CERTIFICATIONS

I, Nathan E Simon, am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Supplemental Polishing Phase Remedial Actions Work Plan was implemented and that all construction activities were completed in substantial conformance with the Department-approved Supplemental Polishing Phase Remedial Actions Work Plan.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Nathan E. Simon, of Day Engineering, P.C. at 1563 Lyell Avenue, Rochester, New York, am certifying as Owner's Designated Site Representative for the Site.

EXECUTIVE SUMMARY

The Site consists of four contiguous parcels addressed as 300, 304-308 and 320 Andrews Street and 25 Evans Street, Rochester, New York. A Remedial Investigation (RI) was conducted at the Site between 2011 and 2015. A 2012 soil removal Interim Remedial Measure (IRM) and a 2014 in-situ chemical oxidation (ISCO) supplemental IRM were completed at the Site to remediate Tetrachloroethene (PCE) and other chlorinated volatile organic compounds (CVOCs) in soil and groundwater at the Site. The RI work and IRM work are documented in a Remedial Investigation/Remedial Alternatives Analysis Report dated November 2015. Additional polishing phase ISCO efforts were conducted at the Site between 2015 and 2018. Despite these IRMs and polishing phase efforts, a localized area of contaminated overburden soil (i.e., dense glacial till) in the saturated zone at a depth between approximately 12 and 24 feet appeared to be back diffusing elevated concentrations of PCE (i.e., 1,000 microgram per liter or ug/l in a December 2018 groundwater sample from monitoring well MW-17) and other CVOCs into the groundwater on the central portion of the Site.

This Construction Completion Report (CCR) documents the work conducted to address the localized contaminated area in accordance with a Supplemental Polishing Phase Remedial Actions Work Plan dated August 7, 2019 as conditionally approved in a York State Department of Environmental Conservation (NYSDEC) letter dated August 22, 2019. In September and October 2019, the supplemental polishing phase remedial actions completed included, but were not limited to, the following:

- Removal and off-site disposal of approximately 250 cubic yards of PCE and CVOC contaminated soil.
- Removal and off-site disposal of approximately 9,500 gallons of PCE contaminated groundwater.
- Installation of in-situ remediation hardware in the backfilled excavation.
- Injection of approximately 950-gallons of approximate 5% potassium permanganate solution through the in-situ remediation hardware to enhance ISCO of residual contamination in the subsurface.

The analytical laboratory VOC results of September 2019 post-excavation soil samples and December 2019 groundwater samples show the supplemental polishing phase remedial actions reduced the mass of VOC contamination within the localized area of contamination on the central portion of the Site. The detected concentration of PCE in a December 2019 groundwater sample from replacement monitoring well MW-17A installed in the backfilled supplemental polishing phase soil removal area was 28 ug/l. This represents an approximate 97% reduction of PCE in groundwater on this portion of the Site in relation to the December 2018 groundwater sampling event.

Based on the cumulative investigative and remedial work performed to date, additional remedial actions beyond ISCO polishing of groundwater do not appear warranted at this time. The remaining residual contamination, including VOCs, are addressed by the NYSDEC-approved institutional controls (Environmental Easement and Site Management Plan) and engineering controls (Cover System).

These supplemental polishing phase remedial actions were successful in achieving the goals of the project, which included physical removal and off-site disposal of the localized area of PCE-contaminated soil and groundwater, and completion of additional in-situ remediation to address residual PCE contamination at the Site. In addition, this work has further prepared the Site for redevelopment and may result in eliminating the need for long-term groundwater monitoring in the center of the Site.

CONSTRUCTION COMPLETION REPORT

1.0 BACKGROUND AND SITE DESCRIPTION

The City of Rochester (City) entered into a State Assistance Contract (SAC) with the New York State Department of Environmental Conservation (NYSDEC) in February 2008, to investigate the approximate 1.5-acre property located in the City of Rochester, New York. The property was subsequently remediated to restricted residential use.

The Site is located in the County of Monroe, New York and consists of four parcels: Section 106.72 Block 01 Lots 84.1, 85.1, 86, and 87.1 on the City of Rochester Tax Map #106.72-1 that are addressed as 300, 304-308 and 320 Andrews Street and 25 Evans Street. The Site is situated on an approximately 1.5-acre area bounded by the Inner Loop highway right-of-way (ROW) to the north, Andrews Street ROW with commercial property beyond to the south, Franklin Square ROW with a City-owned park beyond to the east, and Bristol Street ROW with commercial property beyond to the west. Refer to Figure 1 for a project locus map, and Figure 2 for a Site Plan.

The Site was previously investigated and remediated under the NYSDEC Environmental Restoration Program (ERP). This previous work is detailed in the following documents:

- An IRM CCR dated October 2013.
- An Environmental Easement dated May 2015.
- A Supplemental IRM CCR dated August 2015.
- A Site Management Plan (SMP) dated August 2015.
- A Remedial Investigation/remedial Alternatives Analysis (RI/RAA) Report dated November 2015.

The remediation included soil removals in the unsaturated zone and various phases of in-situ chemical oxidation (ISCO) using potassium permanganate within the saturated zone. The Site received a Certificate of Completion from the NYSDEC in December 2015; however, polishing phase ISCO and groundwater monitoring continued to be performed to address residual CVOC contamination in the overburden saturated zone generally present

between 10 and 24 feet below the ground surface (bgs). The CVOCs generally consist of tetrachloroethene (i.e., Perchloroethene or PCE) with lower concentrations of Trichloroethene (TCE), Dichloroethene (DCE) and Vinyl Chloride (VC).

Subsequent to the activities described above, it became evident that an apparent small localized source zone of CVOC contamination primarily consisting of PCE was present in a generally impermeable dense glacial till soil located within the overburden saturated zone. Back diffusion of CVOCs from this glacial till source zone appeared to result in sustained elevated concentrations of CVOCs in groundwater on this portion of the Site. As shown on Figure 3, the localized PCE-contaminated area generally encompasses an approximately 20' x 30' oval shaped area totaling approximately 570 square feet (SF). The PCE-contaminated area was primarily present between a depth interval of 12 and 24 feet bgs. Based on geologic cross sections prepared as part of the previous remedial investigation for the Site, the top of bedrock on this portion of the Site is approximately 30 feet bgs. Figure 4 illustrates the localized PCE-contaminated area in relation to previously completed PCE remedial measures (e.g., Interim Remedial Measures or IRMs, and ISCO treatment components). Based on the cumulative information, it became apparent that further polishing via in-situ treatment alone would not result in timely remediation of the localized PCE-contaminated area.

This CCR was prepared to document supplemental polishing phase remedial actions undertaken at the Site. The work was completed in accordance with a Supplemental Polishing Phase Remedial Actions Work Plan dated August 7, 2019 and the requirements stated in the NYSDEC conditional approval letter dated August 22, 2019. A digital copy of this CCR is included as Appendix A. Select photographs showing various supplemental polishing phase remedial actions are included in Appendix B.

2.0 SUMMARY OF SUPPLEMENTAL POLISHING PHASE REMEDIAL ACTIONS

2.1 REMEDIAL ACTION OBJECTIVES

Based on the results of the Remedial Investigation, the following Remedial Action Objectives (RAOs) were identified for this Site.

2.1.1 Groundwater RAOs

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Restore ground water aquifer, to the extent practicable, to pre-disposal/pre-release conditions.
- Prevent the discharge of contaminants to surface water.
- Remove the source of ground or surface water contamination.

2.1.2 Soil RAOs

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.

- Prevent impacts to biota due to ingestion/direct contact with contaminated soil that would cause toxicity or bioaccumulation through the terrestrial food chain.

2.1.3 Soil Vapor RAOs

RAOs for Public Health Protection

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into building at the Site.

2.2 DESCRIPTION OF SELECTED REMEDY

The Site was further remediated in accordance with the remedy identified in the Supplemental Polishing Phase Remedial Actions Work Plan dated August 7, 2019 as modified/clarified by the NYSDEC conditional approval letter dated August 22, 2019.

The factors considered during the selection of the remedy are those listed in 6 New York Codes, Rules and Regulations (NYCRR) 375-1.8. The following are the components of the selected remedy:

1. Excavation of soil/fill exceeding NYSDEC Part 375 Restricted Residential Soil Cleanup Objectives (SCOs) and/or Protection of Groundwater SCOs from a depth interval of approximately 12 to 24 feet bgs; and,
2. Additional ISCO polishing via injection of potassium permanganate.

3.0 DESCRIPTION OF SUPPLEMENTAL POLISHING PHASE REMEDIAL ACTIONS PERFORMED

Remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved Supplemental Polishing Phase Remedial Actions Work Plan dated August 7, 2019 for the Andrews Street Site and the NYSDEC conditional approval letter dated August 22, 2019. Significant deviations from this Work Plan are noted in Section 3.13.

3.1 GOVERNING DOCUMENTS

The Supplemental Polishing Phase Remedial Actions Work Plan included a site-specific Health and Safety Plan (HASP) with Community Air Monitoring Plan (CAMP) and a Quality Assurance Project Plan (QAPP). These governing plans were adhered to during the execution of the Supplemental Polishing Phase Remedial Actions Work Plan.

3.1.1 Site-Specific Health & Safety Plan

The remedial work performed under the Supplemental Polishing Phase Remedial Actions Work Plan was in full compliance with governmental requirements, including Site and worker safety requirements mandated by Federal Occupational Safety and Health Administration (OSHA). On-site workers were required to have OSHA 1910.120 Hazardous Waste Operations and Emergency Response (HAZWOPER) Certification.

The HASP, included in the approved Supplemental Polishing Phase Remedial Actions Work Plan, was complied with for the work performed at the Site. Accidents and/or reportable HASP incidents did not occur during the implementation of the work described herein.

3.1.2 Quality Assurance Project Plan

The QAPP, included in the approved Supplemental Polishing Phase Remedial Actions Work Plan, was complied with for the work performed at the Site. The QAPP describes the specific policies, objectives, organization, functional activities and quality assurance/quality control (QA/QC) activities designed to achieve the project data quality objectives.

3.1.3 Community Air Monitoring Plan

The CAMP implemented during the supplemental polishing phase remedial actions was conducted in accordance with the New York State Department of Health (NYSDOH) Generic CAMP, which was within the HASP included in the approved Supplemental Polishing Phase Remedial Actions Work Plan. Total volatile organic compound (VOC) and particulate concentrations were monitored at upwind and downwind perimeter locations during work that involved the disturbance of contaminated material and potentially contaminated material (i.e., during soil excavation, soil staging, backfilling, replacement well installation drilling, and soil load out). Particulates in air were monitored using Thermo Fisher Scientific DataRAM real time aerosol monitors. Total VOCs in air was measured using MiniRAE photoionization detectors (PIDs). Action levels specified in the CAMP were not exceeded during the supplemental polishing phase remedial actions work. The daily CAMP Air Monitoring Report Sheets with field figures are included in Appendix C. Results of the CAMP monitoring are further discussed in Section 3.2.5.

3.2 REMEDIAL PROGRAM ELEMENTS

3.2.1 Contractors and Consultants

Contractors and consultants that performed work as part of the supplemental polishing phase remedial actions, and a description of their associated tasks, are provided below.

- TREC Environmental Inc. (TREC) – Site preparation activities; removal, staging, loading, transport and disposal of non-hazardous contaminated soil and excavation waters; installation of ISCO delivery hardware in soil removal excavation; backfilling excavation with Site soil and imported stone; replacement of existing cover system material in work area; mixing and injection of potassium permanganate injectate through an ISCO delivery system; and, non-hazardous contaminated soil hauling. NYSDEC Part 364 permit #8A-1053.
- MJ Dreher Trucking, Inc. – Imported stone/backfill delivery; and non-hazardous contaminated soil hauling. NYSDEC Part 364 permit #8A-554.
- Terracon – Grain size distribution testing of on-site backfill material, field density (i.e., compaction) testing and reporting during backfilling.
- Nothnagle Drilling, Inc. (Nothnagle) – Installation of replacement overburden monitoring well MW-17A.

- Chemtech Consulting Group, Inc. (Chemtech) – Analytical Laboratory Testing Services.
- Paradigm Environmental Services, Inc. (Paradigm) – Analytical Laboratory Testing Services.
- Vali-Data of WNY, LLC (Vali-Data) – Analytical laboratory data validation services.

Day Engineering, P.C. (DAY) performed oversight and consulting for the Supplemental IRM work. The certifying Professional Engineer of Record is Nathan Simon, P.E., of DAY.

3.2.2 Site Preparation

Between approximately August 27, 2019 and September 9, 2019, the majority of required Site preparation and mobilization activities were conducted in general accordance with Section 2.2 of the Supplemental Polishing Phase Remedial Actions Work Plan. These activities included, but were not limited to, the following:

- Performed utility stakeouts in accordance with Dig Safely New York requirements prior to commencing intrusive activities (e.g., polishing phase soil removal work, and drilling associated with installation of a replacement monitoring well).
- A pre-existing NYSDEC-approved project sign at the project entrance was maintained during the supplemental polishing phase remedial actions.
- Delivered a portable restroom to the support zone (SZ) at the Site.
- Delivered a POD (used as a field office and dry storage) to the support zone at the Site.
- Mobilized heavy equipment, materials and supplies onto the Site.
- Held an on-site pre-construction meeting on September 3, 2019 that was attended by representatives of the NYSDEC, the City, DAY and TREC.
- Marked out the exclusion zone (EZ), the contamination reduction zone (CRZ) and the SZ.
- Installed “No Parking” signage on the chain link gate and adjacent chain link fencing to keep the entrance to the Site from Andrews Street clear of public and private vehicles.
- Decommissioned injection wells IW-14, IW-15 and IW-21 via tremie filling the polyvinyl chloride (PVC) screens and PVC riser piping with grout comprised of 96% Portland Cement/4% Bentonite ratio of dry material mixed with appropriate amount of

potable water. The former locations of these decommissioned wells are shown on Figure 4 and Figure 5, and well decommissioning records are included in Appendix D.

- Marked out and constructed an approximate 8,614 square foot soil staging area. The staging area consisted of a welded Solmax Linear Low-Density Polyethylene (LLDPE) 60-mil black textured liner and approximately 120.66 tons (6 truckloads) of imported Crusher Run #2 (CR2) stone sourced from the Dolomite Group Brockport plant that was used to create a minimum 1-foot high berm under the perimeter of the soil staging liner. The gradation sheet showing the CR2 contains less than 10% fines passing through a #80 sieve, an email from the NYSDEC accepting the material, and an invoice provided for the six truckloads delivered on September 4, 2019 are included in Appendix E.
- Marked out and constructed an approximate 665 square foot decontamination pad that connected the soil staging area and the CRZ. Initially, part of the 2-foot thick cover consisting of CR2 was excavated and used for berming around the perimeter of the decontamination pad footprint. A welded Solmax LLDPE 60-mil black textured liner and approximately 21.53 tons (1 truckload) of imported washed #1/#2 stone sourced from the Dolomite Group Brockport plant were then installed. The stone was used to fill the interior of the liner. A 5-gallon bucket with perforations was placed above the liner and surrounded by washed #1 and #2 stone in the lowest portion of the decontamination pad, to facilitate extraction (i.e., pumping) of water from the decontamination pad at a later date. The gradation sheet for the washed #1/#2 stone showing less than 10% fines pass through a #80 sieve, and a truck ticket and Dolomite Group ticket provided for the truckload are included in Appendix E.
- Marked out polishing phase soil removal areas for reusable soil and PCE-contaminated soil, as well as former IRM-01 limits of excavation that were within the polishing phase soil removal areas.
- Polishing phase work that involved additional injection of potassium permanganate to assist with in-situ chemical oxidation of contamination was conducted under the United States Environmental Protection Agency (USEPA) Underground Injection Control (UIC) Program via the existing Reference UICID 14NY05599031. An April 28, 2014 submittal with the original Inventory form, and a May 1, 2014 letter from the USEPA acknowledging the receipt of the inventory information, are attached in Appendix F. As shown on the May 1, 2014 UIC authorization response letter, the USEPA states “Follow up injection of additional potassium permanganate also authorized if needed to complete remediation”.

In addition to the Site preparation and mobilization activities described above, an approximate 21,000-gallon frac tank was mobilized and set up on the northwest portion of the Site on September 11, 2019.

Figure 6 shows the Site layout and location of support facilities, staging areas, decontamination pad, frac tank location, etc. Documentation of a Specialty Short Term Discharge permit required by the Supplemental Polishing Phase Remedial Action Work Plan is included in Appendix G.

3.2.3 General Site Controls

Existing perimeter fencing with two locked gates were maintained during the supplemental polishing phase remedial actions to ensure the safety of workers and the public. Access to the Site was limited to staff, workers, and pertinent agencies involved with the project. The City, DAY, TREC and Nothnagle were the only entities with keys to the locks on the gates. The public was not permitted to enter the fenced area. The gates were locked at the end of each work day.

Daily site activities were recorded by DAY and City representatives in a field logbook, including names of on-site personnel. Daily sign-in sign-out sheets were also used to document on-site personnel. Truck tracking logs were used to document imported and exported earthen materials during the project. Copies of these field notes, sign-in/sign-out sheets and truck tracking logs are included in Appendix H.

At the end of each day, construction fencing secured with metal posts was placed around open excavations.

Since the implemented supplemental polishing phase remedial actions resulted in the exposure and disturbance of less than 1 acre of the Site, the remedial activities were considered exempt from formal NYSDEC storm water construction permit requirements. However, erosion and sedimentation control measures implemented during the project included:

- Placing segregated reusable soil and contaminated soil in the bermed and lined staging area, covering soil piles with plastic sheeting within the soil staging area, and securing the plastic sheeting cover in-place with tire rings during periods of time when the Site was unoccupied.
- Loading of trucks with care to avoid the need for decontamination.

A truck and equipment decontamination pad shown on Figure 6 was available for use. Contaminated soil was loaded onto trucks within the soil staging area, and the trucks were required to drive through the decontamination pad located in the CRZ prior to passing through the SZ and leaving the Site. Due to dry conditions and careful loading practices, required decontamination was limited to sweeping/shoveling soil off the back of the trucks. The decontamination pad in the CRZ was also used to perform dry and wet decontamination of heavy equipment that was leaving the EZ prior to passing into the SZ and leaving the Site.

3.2.4 Nuisance Controls

The soil staging area was integrated with the ramp for the soil removal area. Heavy equipment involved with excavation of contaminated material generally stayed within the limits of the excavation area or the soil staging area. If heavy equipment or trucks needed to leave the soil staging area, they were required to pass through the decontamination pad in the CRZ and undergo dry and/or wet decontamination.

Biosolve pinkwater was applied to contaminated soil as it was being excavated, which suppressed airborne vapor and dust during its excavation, staging and load out. No nuisance complaints were received regarding the supplemental polishing phase remedial actions. Dust control beyond these measures was not necessary during the supplemental polishing phase remedial actions work.

3.2.5 CAMP Results

The CAMP was adhered to during ground intrusive remedial activities and during any on-site activity that had the potential to create airborne VOCs or particulates (i.e., excavation, backfilling, soil staging, load-out of contaminated soil, etc.). Action levels for both VOCs and particulates were not exceeded during these activities. The application of Biosolve pinkwater to contaminated soil assisted in suppression of airborne VOC vapors and particulates. No CAMP exceedances were measured at the Site perimeter during the supplemental polishing phase remedial actions. Copies of the CAMP Air Monitoring Report Sheets and field figures are included in Appendix C.

Periodic air monitoring of VOCs and particulates in the worker's breathing zone air was conducted with a PID and particulate meter during various activities that had the potential for VOC and particulate exposure. Breathing zone readings were recorded in the field log book (Appendix H) and/or on CAMP Air Monitoring Report Sheets (Appendix C).

Respiratory protection due to VOC vapors was necessary during excavation of some of the PCE-contaminated soil. Respiratory protection was also used by TREC during mixing of anhydrous potassium permanganate.

3.2.6 Reporting

Project updates were occasionally provided by DAY and/or the City via email to the project team and the NYSDEC. In general, updates included a summary of work completed and anticipated upcoming activities.

Status meetings were held on-site on at least a weekly basis to discuss progression of the supplemental polishing phase remedial actions work, any issues or concerns, proposed work plan deviations, and preliminary sample results. The meetings were generally attended by representatives from the City, DAY and TREC, and occasionally representatives from the NYSDEC.

The digital photo log required by the Supplemental Polishing Phase Remedial Actions Work Plan is included in electronic format in Appendix B.

3.3 CONTAMINATED MATERIALS REMOVAL

Figure 3 through Figure 10 show the location of the localized area of the Site where PCE-contaminated soils were removed and subsequent ISCO was performed as part of the supplemental polishing phase remedial actions. Removal of contaminated materials and ISCO are described in the following subsections, generally in the order that they were completed.

3.3.1 Supplemental Polishing Phase Soil Removal

The purpose of the supplemental polishing phase soil removal was to remove PCE-contaminated dense glacial till soil from a depth interval of 12 to 24 feet bgs that appeared to be acting as a source of elevated CVOC concentrations in groundwater within the center of the Site.

During soil removal work, an excavator was used to excavate the soils. Where necessary, excavation sidewalls were sloped for stability and safety purposes. The majority of removed soils were then transferred from the excavator bucket into the bucket of a loader, which was used to transport the removed soil to the appropriate staging location. When a loader was used to bring reusable or contaminated soil from the excavation to the soil

staging area, the loader stayed within the footprints of the excavation ramp area and the integrated soil staging area in order to prevent removed soil from mixing with the surrounding cover system material. A mini-excavator was also used to assist in shaping the various piles of soil.

Between September 9, 2019 and September 12, 2019, reusable soil was removed to depths up to approximately 12.0 feet bgs from the targeted PCE-contaminated soil removal area. On September 9, 2019 and September 10, 2019, the cover system material from 0 to 2 feet bgs over the entire targeted area, and reusable soil from 2 to 12 feet bgs from the northern portion of the targeted area, were removed. On September 12, 2019, some additional cover system material from 0 to 2 feet bgs near the southern portion of the targeted area, and reusable soil from a depth interval of 2 to 12 feet bgs from the central and southern portions of the targeted area, were removed. Based on global positioning system (GPS) measurements and excavation depth measurements, calculations estimated a total of 750.8 cubic yards of reusable soil was removed. The upper two feet of re-usable soil removed consisted of the earthen cover system material that was primarily comprised of CR2 stone. The removed cover system material was placed in a pile on top of the earthen cover system at a location northwest of the soil removal area (refer to Figure 6). PID screening of every other excavator bucket was conducted for the reusable soil being excavated from beyond the limits of the previous IRM-01 excavation at depths greater than 2.0 feet bgs. Peak PID readings measured on this material ranged between 0.0 parts per million (ppm) and 3.1 ppm. PID screening of every third or fourth excavator bucket was conducted for the reusable soil being excavated from within the limits of the previous IRM-01 excavation at depths greater than 2.0 feet bgs. Peak PID readings measured on this material ranged between 0.0 ppm and 140 ppm. Reusable soil from depths greater than 2.0 feet (from outside and within the limits of the previous IRM-01 excavation) was placed in piles within the staging area (refer to Figure 6).

Between September 11, 2019 and September 13, 2019, PCE-contaminated soil was removed from depths between approximately 12 and 24 feet bgs from the approximate 570 square foot (approximate 20 ft x 30 ft) targeted PCE-contaminated soil removal area. The contaminated soil that was removed was indigenous and generally consisted of a very dense silt and/or fine sand with trace gravel (glacial till) that was underlain by looser silt and/or fine sand with little to some gravel. PID screening of every other excavator bucket was conducted for the contaminated soil that was removed, and peak PID readings measured on this material ranged between approximately 20 ppm and 7,000 ppm (near the center of the oval soil removal area shown on Figure 3 through Figure 10). The contaminated soil

was placed in segregated piles within the staging area (designated as Pile 1 and Pile 2 on Figure 6). Pile 1 contained contaminated soil with PID readings less than 1,000 ppm. Pile 2 contained contaminated soil with PID readings greater than or equal to 1,000 ppm.

Between September 9, 2019 and September 13, 2019, monitoring well MW-17 and injections wells IW-6, IW-13, IW-16, and IW-22 through IW-30 were decommissioned via removal as reusable soil and PCE-contaminated soil were being excavated from the soil removal area. The well materials were placed in the soil staging area for disposal with the PCE-contaminated soil. The former locations of these wells are shown on Figure 4 and Figure 5, and well decommissioning records are included in Appendix D.

As the soil removal work progressed, field measurements and survey-grade GPS equipment were used to measure the horizontal limits of reusable soil and PCE-contaminated soil excavation work, and a rotary laser level was used to measure excavation depths. The reusable soil and PCE-contaminated soil excavation limits are shown on Figure 5, Figure 6 and Figure 7. Figure 5 also includes a cross-section of the excavation through reusable soil and PCE-contaminated soil. Based on measurements taken, it is estimated that approximately 750 cubic yards of reusable soil (including cover system material), and approximately 250 cubic yards of PCE-contaminated soil, were removed and staged in segregated piles on the Site. The aerial limits of reusable soil removed were greater than the limits identified in the Work Plan to provide better mobility of heavy equipment in the excavation. The vertical limit of reusable soil removed was generally in accordance with the limits identified in the Work Plan. The vertical and areal excavation limits of contaminated soil identified in the Work Plan were met. [Note: Due to the excavation method being employed and factors that did not allow precise measurements during excavation of contaminated soil from the 12 to 24 ft depth interval, a little over-excavation of contaminated soil occurred in order to ensure the planned limits were met.]

3.3.2 Excavation Dewatering and Storage

On September 13, 2019 and September 16, 2019, an electric pump was used to remove accumulated groundwater and control infiltrating groundwater in the excavation. No significant precipitation events occurred that required pumping of rainwater from the excavation. Some of the groundwater that was observed infiltrating into the excavation was initially pink to purple in color as a result of previous potassium permanganate injection events in the targeted soil removal area. Accumulated groundwater in the excavation was pumped to the 21,000-gallon frac tank located on the northwest portion of the Site. Over time, the color of the staged water in the frac tank changed from light pink

to clear. A total of approximately 9,500 gallons of groundwater was removed from the excavation during dewatering and placed in the frac tank.

3.4 REMEDIAL PERFORMANCE/DOCUMENTATION SAMPLING

On September 12, 2019 and September 13, 2019, eight post-excavation soil samples were collected from the PCE-contaminated soil excavation. Due to the depth of the excavation, the excavator bucket was used to collect soil from each targeted sample location, of which a portion was transferred to laboratory sample containers for subsequent laboratory testing. The locations of these post-excavation soil samples are shown on Figure 5 and Figure 7). Details concerning these samples are included on Table 1 (Sample Log).

The following post-excavation documentation soil samples were collected on September 12, 2019 from the northern portion of the excavation.

- Sample 979-S-1-(18-19) was collected from the excavation sidewall at a depth interval of 18 to 19 feet bgs. A peak PID reading of 242.0 ppm was measured on a portion of this sample.
- Sample 980-B-1-(24) was collected from the excavation bottom at a depth of 24 feet bgs. A peak PID reading of 1.3 ppm was measured on a portion of this sample.
- Sample 981-S-2-(20) was collected from the excavation sidewall at a depth of 20 feet, bgs. A peak PID reading of 28.4 ppm was measured on a portion of this sample.

The following post-excavation documentation soil samples were collected on September 13, 2019 from the central and southern portions of the excavation.

- Sample 982-S-3-(19) was collected from the excavation sidewall at a depth of 19 feet bgs. A peak PID reading of 43.2 ppm was measured on a portion of this sample.
- Sample 983-B-2-(24) was collected from the excavation bottom at a depth of 24 feet bgs. A peak PID reading of 3.9 ppm was measured on a portion of this sample.
- Sample 984-S-4-(19) was collected from the excavation sidewall at a depth of 19 feet bgs. A peak PID reading of 0.6 ppm was measured on a portion of this sample.
- Sample 985-S-5-(19) was collected from the excavation sidewall at a depth of 19 feet bgs. No PID readings were recorded for this sample.
- Sample 986-B-3-(24) was collected from the excavation bottom at a depth of 24 feet bgs. A peak PID reading of 2.2 ppm was measured on a portion of this sample.

The eight post-excavation soil samples were delivered under chain-of-custody control to Chemtech, which tested each sample for USEPA target compound list (TCL) VOCs and tentatively identified compounds (TICs) using USEPA Method 8260. Matrix spike/matrix spike duplicate (MS/MSD) testing was performed on a portion of sample 982-S-3-(19) for QA/QC purposes. The analytical laboratory reports are included in Appendix I.

Vali-Data completed a data usability summary report (DUSR) on the two analytical laboratory data packages for the eight post-excavation soil samples. Copies of the DUSRs are included in Appendix J, and the results were incorporated on the Equis Data that was submitted electronically to the NYSDEC. As shown, the data were determined to be acceptable for use. One data package required no qualification. The second laboratory package required minor qualification due to some analyte percent recoveries being outside quality control limits in internal Standards, Surrogate Spike Recoveries, Laboratory Control Samples and MS/MSD.

Table 2 provides a summary of the validated VOC test results for the eight post-excavation soil samples, and also includes a comparison of the test results to NYSDEC Part 375 Unrestricted Use SCOs, Restricted Residential SCOs, Commercial SCOs and Protection of Groundwater SCOs where exceedances are highlighted with bold red typeface. As shown, PCE concentrations detected in sidewall soil samples ranged between 7.4 milligram per kilogram (mg/kg) or ppm and 34.7 mg/kg or ppm, which exceed its Unrestricted Use SCO (1.3 ppm) and Protection of Groundwater SCO (1.3 ppm). The PCE concentrations detected in sidewall samples 979-S-1-(18-19) and 985-S-5-(19) also exceeded its Restricted Residential SCO (19 ppm). PCE concentrations detected in the three bottom soil samples ranged between 0.0196 mg/kg or ppm and 0.44 mg/kg or ppm, which do not exceed the Unrestricted Use SCO (1.3 ppm), Restricted Residential SCO (19 ppm), Commercial SCO (150 ppm) or Protection of Groundwater SCO (1.3 ppm). Other VOCs detected in one or more of the eight post-excavation soil samples included: Acetone, Carbon Disulfide; cis-1,2-DCE; Toluene; and TCE. The detected concentrations of these other VOCs did not exceed their respective Unrestricted SCOs, Restricted Residential SCOs, Commercial SCOs or Protection of Groundwater SCOs. VOC TICs were detected in three of the eight post-excavation soil samples at total TIC concentrations ranging between 0.0109 mg/kg or ppm and 14.85 mg/kg or ppm. Total TCL VOC concentrations detected in the eight post-excavation soil samples are also shown on Figure 7.

3.5 BACKFILLING, INSTALLATION OF ISCO POLISHING HARDWARE, AND SITE GRADING

Between September 16, 2019 and September 24, 2019, the excavation associated with removal of the localized area of PCE-contaminated soil was backfilled. The backfill consisted of the approximately 750.8 cubic yards of reusable soil (including cover material) that was staged on-site and approximately 357 tons (18 truckloads) of CR2 imported to the Site on September 23, 2019 and September 24, 2019 from the Dolomite Group Brockport plant. The gradation sheet showing the imported CR2 contains less than 10% fines passing through a #80 sieve, an email from the NYSDEC accepting the material, and Dolomite Group tickets provided for the 18 truckloads delivered on September 23, 2019 and September 24, 2019 are included in Appendix E.

On September 18, 2019, when the excavation was backfilled to a depth of about 12 feet bgs, eight sets of ISCO polishing hardware (designated as ISCO-1 through ISCO-8) were installed in the excavation. At each location, a mini-excavator was used to excavate trenches into the backfill to allow the ISCO polishing hardware to be installed at the desired depths that ranged between 15 and 20 feet bgs (refer to table on Figure 7). The locations of the ISCO polishing hardware are shown on Figure 7 and Figure 8. Each set of ISCO polishing hardware was constructed of two-inch inner diameter (ID) Schedule 40 PVC that consisted of a ten-foot long horizontal section of 10-slot screen capped on one end finished with a 90° elbow connected to a solid vertical riser pipe with j-plug extending above the finished ground surface. The trenches around each perforated horizontal screen section were backfilled with a total of approximately 40.02 tons (2 truckloads) of imported washed #2 stone previously delivered to the Site on September 12, 2019 from the Dolomite Group Brockport plant. The gradation sheet for the washed #2 stone showing less than 10% fines pass through a #80 sieve, and a truck ticket and Dolomite Group tickets provided for the two truckloads are included in Appendix E. Once the ISCO polishing hardware and washed stone were installed, the corresponding trench was backfilled with reusable soil to the original backfilled depth of about 12 feet bgs.

After installation of the eight sets of ISCO polishing hardware was complete, excavation backfilling resumed. Once the excavation was backfilled to a depth of approximately 9 feet, a vibratory roller was used to compact backfill in one-foot lifts, and Terracon began field density (i.e., compaction) testing of each one-foot lift. Field density testing was completed on September 20, 2019, September 23, 2019, and September 24, 2019. Terracon's grain size distribution test report, earthwork observations reports, and field

density (compaction) test reports are included in Appendix K. The field density test reports show the achieved percent compactions ranged between 95.2% and 99.7%, which exceeded the goal of 95% compaction. As part of the backfilling, the staged existing cover system material, supplemented with new imported CR2, were used to re-establish the minimum two-foot thick earthen cover system over the excavation.

On September 25, 2019, the excavator (except the bucket), the loader and the vibratory roller that had been in contact with PCE-contaminated soil were decontaminated by mechanically removing soil (i.e., using a shovel, brush, etc.) over the staging area followed by power washing with potable water over the decontamination pad in the CRZ.

On October 22, 2019, a skid steer was used to grade portion of the cover material on the Site that were disturbed by the project. As part of this work, approximately 43 tons (2 truckloads) of additional CR2 from the Dolomite group Brockport plant was imported to the Site. The gradation sheet showing the imported CR2 contains less than 10% fines passing through a #80 sieve, an email from the NYSDEC accepting the material, and Dolomite Group tickets provided for the 2 truckloads delivered on October 22, 2019 are included in Appendix E. The skid steer did not require decontamination since it was not in contact with potentially contaminated materials. The POD storage container and portable restroom were also removed from the SZ and transported off-site on October 22, 2019.

3.6 INSTALLATION AND DEVELOPMENT OF REPLACEMENT MONITORING WELL

On October 17, 2019, a replacement overburden monitoring well (designated as MW-17A) was installed by Nothnagle to replace monitoring well MW-17 that was to be decommissioned as a result of the soil removal work. Replacement well MW-17A was located near the center of the removal area approximately eight feet northwest of the MW-17 location (refer to Figure 5). Nothnagle used a 4.25-inch inner diameter hollow stem auger system to advance the well boring to a depth of 25 feet bgs. A two-inch inner diameter Schedule 40 PVC well consisting of fifteen feet of 10-slot PVC screen connected to solid and capped PVC riser extending above the ground surface was installed in the borehole. A sand pack was installed around, and two feet above, the screened interval. A 2.5-foot bentonite seal was installed above the sand pack. Grout was used to fill the remainder of the borehole to approximately one-foot bgs. A protective casing was cemented in-place over the aboveground portion of the PVC riser. Soil cuttings were placed in a Part 364 permitted dump trailer provided by TREC and left on-site, and

decontamination water was placed in the 21,000-gallon frac tank. The boring log and monitoring well construction diagram for MW-17A are included in Appendix L.

On October 18, 2019, monitoring well MW-17A was developed by utilizing a gas-powered pump and dedicated disposable tubing. Approximately 35 gallons (i.e., over 13 well casing volumes) of groundwater was purged from the well during its development. No fluids were added to the well during development, and well development equipment was decontaminated after its use. Using a Horiba U-53 water quality meter, water quality measurements were taken prior to purging and after each five-gallon increment of groundwater was removed. A well development data log is included in Appendix L. The purged well development water and decontamination water were placed in the 21,000-gallon frac tank.

A City licensed surveyor measured: 1) the location of monitoring well MW-17A; and 2) the elevations of the ground surface, top of inner PVC casing and top of outer protective casing of monitoring well MW-17A.

3.7 WASTE CHARACTERIZATION AND DISPOSAL

Table 3 is a Waste Disposal Tracking Log that summarizes the wastes generated during the supplemental polishing phase remedial actions, the characterization sampling and analysis performed, transportation information, and disposal information. Further details are discussed below.

3.7.1 Wastes Associated with Frac Tank Contents

On September 20, 2019, two waste characterization water samples were collected from the frac tank that contained water removed from the excavation. The samples were collected using a peristaltic pump connected to new plastic tubing. Water sample 987-WS-01 was collected approximately one foot below the surface of the water in the frac tank. Water sample 988-WS-02 was collected approximately 1 inch above the bottom of the tank. These two liquid waste characterization samples were delivered under chain-of-custody control to Paradigm, which tested each sample for VOCs using USEPA Method 624, pH using Method SM22 4500 H+ B, and Oxidizers using American Society for Testing and Materials (ASTM) Method D4981-08. Details concerning these samples are included on Table 1 (Sample Log). The analytical laboratory report is included in Appendix I. Sample 987-WS-01 contained the VOC PCE at a concentration of 834 ug/l, had a pH of 7.64, and was negative for oxidizers. Sample 988-WS-02 contained the VOC PCE at a concentration of 942 ug/l, had a pH of 7.58, and was negative for oxidizers.

On October 2, 2019, DAY submitted an application package to the Monroe County Department of Environmental Services (MCDES) for a Specialty Short Term Discharge Permit. On October 7, 2019, MCDES issued Specialty Short Term Discharge Permit #ST-371. Copies of the permit application and the permit are included in Appendix G.

On October 10, 2019, discharge of the wastewater being stored in the 21,000-gallon frac tank commenced. In accordance with Permit #ST-371, the water was discharged to a manhole located in the adjoining Bristol Street public right-of-way west of the Site (designated as B-MH2 on Figure 3 and Figure 6). Manhole B-MH2 is connected to a combined sewer that ultimately leads to the Monroe County Pure Waters (MCPW) Frank E. VanLare Wastewater Treatment Plant.

On October 22, 2019, the frac tank was cleaned by TREC. The excavation water in the tank, and approximately 100 gallons of wash waters, were discharged to manhole B-MH2 under Permit #ST-371, and sediments were placed in the TREC Part 364 permitted dump trailer that was also used for storage of the soil cuttings generated during installation of replacement overburden monitoring well MW-17A. On October 22, 2019, TREC left the Site with the dump trailer and disposed of the approximately 0.66 tons of contents at High Acres Landfill under waste profile #110197NY (see below). A Waste Management Customer Summary Report, a landfill ticket, and a non-hazardous waste manifest for the TREC dump trailer load are included in Appendix M.

3.7.2 Wastes Associated with Removed PCE-Contaminated Soil, Decommissioned Wells, and Dismantled Staging Area and Decontamination Pad

On September 24, 2019, two waste characterization soil samples were collected from the PCE-contaminated soil located in the staging area. Soil sample 989-Pile-1 was collected at Pile 1 that consisted of removed PCE-contaminated soil that had PID measurements < 1,000 ppm. Soil sample 990-Pile-2 was collected at Pile 2 that consisted of removed PCE-contaminated soil that had PID measurements \geq 1,000 ppm. At each location, an excavator was used to dig at least two feet into the side of the respective soil pile and a soil sample was collected from the in-situ portion of each location that exhibited the highest PID reading. At the two sample locations, soil was collected from a 0 to 0.5 foot depth interval within the targeted portion of the excavation.

The two solid waste characterization samples were delivered under chain-of-custody control to Paradigm, which tested each sample for: TCL VOCs and TICs using USEPA Method 8260; Toxicity Characteristic Leaching Procedure (TCLP) VOCs using USEPA

Methods 1311 and 8260; and TCLP Metals using USEPA Methods 1311, 6010 and 7470. Details concerning these samples are included on Table 1 (Sample Log). The analytical laboratory report is included in Appendix I. Sample 989-Pile-1 contained the total VOC PCE at a concentration of 261 ug/kg, was non-detect for TICs, had a TCLP detection of 0.630 mg/l for the metal Barium, and was non-detect for TCLP VOCs. Sample 990-Pile-2 contained the total VOC PCE at a concentration of 594 ug/kg, contained 175 ug/kg of total TICs, had a TCLP detection of 0.525 mg/l for the metal Barium, and was non-detect for TCLP VOCs. Based on these test results, Pile 1 and Pile 2 were characterized as non-hazardous waste, and waste profile #110197NY was generated.

On October 9, 2019 and October 10, 2019, the non-hazardous PCE-contaminated soil in Pile 1 and Pile 2, as well as the staging area materials, decommissioned well materials and disposable personal protective equipment (PPE), were loaded onto a total of 28 Part 364 permitted trucks provided through MJ Dreher Trucking, Inc. A total of approximately 547.14 tons of PCE-contaminated soil (including the staging area materials, decommissioned well materials, and PPE) was transported off-site and disposed at High Acres Landfill under waste profile #110197NY. A Waste Management Customer Summary Report, landfill tickets, and non-hazardous waste manifests for the 28 truckloads are included in Appendix M.

On October 11, 2019, the excavator, the mini-excavator and truck mats that had been in contact with PCE-contaminated soil were decontaminated over the decontamination pad in the CRZ using a sledge hammer and shovel followed by power washing with potable water. The decontamination pad was then dismantled. Approximately 50 gallons of water contents in the decontamination pad was pumped into drums, which were transported on a truck to Bristol Street and discharged to manhole B-MH2 under MCDES Specialty Short Term Discharge Permit #ST-371. The liner, washed stone, perforated water pump bucket, and soil from decontamination activities was loaded onto two Part 364 permitted trucks provided through MJ Dreher Trucking, Inc. Subsequent to finishing loading of decontamination pad material into the bed of the second Part 364 permitted truck, the excavator bucket that touched these materials was decontaminated by power-washing with potable water above the material in the truck bed prior to this last truck leaving the Site. A total of approximately 27.90 tons of solid decontamination pad waste material was transported off-site and disposed at High Acres Landfill under waste profile #110197NY. A Waste Management Customer Summary Report, the landfill tickets, and the non-hazardous waste manifests for the two truckloads are included in Appendix M.

3.8 POST-EXACATION SUPPLEMENTAL POLISHING PHASE ISCO TREATMENT

On October 18, 2019 and October 25, 2019, 385 pounds of 97% potassium permanganate sourced from Hepure Technologies, Inc. was hydrated and mixed with approximately 950-gallons of potable water to result in an approximate 5% solution of potassium permanganate. The potassium permanganate was delivered as a powder in seven 55-pound containers. TREC's personnel involved with the mixing wore Level C PPE with proper respiratory protection during mixing of the potassium permanganate. Potassium permanganate was mixed in 55-gallon batches in a plastic open head 55-gallon drum. Appropriate amounts of water and 97% potassium permanganate were added to the drum for each batch, and an electric power drill stainless steel mixer was then used to mix each batch of potassium permanganate solution prior to injection. A pump equipped with rubber hose and/or a gravity feed funnel were used to inject the ~5% potassium permanganate solution.

- On October 18, 2019, the following approximate volumes of potassium permanganate solution were injected:
 - Approximately 110 Gallons each at ISCO-1, ISCO-2, ISCO-3, ISCO-4, ISCO-5, ISCO-7, and ISCO-8 (total of approximately 770 gallons).
 - Approximately 55 Gallons at ISCO-6.
 - Approximately 15 gallons each at MW-01 and MW-03A (total of approximately 30 gallons).
 - Approximately 5 gallons each at IW-1, IW-4A, IW-8, IW-9, IW-17, IW-18, IW-19 and IW-20 (total of approximately 40 gallons).
- On October 18, 2019, the following approximate volumes of potassium permanganate solution were injected:
 - Approximately 30 Gallons at ISCO-6.
 - Approximately 25 Gallons each at ISCO-5.

The injection locations identified above are shown on Figure 7 and Figure 8. Once the ISCO treatment was complete, the plastic drum was rinsed, neutralized and removed from the Site.

3.9 POST-EXCAVATION PERFORMANCE GROUNDWATER MONITORING EVENT

Approximately six weeks after finishing the supplemental polishing phase ISCO treatment, a post-excavation performance groundwater monitoring event was conducted. On December 6, 2019, static water levels were taken at monitoring wells, MW-01, MW-02,

MW-03A, MW-04, MW-05, MW-06, MW-07, MW-11, MW-15, MW-16, MW-17A, MW-18, MW-19 and MW-20. Following the static water level measurements on December 6, 2019, wells MW-01 and MW-03A were redeveloped, and then passive diffusion bag (PDB) samplers were deployed at monitoring wells MW-01, MW-02, MW-03A, MW-05, MW-11, MW-15, MW-16, MW-17A, MW-18 and MW-19. On December 20, 2019, the PDBs were retrieved from the 10 wells, and groundwater samples were processed for laboratory analysis. The ten field samples, a field blank and a trip blank were delivered under chain-of-custody control to Chemtech, which tested the samples for TCL VOCs and TICs using USEPA Method 8260. In addition, MS/MSD testing was performed on a portion of sample 996-MW-15(17) for QA/QC purposes. Details concerning these samples are included on Table 1 (Sample Log). The analytical laboratory reports are included in Appendix I.

Vali-Data completed a DUSR on the analytical laboratory data package. A copy of the DUSR is included in Appendix J, and the results were incorporated on the Equis Data that was submitted electronically to the NYSDEC. As shown, the data were determined to be acceptable for use, and minor qualification was required due to acetone being detected in a field blank.

Using the surveyed well elevations, and static water level measurements from December 6, 2019, the groundwater elevation for each monitoring well on December 6, 2019 was calculated (refer to Table 4). A potentiometric groundwater contour map for the December 6, 2019 monitoring event was developed and is included as Figure 9. As shown, with the exception of radial flow away from MW-03A, groundwater flow on December 6, 2019 generally flows toward the northeast, toward the Inner Loop.

Table 5 provides a summary of the validated December 2019 VOC test results for the ten groundwater samples, and also a comparison of the test results to NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 groundwater standards and guidance values where exceedances are highlighted with bold red typeface. A discussion of this data is discussed below.

- The December 2019 groundwater samples from monitoring wells MW-01, MW-02, MW-03A, MW-05, MW-11, and MW-17A contained concentrations of one to four CVOCs that exceeded their respective TOGS 1.1.1 groundwater standards or guidance values. One to three CVOCs were also detected in December 2019 groundwater samples from monitoring wells MW-15, MW-16, MW-18 and MW-19, but at concentrations below their respective TOGS 1.1.1 groundwater standards or guidance values.

- CVOCs detected in one or more of the groundwater samples included: Cis-1,2-DCE; Trans-1,2-DCE; PCE; TCE; and VC.
- PCE results ranged between 0.55 ug/l or parts per billion or ppb (MW-15) and 820 ug/l or ppb (MW-01). PCE concentration results for the ten December 2019 groundwater samples in relation to the supplemental polishing phase soil removal area are shown on Figure 9 and Figure 10. Two-dimensional Geographical Information System (GIS) modeling of the PCE groundwater concentrations is included on Figure 10. As shown for the December 2019 groundwater monitoring event, MW-01 had the highest PCE concentration (820 ug/l). The PCE concentration detected at MW-17A set within the supplemental polishing phase soil removal area (i.e., 28 ug/l) was over 29 times lower than the PCE concentration detected at MW-01.
- The highest TCE, cis-1,2-DCE and trans-1,2-DCE results were detected at MW-01.
- The highest total CVOC concentrations were detected in the groundwater samples from MW-01 (1,008.3 ug/l) and MW-03A (353.4 ug/l) that are located north and south of the supplemental polishing phase soil removal location, respectively.
- The VOCs Benzene; Xylenes; Cyclohexane; and Methylcyclohexane were only detected in the groundwater sample from MW-17A, but at concentrations below TOGS 1.1.1 groundwater standards and guidance values.
- VOC TICs were detected in five of the ten December 2019 groundwater samples at total TIC concentrations ranging between 5.2 ug/l or ppb and 22.1 ug/l or ppb.

Table 6 summarizes the validated field blank and trip blank QA/QC sample results associated with the December 2019 groundwater monitoring event. As shown, the VOC Acetone was detected in the field blank at a concentration of 7.3 ug/l, and no VOCs were detected in the trip blank.

3.10 CONTAMINATION REMAINING AT THE SITE

Some residual contamination remains at the Site in soil and groundwater at concentrations that exceed NYSDEC Part 375 Unrestricted Use SCOs and/or NYSDEC TOGS 1.1.1 groundwater standards or guidance values. Refer to the Site's November 2015 *Remedial Investigation/Alternative Analysis Report* for sample locations exceeding applicable SCOs that are located below the Site cover system.

The remaining contamination will continue to be addressed by the existing engineering control cover system, and by the existing institutional controls (Environmental Easement and Site Management Plan) to protect human health and the environment. Long-term management of the Institutional and/or Engineering Controls and residual contamination is being performed under the Site Management Plan (SMP) approved by the NYSDEC. Specific areas and types of remaining contamination are summarized below.

- Residual PCE-impacted subsurface soil and groundwater are generally present starting at depths greater than 10 to 12 feet bgs within the overburden saturated zone. There is no longer a defined PCE source area at the Site, and the remaining residual PCE contamination is generally present at depth in discrete relatively thin zones. It is anticipated that the remaining PCE in the above media will continue to decrease with time to concentrations below the project Standards, Criteria and Guidance (SCG) values. Specifically, the injected potassium permanganate will remain in the subsurface for an extended period of time allowing the transportation mechanisms (i.e., advection, dispersion and diffusion) to further penetrate the fine-grained media resulting in oxidation and complete mineralization (i.e., destruction) of the chlorinated solvents in the targeted source area and plume area. VOCs remaining in soil, bedrock, or groundwater will continue to be addressed by the institutional controls and the engineering controls that apply to the entire Site. Soil vapor intrusion concerns will be addressed through further monitoring and/or implementation of engineering controls, if deemed necessary.
- Sporadic areas of urban fill and soil across the Site contain concentrations of SVOCs and/or target analyte list (TAL) metals that exceed NYSDEC Part 375 Restricted Residential SCOs and/or Protection of Groundwater SCOs, and this condition will be controlled by the Site's cover system and institutional controls.

3.11 SOIL COVER SYSTEM

Exposure to remaining contamination in soil/fill at the Site is prevented by the existing cover system placed over the entire Site. This cover system is comprised of a minimum of 24 inches of CR2 stone and some concrete-paved areas. The area of the cover system that was disturbed as a result of completing the supplemental polishing phase remedial actions was restored using the existing cover system CR2 stone and additional NYSDEC-approved imported CR2 stone.

3.12 INSTITUTIONAL CONTROLS

Due to contamination remaining at the Site subsequent to completion of the supplemental polishing phase remedial actions, the existing environmental easement and site management plan continue to be required for this Site.

3.13 DEVIATIONS FROM THE SUPPLEMENTAL POLISHING PHASE REMEDIAL ACTIONS WORK PLAN

Subsequent to NYSDEC's August 22, 2019 conditional approval of the August 7, 2019 Supplemental Polishing Phase Remedial Actions Work Plan, deviations were made to the scope of work as the project progressed. The original requirements, the deviations, the reasons for change, the effects of the actions and the regulatory approvals of the actions are presented on Table 7. These deviations did not affect meeting the goals or objectives of the project outlined in the Supplemental Polishing Phase Remedial Actions Work Plan.

Notes

Monitoring Wells listed are overburden groundwater monitoring wells.

Ft TOC = Feet below top of casing

Well MW-03A was damaged during Supplemental MIP work and was repaired and re-set with a flush-mount curb box in July 2013.

MW-03A TOC re-surveyed August 8 or 9, 2013, and is 2.46 lower than original. MW-03A groundwater elevations collected after August 9, 2013 are adjusted

⁽¹⁾ Represents ground elevation prior to installation of #2 Crusher Run (CR2) cover system material as a

***Monitoring event had a 1.53' riser (repaired) added to the top of casing of MW-02.

Post-Excavation Performance
Monitoring Event***

Deviations to Supplemental Polishing Phase Remedial Actions Work Plan

Work Plan Section	Action in Work Plan	Revised Plan/Action	Justification
2.2 - Site Preparation	Figure 6 of the work plan identifies the anticipated layout of the Site during supplemental polishing phase remedial activities	Staging area layout/location and decontamination pad location were modified from those shown on Figure 6	The modifications were requested by the remediation contractor to allow more efficient use of the Site during the fieldwork. The modifications were approved by the NYSDEC Project Manager during a September 3, 2019 on-site kick-off meeting.
2.2 - Site Preparation	Staging area liner to be constructed of 3-inch layer of imported pea stone overlain by 25 mil thick poly plastic liner	Staging area liner consisted of Mirafi geotextile fabric overlain by 60-mil thick poly plastic liner.	Geotextile fabric and 60 mil liner are readily available, and remediation contractor was concerned that pea stone would prematurely wear the liner. These modifications were approved by the NYSDEC Project Manager during a September 3, 2019 on-site kick-off meeting.
2.2 - Site Preparation	Decontamination pad to be constructed of 3-inch layer of imported pea stone overlain by 60 mil thick poly plastic liner	Decontamination pad consisted of Mirafi geotextile fabric overlain by 60-mil poly plastic liner.	Geotextile fabric and 60 mil liner are readily available, and remediation contractor was concerned that pea stone would prematurely wear the liner. These modifications were approved by the NYSDEC Project Manager during a September 3, 2019 on-site kick-off meeting.
2.2 - Site Preparation	Modification/clarification #5 of the August 22, 2019 NYSDEC letter indicated injection wells IW-14, IW-15, IW-17, IW-19 and IW-21 located within the sloped/benched area and the sloped/benched ramp area need to be decommissioned per CP-43	Injection wells IW-17 and IW-19 were not decommissioned since the sloped ramp area was repositioned	The repositioning of the sloped ramp area was requested by the remediation contractor to allow more efficient use of the Site during the fieldwork. These modifications were approved by the NYSDEC Project Manager during a September 3, 2019 on-site kick-off meeting.
2.2 - Site Preparation	Modification/clarification #4 of the August 22, 2019 NYSDEC letter indicated soil piles to be covered with a minimum of 12-mil poly sheeting	Covering of soil piles changed from two layers of 6-mil poly sheeting to one layer of reinforced 10-mil poly sheeting	Reinforced 10 mil poly sheeting is readily available, easier to install/maintain, and provides the same level of cover protection. This modification was approved by the acting NYSDEC Project Manager on September 11, 2019.
2.6 - Excavation Dewatering, Treatment, and Disposal	One sample of excavation water staged in the frac tank was to be collected and submitted for waste characterization analytical laboratory testing.	Two samples of excavation water staged in the frac tank were collected and submitted for waste characterization analytical laboratory testing. One of the samples was collected near the top of the water in the frac tank, and the second water sample was collected near the bottom of the frac tank.	The two samples were collected to confirm that the water column in the tank contained similar levels of VOCs.
2.6 - Excavation Dewatering, Treatment, and Disposal	Frac tank water waste characterization samples were to be tested by Chemtech located in Mountainside, New Jersey.	Frac tank water waste characterization samples were tested by Paradigm Environmental Services located in Rochester, New York.	Paradigm was selected in order to expedite delivery and testing of the waste characterization water samples.
2.7 - Backfilling and Installation of ISCO Polishing Hardware	Backfill was to be placed and compacted in one-foot lifts or less with a goal of achieving 95% compaction to the extent possible.	Backfill from 24 ft. bgs to 9 ft. bgs was placed and compacted using the excavator bucket and no compaction testing was conducted for this backfilled interval. Backfill from 9 ft. bgs to the ground surface was compacted using a vibratory roller and compaction testing was completed daily.	The excavation was not safe to enter with the vibratory roller until a depth of 9 ft. or less was achieved.
2.7 - Backfilling and Installation of ISCO Polishing Hardware	A minimum 1-foot thick layer of imported crushed stone was to be placed in the bottom of the excavation and ISCO hardware was to be placed with in the layer of crushed stone.	A layer of imported crushed stone was not placed at the bottom of the excavation. The excavation was backfilled with re-useable Site soil and imported crushed stone was used around horizontal perforated ISCO piping that was placed at depths ranging 15 and 20 feet bgs.	Areas of the excavation that had the highest field evidence of residual VOC contamination (e.g., elevated PID readings, odors) was along sidewalls at depths between 15 and 20 ft. bgs. These areas were targeted for placement of the perforated ISCO piping.
2.8 - Post-Excavation ISCO Treatment	385 pounds of 97% pure potassium permanganate mixed with 950 gallons of potable water (i.e., approximately 960 gallons of injectate) was to be pumped directly into the excavation or through the ISCO polishing PVC hardware that was installed in the excavation.	Approximately 890 gallons of injectate was pumped through the ISCO polishing PVC hardware that was installed in the excavation. Approximately 15 gallons each of injectate was pumped to existing monitoring wells MW-01 and MW-03A. Approximately 5 gallons each of injectate was pumped to existing injection wells IW-1, IW-4A, IW-8, IW-9, IW-17, IW-18, IW-19 and IW-20.	Including injection of small volumes of injectate at the specified monitoring wells and injection wells assists with polishing of contaminants beyond the limits of the supplemental polishing phase excavation. ISCO polishing at these monitoring wells and injection wells was presented in an ISCO Polishing Work Plan dated November 7, 2017, which was approved by the NYSDEC in a letter dated November 22, 2017.
2.9 - Characterize, Transport and Dispose Contaminated Soil	Waste characterization soil samples were to be tested by Chemtech located in Mountainside, New Jersey.	Waste characterization soil samples were tested by Paradigm Environmental Services located in Rochester, New York.	Paradigm was selected in order to expedite delivery and testing of the waste characterization soil samples.
2.11 - Installation and Development of New Monitoring Well	Advance boring for replacement well MW-17A to 20 feet bgs with hollow stem augers, then collect 2 foot split spoon samples ahead of hollow stem augers from 20 to 30 feet bgs	Advanced boring for replacement well MMW-17A to 25 feet bgs with hollow stem augers, and collected no 2-foot split spoon samples	The bottom of original well MW-17 was at 25 feet bgs, and the location of the replacement well MW-17A had been excavated to a depth of 24 ft bgs and subsequently backfilled, making split spoon sampling unnecessary. These modifications were approved by the NYSDEC Project Manager in an email dated October 2, 2019.
2.12 - Post-Excavation Performance Groundwater Monitoring Event	Completion of a Data Usability Summary Report (DUSR) on the analytical laboratory data for this monitoring event was not planned.	A DUSR was completed on the analytical laboratory data for this monitoring event.	Acetone was detected in some of the field samples and also the accompanying QA/QC field blank sample. As such, it was beneficial to have the Acetone results qualified for the affected field samples.

Supplemental Polishing Phase Remedial Actions
300, 304-308, 320 Andrews Street and 25 Evans Street, Rochester, New York

Dropping off PODS storage unit – looking southwest (8-27-2019)

Delivery of imported crusher run #2 (CR2) – looking northwest (9-4-2019)

Well decommissioning (9-4-2019)

60-mil liner used for staging areas and decontamination pad (9-4-2019)

Construction of soil staging area – looking west (9-4-2019)

Plastic welding sheet of soil staging area liner – looking west (9-5-2019)

Plastic welded and bermed soil staging area – looking southwest (9-6-2019)

Removing and staging earthen cover system material – looking northwest (9-9-2019)

Earthen cover system material removed from excavation area and ramp area
– looking southeast (9-9-2019)

Excavating re-usable soil – looking northeast (9-9-2019)

Staging re-usable soil – looking northwest (9-9-2019)

Excavating/staging re-usable soil – looking southeast (9-10-2019)

Staged re-useable soil covered with plastic sheeting – looking northwest (9-10-2019)

Delivery of frac tank for excavation dewatering – looking northwest (9-11-2019)

Excavating re-usable soil – looking southeast (9-11-2019)

Start removing contaminated soil from north end of excavation – looking east (9-11-2019)

Contaminated soil removal from north end of removal area with field evidence of previously injected potassium permanganate in standing groundwater – looking northwest (9-12-2019)

Ramp into soil removal excavation – looking northwest (9-12-2019)

Application of Biosolve Pinkwater vapor suppressant during removal of contaminated soil – looking north (9-12-2019)

Preparing excavator pad within removal area to extend deep excavation southward – looking south (9-12-2019)

Standing groundwater with potassium permanganate that accumulated in excavation overnight and was pumped to frac tank – looking south (9-13-2019)

Contaminated soil removal with concurrent excavation dewatering – looking northeast (9-13-2019)

Contaminated soil removal with concurrent excavation dewatering – looking east (9-13-2019)

Contaminated soil removal – looking south (9-13-2019)

Removal of targeted contaminated soil nearing completion – looking southeast (9-13-2019)

Standing groundwater with potassium permanganate that accumulate in excavation overnight being pumped to frac tank – looking northeast (9-16-2019)

Commence backfilling of excavation with previously excavated and staged re-usable Site soil – looking southeast (9-16-2019)

Backfilling excavation using re-usable Site soil – looking northeast (9-16-2019)

Backfilling excavation using re-usable Site soil – looking southeast (9-16-2019)

Backfilling excavation using re-usable Site soil – looking east (9-17-2019)

Backfilling excavation using re-usable Site soil – looking northeast (9-17-2019)

Backfilling excavation using re-usable Site soil – looking south (9-17-2019)

Mark out trench locations for installation of ISCO pipe hardware through backfill – looking northeast (9-17-2019)

Trenching through partial backfill to install perforated ISCO piping at desired depth (9-18-2019)

Installing ISCO piping in trench within partial backfill – looking northeast (9-18-2019)

Installing ISCO piping in trench within partial backfill – looking northeast (9-18-2019)

Installing ISCO piping in trench within partial backfill – looking southeast (9-18-2019)

Installing ISCO piping in trench within partial backfill – looking southeast (9-18-2019)

Resuming backfill of excavation with re-usable Site soil – looking northeast (9-19-2019)

Vibratory roller entering ramp to compact backfill – looking southeast (9-19-2019)

Backfilling around ISCO riser piping in excavation – looking northeast (9-20-2019)

Compacting backfill with vibratory roller – looking southeast (9-20-2019)

Compaction testing backfill – looking northwest (9-20-2019)

Backfilling with imported crusher run #2 – looking northwest (9-23-2019)

Compacting imported crusher run #2 – looking southwest (9-23-2019)

Excavation prior to placement of staged existing cover system material (e.g., crusher run #2) - looking northeast (9-23-2019)

Backfilling with existing staged crusher run #2 cover system material – looking east (9-24-2019)

Backfilling with existing staged crusher run #2 cover system material – looking southeast (9-24-2019)

Backfilling with existing staged crusher run #2 cover system material – looking northwest (9-24-2019)

Compacting existing staged crusher run #2 cover system material – looking north (9-24-2019)

Compacting existing staged crusher run #2 cover system material – looking southeast (9-24-2019)

Decontaminated vibratory roller and loader – looking northwest (9-25-2019)

Staged contaminated soil piles pending disposal facility approvals – looking east (9-25-2019)

Load out of contaminated soil for disposal at High Acres landfill – looking northwest (10-9-2019)

Cover remaining contaminated soil pile at end of day – looking northeast (10-9-2019)

Load out of contaminated soil for disposal at High Acres landfill – looking northwest (10-10-2019)

Frac tank discharge to sewer manhole in Bristol Street under Monroe County permit – looking southwest (10-10-2019)

Decontaminating excavator tracks – looking north (10-11-2019)

Decontaminating mini-excavator – looking west (10-11-2019)

Remove and load out decontamination pad for disposal at High Acres Landfill - looking southwest (10-11-2019)

Rotary drill-rig set up to install replacement monitoring well MW-17A – looking northeast (10-17-2019)

Mixing potassium permanganate for injection at ISCO piping system in backfilled excavation – looking southeast (10-18-2019)

Clean out of frac tank – looking northwest (10-22-2019)

Clean out of frac tank – looking north (10-22-2019)

Well Decommissioning Records
(Refer to CD)

**FIGURE 3
WELL DECOMMISSIONING RECORD**

Site Name: <i>Andrews St Site (EB2B144)</i>	Well I.D.: <i>IW-14</i>
Site Location: <i>Rochester, NY</i>	Driller: <i>Jim Agas</i>
Drilling Co.: <i>TREC Env.</i>	Inspector: <i>J. Denzinger</i>
	Date: <i>9/4/2019</i>

DECOMMISSIONING DATA
(Fill in all that apply)

OVERDRILLING

Interval Drilled	
Drilling Method(s)	
Borehole Dia. (in.)	
Temporary Casing Installed? (y/n)	
Depth temporary casing installed	
Casing type/dia. (in.)	
Method of installing	

CASING PULLING

Method employed	
Casing retrieved (feet)	
Casing type/dia. (in)	

CASING PERFORATING

Equipment used	
Number of perforations/foot	
Size of perforations	
Interval perforated	

GROUTING

*- 96 lbs Portland Cement
- 4 1/2 buckets
- 7.5 gal water*

Interval grouted (FBLs)	<i>0-20', plus stick up</i>
# of batches prepared	
For each batch record:	
Quantity of water used (gal.)	
Quantity of cement used (lbs.)	
Cement type	
Quantity of bentonite used (lbs.)	
Quantity of calcium chloride used (lbs.)	
Volume of grout prepared (gal.)	
Volume of grout used (gal.)	<i>6.8 gal</i>

COMMENTS:

* Sketch in all relevant decommissioning data, including: interval overdrilled, interval grouted, casing left in hole, well stickup, etc.

WELL DECOMMISSIONING RECORD**

Site Name: <i>Andrews St. Site</i>	Well I.D.: <i>JW-21</i>
Site Location: <i>Rochester, NY</i>	Driller: <i>Jim Agur</i>
Drilling Co.: <i>TREC Env.</i>	Inspector: <i>J. Dan Zimpfer</i>
	Date: <i>9/4/2019</i>

DECOMMISSIONING DATA
(Fill in all that apply)

OVERDRILLING

Interval Drilled	
Drilling Method(s)	
Borehole Dia. (in.)	
Temporary Casing Installed? (y/n)	
Depth temporary casing installed	
Casing type/dia. (in.)	
Method of installing	

CASING PULLING

Method employed	
Casing retrieved (feet)	
Casing type/dia. (in)	

CASING PERFORATING

Equipment used	
Number of perforations/foot	
Size of perforations	
Interval perforated	

GROUTING

Interval grouted (FBLs)	<i>0-20 + 5 pickup</i>
# of batches prepared	
For each batch record:	
Quantity of water used (gal.)	
Quantity of cement used (lbs.)	
Cement type	
Quantity of bentonite used (lbs.)	
Quantity of calcium chloride used (lbs.)	
Volume of grout prepared (gal.)	
Volume of grout used (gal.)	<i>6-8 gal</i>

*96 lb Portland
4 lb Bentonite
7.5 gal H₂O*

*2 Celco Crumbler
#3*

COMMENTS:

* Sketch in all relevant decommissioning data, including: interval overdrilled, interval grouted, casing left in hole, well stickup, etc.

Hi Charlotte,

I received an email from Keith. TREC is looking for approval to import Crusher Run #1 (CR1) and Crusher Run #2(CR2) from the Dolomite Brockport Plant.

As shown on the attached gradation sheet, less than 10% passes through the #80 sieve for the CR1 and the CR2.

Can NYSDEC approve the import of the CR1 and CR2 from the Dolomite Brockport Plant for use at the Andrews St Site?

Jeff

PROJECT: City of Rochester

CRUSHED STONE: Brockport Plant

NYSDOT Geotechnical Source #: 1665

This is to certify that the Crushed Stone to be used on the above referenced project will be produced in accordance with the most current New York State Department of Transportation's, "Standard Specifications" and Addenda. All stone properties conform to sections 203, 304, 605 and 620 of the Specification. Specific values are listed below.

TYPICAL GRADATIONS (All Values are % Passing)						
SIEVE SIZE	CRUSHER RUN #2	CRUSHER RUN #1	#1 STONE	#2 STONE	#1 and #2 MIXTURE	CRUSHER RUN 5/8"
4" (100 mm)						
2" (50)	100					
1 1/2" (37.5)	98			100	100	
1" (25)	82	100	100	94	97	
1/2" (12.5)	54		93	11	52	100
1/4" (6.3)	36	57	12	1	7	70
#40 (0.425)	11	18				25
#80 (0.180)	8	9				
#200 (0.075)	6	7	0.6	0.2	0.4	11
Typical Item Numbers	203.____ 304.____		605.0901		CA 2 ASTM 57	

LIGHT STONE FILL		
SIZE	VALUE	SPEC
Lighter Than 100 Lbs.	100	90 - 100
Larger Than 6"	55	50 - 100
Smaller Than 1/2"	8	0 - 10

Notes:
 1) Proctor Density typically runs 138 +/- 2 pcf at 6-8% Moisture. (For Crusher Run products only)
 2) Medium and Heavy Stone Fill Items are selected at time of purchase to satisfy project requirements.

TERMS: Net 15 days. Seller shall be entitled to interest at the rate of 1 1/2% for each month or part thereof on any amount remaining unpaid after 15 days. If Seller is not able to recover any unpaid amounts, it shall be entitled to recover from customer reasonable attorney's fee in an amount not to exceed 20% of the amount found owing. Trucker, by its driver, hereby agrees to indemnify seller, its agents, representative and employees (hereinafter "seller"), and to otherwise hold seller harmless (1) from any and all liability for claims, for personal injury or property damage asserted against seller arising from, or in any way related to, the means or manner in which trucker's vehicle was loaded and/or the amount of material loaded on trucker's vehicle, and (2) from any and all expenses, including attorneys' fees, arising from or associated with investigation and/or defense of such claims. We assume no responsibility for delivery beyond the curb when authorized to drive beyond by customer or his agent. I have read the foregoing terms and my signature on this form reflects acceptance of them.

DAY ENVIRONMENTAL, INC.

ENVIRONMENTAL CONSULTANTS
AN AFFILIATE OF DAY ENGINEERING, P.C.

April 28, 2014

Mr. Frank Brock
Geologist, Underground Injection Control Program
EPA Region 2
290 Broadway, 20th Floor
New York, NY 10007

Re: Andrews Street Site
300, 304-308 and 320 Andrews Street, and 25 Evans Street
Rochester, New York
NYSDEC Site #E828144

Dear Mr. Brock:

On behalf of the City of Rochester (City), Day Environmental, Inc. (DAY) is coordinating interim remedial measure (IRM) work at the above-referenced Site (refer to Figure 1) under the New York State Department of Environmental Conservation (NYSDEC) Environmental Restoration Program (ERP). City and NYSDEC funds are being used to finance this project.

As part of the IRM work, in-situ chemical oxidation (ISCO) is planned for the July and August 2014 timeframe to treat residual chlorinated solvent contamination in saturated soils and groundwater at the Site. Mobilization may commence in June 2014. A total of up to 51 injection wells (i.e., injection points) are planned. The 51 tentative injection well locations are shown on the enclosed Figure 17, and are designated as IP-1 through IP-47 and BW-1 through BW-4. The actual number of injection wells may be reduced based on process monitoring and performance monitoring as the ISCO injections progress. A total of 36,000 pounds of potassium permanganate are to be injected into the saturated soil and groundwater zone at the Site. Enclosed is an Environmental Protection Agency (EPA) Underground Injection Control (UIC) program inventory of injection wells (EPA Form 7520-16) for the project.

It is intended that the injection wells will be used during a one-time event; however, they may be left open for a period of time for possible use during an ISCO polishing phase, if warranted. Once the IRM is deemed complete, the injection wells will be decommissioned.

If there are any questions, please contact this office.

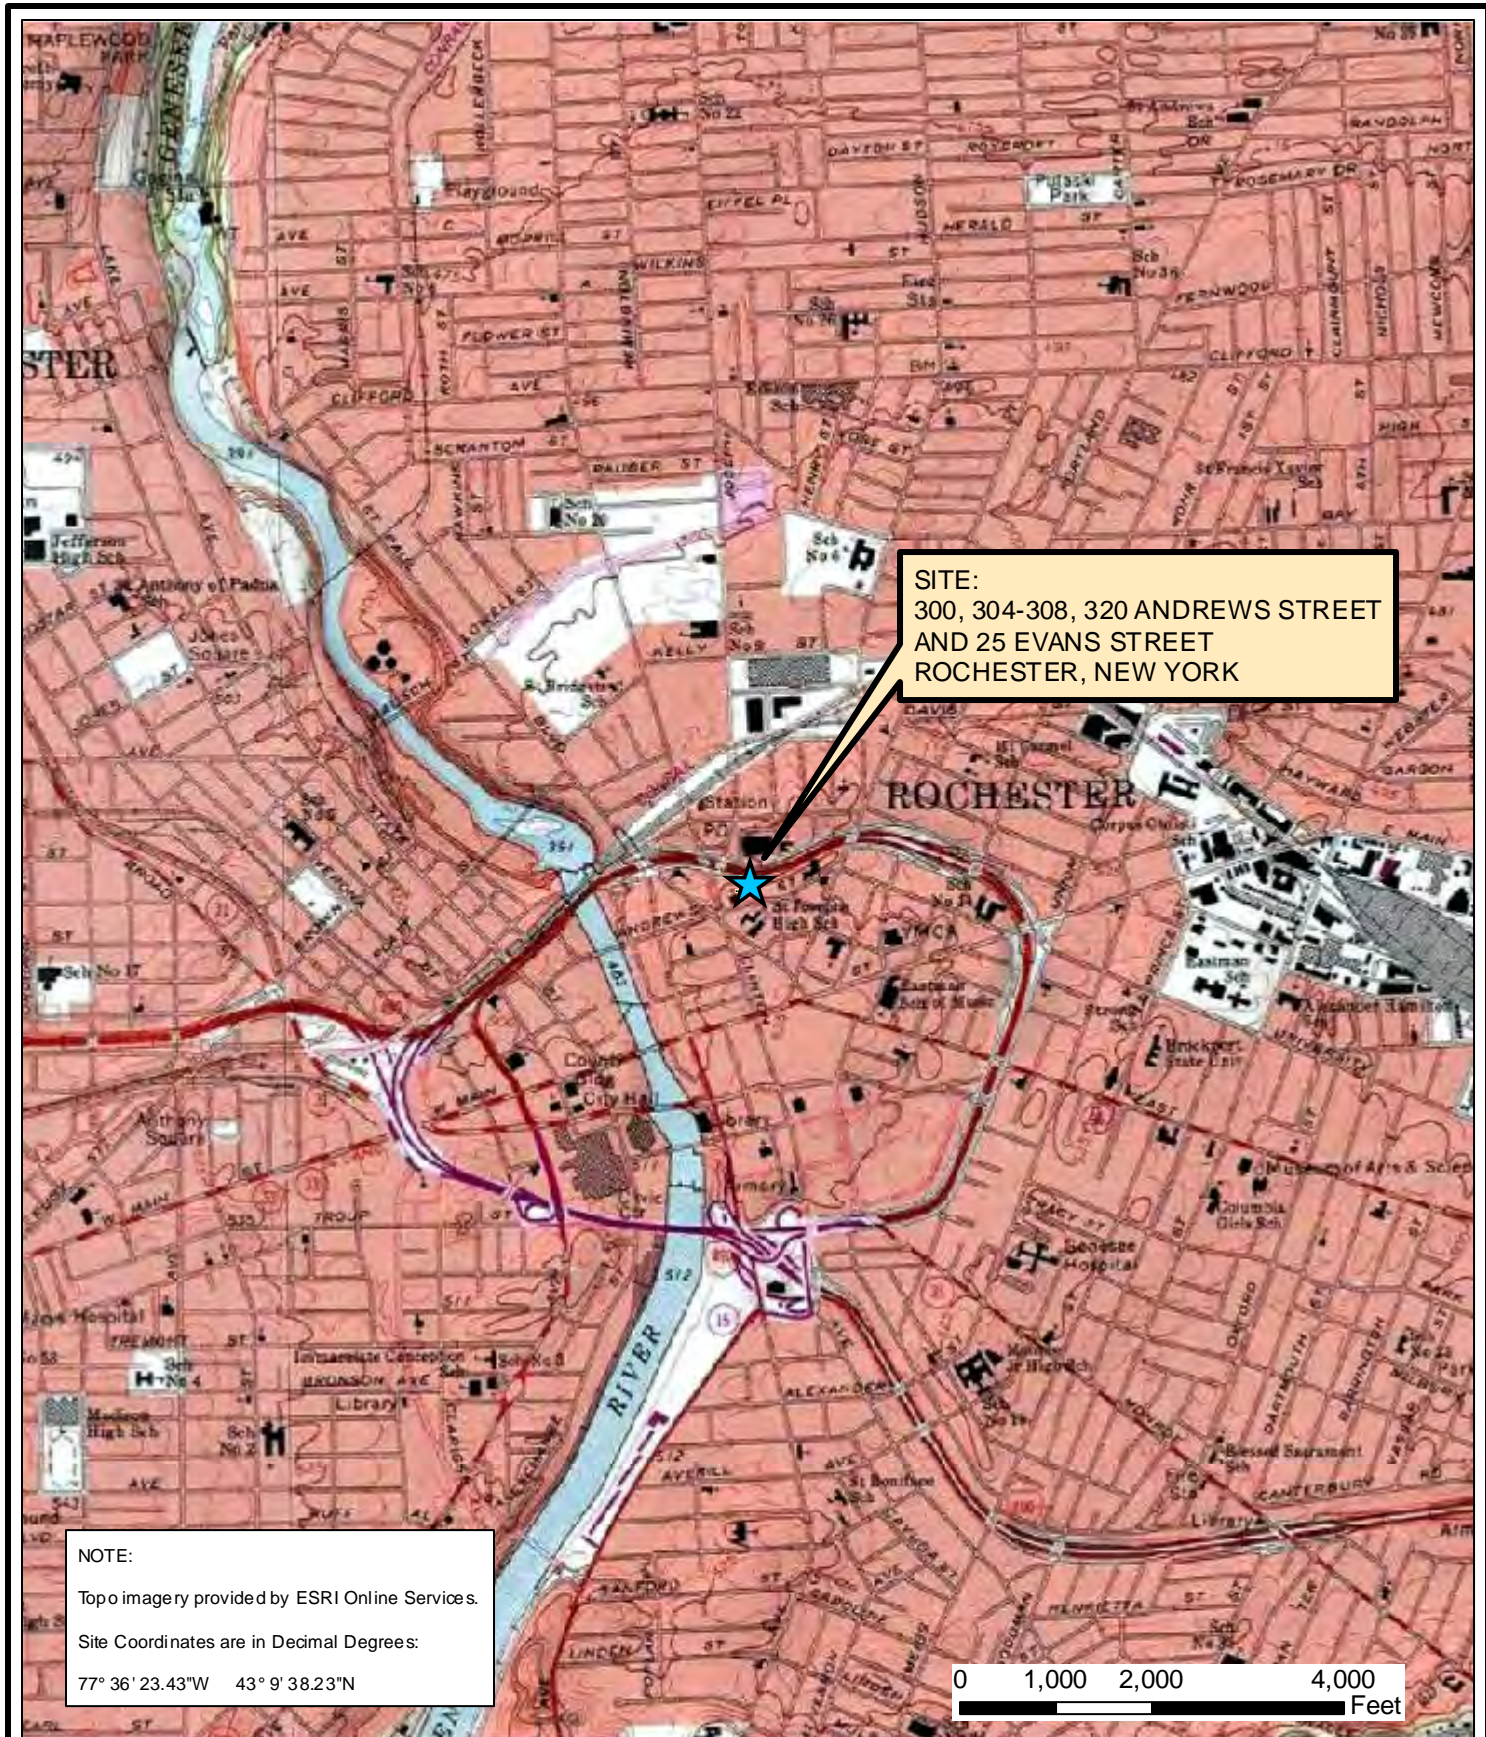

Very truly yours,
Day Environmental, Inc.

Jeffrey A. Danzinger
Project Manager

Re: Underground Injection Control (UIC) Program Regulation
Andrews Street Site (**Reference UICID: 14NY05599031**)
300 Andrews Street
Rochester, NY 14614
Monroe County
Authorization to Inject

Dear Mr. Danzinger:

This letter serves to inform you that the U.S. Environmental Protection Agency is in receipt of inventory information addressing wells authorized by rule located at the above-referenced facility in accordance with 40 Code of Federal Regulations (CFR) §144.26. The operation of the following Underground Injection Control wells are authorized by rule, pursuant to 40 CFR §144.24:

A maximum of 51 injection points are authorized to receive potassium permanganate to remediate chlorinated solvent contamination. Follow up injection of additional potassium permanganate also authorized if needed to complete remediation.

Should any conditions change in the operation of any of the wells listed above (such as injectate composition, closure of the well, injection of cooling water greater than 98 degrees Fahrenheit, construction of additional wells, etc.) you are required to notify this office within five (5) days. Any accidental spills into a well should be reported within twenty-four (24) hours after the event. Change in operation information should be addressed to:

Nicole Foley Kraft, Chief
Ground Water Compliance Section
United States Environmental Protection Agency
290 Broadway, 20th Floor
New York, NY 10007-1866
Re: 14NY05599031
Attn: Frank Brock

Should you own or operate **other** facilities using underground injection wells, please use the enclosed inventory form (EPA Form 7520-16) and instructions, copy for multiple facilities, and submit them to the address listed above. These documents can also be found on the internet at:

<http://www.epa.gov/safewater/uic/pdfs/7520-16.pdf>
http://www.epa.gov/region02/water/compliance/supplemental_instructions_inventory.pdf
http://www.epa.gov/region02/water/compliance/wellclasstypetable_inventoryc_form

Internet Address (URL) • <http://www.epa.gov>

Failure to respond to this letter truthfully and accurately within the time provided may subject you to sanctions authorized by federal law. Please also note that all information submitted by you may be used in an administrative, civil judicial, or criminal action. In addition, making a knowing submission of materially false information to the U.S. Government may be a criminal offense.

Should you have any questions, please contact Frank Brock of my staff at (212) 637-3762 or brock.frank@epa.gov.

Sincerely,

Nicole Foley Kraft, Chief
Ground Water Compliance Section

Enclosure

**USEPA REGION II SUPPLEMENTAL INSTRUCTIONS
FOR COMPLETING
INVENTORY OF INJECTION WELLS**
EPA FORM 7520-16 (Rev. 8-01)

SECTION 2. FACILITY ID NUMBER: Leave blank. EPA will assign an ID number.

SECTION 3. TRANSACTION TYPE: Check either First Time Entry or Entry Change. If this is the first time you have submitted this form for your injection wells(s), check First Time Entry and fill in all the appropriate information. If you are modifying information you sent in before, check Entry Change, fill in the Facility Name and Location and fill in the information that has changed. (Note: If the facility name has changed, in the blank space in the upper left hand corner write the prior facility name under which the form was first submitted, and the date it was submitted.)

SECTION 4. FACILITY NAME AND LOCATION: If you know the latitude and longitude of your facility, fill in line 4C and 4D. You do not need to fill in 4E, Township/Range. If you know the Numeric County Code, fill in line 4I, otherwise just write in the name of the County.

SECTION 5. LEGAL CONTACT: Under 5A, if the Legal Contact you are identifying owns the land, check Owner. If the Legal Contact owns and/or operates the business but someone else owns the land, check Operator. Under 5I, "Private" means privately owned. "Public" means owned by local/municipal government. "State" and Federal" mean owned by state/federal government.

SECTION 6. WELL INFORMATION: Under 6A CLASS AND TYPE, use the attached table "USEPA Region II List of Class V Injection Well Types" to determine the CLASS V "TYPE". Enter the appropriate Type Code in 6A (the Type Code does not have to fit within the two boxes on the Inventory Form). Select the Class V well type(s) that most accurately fit the well(s) at your facility. When reviewing the attached table and making your determination, be sure to consider all of the fluids entering the well or having the potential to enter the well. For example, Storm Water Drainage Wells located in industrial areas which are susceptible to spills, leaks or other chemical discharges are inventoried as Industrial Drainage Wells. If Cesspools and Septic Systems are receiving fluids other than sanitary waste (human excreta), that should be noted in the Additional Information below.

IMPORTANT: ADDITIONAL INFORMATION

In order to ensure that the Class V Well(s) at your facility are accurately inventoried you must also submit on a separate piece of paper: (1) a brief description characterizing your facility and the types of activities conducted; (2) a brief description of what you use each of your injection well(s) for; (3) a brief description of the types of fluids that enter, or have the potential to enter, each of your injection well(s). (Note: wells with the same information may be grouped).

If you require assistance, please contact EPA Region II at (212) 637-3093.

**USEPA REGION II LIST OF
CLASS V INJECTION WELL TYPES**

TYPE CODE	NAME	DESCRIPTION
INDUSTRIAL/COMMERCIAL/UTILITY DISPOSAL WELLS		
5X28	MOTOR VEHICLE WASTE DISPOSAL WELLS	- wells that receive or have received fluids from vehicular repair or maintenance activities, such as an auto body repair shop, automotive repair shop, new and used car dealership, specialty repair shop (e.g., transmission and muffler repair shop), or any facility that does any vehicular repair work.
5W20	INDUSTRIAL PROCESS WATER & WASTE DISPOSAL WELLS	- used to dispose of a wide variety of wastes and wastewater from industrial, commercial, or utility processes. Industries include refineries, chemical plants, smelters, pharmaceutical plants, laundromats and dry cleaners, tanneries, carwashes, laboratories, funeral homes, etc. Specify industry <u>and</u> waste stream.
5A19	COOLING WATER RETURN FLOW WELLS	- used to inject water which was used in a cooling process.
DRAINAGE WELLS		
5D4	INDUSTRIAL DRAINAGE WELL	- wells located in industrial areas which primarily receive storm water runoff but are susceptible to spills, leaks, or other chemical discharges.
5D2	STORM WATER DRAINAGE WELLS	- receive storm water runoff from paved areas, including parking lots, streets, residential subdivisions, building roofs, highways, etc.
5F1	AGRICULTURAL DRAINAGE WELLS	- receive irrigation tailwaters, other field drainage, animal yard, feedlot, or dairy runoff, etc.
5D3	IMPROVED SINKHOLES	- receive storm water runoff from developments located in karst topographic areas.
5G30	SPECIAL DRAINAGE WELLS	- used for disposing water from sources other than direct precipitation—such as landslide control drainage wells, potable water tank overflow drainage wells, swimming pool drainage wells, and lake level control drainage wells.

DOMESTIC WASTEWATER DISPOSAL WELLS		
5W9	UNTREATED SEWAGE WASTE DISPOSAL	- receive raw sewage wastes from pumping trucks or other vehicles which collect such wastes from single or multiple sources. (No treatment)
5W10	LARGE CAPACITY CESSPOOLS	- large capacity cesspools including multiple dwelling, community or regional cesspools, or other devices that receive sanitary wastes, containing human excreta, which have an open bottom and sometimes perforated sides. Includes non-residential cesspools which receive solely sanitary waste and have the capacity to serve greater than or equal to 20 persons a day. DOES NOT apply to single family residential cesspools.
5W11	SEPTIC SYSTEM (UNDIFFERENTIATED DISPOSAL METHOD)	- used to inject the waste or effluent from a multiple dwelling, business establishment, community or regional business establishment septic tank to an undetermined final discharge point. Includes non-residential septic systems which receive solely sanitary waste and have the capacity to serve greater than or equal to 20 persons a day. DOES NOT apply to single family residential septic systems. (Primary Treatment)
5W31	SEPTIC SYSTEMS (WELL DISPOSAL METHOD)	- used to inject the waste or effluent from a multiple dwelling, business establishment, community or regional business establishment septic tank to a well-- examples of wells include dry wells, seepage pits, cavitettes, etc. The largest surface dimension is less than or equal to the depth dimension. Includes non-residential septic systems which receive solely sanitary waste and have the capacity to serve greater than or equal to 20 persons a day. DOES NOT apply to single family residential septic systems. (Primary Treatment)
5W32	SEPTIC SYSTEMS (DRAIN FIELD DISPOSAL METHOD)	- used to inject the waste or effluent from a multiple dwelling, business establishment, community or regional business establishment septic tank to a drainfield--examples of drainfields include drain or tile lines, and trenches. Includes non-residential septic systems which receive solely sanitary waste and have the capacity to serve greater than or equal to 20 persons a day. DOES NOT apply to single family residential septic systems. (Primary Treatment)
5W12	DOMESTIC WASTEWATER TREATMENT PLANT EFFLUENT DISPOSAL	- dispose of treated sewage or domestic effluent from small package plants up to large municipal treatment plants. Final discharge points may include drywells or leachfields. (Secondary or further treatment)

GEOHERMAL REINJECTION WELLS		
5A5	ELECTRIC POWER REINJECTION WELLS	- reinject geothermal fluids used to generate electric power.
5A6	DIRECT HEAT REINJECTION WELLS	- reinject geothermal fluids used to provide heat for large buildings or developments.
5A7	HEAT/PUMP/AIR CONDITIONING RETURN FLOW WELLS	- reinject groundwater used to heat or cool a building in a heat pump system.
5A8	GROUNDWATER AQUACULTURE RETURN FLOW WELLS	- reinject groundwater or geothermal fluids used to support aquaculture. Non-geothermal aquaculture disposal wells are also included in this category (e.g., Marine aquariums in Hawaii use relatively cool sea water).
RECHARGE WELLS		
5R21	AQUIFER RECHARGE WELLS	- used to recharge depleted aquifers and may inject fluids from a variety of sources such as lakes, streams, domestic wastewater treatment plants, other aquifers, etc.
5B22	SALINE WATER INTRUSION BARRIER WELLS	- used to inject water into fresh water aquifers to prevent intrusion of salt water into fresh water aquifers.
5S23	SUBSIDENCE CONTROL WELLS	- used to inject fluids into a non-oil or gas producing zone to reduce or eliminate subsidence associated with overdraft of fresh water and not used for the purpose of oil or natural gas production.
OIL FIELD PRODUCTION WASTE DISPOSAL WELLS		
5X17	AIR SCRUBBER WASTE DISPOSAL WELLS	- inject waste from air scrubbers used to remove sulfur from crude oil which is burned in steam generation for thermal oil recovery projects. (If injection is used directly for enhanced recovery and not just disposal it is a Class II well.)
5X18	WATER SOFTENER REGENERATION BRINE DISPOSAL WELLS	- inject regeneration waste from water softeners which are used to improve the quality of brines used for enhanced recovery. (If injection is used directly for enhanced recovery and not just disposal it is a Class II well.)

MINERAL AND FOSSIL FUEL RECOVERY RELATED WELLS		
5X13	MINING, SAND, OR OTHER BACKFILL WELLS	- used to inject a mixture of water and sand, mill tailings, and other solids into mined out portions of subsurface mines whether what is injected is radioactive waste or not. Also includes special wells used to control mine fires and acid mine drainage wells.
5X14	SOLUTION MINING WELLS	- used for in situ solution mining in conventional mines, such as slopes leaching.
5X15	IN-SITU FOSSIL FUEL RECOVERY WELLS	- used for in situ recovery of coal, lignite, oil shale, and tar sands.
5X16	SPENT BRINE RETURN FLOW WELLS	- used to reinject spent brine into the same formation from which it was withdrawn after extraction of halogens or their salts.
MISCELLANEOUS WELLS		
5X25	EXPERIMENTAL TECHNOLOGY WELL	- wells used in experimental or unproven technologies such as pilot scale in situ solution mining wells in previously unmined areas.
5X26	AQUIFER REMEDIATION RELATED WELLS	- wells used to prevent, control, or remediate aquifer pollution, including but not limited to Superfund sites.
5X29	ABANDONED DRINKING WATER WELLS	- used for disposal of fluids. Specify well purpose and injected fluids.
5X27	OTHER WELLS	- any other unspecified Class V wells. Specify well type/purpose and injected fluids.

SOURCE: Prepared by EPA Region II. Based on 1987 Report to Congress on Class V Wells; and 40 C.F.R. §144.81.

SECTION 1. DATE PREPARED: Enter date in order of year, month, and day.

SECTION 2. FACILITY ID NUMBER: In the first two spaces, insert the appropriate U.S. Postal Service State Code. In the third space, insert one of the following one letter alphabetic identifiers:

- D - DUNS Number,
- G - GSA Number, or
- S - State Facility Number.

In the remaining spaces, insert the appropriate nine digit DUNS, GSA, or State Facility Number. For example, A Federal facility (GSA - 123456789) located in Virginia would be entered as : VAG123456789.

SECTION 3. TRANSACTION TYPE: Place an "x" in the applicable box. See below for further instructions.

Deletion. Fill in the Facility ID Number.

First Time Entry. Fill in all the appropriate information.

Entry Change. Fill in the Facility ID Number and the information that has changed.

Replacement.

SECTION 4. FACILITY NAME AND LOCATION:

- A. **Name.** Fill in the facility's official or legal name.
- B. **Street Address.** Self Explanatory.
- C. **Latitude.** Enter the facility's latitude (all latitudes assume North Except for American Samoa).
- D. **Longitude.** Enter the facility's longitude (all longitudes assume West except Guam).
- E. **Township/Range.** Fill in the complete township and range. The first 3 spaces are numerical and the fourth is a letter (N,S,E,W) specifying a compass direction. A township is North or South of the baseline, and a range is East or West of the principal meridian (e.g., 132N, 343W).
- F. **City/Town.** Self Explanatory.
- G. **State.** Insert the U.S. Postal Service State abbreviation.
- H. **Zip Code.** Insert the five digit zip code plus any extension.

SECTION 4. FACILITY NAME & LOCATION (CONT'D.):

- I. **Numeric County Code.** Insert the numeric county code from the Federal Information Processing Standards Publication (FIPS Pub 6-1) June 15, 1970, U.S. Department of Commerce, National Bureau of Standards. For Alaska, use the Census Division Code developed by the U.S. Census Bureau.
- J. **Indian Land.** Mark an "x" in the appropriate box (Yes or No) to indicate if the facility is located on Indian land.

SECTION 5. LEGAL CONTACT:

- A. **Type.** Mark an "x" in the appropriate box to indicate the type of legal contact (Owner or Operator). For wells operated by lease, the operator is the legal contact.
- B. **Name.** Self Explanatory.
- C. **Phone.** Self Explanatory.
- D. **Organization.** If the legal contact is an individual, give the name of the business organization to expedite mail distribution.
- E. **Street/P.O. Box.** Self Explanatory.
- F. **City/Town.** Self Explanatory.
- G. **State.** Insert the U.S. Postal Service State abbreviation.
- H. **Zip Code.** Insert the five digit zip code plus any extension.
- I. **Ownership.** Place an "x" in the appropriate box to indicate ownership status.

SECTION 6. WELL INFORMATION:

- A. **Class and Type.** Fill in the Class and Type of injection wells located at the listed facility. Use the most pertinent code (specified below) to accurately describe each type of injection well. For example, 2R for a Class II Enhanced Recovery Well, or 3M for a Class III Solution Mining Well, etc.
- B. **Number of Commercial and Non-Commercial Wells.** Enter the total number of commercial and non-commercial wells for each Class/Type, as applicable.
- C. **Total Number of Wells.** Enter the total number of injection wells for each specified Class/Type.
- D. **Well Operation Status.** Enter the number of wells for each Class/Type under each operation status (see key on other side).

CLASS I Industrial, Municipal, and Radioactive Waste Disposal Wells used to inject waste below the lowermost Underground Source of Drinking Water (USDW).

- TYPE II** Non-Hazardous Industrial Disposal Well.
- 1M** Non-Hazardous Municipal Disposal Well.
- 1H** Hazardous Waste Disposal Well injecting below the lowermost USDW.
- 1R** Radioactive Waste Disposal Well.
- 1X** Other Class I Wells.

CLASS II Oil and Gas Production and Storage Related Injection Wells.

- TYPE 2A** Annular Disposal Well.
- 2D** Produced Fluid Disposal Well.
- 2H** Hydrocarbon Storage Well.
- 2R** Enhanced Recovery Well.
- 2X** Other Class II Wells.

CLASS III Special Process Injection Wells.

- TYPE 3G** *In Situ* Gasification Well
- 3M** Solution Mining Well.

CLASS III (CONT'D.)

- TYPE 3S** Sulfur Mining Well by Frasch Process.
- 3T** Geothermal Well.
- 3U** Uranium Mining Well.
- 3X** Other Class III Wells.

CLASS IV Wells that inject hazardous waste into/above USDWs.

- TYPE 4H** Hazardous Facility Injection Well.
- 4R** Remediation Well at RCRA or CERCLA site.

CLASS V Any Underground Injection Well not included in Classes I through IV.

- TYPE 5A** Industrial Well.
- 5B** Beneficial Use Well.
- 5C** Fluid Return Well.
- 5D** Sewage Treatment Effluent Well.
- 5E** Cesspools (non-domestic).
- 5F** Septic Systems.
- 5G** Experimental Technology Well.
- 5H** Drainage Well.
- 5I** Mine Backfill Well.
- 5J** Waste Discharge Well.

APPENDIX G
Specialty Short Term Discharge Permit
(Refer to CD)

October 2, 2019

Mr. Donald Wolf
Industrial Waste Engineer
Monroe County Department of Environmental Services
Office of Industrial Waste
145 Paul Rd Bldg. 1
Rochester, New York 14624

RE: Andrews Street Site
300, 304-308, 320 Andrews Street and 25 Evans Street
Rochester, New York
NYSDEC ERP Site #E828144

Dear Mr. Wolf:

Day Environmental, Inc. (DAY) is requesting a Specialty Short Term Discharge Permit from the Monroe County Department of Environmental Services (MCDES) for the above-referenced properties (Andrews Street Site). [Note: Wastewater generated during previous environmental work at this Site was discharged under Permit Numbers ST-201, ST-227, ST-249 and ST-275.] Under a work plan approved by the New York State Department of Environmental Conservation (NYSDEC), DAY recently completed excavation of soil contaminated with chlorinated volatile organic compounds (VOCs) at the Site on behalf of the City of Rochester, which owns the Site.

The Andrews Street Site is currently vacant undeveloped commercial land that is mostly covered with a layer of imported crushed stone. The soil removal work commenced in September 2019 and is substantially complete. DAY is requesting a new Specialty Short Term Discharge Permit for excavation water that was generated during the supplemental work.

Approximately 10,000 gallons of water was removed via dewatering of the excavation as the soil removal work progressed. This water is currently being stored in a frac tank on-site (refer to attached Figure 1). As previously discussed with MCDES, groundwater associated with previous in-situ chemical oxidation remediation at the Site was encountered during the excavation dewatering, which was also placed in the frac tank.

On September 20, 2019, two grab water samples were collected from the frac tank. Sample 987-WS-01 was collected from one foot below the top of water surface in the frac tank. Sample 988-WS-02 was collected from one inch above the bottom of the frac tank. Under chain-of-custody control, DAY relinquished the samples to Paradigm Environmental Services, Inc. (Paradigm), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified analytical laboratory (ELAP ID #10958). Paradigm analyzed the two water samples for the following parameters:

- Purgeable Organics via Method EPA 624.1;
- pH via Method SM22 4500 H & B; and
- Oxidizers via Method ASTM D4981-08.

Mr. Donald Wolf
October 2, 2019
Page 2

A copy of Paradigm's report with the results for Samples 987-WS-01 and 988-WS-02 is enclosed, and the test results are summarized below.

- Sample 987-WS-01 and Sample 988-WS-02 contained 834 micrograms per liter (ug/l) and 942 ug/l of Tetrachloroethene (PCE), respectively. No other VOCs were detected in these two samples.
- The oxidizer tests for Samples 987-WS-01 and 988-WS-02 were negative.
- The pH results for Samples 987-WS-01 and 988-WS-02 were 7.64 and 7.58, respectively.

A photograph of a sample of the water collected from the frac tank on 9/25/2019 using a bailer is enclosed. As shown, the water does not have a color.

Once approved by MCDES, the wastewater will be discharged directly to the combined sewer manhole shown on the enclosed Figure 1 at a rate not to exceed 10 gallons per minute (gpm). The proposed sewer manhole is located within a portion of the Bristol Street right-of-way that is fenced off and is not accessible to the general public.

Also enclosed are a copy of a Specialty Short Term Discharge Permit with DAY's required information and signature, a copy of DAY's insurance certificate, and a check in the amount of \$125.00 made payable to the Monroe County Director of Finance.

If there are any questions, please contact this office.

Very truly yours,
Day Environmental, Inc.

QC Report for Laboratory Control Sample

Client: Day Environmental, Inc.

Project Reference: 5334S-17

Lab Project ID: 194633

SDG #: 4633-01

Matrix: Wastewater

Volatile Organics

Analyte	Method Reference(s):	BPA 624.1	Spike Added	Spike Units	LCS Result	LCS % Recovery	% Rec Limits	LCS Outliers	Date Analyzed
	Data File:	x64702.D							
	QC Number:	1							
	QC Batch ID:	voaw190923							

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.

"E" = Result has been estimated, calibration limit exceeded.

"Z" = See case narrative.

"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.

"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.

"B" = Method blank contained trace levels of analyte. Refer to included method blank report.

"J" = Result estimated between the quantitation limit and half the quantitation limit.

"L" = Laboratory Control Sample recovery outside accepted QC limits.

"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.

"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.

"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

"(1)" = Indicates data from primary column used for QC calculation.

"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.

"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

GENERAL TERMS AND CONDITIONS

LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty.

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation.

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices.

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability.

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure.

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling.

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility.

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment.

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure.

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law.

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

SPECIALTY SHORT TERM DISCHARGE PERMIT

County of Monroe Pure Waters District No. _____

ST- Permit No: _____

Expires: _____

Fee: \$125.00

FirmName _____

Address _____

Type of Business or Service _____

I. The above-named applicant is permitted to discharge wastes into the Monroe County Pure Waters Sewer system or Tributary thereto as applied for by an application dated _____ and verified by the applicant except the Director of Pure Waters requires the following terms and conditions to govern the permitted discharge:

- A. Day Environmental, Inc.
- B. 1563 Lyell Avenue
- C. Rochester, New York 14606

II. The applicant further agrees to:

1. Accept and abide by all provisions of the Sewer Use Law of Monroe County and of all pertinent rules or regulations now in force or shall be adopted in the future.
2. Notify the Director of Pure Waters in writing of any revision to the plant sewer system or any change in industrial wastes discharge to the public sewers as listed in the application. The latter encompasses either (1) an increase or decrease in average daily volume or strength of wastes listed in the application or (2) new wastes that were not listed in the application.
3. Furnish the Director of Pure Waters upon request any additional information related to the installation or use of sewer or drain for which this permit is sought.
4. Operate and maintain any waste pretreatment facilities, as may be required as a condition of the acceptance into the public sewer of the industrial wastes involved, in an efficient manner at all times, and at no expense to the County.
5. Cooperate with the Director of Pure Waters or his representatives in their inspecting, sampling, and study of wastes, or the facilities provided for pretreatment.
6. Notify the Director of Pure Waters immediately of any accident, negligence, breakdown of pretreatment equipment, or other occurrence that occasions discharge to the public sewers of any wastes or process waters not covered by this permit.

**COUNTY OF MONROE
SEWER USE PERMIT ENCLOSURE**

Day Environmental
1563 Lyell Ave
Rochester, NY 14606

PERMIT NUMBER: ST-371
DISTRICT NUMBER: 8575

SITE LOCATION: 300, 304 to 308 Andrews St, Rochester, New York
TYPE OF BUSINESS: Site Remediation, Surface/Ground water
SAMPLE POINT: Frac Tank

REQUIRED MONITORING

SELF MONITORING FREQUENCY: Each Frac Tank Discharge

SAMPLING PROTOCOL: Sampling and analysis shall be performed in accordance with the techniques prescribed in 40 CFR Part 136 and amendments thereto. In the absence of 40 CFR Part 136 testing methodology, a New York State Department of Health, approved method is acceptable. A grab sample, collected from the above noted sample point shall be analyzed for the following:

* Volatile Organic Compounds

* The summation of all volatile organic compounds reported greater than 10 µg/l shall not exceed 2.13 mg/L.

SPECIAL CONDITIONS:

1. Sample results for each frac tank must be reviewed and approved by Monroe County prior to discharge.
2. Monroe County must approve the discharge location.
3. Treatment system is to be inspected and approved by Monroe County prior to discharge if treatment is required.
4. Treatment equipment must be maintained to ensure proper filtration of the wastewater.
5. The summation of volatile organic compounds and semi-volatile organic compounds greater than 10 µg/L cannot be greater than 2.13 mg/L.

APPENDIX H

Field Notes, Sign-In Sign-Out Sheets, and Truck Tracking Logs

(Refer to CD)

Location Andrew St. Site Date 8-27-2019 57

Project / Client Roentri 53345-19

0852 - JAD + CCD on-site

0853 D. Park (Lift) on-site

Weather: cloudy, intermittent rain
expected, 6T-7T of
5-10 MPH wind.

Objective: mark out site, layout
feature using string line

0859: Humm on-site

0910 - C Theobald + Liz Kaptan (DEC)
on-site.

~~1030~~ 1030 - D. Park off-site

1100 - DEC off-site

1118 - CCD + Humm off-site +
PODs being delivered

1135 PODS driver off-site

1145 - D. Park on-site + will stay
for portable toilet placement

1200 JAD off-site

Location Andrews St Site Date 8/29/2019
 Project / Client Recy. 53345-19

0830 JAD on-site

- transfer supplier to POD,
 mark out features

0850 - CCD on-site to assist.

1000 D. Peck (City); Keith Hambley
 + Steve Stokumster (TREC)
 on-site

- go over project layout
 - TREC to change Ramp, staging
 area + delineate pad locations
 + provide tentative schedule

1045 JAD, CCD, D Peck, Hambley +
 Stokumster off-site

Location Andrews St Site Date 9/3/2019
 Project / Client Recy. 53345-19

0900 - JAD and NES on-site
 Steve Stokumster + Jeff Ignazak from
 TREC already on-site

0905 - D. Peck (City) on-site

0925 - Keith Hambley (TREC) on-site

0930 Jim Agge (TREC) on-site with
 TRUCK + Geoprobe for well decommissioning
 work

TREC excavator DEERE 260CLC
 and Loader VOLVO L110G

0940 - Keith Hambley off-site.

Weather - mostly cloudy 70-80°F - 0-5
 mph wind; Humid.

objectives: TREC move equipment +
 supplies, mark out staging areas,
 decommission some wells.

1115 - well decommissioning will meet.

- TREC will also look to modify
 staging area to consist of 11R20.
 overlap by 60 mil liner instead
 of 3" pasture overlap by 30 mil
 liner - need to run relocation
 of ramp, delineate staging area changes
 by NTRDEC

1118. Everyone off-site

Location Andrew St. Site Date 9/3/2019
 Project / Client Roady- 53345-17

- 1400 JAD, NEJ, Hmin, Dferk + Joe B onsite
 S. Stachumster (TREC) already on-site.
- 1405 Liz Caplan + Charlotte Theobald (DEC)
 onsite.
- 1300 ~~Chris~~ Steve Stachumster, and everyone
 but JAD off-site - Chris Stachumster
 (TREC) on-site to off-load + install
 of material
- 1510 JAD + Chris Stachumster off-site.

Note - During on-site work w/ DEC + Gb -
 DEC agreed to modification layout
 of staging areas, decan pad +
 ramp + also modification staging
 area material changed to high-density
 fabric available by 60mil plastic
 sheeting/liner.
 - NO Penstems to be installed

Location Andrew St. Site Date 9/4/19
 Project / Client Roady- 53345-19

- 0750 - CCD on-site, TREC (S. Stachumster,
 J. Agre, J. Ignaszak) already on-site
 getting ready
- 0800 JAD on-site
- weather: Rain letting up, will be
 partly sunny 70-75°F 0-10 MPH wind
- Objectives: decommission Iw-14,
 Iw-15, and Iw-21 at first
 consideration staging areas.
- 0830 - mix grant 96 lbs Portland to 4 lbs Bentonite
- 0840 - Safety meeting held by TREC
- 0845: generator not making adequate power
 for mixing / pumping.
- 0850 - set up diffused gravel - Finish
 mixing and use fresh port
 6-8 gallon/well
- mix: 7-8 gallons H₂O + 96 lb Portland +
 4 lbs Bentonite Crumbler
 ↳ made 2 batches used all except
 2 gallons of mix.
- 0910 Iw-14, Iw-15 + Iw-21 well decommissioning
 complete. TREC clean up.
- Note: liner sealing person owns his company
 + not sched to work - will be on-site later
 today or this week.

Location Andrews St. Site. Date 9/4/2019Project / Client Rocky-53345-17

- 0924 Jim Ager + Jeff Ignazek (TREC)
off-site to pick up more 60 mil
liner
- 0935 Steve Stackhammer also off-site
Trailer that Jeff Ignazek is pulling
needs repair: Steve S to follow
Jeff to Brad's Trailer Repair.
- 11:15 TREC guys on site
- 11:30 Start working on the berm
- 12:00 4th Truck with stone on site
with and Steve S from TREC
ask the driver for 2 more loads
- 12:00 Keith H. on site
- 12:10 Keith H off site with Jim A
- 12:45 Keith H and Jim A on site
start → finish the berm
- 13:20 Keith H off site
- 13:50 First layer of fabric layed down
- 14:05 JAD on site
- 14:40 Jim A off site
- 15:10 JAD off site
- 15:20 Jim A on site → He returns
with more fabric
- 15:30 Everyone off-site

Location Andrew A Site. Date 9-5-19Project / Client Rocky-53345-17

- 0800 JAD, CLO + Jim Ager (TREC) on-site
Objectives: continue const. of staging area
and dolan pad
- Weather: mostly sunny; 55-75°F 0-10
mph wind.
- 0805 - Steve Stackhammer (TREC) on-site
- 0830 - Jeff Ignazek (TREC) on-site
- 0845 - Start ~~get~~ working on const. of
dolan pad
- 0955 - change in plans - TREC working
on installing 60 mil plastic liner in staging
area.
- 10:01 HMM on site
- 10:07 CLO off site
- 1030 JAD off-site
- 10:42 minor leak of hydraulic oil
from loader on east of Site
est. ~4 oz
- TREC placed 5-gal pail below
plan to shovel cover material
into staging area when staging
area complete

1440 - Steve Strickman + Jeff Ignatuk from TREC off-site

1500 JSD off-site

Location Andrew St. Site. Date 9/25/19Project / Client Rocify. 53345-17

- 0750 JAD on-site
 weather: Sunny 70-80°F strong
 wind.
 Objectives: Button up staging area
 and contaminated soil piles;
 clean up site, repair fuel tank,
 decontaminate heavy equipment.
- 0800 Steve Steckmayer and Chris
 Steckmayer (TREC) on-site
- 0805 TREC starts decontamination of
 John Deere 260CLC excavator
 - remove dirt with shovels from
 tracks etc.
- 0840 Remove dirt with shovel from
 JCB 030N Vibromax roller
- 0900 Pressure washer pump fails - TREC
 off site to get a new one
 JAD labels ISCO injection hardware
 sizes within backfilled excavation.
- 0951 TREC (Steve S + Chris S) on-site
 - Forget spray nozzle for new
 pump set-up
- 0955 Chris S (TREC) off-site.
- ~~0955~~
 1005 D Peck (CH) on-site

Location Andrew St. Site. Date 9/25/19Project / Client Rocify. 53345-17

- 1040 Chris S back on-site.
- 1045 TREC resumes clean of JCB 030N
 Vibromax roller using potable water
 + sprayer
- 1050 Vibromax decontamination complete
- 1055 TREC decontaminates Volvo
 L110G loader - sprayer + water
- 1110 - TREC using sprayer + water
 to clean rubber road mats
- 1115 - Steve S (TREC) off-site.
- 1208 - Clean of mats stopped
- 1215-1225 lay reinforced 10-mil plastic
 sheeting over existing empty staging
 area that has layer of dirt/mud,
 and cover with rubber track mats
 and fire rings.
- 1248 - continue buttoning up staging area
 with staged soil, PVC, plastic liner
 etc.
- 1325 staging area properly covered +
 secured
- 1330 Steve S + Chris S (TREC)
 off-site
- 1355 JAD off-site after cleanup.

Location Andrews St Site Date 10/9/19
 Project / Client Rocky 53345-17

0700 JAD, Steve Stockmaster + Jeff
 Ignazak (TREC) on-site
 Objective - Soil load out
 weather 45-55°F mostly sunny

0705 D. Peck on-site 0-5 MPH wind

0715 First truck being loaded.

- Valley View VVOF

0720 TREC is pumping water off plastic ^{cars}
 + discharging to clean pad for
 temp storage

0800 4 trucks off site to fur

0820 measured water depth in first tank
 it is 54.5" deep from bottom =
 9518 gallons.

0835 D Peck off-site

0840 PID around contain pile being
 moved are 0.0 ppm to 0.3 ppm

AZ using MiniRAE 3000

1115 J. Danyang off-site.

0955 A. Zabel (DOR) on-site.

1400 D. Peck + J. Bismalillo on-site.

1430 A. Zabel off-site. 1445 JAD on-site

1500 D Peck + JAD off-site

1570 CCD off-site

1530 JAD, Steve S + JAH I (TREC) off-site

Location Andrews St Site Date 10/10/19
 Project / Client Rocky 53345-17

0715 JAD, Steve Stockmaster + Jeff Ignazak
 (TREC) on-site

weather: clear 35-65°F 0-5 mph wind
 objective: continue soil load out (3 trucks)

0720 - Calibrate Minirae < 3000

SN 592-918567; provide 10/1 punch ^{list to} TREC

0725 - Calibrate PDR-1000AH SN 7425 ^{store}

0730 - D. Peck on-site

0740 - D Peck off-site

0745 - Start CAROL - TREC readying
 soil pile for load out

0755 Start soil loading on 1st truck

1020 - JAH I says Jansack Truck OI
 Broken down. MJ Doctor to try +
 get replacement truck/driver on-site

1027 - Jansack OI - Back on-site!
 - must have been repaired.

1135 Email from Don Wolt (MDES) gives
 green light for water discharge to MH
 in Bristol St under permit. - passed
 info onto Steve Stockmaster.
 PROX gate to be locked while MH
 open.

1210 - Steve S off site to get permits
 for first truck discharge

116

Location Andrews St Site Date 10/10/19
 Project / Client Rocity 53345-17

1303 most soil has been loaded out
 1343 Steve Stockmoter back on-site
 1430 Repair IW-7A → new 2" PVC
 stickup + coupling installed
 1500 TREC (Steve + Jeff I) off-site
 1515 JAD (DAY) off-site

117

Location Andrews St Site Date 10/11/19
 Project / Client Rocity 53345-17

0715 JAD on-site
 0720 Jeff Ignaszak (TREC) on-site
 0730 Steve Stockmoter (TREC) and
 Chris Stockmoter (TREC) on-site
 weather: clear 40°F - 65°F 0-5 mph
 wind
 object: continue gently feed of
 water from face tank - It was left
 open over night - curved water level
 in tank is 3' 11" = 8,200⁺ gallons
 - clean down equipment
 - pump down pad
 - crush metal (empty drums) for scrapping
 0740 Start down of John Deere 200 CLC
 excavator - Knock off/raise tail
 using sledge hammer + shovel, followed
 by power wash
 0902 Trailer on excavator clam
 - new down truck on Roc Rests
 Tupper mini excavator + bucket
 using power wash
 Note: bucket on John Deere excavator
 left contaminated for now since down
 pad still needs to be loaded out.

Location Andrew St. Site Date 10/11/14
 Project / Client Roady. 53345-17

- 0905 D. Peck arrives
 Dean continuing - pressure washing
 truck mats
- 0935 TREC pumping water out of Dean pad
 gallon
- 0945 All monitoring wells + injection wells
 on-site are accounted for - only one
 has damaged - leaking out of plumb, but
 in fact
- using pump, filling drums on trailer to
 take to discharge location Bristol St.
- Note: Jeff Ignastala says meter 7 was
 out of plumb prior to removal project
 - was already leaking - 15 inches
 down all wells ok
- 1041 Joe B (City) on-site
 - show Joe the site work being done
 go over punch list items
- 1100 Joe B (City) off-site
 Note: Steve Starkweather on/off site on
 intermittent basis for supplies, etc.
- 1105 Pumping water from Dean pad
 Stopped → ~50 gallons of water was
 removed from pad + will be discharge
 to Bristol St sewer under permit.

Location Andrew St. Site Date 10/11/2014
 Project / Client Roady. 53345-17

- 1110 - Dean pad water in drum on trailer
 is discharged to Bristol St sewer under
 permit.
- 1112 - TREC preparing to load out
 Dean pad
 - Job by CAMP + start CAMP
- 1125 - discharge of Dean pad water to
 sewer is complete
- 1130 Truck CC32 Lighthouse (LHL (Car))
 on-site to load out Dean Pad.
- 1135 TREC crushing empty drums + loading
 out scrap metal on trailer.
- 1221 Steve Starkweather and Chris Starkweather
 off-site for metal recycling, etc.
- 1255 Water level in Fuel tank 33" = 5,468 gallons
- 1305 Check PIDs on headspace air inside
 PVC injection hardware

Location Andrews St. Site Date 10/11/19
 Project / Client Rocity, 53345-17

- 1330 Steve Stokumster (TREC) w/ Chris
 Stokumster (TREC) back on-site
- 1331 Last truck loading of dcau part
 complete
- 1335 dcau loader bucket inside
 C432 truck bed to go off in
 last load.
- 1342 Dem of excavator bucket complete,
 truck C432 off-site.
- 1407 Jeff Ignaszak (TREC) off-site
- 1410 Steve Stokumster (TREC) w/ Chris
 Stokumster (TREC) off-site
- 1420 JAD (D45) off-site

Location Andrews St. Site Date 10/17/19
 Project / Client Rocity, 53345-17

- 845 JAD + C432 on-site
 weather 45-50 5-20 mph wind rain
 objective: drill/install new-17A
- 9:00 Mothnagle on site (Kevin Busch
 and Jeremiah L)
- 9:30 Start drill the well
- 10:00 They reach 25 feet depth
- 10:30 Start to install the well
 15' of screen and 10 feet solid
 Filled the well with sand
 and bentonite according with
 the work plan (work order)
- 11:35 Finish pulling the core drill
 Start filling with grout
- 13:00 Sign out
- 13:10 C432 off site

Location Andrews St Site Date 10/17/19Project / Client Resub. 53345-17

1415 JAD on-site

Objective PIDs + Swls from ISCO 1 thru
ISCO 8 immediately + a little while
later

Note: Solvent odor (smells like PVC
glue) noted inside ISCO hardware
Notes: PID readings may be
attributable to the glue, not
PCE/TCE.

Location Andrews St. Site Date 10/17/19Project / Client Resub. 53345-17

	1430-1442 Initial PID time	1520-1527 Subsequent PID time	1444-1447 SwL (56.365)
ISCO 1	909.6 ppm	9.2 ppm	11.4'
2	208.4 ppm	9.1 ppm	11.2'
3	221.1 ppm	2.2 ppm	11.2'
4	300.5 ppm	1.3 ppm	11.2'
5	368.6 ppm	9.7 ppm	10.4'
6	5.8 ppm	0.0 ppm	10.4'
7	596.9 ppm	20.2 ppm	11.3'
8	386.8 ppm	1.7 ppm	11.0'

1530 JAD off-site

Location Andrews site Date 10/18/19
 Project / Client 53345-17

0750 JRD on-site
 weather: mostly cloudy 45-55% S10WMPH
 wind from west
 objectives: KMnO₄ injection in GPS
 MW-17A, development of MW-17A
 monitoring select wells for color during
 KMnO₄ injection.

0755 - MW-17A GPS measurement

0800 Jim Agis + Eric Hannon on-site
 from TRAC.

0800 Denis Peck on-site - ^{has} ~~has~~ machine

0800 Chris Stachurski (TRAC) on-site

0830 Steve Stachurski (TRAC) on-site
 only Chris Stachurski + Eric Hannon
 doing site work.

0845 Start to start mixing KMnO₄
 1 bucket mixer 2.75 50 gallon batches

0900 mix 1st 50 gallon batch.

0915 water from clear barrels drain MW-3A,
 MW-02, MW-05, MW-12 + MW-17A
 in clear prior to injecting

0920 start injecting into ISCO 5
 → Steve S + Jim A (TRAC) on-site

Location Andrews A site Date 10/18/19
 Project / Client Realty 53345-17

Planned Injection in tracking table
 gallons of potassium solution

110 ISCO 1 55+55

110 ISCO 2 55+55

110 ISCO 3 55+55

5 IW-19 5

5 IW-20 5

Location Andrews St. Site Date 10/18/19
 Project / Client Roady. 53345-17

- 0930 SWL @ MW-17A = 10.96' Below top of PVC casing
 - prepare for well development
- 0935 Mixing 2nd 55 gallon batch of KMnO4 solution - actually mixed 60 gallons
- 0938 Start injecting 2nd batch into ISCO5
- 1000 ISCO 5 got 110 gallons
- 1004 mix 3rd batch + still 15 gal @ ISCO4 (55 gallons)
- 1030 3rd Batch injection @ ISCO4 complete
- 1032 mix 4th 55 gal batch
- 1038 start injecting 4th batch into ISCO4
- 1056 4th batch injection @ ISCO4 complete
- 1057 mix 5th batch to inject @ ISCO2
- 1115 5th Batch injection @ ISCO2 complete
- 1117 mix 6th batch
- 1122 start injecting 6th batch @ ISCOB
- 1125 well development @ MW-17A complete
 - 35 gallons total H₂O purged
 and placed in Fran tank for discharge to sewer
 - No pink water noted on MW-17A
 purge water white TRC was simultaneously injecting KMnO4 solution

Location Andrews St. Site Date 10/18/19
 Project / Client Roady. 53345-17

- 1138 6th Batch injection @ ISCOB complete
- 1146 mix 7th Batch for ISCO-2
- 1145 start injecting 7th batch @ ISCO-2
- 1201 7th batch injection @ ISCO-2 complete
- 1202 mix 8th batch KMnO4 for ISCO-2
- 1207 start injecting 8th batch @ ISCO-2
- 1218 water in barrels from MW-02, MW-15, MW-5 MW-30 + MW-17A show no signs of pink or purple KMnO4 - just clear to cloudy in appearance
- 1222 Batch 8 injection @ ISCO-2 complete
- 1225 mix batch 9 for ISCO-7
- 1229 start injecting Batch 9 @ ISCO-7
- 1240 Batch 9 injection @ ISCO-7 complete
- 1242 mix Batch 10 for ISCO-7
- 1247 start injecting Batch 10 at ISCO ~~7~~
- 1300 Batch 10 injection @ ISCO-7 complete
- 1302 mix batch 11 for ISCO-3
- 1305 start injecting @ ISCO-3 Batch 11
- 1320 11th Batch injection @ ISCO-3 complete
- 1321 mix Batch 12 for ISCO-3
- 1326 start injecting Batch 12 @ ISCO-3
- 1339 12th Batch injection complete @ ISCO-3
- 1340 mix Batch 13 for ISCO-1

Location Andrew St Site Date 10/16/19Project / Client Roads 53345-17

- 1345 Start injecting Batch 13 @ ISLO-1
- 1346 Reinject KMnO₄ @ ISLO-1 - stop pump + ground level only
- 1353 Start pump 1/2 open + continue ISLO-1
- 1420 13th Batch injection @ ISLO-1 complete
- 1422 Mix 35 gal Batch 14 for injection at MW-01, In-1, In-04, In-05 + In-09
- 1425 Inject 15 gal @ MW-01, 5 gal each at In-1, In-4A, In-B + In-9
- 1430 Mix Batch 15 (35 gal) for ISLO-1
- 1435 Start injecting batch 15 @ ISLO-1
- 1306 Batch 15 injection at ISLO-1 complete
- 1310 Mix Batch 16 (35 gal) for use @ MW-3A, In-17, In-18, In-19 + In-20
- 1320 Inject Batch 16 (35 gal): 15 gal @ MW-3A, 5 gal each @ In-17, In-18, In-19 + In-20
- 1330 Mix 17th Batch for injection at ISLO-6
- 1350 Cleanup → 17th Batch @ ISLO-6 complete
- out of time - finish next Tuesday
- 1400 Eric + Chris (TREC) off-site
- 1405 MW-02, MW-05, MW-17 + MW-18 show no sign of pink or purple KMnO₄ when bucket sample collected.

Location Andrew St. Site Date 10/22/19Project / Client Roads 53345-17

- 0757 JAD on-site JCF Ignaszak (TREC) on-site; Christopher Stokemaster (TREC) on-site
- 0800 MW Drive Truck # MJD 21 on-site + drops off load of CR-2 (21 tons)
- 0802 Truck MJD 21 off-site
- 0803 MW Drive Truck # MJD-17 on-site + drops off load of ER2 (22 tons)
- 0805 MJD-17 truck off-site
objectives: clean fuel tank
site grading
possibly finish KMnO₄ injection work
- weather 50-60°F light rain, overcast
Jed Steer from ROCKENT on-site
- 0807: Eric Hamman (TREC) on-site.
- 0815 Start cleaning fuel tank
- 0840 Chris off-site for trucks
- 0852 Steve Stokemaster (TREC) on-site
at fueler
- 0858 - D Park on-site Provider input on site grading
- 0859 Steve Stokemaster off-site
- 0905 D. Park off-site and TREC starts grading CR2

130

Location Andrew St Site Date 10/22/19
Project / Client Rochy. 53345-17

- 0910 water in bucket water from mnu-02,
mnu-18 or mnu-05, clear
- 0936 Chris Stackmaster (TREC) back on-site
with flat bed trailer.
- 0946 Eric and Chris loading up truck with
(cont. Fencing), cones etc. on flat bed.
- 1035 Untel on-site to pick up portable
toilet
- 1044 Untel off-site with portable toilet.
- 1055 D. Park on-site, TREC exiting from truck
to clean
- 1110 D. Park off-site
- 1115 From truck cleaning under way - TREC
in Level CPPC - air quality checked ^{for}
_{air}
- 1125 TREC also resuming site grading ^{or}
on site _{as}
_{usual}
_{space}
- 1139 PODS driver on-site (Bill)
- 1149 PODS driver off-site with POD.
- 1230 From truck cleaning complete. Place
specy bag + sediments in TREC
put 364 peristaltic Dump trailer mixed
is with soil cutting from mnu-17A
- 1315 JFI, Chris J + Eric H from TREC
off-site Eric to return to take
TREC Dump Trailer to High Acres.
JAD stays on-site + clean up

131

Location Andrew St. Site Date 10/22/19
Project / Client Rochy. 53345-17

- 1315 Eric H. (TREC) back on-site +
itches up Dump trailer to TREC truck
- 1410 Eric off-site to High Acres Landfill
- 1420 JAD (DAD) off-site

Location Andrew St Site Date 10/25/19
 Project / Client Recity 53345-17

1625 JAD (DPT) and Jim Ayers (TRCC) and
 Eric Hammon (TRCC) on-site.
 weather: cloudy 45-55°F 0-TWPH wind
 from East → west

Objective: finally perform maintenance on
 work at ISLO hardware locations
 - Focus on ISLO-6 which did
 not receive planned amount on 10/18
 need to get at least 55 more gallons
 of KMnO₄ solution into ISLO-6
 Jim + Eric wear level C with
 Tyvek, hood, respirator gloves & respirator
 when working w/ dry KMnO₄

1650 Start injecting 55 gallon batch #13 @
 ISLO-6

1110 30 gallon payload @ ISLO-6 +
 day lighting occurring

1111 more + inject @ ISLO-5

1116 25 Gal inject @ ISLO-5

1120 Clean up neutralize equipment +
 containers / mixing drum
 5-gal Sodium Thiosulfate left
 in drum on-site.

1145 Jim + Eric from TRCC off-site

1150 JAD off-site + jobs collected

Location Andrew St Date 12/6/19
 Project / Client Recity 53345-17

905AM - JAD + CLD on-site.

weather: snowing + 31°F 0-5MPH wind
 Objective: SWLS @ all wells; deploy
 PDBs at jacked wells

1100 develop MW-1 and MW-3A prior to
 deploying PDBs - placed in ISLO-8
 ISLO-8

1138 - deploy PDBs @ MW-01, MW-02,
 MW-03A, MW-05, MW-11, MW-15
 - run out of proper size PDBs - wait
 for shipments

1200 - leave site, CLD only

1350 - back on-site - deploy PDBs
 @ MW-16, MW-17A, MW-18 + MW-19

1410 - CLD off-site.

134

Location Andrew St. Site Date 12/20/2019Project / Client Rochy 53345-17

1310 JAD + CCJ on-site

Weather: 25°F ± 0-10 mph wind. Partly sunny
objectives. Relative PDB5 + PDB55

GR sampler.

1345 Alex 2 on site (city) on-site

1440 Alex + JAD on-site

CASE NARRATIVE

Day Environmental, Inc.**Project Name: Andrew St. RI****Project # N/A****Chemtech Project # K4888****Test Name: VOC-TCLVOA-10****A. Number of Samples and Date of Receipt:**

3 Solid samples were received on 09/13/2019.

B. Parameters

According to the Chain of Custody document, the following analyses were requested: VOC-TCLVOA-10. This data package contains results for VOC-TCLVOA-10.

C. Analytical Techniques:

The analysis performed on instrument MSVOA_W were done using GC column RXI-624SIL MS 30m 0.25mm 1.4 um. Cat#13868. The analysis performed on instrument MSVOA_X were done using GC column DB-624UI 20m 0.18mm 1.0 um. Cat#121-1324UI. The analysis of VOC-TCLVOA-10 was based on method 8260C.

D. QA/ QC Samples:

The Holding Times were met for all analysis.

The Surrogate recoveries met the acceptable criteria.

The Internal Standards Areas met the acceptable requirements.

The Retention Times were acceptable for all samples.

The RPD met criteria.

The Blank Spike met requirements for all samples.

The Blank Spike Duplicate for {VW0920SBSD01} with File ID: VW013188.D met requirements for all samples except for 1,2-Dibromo-3-Chloropropane[133%], 2-Butanone[140%], 2-Hexanone[140%] and 4-Methyl-2-Pentanone[140%].

The Blank analysis did not indicate the presence of lab contamination.

The % RSD is greater than 15% in the Initial Calibration method (82W092019S.M) for Methylene Chloride this compound passing on Linear Regression.

The % RSD is greater than 15% in the Initial Calibration method (82X091719W.M) for Dichlorodifluoromethane, Acetone, Carbon Disulfide, Bromoform are passing on Linear Regression.

The Continuous Calibration met the requirements.

The Tuning criteria met requirements.

Sample 979-S-1-(18-19) was diluted due to high concentration.

E. Additional Comments:

Samples for MS/MSD for VOC analysis were not provided with this set of samples. The Blank Spike Duplicate is reported with the data.
Trip Blank was not provided with this set of samples.

Samples 979-S-1-(18-19) and 981-S-2-(20) are analyzed at medium level due to found high concentration of Tetrachloroethene.

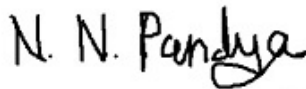

Please use %D calculated based on Avg RF and CCRF for all compounds using Average Response Factor when the %RSD value for a compound is <15% for the Initial Calibration curve and use %D calculated based on Amount added and Calculated amount for all compounds using Linear Regression when the %RSD value for a compound is > 15% for the Initial Calibration curve for SW-846 analysis.

F. Manual Integration Comments:

Please refer to the Manual integration Report included with the Run Logs for information on the manual integrations performed.

I certify that the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. The laboratory manager or his designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

DATA REPORTING QUALIFIERS- ORGANIC

For reporting results, the following " Results Qualifiers" are used:

Value	If the result is a value greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10 U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
ND	Indicates the analyte was analyzed for, but not detected
J	Indicates an estimated value. This flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3 ug/L was calculated report as 3 J. This is flag is used when similar situation arise on any organic parameter i.e. Pest, PCB and others.
B	Indicates the analyte was found in the blank as well as the sample report as "12 B".
E	Indicates the analyte 's concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide/PCB target analyte when there is >25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on Form 1 and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
A	This flag indicates that a Tentatively Identified Compound is a suspected aldol-condensation product.
Q	Indicates the LCS did not meet the control limits requirements

GC/MS VOA CONFORMANCE/NON-CONFORMANCE SUMMARY

CHEMTECH PROJECT NUMBER: K4888

MATRIX: Solid

METHOD: 8260C

	NA	NO	YES
1. Chromatograms Labeled/Compounds Identified. (Field samples and Method Blanks)			✓
2. GC/MS Tuning Specifications BFB Meet Criteria (NOTE THAT THERE ARE DIFFERENT CRITERIA FOR NY ASP CLP, CLP AND NJ)			✓
3. GC/MS Tuning Frequency - Performed every 24 hours for 600 series and 12 hours for 8000 Series.			✓
4. GC/MS Calibration - Initial Calibration performed before sample analysis and continuing calibration performed within 24 hours of sample analysis for 600 series and 12 hours for 8000 series.			✓
5. GC/MS Calibration Requirements. The % RSD is greater than 15% in the Initial Calibration method (82W092019S.M) for Methylene Chloride this compound passing on Linear Regression. The % RSD is greater than 15% in the Initial Calibration method (82X091719W.M) for Dichlorodifluoromethane, Acetone, Carbon Disulfide , Bromoform are passing on Linear Regression. The Continuous Calibration met the requirements.			✓
6. Blank Contamination - If yes, list compounds and concentrations in each blank:		✓	
7. Surrogate Recoveries Meet Criteria If not met, list those compounds and their recoveries which fall outside the acceptable ranges. The Surrogate recoveries met the acceptable criteria.			✓

GC/MS VOA CONFORMANCE/NON-CONFORMANCE SUMMARY (CONTINUED)

	NA	NO	YES
8. Matrix Spike/Matrix Spike Duplicate Recoveries Meet Criteria		✓	
If not met, list those compounds and their recoveries which fall outside the acceptable range.			
The Blank Spike met requirements for all samples . The Blank Spike Duplicate for {VW0920SBSD01} with File ID: VW013188.D met requirements for all samples except for 1,2-Dibromo-3-Chloropropane[133%], 2-Butanone[140%], 2-Hexanone[140%] and 4-Methyl-2-Pentanone[140%] .			
9. Internal Standard Area/Retention Time Shift Meet Criteria			✓
Comments:			
10. Analysis Holding Time Met			✓
If not met, list number of days exceeded for each sample:			

ADDITIONAL COMMENTS:

Sample 979-S-1-(18-19) was diluted due to high concentration.

Samples for MS/MSD for VOC analysis were not provided with this set of samples. The Blank Spike Duplicate is reported with the data.

Trip Blank was not provided with this set of samples.

Please use %D calculated based on Avg RF and CCRF for all compounds using Average Response Factor when the %RSD value for a compound is <15% for the Initial Calibration curve and use %D calculated based on Amount added and Calculated amount for all compounds using Linear Regression when the %RSD value for a compound is > 15% for the Initial Calibration curve for SW-846 analysis.

QA REVIEW

APPENDIX A

QA REVIEW GENERAL DOCUMENTATION

Project #: K4888

Completed

For thorough review, the report must have the following:

GENERAL:

Are all original paperwork present (chain of custody, record of communication,airbill, sample management lab chronicle, login page) ✓

Check chain-of-custody for proper relinquish/return of samples ✓

Is the chain of custody signed and complete ✓

Check internal chain-of-custody for proper relinquish/return of samples /sample extracts ✓

Collect information for each project id from server. Were all requirements followed ✓

COVER PAGE:

Do numbers of samples correspond to the number of samples in the Chain of Custody on login page ✓

Do lab numbers and client Ids on cover page agree with the Chain of Custody ✓

CHAIN OF CUSTODY:

Do requested analyses on Chain of Custody agree with form I results ✓

Do requested analyses on Chain of Custody agree with the log-in page ✓

Were the correct method log-in for analysis according to the Analytical Request and Chain of Custody ✓

Were the samples received within hold time ✓

Were any problems found with the samples at arrival recorded in the Sample Management Laboratory Chronicle ✓

ANALYTICAL:

Was method requirement followed? ✓

Was client requirement followed? ✓

Does the case narrative summarize all QC failure? ✓

All runlogs and manual integration are reviewed for requirements ✓

All manual calculations and /or hand notations verified ✓

000629-62-9	Pentadecane	4300	J		15.6	ug/Kg
001560-97-0	Dodecane, 2-methyl-	680	J		16.1	ug/Kg
	unknown16.18	890	J		16.2	ug/Kg
000544-76-3	Hexadecane	3100	J		16.5	ug/Kg

U = Not Detected

LOQ = Limit of Quantitation

MDL = Method Detection Limit

LOD = Limit of Detection

E = Value Exceeds Calibration Range

Q = indicates LCS control criteria did not meet requirements

M = MS/MSD acceptance criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

N = Presumptive Evidence of a Compound

* = Values outside of QC limits

D = Dilution

() = Laboratory InHouse Limit

A = Aldol-Condensation Reaction Products

4-Bromofluorobenzene	0.442	0.390	0.352	0.397	0.396	0.382	0.393	7.4

* Compounds with required minimum RRF and maximum %RSD values.
 All other compounds must meet a minimum RRF of 0.010.
 RRF of 1,4-Dioxane = Value should be divide by 1000.
