standards of 0.4, 1.0, 2.0, 5.0, 10, 25, 50 and 100 µg/l were included. Each targeted analyte produced the required levels of instrument response and demonstrated an acceptable degree of linearity during this calibration.

Calibration check standards were analyzed on 01Mar19 (09:33), 01Mar19 (21:21) and 02Mar19, prior to the twelve-hour periods of instrument operation that included samples from this program. When compared to the initial calibration, unacceptable shifts were observed in the instrument response of bromoform (34%, 26%) on 01Mar19 (21:21) and 02Mar19, and dibromochloromethane (27%) on 01Mar19 (21:21). Based on this performance the bromoform and dibromochloromethane (BR2CLMANE) results from ML-2D, ML-2S, ML-7I, LAB-SBW-16, LAB-SBW-15 and the TRIP BLANK have been qualified as estimations.

Surrogates

Each sample, blank and standard is spiked with surrogate compounds prior to analysis. The structures of surrogates are similar to analytes of interest, but they are not normally found in environmental samples. Surrogate recoveries are monitored to evaluate overall laboratory performance and the efficiency of laboratory technique.

Surrogate Summary Sheets were properly prepared, based on the laboratory's statistical acceptance criteria. When compared to the ASP requirements, however, an acceptable recovery was reported for each surrogate addition to this group of samples.

Internal Standards

Internal standards are added to each sample, blank and standard just prior to injection. Analyte concentrations are calculated relative to the response of a specific internal standard. Internal standard performance criteria ensure that GC/MS sensitivity and response are stable during the analysis of each sample. The area of internal standard peaks may not vary by more than a factor of two. When compared to the preceding calibration check, retention times may not vary by more than 30 seconds.

The laboratory correctly calculated control limits for internal standard response and retention times. When compared to this criteria, acceptable performance was reported for the internal standard additions to each program sample.

Matrix Spikes

Matrix spiking refers to the addition of known analyte concentrations to a sample, prior to analysis. Analyte recoveries provide an indication of laboratory accuracy. The analysis of a duplicate spiked aliquot provides a measurement of precision.

LAB-SBW-15 was selected for matrix spiking. The entire list of targeted analytes was added to two portions of this sample. The recoveries reported for these additions included an elevated result for dibromochloromethane (126%). This indication of positive bias, however, warrants no concern because dibromochloromethane was not detected in this group of samples.

Three spiked blanks (LCS) were also analyzed with this group of samples. These LCS samples produced unacceptable recoveries of methyl acetate (72%), 2-butanone (195%) and dibromochloromethane (126%). The methyl acetate (METH ACE) results from ML-2I, ML-7D, GMX-MW3 and the DUPE; and the 2-butanone (MEK) concentrations found in ML-7I and LAB-SBW-16 have been qualified as estimations based on this performance. Again, the positive bias indicated by the high recovery of dibromochloromethane warrants no concern.

Duplicates

Two aliquots of the same sample are processed separately through all aspects of sample preparation and analysis. The results produced by the analysis of this pair of samples are compared as a measurement of precision. Poor precision may be indicative of sample non-homogeneity, method defects, or poor laboratory technique.

The blind field duplicate sample that was included in this delivery group was not identified.

Reported Analytes

Formal reports were provided for each sample. The data package also included total ion chromatograms and raw instrument print-outs. Reference mass spectra were provided to confirm the identification of each analyte that was found in this group of samples. Tentatively Identified Compounds (TIC) were reported.

The presence of chloroethane in ML-2S and ML-2I; 1,1-dichloroethene in ML-7I, and benzene in LAB-SBW-15 could not be verified, based on the mass spectra references included in the raw data. Chloroethane (CLEANE), 1,1-dichloroethene (11DCE) and benzene should be interpreted as undetected in the affected samples.

DATA USABILITY SUMMARY REPORT

for

LABELLA ASSOCIATES, P.C.

300 State Street

Rochester, NY 14614

FORMER EMERSON LANDFILL

Project 210173

SDG: 480-129878

Sampled 01/08/2018

VOLATILE ORGANICS

ML-7I (480-129878-1)

DUPE-2 (480-129878-2)

ML-7D (480-129878-3)

DATA ASSESSMENT

An ASP Category B data package containing analytical results for three groundwater samples was received from Labella Associates, P.C. on 19Oct18. The deliverables package included formal reports, raw data, the necessary QC, and supporting information. The samples, taken from the Former Emerson Street Landfill Site, were identified by Chain of Custody documents and traceable through the work of TestAmerica-Buffalo, the laboratory contracted for analysis. The analyses, performed according to EPA Method 8260, addressed determinations of volatile organics. Laboratory data was evaluated according to the quality assurance / quality control requirements of the New York State Department of Environmental Conservation's Analytical Services Protocol (ASP), September 1989, Rev. 07/2005. When the required protocol was not followed, the current EPA Region II Functional Guidelines (SOP NO. HW-33, Rev. #3, March 2013, Low/Medium Volatile Data Validation) was used as a technical reference.

The acetone and 2-butanone concentrations found in ML-7D have been qualified as estimations because they may represent laboratory artifacts.

The acetone results from this delivery group have been qualified as estimations due to poor calibration performance.

The chloromethane and vinyl chloride concentrations from ML-7I have been qualified as estimations due to poor spiked sample recoveries. The acetone concentration found in ML-7D has been qualified due to a high spiked blank recovery.

The presence of 1,1,1-trichloroethane in DUPE-2 could not be verified based on the mass spectra references included in the raw data. 1,1,1-Trichloroethane should be interpreted as undetected in this sample.

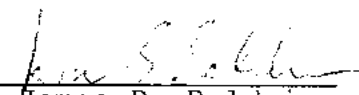

A TIC reported from ML-7I was identified as an "unknown". This identification has been changed to 1,2-dichloro-1,1,2-trifluoroethane, a more appropriate identification.

CORRECTNESS AND USABILITY

Reported data should be considered technically defensible and completely usable in its present form. Results presenting a usable estimation of the conditions at the time of sampling have been flagged "J", "U" or "UJ". Estimated data should be used with caution. A detailed discussion of the review process follows.

Two facts should be considered by all data users. No compound concentration, even if it has passed strict QC testing, can be

guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error. Secondly. DATAVAL, Inc. guarantees the quality of this data assessment. However, DATAVAL, Inc. does not warrant any interpretation or utilization of this data by a third party.

Reviewer's signature:  Date: 10/20/81

DATAVAL Inc.

SAMPLE HISTORY

Analyte concentrations can deteriorate with time due to chemical instability, bacterial degradation or volatility. Samples that are not properly preserved or are not analyzed within established holding times may no longer be considered representative. Holding times are calculated from the time of sample collection. Samples must remain chilled to 4°C between the time of collection and the time of analysis. Acid preserved VOC samples must be analyzed within 14 days. Unpreserved VOC samples within 7 days.

This delivery group contained three groundwater samples that were collected from the Former Emerson Street Landfill Site on 08Jan18. The samples were shipped to the laboratory, via FedEx, on 09Jan18 and were received the following morning. At the time of receipt the sample cooler was found to be intact and packed with ice, with custody seals in place. A cooler temperature of 3.4°C was recorded at the time of receipt.

Although proper sample preservation was not documented in the field custody record, the pH of each VOC sample was recorded at the time of analysis to verify proper stabilization. Although an acceptable pH<2 was obtained from ML-7I and ML-7D, Dupe-2 produced a pH=7. This result, however, warrants no concern because DUPE-2 was analyzed within the holding time limitation of an unpreserved sample. Data qualifications are not required.

VOLATILE ORGANICS

This group of samples was analyzed for volatile organics on 12Jan18. The integrity of these samples has been previously addressed.

Blanks

Blanks are analyzed to evaluate various sources of sample contamination. Field blanks monitor sampling activities. Method blanks are analyzed to verify instrument integrity. Samples are considered compromised by conditions causing contamination in any blank.

One method blank was analyzed with this group of samples. This blank demonstrated acceptable chromatography and was free of targeted analyte contamination.

One Tentatively Identified Compound (TIC), identified as 1-chlorohexane, was reported from the method blank. Although an identification of "unknown" was more appropriate, the presence of this contamination warrants no concern. A similar artifact was not detected in this group of samples.

Although not detected in the associated blank, acetone and 2-butanone were found in ML-7D. These concentrations have been qualified as estimations because low levels of acetone and 2-butanone frequently represent laboratory artifacts. Acetone and

2-butanone (MEK) could not be removed from the affected sample report because they were not found in the associated blank.

MS Tuning

Mass spectrometer tuning and performance criteria are established to ensure sufficient mass resolution and sensitivity to accurately detect and identify targeted analytes. Verification is accomplished using a certified standard.

An Instrument Performance Check Standard of BFB was analyzed prior to each analytical sequence that included samples from this program. An Instrument Performance Check Form is present for each BFB evaluation. The BFB tunes associated with this group of samples satisfied the program acceptance criteria.

Calibrations

Requirements for instrument calibration are established to ensure that laboratory equipment is capable of producing accurate, quantitative data. Initial calibrations demonstrate a range through which measurements may be made. Continuing calibration check standards verify instrument stability.

The initial instrument calibration for VOC was performed on 28Dec17. Standards of 0.5, 1.0, 2.0, 5.0, 10, 25, 50 and 100 µg/l were included. Each targeted analyte produced the required levels of instrument response and demonstrated an acceptable degree of linearity during this calibration.

A calibration check standard was analyzed on 12Jan18, prior to the twelve-hour period of instrument operation that included samples from this program. When compared to the initial calibration, each targeted analyte, with the exception of acetone, demonstrated an acceptable level of instrument stability during this check. However, an unacceptable shift of 105% was observed in the instrument response of acetone. The acetone results from this group of samples have been qualified as estimations based on this performance.

Surrogates

Each sample, blank and standard is spiked with surrogate compounds prior to analysis. The structures of surrogates are similar to analytes of interest, but they are not normally found in environmental samples. Surrogate recoveries are monitored to evaluate overall laboratory performance and the efficiency of laboratory technique.

Surrogate Summary Sheets were properly prepared, based on the laboratory's statistical acceptance criteria. When compared to the ASP requirements, however, an acceptable recovery was reported for each surrogate addition to this group of samples.

Internal Standards

Internal standards are added to each sample, blank and standard just prior to injection. Analyte concentrations are calculated relative to the response of a specific internal standard. Internal standard performance criteria ensure that GC/MS sensitivity and response are stable during the analysis of each sample. The area of internal standard peaks may not vary by more than a factor of two. When compared to the preceding calibration check, retention times may not vary by more than 30 seconds.

The laboratory correctly calculated control limits for internal standard response and retention times. When compared to this criteria, acceptable performance was reported for the internal standard additions to each program sample.

Matrix Spikes

Matrix spiking refers to the addition of known analyte concentrations to a sample, prior to analysis. Analyte recoveries provide an indication of laboratory accuracy. The analysis of a duplicate spiked aliquot provides a measurement of precision.

ML-7I was selected for matrix spiking. The entire list of targeted analytes was added to two aliquots of this sample. The recoveries reported for these additions included unacceptable results for acetone (157%, 181%), chloromethane (66%) and vinyl chloride (64%). The positive bias indicated by the high recoveries of acetone warrant no concern because acetone was not found in ML-7I. The chloromethane and vinyl chloride results from ML-7I have been qualified as estimations.

It is noted that poor measurement precision was identified in the measurements of twenty-four spiked analytes. The affected analytes have not been qualified, however, because each individual measurement fell within the laboratory's range of acceptance.

A spiked blank (LCS) was also analyzed with this group of samples. The recoveries reported for this LCS sample included a high result for acetone (199%). The acetone concentration reported from ML-7D has been qualified as an estimation based on this indication of positive bias. The remaining samples produced negative acetone results.

Duplicates

Two aliquots of the same sample are processed separately through all aspects of sample preparation and analysis. The results produced by the analysis of this pair of samples are compared as a measurement of precision. Poor precision may be indicative of sample non-homogeneity, method defects, or poor laboratory technique.

The blind field duplicate sample that was included in this delivery group was not identified.

Reported Analytes

Formal reports were provided for each sample. The data package also included total ion chromatograms and raw instrument print-outs. Reference mass spectra were provided to confirm the identification of each analyte that was found in this group of samples. Tentatively Identified Compounds (TIC) were reported.

The presence of 1,1,1-trichloroethane in DUPE-2 could not be verified based on the mass spectra references included in the raw data. 1,1,1-Trichloroethane (111TCA) should be interpreted as undetected in this sample. A detection limit equaling the laboratory's reporting limit should be assumed.

A TIC reported from ML-7I was identified as an "unknown". This identification has been changed to 1,2-dichloro-1,1,2-trifluoroethane, a more appropriate identification.

DATA ASSESSMENT

An ASP Category B data package containing analytical results for eight groundwater samples was received from Labella Associates, P.C. on 02Jul18. The deliverables package included formal reports, raw data, the necessary QC, and supporting information. The samples, taken from the Former Emerson Street Landfill Site, were identified by Chain of Custody documents and traceable through the work of TestAmerica-Buffalo, the laboratory contracted for analysis. The analyses, performed according to EPA Methods, addressed determinations of volatile organics, nitrate, nitrite, ethane, ethene, sulfide and ferrous iron. Laboratory data was evaluated according to the quality assurance / quality control requirements of the New York State Department of Environmental Conservation's Analytical Services Protocol (ASP), September 1989, Rev. 07/2005. When the required protocol was not followed, the current EPA Region II Functional Guidelines (SOP NO. HW-33, Rev. #3, March 2013, Low/Medium Volatile Data Validation) and the cited methods were used as a technical reference.

The methylene chloride and 2-butanone concentrations found in this group of samples have been qualified as estimations because they may represent laboratory artifacts.

The 2-butanone, 2-hexanone, acetone and methyl acetate results from LBA-SBW-16 have been qualified as estimations due to low spiked sample recoveries.

The methyl acetate results from ML-2I and LBA-SBW-16, and the 2-butanone and 2-hexanone results from ML-2I have been qualified as estimations due to low spiked blank recoveries.

The nitrite and nitrate results from this delivery group have been qualified as estimations because their holding time limitation was exceeded by one day.

The ferrous iron results from this group of samples have been rejected because their holding time limitation was grossly exceeded.

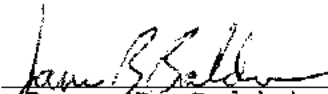

CORRECTNESS AND USABILITY

Reported data should be considered technically defensible and completely usable in its present form. Results presenting a usable estimation of the conditions at the time of sampling have been flagged "J" or "UJ". Data felt to be unreliable has been identified with a single red line and flagged "R". Estimated data should be used with caution. A detailed discussion of the review process follows.

Two facts should be considered by all data users. No compound concentration, even if it has passed strict QC testing, can be

guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error. Secondly. DATAVAL, Inc. guarantees the quality of this data assessment. However, DATAVAL, Inc. does not warrant any interpretation or utilization of this data by a third party.

Reviewer's signature:

James B. Baldwin

Date: 19 Oct 18

SAMPLE HISTORY

Analyte concentrations can deteriorate with time due to chemical instability, bacterial degradation or volatility. Samples that are not properly preserved or are not analyzed within established holding times may no longer be considered representative. Holding times are calculated from the time of sample collection. Samples must remain chilled to 4°C between the time of collection and the time of analysis. Acid preserved VOC samples must be analyzed within 14 days. Unpreserved VOC samples within 7 days. Nitrate and nitrite, must be determined within one day, sulfide within seven days, and ferrous iron analyses should be performed in the field at the time of sample collection.

This delivery group contained eight groundwater samples that were collected from the Former Emerson Street Landfill Site on 21Feb18. The samples were shipped to the laboratory, via FedEx, on 23Feb18 and were received the following morning. At the time of receipt the sample cooler was found to be intact and packed with ice, with custody seals in place. A cooler temperature of 4.5°C was recorded at the time of receipt.

Although proper sample preservation was documented in the field custody record, a pH=7 was obtained from the VOC samples of ML-2S, ML-2D and LBA-SBW-16. ML-7D produced a pH=4. This performance, however, warrants no concern because each VOC, ethane and ethene sample was analyzed within the holding time limitation of unpreserved samples.

VOLATILE ORGANICS

This group of samples was analyzed for volatile organics between 25Feb18 and 28Feb18. The integrity of these samples has been previously addressed.

Blanks

Blanks are analyzed to evaluate various sources of sample contamination. Field blanks monitor sampling activities. Method blanks are analyzed to verify instrument integrity. Samples are considered compromised by conditions causing contamination in any blank.

Four method blanks were analyzed with this group of samples. Each of these blanks demonstrated acceptable chromatography and was free of targeted analyte contamination.

Although not detected in the associated blanks, methylene chloride was found in ML-7I, and 2-butanone was detected in ML-7D, LBA-SBW-15 and the DUPE. These concentrations have been qualified as estimations because low levels of methylene chloride and 2-butanone frequently represent laboratory artifacts. Methylene chloride (METH CL) and 2-butanone (MEX) could not be removed from the affected sample reports because they were not found in the associated blanks.

MS Tuning

Mass spectrometer tuning and performance criteria are established to ensure sufficient mass resolution and sensitivity to accurately detect and identify targeted analytes. Verification is accomplished using a certified standard.

An Instrument Performance Check Standard of BFB was analyzed prior to each analytical sequence that included samples from this program. An Instrument Performance Check Form is present for each BFB evaluation. The BFB tunes associated with this group of samples satisfied the program acceptance criteria.

Calibrations

Requirements for instrument calibration are established to ensure that laboratory equipment is capable of producing accurate, quantitative data. Initial calibrations demonstrate a range through which measurements may be made. Continuing calibration check standards verify instrument stability.

Initial instrument calibrations for VOC were performed on 09Jan18 and 31Jan18. Standards of 0.5, 1.0, 2.0, 5.0, 10, 25, 50 and 100 µg/l were included. With the exception of trans-1,4-dichloro-2-butene, each targeted analyte produced the required levels of instrument response and demonstrated an acceptable degree of linearity during both of these calibrations.

Although trans-1,4-dichloro-2-butene standards produced the required levels of instrument response, they demonstrated poor linearity. Although errors might be expected in measurements of trans-1,4-dichloro-2-butene, it may be assumed that this analyte would be detected if present in samples. Because trans-1,4-dichloro-2-butene was not detected in this group of samples, data qualifications are not required.

Calibration check standards were analyzed on 25Feb18, 26Feb18 and 28Feb18, prior to the twelve-hour periods of instrument operation that included samples from this program. When compared to the initial calibration, each targeted analyte demonstrated an acceptable level of instrument stability during each of these checks.

Surrogates

Each sample, blank and standard is spiked with surrogate compounds prior to analysis. The structures of surrogates are similar to analytes of interest, but they are not normally found in environmental samples. Surrogate recoveries are monitored to evaluate overall laboratory performance and the efficiency of laboratory technique.

Surrogate Summary Sheets were properly prepared, based on the laboratory's statistical acceptance criteria. When compared to the ASP requirements, however, an acceptable recovery was reported for each surrogate addition to this group of samples.

Internal Standards

Internal standards are added to each sample, blank and standard just prior to injection. Analyte concentrations are calculated relative to the response of a specific internal standard. Internal standard performance criteria ensure that GC/MS sensitivity and response are stable during the analysis of each sample. The area of internal standard peaks may not vary by more than a factor of two. When compared to the preceding calibration check, retention times may not vary by more than 30 seconds.

The laboratory correctly calculated control limits for internal standard response and retention times. When compared to this criteria, acceptable performance was reported for the internal standard additions to each program sample.

Matrix Spikes

Matrix spiking refers to the addition of known analyte concentrations to a sample, prior to analysis. Analyte recoveries provide an indication of laboratory accuracy. The analysis of a duplicate spiked aliquot provides a measurement of precision.

LBA-SBW-15 and LBA-SBW-16 were selected for matrix spiking. The entire list of targeted analytes was added to two aliquots of these samples. The recoveries reported from LBA-SBW-16 included low results for 2-butanone (67%,66%), 2-hexanone (69%,68%), acetone (68%,68%) and methyl acetate (66%,66). The 2-butanone, 2-hexanone, acetone and methyl acetate results from LBA-SBW-16 have been qualified as estimations based on these indications of negative bias. The recoveries reported for the remaining analytes demonstrated acceptable levels of measurement precision and accuracy.

Four spiked blanks (LCS) were also analyzed with this group of samples. The recoveries reported for these LCS samples included low methyl acetate (72%,66%), 2-butanone (64%) and 2-hexanone (68%) results. The methyl acetate results from ML-2I and LBA-SBW-16, and the 2-butanone and 2-hexanone results from ML-2I have been qualified as estimations based on these indications of negative bias.

Duplicates

Two aliquots of the same sample are processed separately through all aspects of sample preparation and analysis. The results produced by the analysis of this pair of samples are compared as a measurement of precision. Poor precision may be indicative of sample non-homogeneity, method defects, or poor laboratory technique.

The blind field duplicate sample that was included in this delivery group was not identified.

Reported Analytes

Formal reports were provided for each sample. The data package also included total ion chromatograms and raw instrument print-outs. Reference mass spectra were provided to confirm the

identification of each analyte that was found in this group of samples. Tentatively Identified Compounds (TIC) were reported.

ETHANE AND ETHENE

Ethane and ethene were also determined by gas chromatography. These analyses were completed within 6 days of collection and were associated with a clean blank and spiked blanks that demonstrated acceptable levels of measurement precision and accuracy. The ethane and ethene results from this delivery group should be considered completely usable and without qualifications as presented.

WET CHEMISTRY

Nitrate, nitrite, sulfide and ferrous iron were determined by wet chemistry methods. Nitrate and nitrite analyses were performed on 23Feb18. At this point the 24-hour holding time limitation for nitrite and nitrate was exceeded by 1 day. The nitrate and nitrite results from this project have been qualified as estimations because the sample holding time limitation was exceeded.

Nitrate (NO₃) concentrations are obtained by analyzing each sample for a total concentration of nitrate plus nitrite (NO₂+NO₃) and subtracting the result of a nitrite (NO₂) determination. Although QC results were not reported for nitrate and nitrite, acceptable calibration check standards, LCS recoveries, and spiked sample and sample duplicate results were found in the raw data by this reviewer. Additional data qualifications are not required.

Sulfide analyses were performed on 26Feb18. These results were associated with acceptable calibration check standard, and LCS recoveries. Sulfide spikes to ML-2S and duplicate analyses of LBA-SBW-15 demonstrated acceptable levels of measurement precision and accuracy.

This group of samples was analyzed for ferrous iron on 06Mar18. These results have been rejected because the analysis should be performed at the time of sample collection and these samples were held for 13 days prior to analysis.

ML-2I	(480-129748-5)
ML-2D	(480-129748-6)

DATA ASSESSMENT

An ASP Category B data package containing analytical results for six groundwater samples was received from Labella Associates, P.C. on 02Jul18. The deliverables package included formal reports, raw data, the necessary QC, and supporting information. The samples, taken from the Former Emerson Street Landfill Site, were identified by Chain of Custody documents and traceable through the work of TestAmerica-Buffalo, the laboratory contracted for analysis. The analyses, performed according to EPA Method 8260 addressed determinations of volatile organics. Laboratory data was evaluated according to the quality assurance / quality control requirements of the New York State Department of Environmental Conservation's Analytical Services Protocol (ASP), September 1989, Rev. 07/2005. When the required protocol was not followed, the current EPA Region II Functional Guidelines (SOP NO. HW-33, Rev. #3, March 2013, Low/Medium Volatile Data Validation) were used as a technical reference.

The acetone and 2-butanone concentrations found in ML-2D have been qualified as estimations because they may represent laboratory artifacts.

The cis-1,2-dichloroethene concentration found in ML-2S has been qualified as an estimation due to a high spiked sample recovery.

The acetone result from ML-2D has been qualified as an estimation due to high spiked blank recoveries.

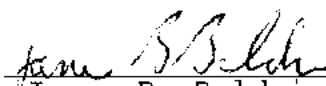

CORRECTNESS AND USABILITY

Although requested, 1,4-dioxane was not reported from the VOC samples in this delivery group.

Reported data should be considered technically defensible and completely usable in its present form. Results presenting a usable estimation of the conditions at the time of sampling have been flagged "J" or "UJ". Estimated data should be used with caution. A detailed discussion of the review process follows.

Two facts should be considered by all data users. No compound concentration, even if it has passed strict QC testing, can be guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error. Secondly, DATAVAL, Inc. guarantees the quality of this data assessment. However, DATAVAL, Inc. does not warrant any interpretation or utilization of this data by a third party.

Reviewer's signature:

James B. Baldwin

Date:

19 Oct 18

SAMPLE HISTORY

Analyte concentrations can deteriorate with time due to chemical instability, bacterial degradation or volatility. Samples that are not properly preserved or are not analyzed within established holding times may no longer be considered representative. Holding times are calculated from the time of sample collection. Samples must remain chilled to 4°C between the time of collection and the time of analysis. Acid preserved VOC samples must be analyzed within 14 days. Unpreserved VOC samples within 7 days.

This delivery group contained six groundwater samples that were collected from the Former Emerson Street Landfill Site on 02Jan18 and 03Jan18. The samples were shipped to the laboratory, via FedEx, on 04Jan18 and were received the following morning. At the time of receipt the sample cooler was found to be intact and packed with ice, with custody seals in place. A cooler temperature of 2.0°C was recorded at the time of receipt.

Although proper sample preservation was not documented in the field custody record, a reading between pH=3 and pH=7 was recorded for the VOC samples of LBA-SBW-15, DUPE, LBA-SBW-16 and ML-2S. This issue, however, warrants no concern because each of these samples was analyzed within the holding time limitation for unpreserved samples. ML-2I and ML-2D produced acceptable readings of pH<2.

VOLATILE ORGANICS

This group of samples was analyzed for volatile organics between 05Jan18 and 08Jan18. The integrity of these samples has been previously addressed.

Blanks

Blanks are analyzed to evaluate various sources of sample contamination. Field blanks monitor sampling activities. Method blanks are analyzed to verify instrument integrity. Samples are considered compromised by conditions causing contamination in any blank.

Three method blanks were analyzed with this group of samples. Each of these blanks demonstrated acceptable chromatography and was free of targeted analyte contamination.

Although not detected in the associated blanks, 2-butanone and acetone were detected in ML-2D. These concentrations have been qualified as estimations because low levels of acetone and 2-butanone frequently represent laboratory artifacts. Acetone and 2-butanone (MEX) could not be removed from the affected sample report because they were not found in the associated blanks.

MS Tuning

Mass spectrometer tuning and performance criteria are established

to ensure sufficient mass resolution and sensitivity to accurately detect and identify targeted analytes. Verification is accomplished using a certified standard.

An Instrument Performance Check Standard of BFB was analyzed prior to each analytical sequence that included samples from this program. An Instrument Performance Check Form is present for each BFB evaluation. The BFB tunes associated with this group of samples satisfied the program acceptance criteria.

Calibrations

Requirements for instrument calibration are established to ensure that laboratory equipment is capable of producing accurate, quantitative data. Initial calibrations demonstrate a range through which measurements may be made. Continuing calibration check standards verify instrument stability.

Initial instrument calibrations for VOC were performed on 01DEC17 and 28Dec17. Standards of 0.4, 1.0, 2.0, 5.0, 10, 25, 50 and 100 µg/l were included. Each targeted analyte produced the required levels of instrument response and demonstrated an acceptable degree of linearity during both of these calibrations.

Calibration check standards were analyzed on 05Jan18, 07Jan18 and 08Jan18, prior to the twelve-hour periods of instrument operation that included samples from this program. When compared to the initial calibrations, each targeted analyte demonstrated an acceptable level of instrument stability during each of these checks.

Surrogates

Each sample, blank and standard is spiked with surrogate compounds prior to analysis. The structures of surrogates are similar to analytes of interest, but they are not normally found in environmental samples. Surrogate recoveries are monitored to evaluate overall laboratory performance and the efficiency of laboratory technique.

Surrogate Summary Sheets were properly prepared, based on the laboratory's statistical acceptance criteria. When compared to the ASP requirements, however, an acceptable recovery was reported for each surrogate addition to this group of samples.

Internal Standards

Internal standards are added to each sample, blank and standard just prior to injection. Analyte concentrations are calculated relative to the response of a specific internal standard. Internal standard performance criteria ensure that GC/MS sensitivity and response are stable during the analysis of each sample. The area of internal standard peaks may not vary by more than a factor of two. When compared to the preceding calibration check, retention times may not vary by more than 30 seconds.

The laboratory correctly calculated control limits for internal standard response and retention times. When compared to this criteria, acceptable performance was reported for the internal standard additions to each program sample.

Matrix Spikes

Matrix spiking refers to the addition of known analyte concentrations to a sample, prior to analysis. Analyte recoveries provide an indication of laboratory accuracy. The analysis of a duplicate spiked aliquot provides a measurement of precision.

LBA-SBW-15 and ML-2S were selected for matrix spiking. The entire list of targeted analytes was added to two aliquots of these samples. The recoveries reported from LBA-SBW-15 included high results for acetone (142%,151%). ML-2S produced low recoveries of cis-1,2-dichloroethene (65%,54%). The positive bias indicated by the high recoveries of acetone warrants no concern because acetone was not detected in LBA-SBW-15. The cis-1,2-dichloroethene (12DCE) concentration found in ML-2S has been qualified as an estimation.

Three spiked blanks (LCS) were also analyzed with this group of samples. The recoveries reported from these LCS samples included high results for acetone (152%,188%). The acetone concentration found in ML-2D has been qualified as an estimation based on this indication of positive bias.

Duplicates

Two aliquots of the same sample are processed separately through all aspects of sample preparation and analysis. The results produced by the analysis of this pair of samples are compared as a measurement of precision. Poor precision may be indicative of sample non-homogeneity, method defects, or poor laboratory technique.

The blind field duplicate sample that was included in this delivery group was not identified.

Reported Analytes

Formal reports were provided for each sample. The data package also included total ion chromatograms and raw instrument print-outs. Reference mass spectra were provided to confirm the identification of each analyte that was found in this group of samples. Tentatively Identified Compounds (TIC) were reported.

SUMMARY OF QUALIFIED DATA

EMERSON STREET LANDFILL SITE

DATA USABILITY SUMMARY REPORT

for

LABELLA ASSOCIATES, P.C.

300 State Street

Rochester, NY 14614

FORMER EMERSON LANDFILL

Project 210173

SDG: 480-129994

Sampled 01/09/2018

VOLATILE ORGANICS

ML-7S (480-129994-1)

TRIP BLANK (480-129994-2)

DATA ASSESSMENT

An ASP Category B data package containing analytical results for one groundwater sample was received from Labella Associates, P.C. on 02Jul18. The deliverables package included formal reports, raw data, the necessary QC, and supporting information. The sample, taken from the Former Emerson Street Landfill Site, was identified by Chain of Custody documents and traceable through the work of TestAmerica-Buffalo, the laboratory contracted for analysis. The analyses, performed according to EPA Method 8260, addressed determinations of volatile organics. Laboratory data was evaluated according to the quality assurance / quality control requirements of the New York State Department of Environmental Conservation's Analytical Services Protocol (ASP), September 1989, Rev. 07/2005. When the required protocol was not followed, the current EPA Region II Functional Guidelines (SOP NO. HW-33, Rev. #3, March 2013, Low/Medium Volatile Data Validation) was used as a technical reference.

The acetone and 2-butanone concentrations found in ML-7S have been qualified as estimations because they were obtained from measurements made beyond the range of calibration.

The methylene chloride concentration found in ML-7S has been qualified as an estimation because it may represent a laboratory artifact.

The presence of 2-hexanone in ML-7S could not be verified, based on the mass spectra references included in the raw data. 2-Hexanone should be interpreted as undetected in this sample.

CORRECTNESS AND USABILITY

Although specifically requested, 1,4-dioxane was not reported from the ML-7S.

Reported data should be considered technically defensible and completely usable in its present form. Results presenting a usable estimation of the conditions at the time of sampling have been flagged "J", "U" or "UJ". Estimated data should be used with caution. A detailed discussion of the review process follows.

Two facts should be considered by all data users. No compound concentration, even if it has passed strict QC testing, can be guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error. Secondly, DATAVAL, Inc. guarantees the quality of this data assessment. However, DATAVAL, Inc. does not warrant any interpretation or utilization of this data by a third party.

Date: 08Oct18

SAMPLE HISTORY

Analyte concentrations can deteriorate with time due to chemical instability, bacterial degradation or volatility. Samples that are not properly preserved or are not analyzed within established holding times may no longer be considered representative. Holding times are calculated from the time of sample collection. Samples must remain chilled to 4°C between the time of collection and the time of analysis. Acid preserved VOC samples must be analyzed within 14 days. Unpreserved VOC samples within 7 days. Nitrate must be determined within one day and ferrous iron analyses should be performed in the field at the time of sample collection.

This delivery group contained one groundwater sample that was collected from the Former Emerson Street Landfill Site on 09Jan18. The sample was packaged with a trip blank and shipped to the laboratory, via FedEx, on 10Jan18. The shipment arrived the following morning. At the time of receipt the sample cooler was found to be intact and packed with ice, with custody seals in place. A cooler temperature of 3.6°C was recorded at the time of receipt.

Although custody seals were not found on the sample cooler, the lab indicated that the cooler was sealed with tape and showed no evidence of tampering.

Although proper sample preservation was not documented in the field custody record, a check made at the time of analysis verified that ML-7S was properly stabilized at a pH<2.

VOLATILE ORGANICS

ML-7S was analyzed for volatile organics on 15Jan18. The program holding time limitation was satisfied.

Blanks

Blanks are analyzed to evaluate various sources of sample contamination. Field blanks monitor sampling activities. Method blanks are analyzed to verify instrument integrity. Samples are considered compromised by conditions causing contamination in any blank.

One method blank and a trip blank were analyzed with ML-7S. Both of these blanks demonstrated acceptable chromatography and were free of targeted analyte contamination.

Although not detected in the associated blanks, methylene chloride was found in ML-7S. This concentration has been qualified as an estimation because low levels of methylene chloride frequently represent laboratory artifacts. Methylene chloride (METH CL) could not be removed from the affected sample reports because it was not found in the associated blanks.

It is noted that high concentrations of acetone (210 µg/l) and 2-butanone (420 µg/l) were also found in ML-7S. These concentra-

tions, found in an undiluted sample, are felt to be too high to represent laboratory artifacts. The acetone and 2-butanone concentrations found in ML-7S have been left unqualified.

MS Tuning

Mass spectrometer tuning and performance criteria are established to ensure sufficient mass resolution and sensitivity to accurately detect and identify targeted analytes. Verification is accomplished using a certified standard.

An Instrument Performance Check Standard of BFB was analyzed prior to each analytical sequence that included samples from this program. An Instrument Performance Check Form is present for each BFB evaluation. The BFB tunes associated with this group of samples satisfied the program acceptance criteria.

Calibrations

Requirements for instrument calibration are established to ensure that laboratory equipment is capable of producing accurate, quantitative data. Initial calibrations demonstrate a range through which measurements may be made. Continuing calibration check standards verify instrument stability.

The initial instrument calibration for VOC was performed on 10Jan18. Standards of 0.5, 1.0, 2.0, 5.0, 10, 25, 50 and 100 µg/l were included. Each targeted analyte produced the required levels of instrument response and demonstrated an acceptable degree of linearity during this calibration.

A calibration check standard was analyzed on 15Jan18, prior to the twelve-hour period of instrument operation that included samples from this program. When compared to the initial calibration, each targeted analyte demonstrated an acceptable level of instrument stability.

Surrogates

Each sample, blank and standard is spiked with surrogate compounds prior to analysis. The structures of surrogates are similar to analytes of interest, but they are not normally found in environmental samples. Surrogate recoveries are monitored to evaluate overall laboratory performance and the efficiency of laboratory technique.

Surrogate Summary Sheets were properly prepared, based on the laboratory's statistical acceptance criteria. When compared to the ASP requirements, however, an acceptable recovery was reported for each surrogate addition to this group of samples.

Internal Standards

Internal standards are added to each sample, blank and standard just prior to injection. Analyte concentrations are calculated relative to the response of a specific internal standard. Internal standard performance criteria ensure that GC/MS sensitivity and

response are stable during the analysis of each sample. The area of internal standard peaks may not vary by more than a factor of two. When compared to the preceding calibration check, retention times may not vary by more than 30 seconds.

The laboratory correctly calculated control limits for internal standard response and retention times. When compared to this criteria, acceptable performance was reported for the internal standard additions to each program sample.

Matrix Spikes

Matrix spiking refers to the addition of known analyte concentrations to a sample, prior to analysis. Analyte recoveries provide an indication of laboratory accuracy. The analysis of a duplicate spiked aliquot provides a measurement of precision.

Although ML-7S was not selected for matrix spiking, a spiked blank (LCS) was analyzed with this group of samples. The recoveries reported for this LCS sample demonstrated an acceptable level of measurement accuracy.

It is noted that because a second spiked blank (LCSD) was not analyzed, an evaluation of measurement precision was not possible.

Duplicates

Two aliquots of the same sample are processed separately through all aspects of sample preparation and analysis. The results produced by the analysis of this pair of samples are compared as a measurement of precision. Poor precision may be indicative of sample non-homogeneity, method defects, or poor laboratory technique.

A field split duplicate sample was not included in this delivery group.

Reported Analytes

Formal reports were provided for each sample. The data package also included total ion chromatograms and raw instrument printouts. Reference mass spectra were provided to confirm the identification of each analyte that was found in this group of samples. Tentatively Identified Compounds (TIC) were reported.

The presence of 2-hexanone in ML-7S could not be verified, based on the mass spectra references included in the raw data. 2-Hexanone should be interpreted as undetected in this sample.

The concentrations of acetone and 2-butanone (MEK) found in ML-7S were obtained from measurements made well beyond the calibrated range of the laboratory's instrumentation. These concentrations have been qualified as estimations.

DATA USABILITY SUMMARY REPORT

for

LABELLA ASSOCIATES, P.C.

300 State Street

Rochester, NY 14614

FORMER EMERSON LANDFILL

Project 210173

SDG: 480-129878

Sampled 01/08/2018

NITRITE, NITRATE, CHLORIDE, SULFATE
ETHANE, ETHENE, FERROUS IRON

ML-7I (480-129878-1)

ML-7D (480-129878-3)

DATA ASSESSMENT

An ASP Category B data package containing analytical results for two groundwater samples was received from Labella Associates, P.C. on 02Jul18. The deliverables package included formal reports, raw data, the necessary QC, and supporting information. The samples, taken from the Former Emerson Street Landfill Site, were identified by Chain of Custody documents and traceable through the work of TestAmerica-Buffalo, the laboratory contracted for analysis. The analyses, performed according to EPA Methods, addressed determinations of nitrate, nitrite, ethane, ethene, chloride, sulfate and ferrous iron. Laboratory data was evaluated according to the quality assurance / quality control requirements of the New York State Department of Environmental Conservation's Analytical Services Protocol (ASP), September 1989, Rev. 07/2005. When the required protocol was not followed, the cited methods were used as a technical reference.

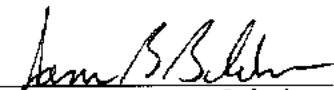

The ferrous iron results from this group of samples have been rejected because the sample holding time was grossly exceeded.

CORRECTNESS AND USABILITY

Reported data should be considered technically defensible and completely usable in its present form. Results presenting a usable estimation of the conditions at the time of sampling have been flagged "J" or "UJ". Data felt to be unreliable has been identified with a single red line and flagged "R". Estimated data should be used with caution. A detailed discussion of the review process follows.

Two facts should be considered by all data users. No compound concentration, even if it has passed strict QC testing, can be guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error. Secondly, DATAVAL, Inc. guarantees the quality of this data assessment. However, DATAVAL, Inc. does not warrant any interpretation or utilization of this data by a third party.

Reviewer's signature:

James B. Baldwin
DATAVAL Inc.

Date: 08 Oct 18

SAMPLE HISTORY

Analyte concentrations can deteriorate with time due to chemical instability, bacterial degradation or volatility. Samples that are not properly preserved or are not analyzed within established holding times may no longer be considered representative. Holding times are calculated from the time of sample collection. Samples must remain chilled to 4°C between the time of collection and the time of analysis. Acid preserved VOC samples must be analyzed within 14 days. Unpreserved VOC samples within 7 days. Nitrate must be determined within one day and ferrous iron analyses should be performed in the field at the time of sample collection.

This delivery group contained two groundwater samples that were collected from the Former Emerson Street Landfill Site on 08Jan18. The samples were shipped to the laboratory, via FedEx, on 09Jan18 and were received the following morning. At the time of receipt the sample cooler was found to be intact and packed with ice, with custody seals in place. Although the Sample Receipt Checklist indicated that the sample cooler was packed with ice, a cooler temperature was not recorded.

Although proper sample preservation was not documented in the field custody record, checks made at the time of receipt indicated that each sample volume was properly stabilized.

Although custody seals were not found on the sample cooler, the lab indicated that the cooler was sealed with tape and showed no evidence of tampering.

ETHANE AND ETHENE

Ethane and ethene were determined by gas chromatography. These analyses were completed within three days of collection and were associated with a clean blank and spiked blanks that demonstrated acceptable levels of measurement precision and accuracy. The ethane and ethene results from this delivery group should be considered technically correct, completely usable, and without qualifications as reported.

WET CHEMISTRY

Nitrate, nitrite, sulfide and ferrous iron analyses utilized classical wet chemistry methods. Nitrate and nitrite analyses were performed on 10Jan18. Although the holding time for nitrate samples is one day, an additional day is allowed for sample shipments. Data qualifications. Sulfide analyses were completed on 15Jan18, satisfying the program holding time limitation. Ferrous iron samples were analyzed on 15Jan18, these results have been rejected because this analysis should be performed at the time of sample collection and these samples were held for 7 days prior to analysis.

Nitrate (NO₃) concentrations were obtained by analyzing each sample for a total concentration of nitrate plus nitrite (NO₂+NO₃) and subtracting the result of a nitrite (NO₂) determination. Although QC results were not reported for nitrate plus nitrite, acceptable calibration check standards and LCS recoveries were found in the raw data by this reviewer. Data qualifications are not required.

The iodine titrations for sulfide were associated with clean blanks, acceptable check standards, and a spiked blank that produced a recovery of 97%. Sulfide results should be considered completely usable as reported.

ION CHROMATOGRAPHY

Chloride and sulfate determinations were performed by ion chromatography. These samples were associated with clean blanks, acceptable check standards and spiked blanks that produced recoveries of 100% and 108%, respectively. The chloride and sulfate results from this delivery group should be considered completely usable as reported.

DATA USABILITY SUMMARY REPORT

for

LABELLA ASSOCIATES, P.C.

300 State Street

Rochester, NY 14614

FORMER EMERSON LANDFILL

Project 210173

SDG: 480-137605

Sampled 6/15/2018

VOLATILE ORGANICS, CHLORIDE, SULFATE, SULFIDE
NITRATE, NITRITE, ETHANE, ETHENE, IRON

ML-2-D (480-137605-1)

DUPE (480-137605-2)

ML-2-I (480-137605-3)

DATA ASSESSMENT

An ASP Category B data package containing analytical results for three groundwater samples was received from Labella Associates, P.C. on 02Jul18. The deliverables package included formal reports, raw data, the necessary QC, and supporting information. The samples, taken from the Former Emerson Street Landfill Site, were identified by Chain of Custody documents and traceable through the work of TestAmerica-Buffalo, the laboratory contracted for analysis. The analyses, performed according to EPA Methods, addressed determinations of volatile organics, chloride, sulfate, sulfide, nitrate, nitrite, ethane, ethene and ferrous iron. Laboratory data was evaluated according to the quality assurance / quality control requirements of the New York State Department of Environmental Conservation's Analytical Services Protocol (ASP), September 1989, Rev. 07/2005. When the required protocol was not followed, the current EPA Region II Functional Guidelines (SOP NO. HW-33, Rev. #3, March 2013, Low/Medium Volatile Data Validation) and the cited methods were used as a technical reference.

The 2-butanone concentrations found in ML-2-D and ML-2-I have been qualified as estimations because they may represent laboratory artifacts.

The ferrous iron results from this project have been rejected because the samples were not analyzed at the time of collection.

The VOC results from ML-2-D have been qualified as estimations because the samples were not properly preserved,

The nitrate concentration from ML-2-I has been qualified as an estimation because the nitrite portion of the analysis was not performed. The nitrite result from ML-2-I has been rejected.

CORRECTNESS AND USABILITY

Reported data should be considered technically defensible and completely usable in its present form. Results presenting a usable estimation of the conditions at the time of sampling have been flagged "J" or "UJ". Data felt to be unreliable has been identified with a single red line and flagged "R". Rejected data should not be included in data tables. Estimated data should be used with caution. A detailed discussion of the review process follows.

Two facts should be considered by all data users. No compound concentration, even if it has passed strict QC testing, can be guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error. Secondly, DATAVAL, Inc. guarantees the quality of this data

assessment. However, DATAVAL, Inc. does not warrant any interpretation or utilization of this data by a third party.

Reviewer's signature:

James B. Baldwin
DATAVAL Inc.

Date: 16 July, 18

SAMPLE HISTORY

Analyte concentrations can deteriorate with time due to chemical instability, bacterial degradation or volatility. Samples that are not properly preserved or are not analyzed within established holding times may no longer be considered representative. Holding times are calculated from the time of sample collection. Samples must remain chilled to 4°C between the time of collection and the time of analysis. Acid preserved VOC samples must be analyzed within 14 days. Nitrate and nitrite must be determined within one day. Sulfide samples must be analyzed within seven days and chloride and sulfate analyses must be completed within 28 days. Ferrous iron analyses should be performed in the field at the time of sample collection.

This delivery group contained three groundwater samples that were collected from the Former Emerson Street Landfill Site and shipped to the laboratory, via FedEx, on 15Jun18. The shipment arrived the following morning. At the time of receipt the sample cooler was found to be intact and packed with ice, with custody seals in place. A cooler temperature of 2.8°C, was recorded at the time of receipt. Proper sample preservation was documented in the field custody record and verified in the laboratory. At the time of analysis a pH=4 was obtained from ML-2-D. The VOC results from this sample have been qualified as estimations because the samples were not analyzed within the holding time allowed for an unpreserved sample. An acceptable reading of pH<2 was obtained from the DUPE and ML-2-I.

VOLATILE ORGANICS

This group of samples was analyzed for volatile organics on 23Jun18. The SW-846 holding time requirements were satisfied for the DUPE and ML-2-I. As previously noted, ML-2-D was not properly preserved and was not analyzed within the holding time allowed for unpreserved samples.

Blanks

Blanks are analyzed to evaluate various sources of sample contamination. Field blanks monitor sampling activities. Method blanks are analyzed to verify instrument integrity. Samples are considered compromised by conditions causing contamination in any blank.

Two method blanks were analyzed with this group of samples. Both of these blanks demonstrated acceptable chromatography and were free of targeted analyte contamination.

Although not detected in the method blank, 2-butanone was found in ML-2-D and ML-2-I. These concentrations have been qualified as estimations because low levels of 2-butanone frequently represent laboratory artifacts. 2-Butanone (MEK) could not be removed from the affected sample reports because it was not found in the associated method blank.

MS Tuning

Mass spectrometer tuning and performance criteria are established to ensure sufficient mass resolution and sensitivity to accurately detect and identify targeted analytes. Verification is accomplished using a certified standard.

An Instrument Performance Check Standard of BFB was analyzed prior to each analytical sequence that included samples from this program. An Instrument Performance Check Form is present for each BFB evaluation. The BFB tunes associated with this group of samples satisfied the program acceptance criteria.

Calibrations

Requirements for instrument calibration are established to ensure that laboratory equipment is capable of producing accurate, quantitative data. Initial calibrations demonstrate a range through which measurements may be made. Continuing calibration check standards verify instrument stability.

The initial instrument calibration for VOC was performed on 20Jun18. Standards of 0.5, 1.0, 2.0, 5.0, 10, 25, 50 and 100 µg/l were included. Each targeted analyte produced the required levels of instrument response and demonstrated an acceptable degree of linearity during this calibration.

Calibration check standards were analyzed on 22Jun18 and 23Jun18, prior to the twelve-hour periods of instrument operation that included samples from this program. When compared to the initial calibration, each targeted analyte demonstrated an acceptable level of instrument stability during both calibration checks.

Surrogates

Each sample, blank and standard is spiked with surrogate compounds prior to analysis. The structures of surrogates are similar to analytes of interest, but they are not normally found in environmental samples. Surrogate recoveries are monitored to evaluate overall laboratory performance and the efficiency of laboratory technique.

Surrogate Summary Sheets were properly prepared, based on the laboratory's statistical acceptance criteria. When compared to the ASP requirements, however, an acceptable recovery was reported for each surrogate addition to this group of samples.

Internal Standards

Internal standards are added to each sample, blank and standard just prior to injection. Analyte concentrations are calculated relative to the response of a specific internal standard. Internal standard performance criteria ensure that GC/MS sensitivity and response are stable during the analysis of each sample. The area of internal standard peaks may not vary by more than a factor of two. When compared to the preceding calibration check, retention times may not vary by more than 30 seconds.

The laboratory correctly calculated control limits for internal standard response and retention times. When compared to this criteria, acceptable performance was reported for the internal standard additions to each program sample.

Matrix Spikes

Matrix spiking refers to the addition of known analyte concentrations to a sample, prior to analysis. Analyte recoveries provide an indication of laboratory accuracy. The analysis of a duplicate spiked aliquot provides a measurement of precision.

ML-2-D was selected for matrix spiking. The entire list of targeted analytes was added to two aliquots of this sample. The recoveries reported for these additions demonstrated acceptable levels of measurement precision and accuracy.

A pair of spiked blanks (LCS/LCSD) was also analyzed with this group of samples. Both of these LCS samples produced acceptable analyte recoveries.

Duplicates

Two aliquots of the same sample are processed separately through all aspects of sample preparation and analysis. The results produced by the analysis of this pair of samples are compared as a measurement of precision. Poor precision may be indicative of sample non-homogeneity, method defects, or poor laboratory technique.

The blind field duplicate sample that was included in this delivery group was not identified.

Reported Analytes

Formal reports were provided for each sample. The data package also included total ion chromatograms and raw instrument print-outs. Reference mass spectra were provided to confirm the identification of each analyte that was found in this group of samples. Tentatively Identified Compounds (TIC) were reported.

ETHANE AND ETHENE

Ethane and ethene were also determined by gas chromatography. These analyses were completed within four days of collection and were associated with a clean blank and spiked blanks that demonstrated acceptable levels of measurement precision and accuracy. The ethane and ethene results from this project should be considered completely usable as presented.

WET CHEMISTRY

Nitrite, nitrate, chloride, sulfate, sulfide and ferrous iron were determined by wet chemistry methods. Nitrate analyses were

completed on 19Jun18, and chloride, sulfate and sulfide determinations were completed on 21Jun18. The ASP holding time limitations were satisfied.

Both program samples were analyzed for ferrous iron on 18Jun18. These results must be considered unreliable because ferrous analyses should be performed at the time of sample collection. ML-2-D and ML-2-I were held for three days prior to analysis.

Nitrate (NO₃) concentrations are obtained by analyzing each sample for a total concentration of nitrate plus nitrite (NO₂+NO₃) and subtracting the result of a nitrite (NO₂) determination. Although both samples from this delivery group were analyzed for NO₂+NO₃, NO₂ determinations were not performed. The nitrate concentration reported from ML-2-I has been qualified as an estimation because the reported result might include a contribution of NO₂. The NO₂ result from ML-2-I has been rejected. ML-2-D produced a negative NO₂+NO₃ result. The NO₂ and NO₃ results from this sample remain unqualified.

Although QC results were not reported for nitrate, acceptable calibration check standards and LCS recoveries, as well as clean blanks were found in the raw data by this reviewer. Data qualifications are not required.

Each chloride, sulfate and sulfide analysis was associated with a linear calibration curve and was bracketed by calibration check standards that were recovered successfully. The method blanks were clean and the spiked blanks (LCS) produced acceptable recoveries. The chloride, sulfate and sulfide results from this project should be considered completely usable as presented.

DATA USABILITY SUMMARY REPORT

for

LABELLA ASSOCIATES, P.C.

300 State Street

Rochester, NY 14614

FORMER EMERSON LANDFILL

Project 210173

SDG: 480-137434

Sampled 6/13/2018

VOLATILE ORGANICS, CHLORIDE, SULFATE, SULFIDE
NITRATE, NITRITE, ETHANE, ETHENE, IRON

LAB-SBW-15 (480-137434-1)

LAB-SBW-16 (480-137434-2)

DUPE (480-137434-3)

DATA ASSESSMENT

An ASP Category B data package containing analytical results for three groundwater samples was received from Labella Associates, P.C. on 02Jul18. The deliverables package included formal reports, raw data, the necessary QC, and supporting information. The samples, taken from the Former Emerson Street Landfill Site, were identified by Chain of Custody documents and traceable through the work of TestAmerica-Buffalo, the laboratory contracted for analysis. The analyses, performed according to EPA Methods, addressed determinations of volatile organics, chloride, sulfate, sulfide, nitrate, nitrite, ethane, ethene and ferrous iron. Laboratory data was evaluated according to the quality assurance / quality control requirements of the New York State Department of Environmental Conservation's Analytical Services Protocol (ASP), September 1989, Rev. 07/2005. When the required protocol was not followed, the current EPA Region II Functional Guidelines (SOP NO. HW-33, Rev. #3, March 2013, Low/Medium Volatile Data Validation) and the cited methods were used as a technical reference.

The acetone concentrations found in LAB-SBW16 and the DUPE have been qualified as estimations because they may represent laboratory artifacts.

The ferrous iron results from this project have been rejected because the samples were not analyzed at the time of collection.

The VOC results from LAB-SBW16 and the DUPE have been qualified as estimations because the samples were not properly preserved,

The total xylenes concentration from LAB-SBW15 was reported incorrectly. Form 1 has been corrected.

CORRECTNESS AND USABILITY

Reported data should be considered technically defensible and completely usable in its present form. Results presenting a usable estimation of the conditions at the time of sampling have been flagged "J" or "UJ". Data felt to be unreliable has been identified with a single red line and flagged "R". Rejected data should not be included in data tables. Estimated data should be used with caution. A detailed discussion of the review process follows.

Two facts should be considered by all data users. No compound concentration, even if it has passed strict QC testing, can be guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error. Secondly, DATAVAL, Inc. guarantees the quality of this data

assessment. However, DATAVAL, Inc. does not warrant any interpretation or utilization of this data by a third party.

Reviewer's signature: James B. Baldwin Date: 15 July 18

DATAVAL Inc.

SAMPLE HISTORY

Analyte concentrations can deteriorate with time due to chemical instability, bacterial degradation or volatility. Samples that are not properly preserved or are not analyzed within established holding times may no longer be considered representative. Holding times are calculated from the time of sample collection. Samples must remain chilled to 4°C between the time of collection and the time of analysis. Acid preserved VOC samples must be analyzed within 14 days. Nitrate and nitrite must be determined within one day. Sulfide samples must be analyzed within seven days and chloride and sulfate analyses must be completed within 28 days. Ferrous iron analyses should be performed in the field at the time of sample collection.

This delivery group contained three groundwater samples that were collected from the Former Emerson Street Landfill Site and shipped to the laboratory, via FedEx, on 13Jun18. The shipment arrived the following morning. At the time of receipt the sample cooler was found to be intact and packed with ice. Although custody seals were not found on the sample cooler, the lab indicated that the cooler was sealed with tape and showed no evidence of tampering. A cooler temperature of 3.2°C, was recorded at the time of receipt. Proper sample preservation was documented in the field custody record and verified in the laboratory. At the time of analysis a pH=7 was obtained from LAB-SBW16 and the DUPE. The VOC results from this pair of samples have been qualified as estimations because the samples were not analyzed within the holding time allowed for unpreserved samples. An acceptable reading of pH<2 was obtained from LAB-SBW15.

VOLATILE ORGANICS

This group of samples was analyzed for volatile organics on 21Jun18. The SW-846 holding time requirements were satisfied for LAB-SBW15. As previously noted, LAB-SBW16 and the DUPE were not properly preserved and were not analyzed within the holding time allowed for unpreserved samples.

Blanks

Blanks are analyzed to evaluate various sources of sample contamination. Field blanks monitor sampling activities. Method blanks are analyzed to verify instrument integrity. Samples are considered compromised by conditions causing contamination in any blank.

One method blank was analyzed with this group of samples. This blank demonstrated acceptable chromatography and was free of targeted analyte contamination.

Although not detected in the blank, acetone was found in LAB-SBW16 and the DUPE. These concentrations have been qualified as estimations because low levels of acetone frequently represent laboratory artifacts. Acetone could not be removed from the

affected sample reports because it was not found in the associated method blank.

MS Tuning

Mass spectrometer tuning and performance criteria are established to ensure sufficient mass resolution and sensitivity to accurately detect and identify targeted analytes. Verification is accomplished using a certified standard.

An Instrument Performance Check Standard of BFB was analyzed prior to each analytical sequence that included samples from this program. An Instrument Performance Check Form is present for each BFB evaluation. The BFB tunes associated with this group of samples satisfied the program acceptance criteria.

Calibrations

Requirements for instrument calibration are established to ensure that laboratory equipment is capable of producing accurate, quantitative data. Initial calibrations demonstrate a range through which measurements may be made. Continuing calibration check standards verify instrument stability.

The initial instrument calibration for VOC was performed on 20Jun18. Standards of 0.5, 1.0, 2.0, 5.0, 10, 25, 50 and 100 µg/l were included. Each targeted analyte produced the required levels of instrument response and demonstrated an acceptable degree of linearity during this calibration.

A calibration check standard was analyzed on 21Jun18, prior to the twelve-hour period of instrument operation that included samples from this program. When compared to the initial calibration, each targeted analyte demonstrated an acceptable level of instrument stability.

Surrogates

Each sample, blank and standard is spiked with surrogate compounds prior to analysis. The structures of surrogates are similar to analytes of interest, but they are not normally found in environmental samples. Surrogate recoveries are monitored to evaluate overall laboratory performance and the efficiency of laboratory technique.

Surrogate Summary Sheets were properly prepared, based on the laboratory's statistical acceptance criteria. When compared to the ASP requirements, however, an acceptable recovery was reported for each surrogate addition to this group of samples.

Internal Standards

Internal standards are added to each sample, blank and standard just prior to injection. Analyte concentrations are calculated relative to the response of a specific internal standard. Internal standard performance criteria ensure that GC/MS sensitivity and response are stable during the analysis of each sample. The area

of internal standard peaks may not vary by more than a factor of two. When compared to the preceding calibration check, retention times may not vary by more than 30 seconds.

The laboratory correctly calculated control limits for internal standard response and retention times. When compared to this criteria, acceptable performance was reported for the internal standard additions to each program sample.

Matrix Spikes

Matrix spiking refers to the addition of known analyte concentrations to a sample, prior to analysis. Analyte recoveries provide an indication of laboratory accuracy. The analysis of a duplicate spiked aliquot provides a measurement of precision.

LAB-SBW16 was selected for matrix spiking. The entire list of targeted analytes was added to two aliquots of this sample. The recoveries reported for these additions demonstrated acceptable levels of measurement precision and accuracy.

A spiked blank (LCS) was also analyzed with this group of samples. This LCS sample produced acceptable analyte recoveries.

Duplicates

Two aliquots of the same sample are processed separately through all aspects of sample preparation and analysis. The results produced by the analysis of this pair of samples are compared as a measurement of precision. Poor precision may be indicative of sample non-homogeneity, method defects, or poor laboratory technique.

The blind field duplicate sample that was included in this delivery group was not identified.

Reported Analytes

Formal reports were provided for each sample. The data package also included total ion chromatograms and raw instrument print-outs. Reference mass spectra were provided to confirm the identification of each analyte that was found in this group of samples. Tentatively Identified Compounds (TIC) were reported.

The total xylenes concentration reported from LAB-SBW15 did not include the contribution of o-xylene. Form 1 has been corrected to read 9.8 μ /l.

ETHANE AND ETHENE

Ethane and ethene were also determined by gas chromatography. These analyses were completed within six days of collection and were associated with a clean blank and spiked blanks that demonstrated acceptable levels of measurement precision and

accuracy. The ethane and ethene results from this project should be considered completely usable as presented.

WET CHEMISTRY

Nitrite, nitrate, chloride, sulfate, sulfide and ferrous iron were determined by wet chemistry methods. Nitrate analyses were completed on 15Jun18; and chloride, sulfate and sulfide determinations were completed on 20Jun18. The ASP holding time limitations were satisfied.

Both program samples were analyzed for ferrous iron on 18Jun18. These results must be considered unreliable because ferrous analyses should be performed at the time of sample collection. LAB-SBW15 and LAB-SBW16 were held for five days prior to analysis.

Nitrate (NO₃) concentrations are obtained by analyzing each sample for a total concentration of nitrate plus nitrite (NO₂+NO₃) and subtracting the result of a nitrite (NO₂) determination. Both samples from this delivery group produced negative NO₂+NO₃ results. A nitrite analysis was therefore not required.

Although QC results were not reported for nitrite and nitrate, acceptable calibration check standards and LCS recoveries, as well as clean blanks were found in the raw data by this reviewer. Data qualifications are not required.

Each chloride, sulfate and sulfide analysis was associated with a linear calibration curve and was bracketed by calibration check standards that were recovered successfully. The method blanks were clean and the spiked blanks (LCS) and spiked samples produced acceptable recoveries. The chloride, sulfate and sulfide results from this project should be considered completely usable as presented.

DATA USABILITY SUMMARY REPORT

for

LABELLA ASSOCIATES, P.C.

300 State Street

Rochester, NY 14614

FORMER EMERSON LANDFILL

Project 210173

SDG: 480-137527

Sampled 6/14/2018

VOLATILE ORGANICS, CHLORIDE, SULFATE, SULFIDE
NITRATE, NITRITE, ETHANE, ETHENE, IRON

ML-7-I (480-137527-1)

ML-7-D (480-137527-2)

DUPE (480-137527-3)

DATA ASSESSMENT

An ASP Category B data package containing analytical results for three groundwater samples was received from Labella Associates, P.C. on 02Jul18. The deliverables package included formal reports, raw data, the necessary QC, and supporting information. The samples, taken from the Former Emerson Street Landfill Site, were identified by Chain of Custody documents and traceable through the work of TestAmerica-Buffalo, the laboratory contracted for analysis. The analyses, performed according to EPA Methods, addressed determinations of volatile organics, chloride, sulfate, sulfide, nitrate, nitrite, ethane, ethene and ferrous iron. Laboratory data was evaluated according to the quality assurance / quality control requirements of the New York State Department of Environmental Conservation's Analytical Services Protocol (ASP), September 1989, Rev. 07/2005. When the required protocol was not followed, the current EPA Region II Functional Guidelines (SOP NO. HW-33, Rev. #3, March 2013, Low/Medium Volatile Data Validation) and the cited methods were used as a technical reference.

The acetone and 2-butanone concentrations found in ML-7-D and the DUPE have been qualified as estimations because they may represent laboratory artifacts.

The ferrous iron results from this project have been rejected because the samples were not analyzed at the time of collection.

CORRECTNESS AND USABILITY

Reported data should be considered technically defensible and completely usable in its present form. Results presenting a usable estimation of the conditions at the time of sampling have been flagged "J" or "UJ". Data felt to be unreliable has been identified with a single red line and flagged "R". Estimated data should be used with caution. A detailed discussion of the review process follows.

Two facts should be considered by all data users. No compound concentration, even if it has passed strict QC testing, can be guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error. Secondly, DATAVAL, Inc. guarantees the quality of this data assessment. However, DATAVAL, Inc. does not warrant any interpretation or utilization of this data by a third party.

SAMPLE HISTORY

Analyte concentrations can deteriorate with time due to chemical instability, bacterial degradation or volatility. Samples that are not properly preserved or are not analyzed within established holding times may no longer be considered representative. Holding times are calculated from the time of sample collection. Samples must remain chilled to 4°C between the time of collection and the time of analysis. Acid preserved VOC samples must be analyzed within 14 days. Nitrate and nitrite must be determined within one day. Sulfide samples must be analyzed within seven days and chloride and sulfate analyses must be completed within 28 days. Ferrous iron analyses should be performed in the field at the time of sample collection.

This delivery group contained three groundwater samples that were collected from the Former Emerson Street Landfill Site and shipped to the laboratory, via FedEx, on 14Jun18. The shipment arrived the following morning. At the time of receipt the sample cooler was found to be intact and packed with ice. Although custody seals were not found on the sample cooler, the lab indicated that the cooler was sealed with tape and showed no evidence of tampering. A cooler temperature of 3.3°C, was recorded at the time of receipt. Proper sample preservation was documented in the field custody record and verified in the laboratory. A pH<2 was recorded for each VOC sample at the time of analysis.

VOLATILE ORGANICS

This group of samples was analyzed for volatile organics on 23Jun18. The SW-846 holding time requirements were satisfied.

Blanks

Blanks are analyzed to evaluate various sources of sample contamination. Field blanks monitor sampling activities. Method blanks are analyzed to verify instrument integrity. Samples are considered compromised by conditions causing contamination in any blank.

One method blank was analyzed with this group of samples. This blank demonstrated acceptable chromatography and was free of targeted analyte contamination.

Although not detected in the blank, acetone and 2-butanone were found in ML-7-D and the DUPE. These concentrations have been qualified as estimations because low levels of acetone and 2-butanone frequently represent laboratory artifacts. Acetone and 2-butanone (MEK) could not be removed from the affected sample reports because they were not found in the associated blank.

MS Tuning

Mass spectrometer tuning and performance criteria are established to ensure sufficient mass resolution and sensitivity to accurately

detect and identify targeted analytes. Verification is accomplished using a certified standard.

An Instrument Performance Check Standard of BFB was analyzed prior to each analytical sequence that included samples from this program. An Instrument Performance Check Form is present for each BFB evaluation. The BFB tunes associated with this group of samples satisfied the program acceptance criteria.

Calibrations

Requirements for instrument calibration are established to ensure that laboratory equipment is capable of producing accurate, quantitative data. Initial calibrations demonstrate a range through which measurements may be made. Continuing calibration check standards verify instrument stability.

The initial instrument calibration for VOC was performed on 20Jun18. Standards of 0.5, 1.0, 2.0, 5.0, 10, 25, 50 and 100 µg/l were included. Each targeted analyte produced the required levels of instrument response and demonstrated an acceptable degree of linearity during this calibration.

A calibration check standard was analyzed on 23Jun18, prior to the twelve-hour period of instrument operation that included samples from this program. When compared to the initial calibration, each targeted analyte demonstrated an acceptable level of instrument stability.

Surrogates

Each sample, blank and standard is spiked with surrogate compounds prior to analysis. The structures of surrogates are similar to analytes of interest, but they are not normally found in environmental samples. Surrogate recoveries are monitored to evaluate overall laboratory performance and the efficiency of laboratory technique.

Surrogate Summary Sheets were properly prepared, based on the laboratory's statistical acceptance criteria. When compared to the ASP requirements, however, an acceptable recovery was reported for each surrogate addition to this group of samples.

Internal Standards

Internal standards are added to each sample, blank and standard just prior to injection. Analyte concentrations are calculated relative to the response of a specific internal standard. Internal standard performance criteria ensure that GC/MS sensitivity and response are stable during the analysis of each sample. The area of internal standard peaks may not vary by more than a factor of two. When compared to the preceding calibration check, retention times may not vary by more than 30 seconds.

The laboratory correctly calculated control limits for internal standard response and retention times. When compared to this

criteria, acceptable performance was reported for the internal standard additions to each program sample.

Matrix Spikes

Matrix spiking refers to the addition of known analyte concentrations to a sample, prior to analysis. Analyte recoveries provide an indication of laboratory accuracy. The analysis of a duplicate spiked aliquot provides a measurement of precision.

ML-7-D was selected for matrix spiking. The entire list of targeted analytes was added to two aliquots of this sample. The recoveries reported for these additions demonstrated acceptable levels of measurement precision and accuracy.

A spiked blank (LCS) was also analyzed with this group of samples. This LCS sample produced acceptable analyte recoveries.

Duplicates

Two aliquots of the same sample are processed separately through all aspects of sample preparation and analysis. The results produced by the analysis of this pair of samples are compared as a measurement of precision. Poor precision may be indicative of sample non-homogeneity, method defects, or poor laboratory technique.

The blind field duplicate sample that was included in this delivery group was not identified.

Reported Analytes

Formal reports were provided for each sample. The data package also included total ion chromatograms and raw instrument print-outs. Reference mass spectra were provided to confirm the identification of each analyte that was found in this group of samples. Tentatively Identified Compounds (TIC) were reported.

ETHANE AND ETHENE

Ethane and ethene were also determined by gas chromatography. These analyses were completed within five days of collection and were associated with a clean blank and spiked blanks that demonstrated acceptable levels of measurement precision and accuracy. The ethane and ethene results from this project should be considered completely usable as presented.

WET CHEMISTRY

Nitrite, nitrate, chloride, sulfate, sulfide and ferrous iron were determined by wet chemistry methods. Nitrate and nitrite analyses were completed on 15Jun18; and chloride, sulfate and sulfide determinations were completed on 21Jun18. The ASP holding time limitations were satisfied.

Nitrate (NO₃) concentrations are obtained by analyzing each sample for a total concentration of nitrate plus nitrite (NO₂+NO₃) and subtracting the result of a nitrite (NO₂) determination. Although QC results were not reported for nitrate, acceptable calibration check standards and LCS recoveries were found in the raw data by this reviewer. Data qualifications are not required.

Both program samples were analyzed for ferrous iron on 18Jun18. These results must be considered unreliable because ferrous analyses should be performed at the time of sample collection. ML-7-I and ML-7-D were held for four days prior to analysis.

Each nitrite, nitrate, chloride, sulfate, sulfide and ferrous iron analysis was associated with a linear calibration curve and was bracketed by calibration check standards that were recovered successfully. The method blanks were clean and the spiked blanks (LCS) produced acceptable recoveries of nitrite, nitrate, chloride, sulfate and sulfide.

SUMMARY OF QUALIFIED DATA

EMERSON STREET LANDFILL SITE
